Battle of Diplomats To Avoid War Nears Final Stage

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1939

ARTICLE BY ANNE O'HARE McCORMICK IN THE NEW YORK TIMES OF MAY 22, 1939

Mr. MARTIN J. KENNEDY. Mr. Speaker, recently returned from Europe after an extensive trip in connection with an assignment to write the news about current events abroad, Anne O'Hare McCormick gives us in this article a clear and interesting picture of the diplomatic strategy of our foreign neighbors. On a number of previous occasions I have found her foreign dispatches almost clairvoyant. At any rate, all of her articles command an important position on the editorial page of the New York Times. Anne O'Hare McCormick is highly regarded here in Washington as a journalist and her writings are widely read.

[From the New York Times of May 22, 1939]

EUROPE—BATTLE OF DIPLOMATS TO AVOID WAR NEARS FINAL STAGE

(By Anne O'Hare McCormick)

This week will probably bring to a head a 2 months' world war on the diplomatic front. As far as line-ups can be decided in advance of the actual explosion, when the best-laid plans and policies are often blown into bits, we shall see the shape and strength of the battle fronts all the major powers, including the United States, have been working on during a period of unprecedented activity and tension.

No scout returning from the field of operations can answer with assurance the universal question: Can peace be saved?—for the reason that it is still unanswered in either of the general headquarters where the decisive signal will be given. These general headquarters, it is now clear, are located in London and Berlin.

When Hitler went beyond the wide right-of-way granted him under the Munich agreement and incorporated a state he was supposed merely to dominate, his main political objective was to encircle Poland, thus preventing that pivotal country from getting out of control. In Poland began, in consequence, Britain's countermoves. Call it by any name, British policy is in reality a policy of encirclement, an attempt to build a ring of alliances to block further German advances east and south. This week's developments will be a gage of the success of this attempt. They will bring war nearer or postpone it indefinitely.

Today an out-and-out military alliance will be signed in Berlin by Germany and Italy. In 2 years the axis has gradually strengthened from a pretty thin shoestring to a knot of steel. In the beginning it was no more than a gesture, a retort to the British-French policy of sanctions against Italy. At no time would it have been inevitable without the surrender of Austria—a surrender by the other guarantor powers quite as much as by Italy. Only in these crucial 2 months, in answer to the new policy of London, have the final steps been taken for military cooperation on terms not fully disclosed but obviously more binding than heretofore.

NEW FORCES IN ACTION

The present agreement, moreover, is broader than the pre-war Triple Alliance, which exempted Italy from fighting against Great Britain and from participating in any but a defensive war. It is more likely to hold, for though Europe, with some minor shifts, seems to be moving straight toward pre-war alinements, actually new forces are at work which have not yet been tested.

Nobody knows how strong fascism will prove under fire, or how far the fine-spun economics of self-sufficiency will suffice to supply armies pitted against outside enemies. Nobody is sure how superior is the Red Army to the army of the Czar, or how ardently it will fight with the forces it has been trained to regard as "capitalist imperialisms," a scruple on the other side usually forgotten by the democratic powers when they shrink from lining up with one dictatorship to beat another. Neither the social nor the political pattern in any country is what it was in 1914.

As a test of ideologies, events in the past 2 months have proved that the barriers between systems are easily jumped when fundamental national interests are imperiled. National socialism merely uses deadlier weapons to push forward the old German "drang." At the scratch, Hitler is no more racist than the Kaiser. All nations are primarily concerned, as they always were, either to save what they have or to acquire what they haven't.

Nevertheless, ideas do count today as they did not before the last war. Then most of the slogans were coined after the outbreak of hostilities. Systems of government did not affect the relations between states or dictate their alliances. Today Germany and Italy are united by a common idea as well as by a desire for conquest, and this makes the tie stronger than in 1914, despite the fact that Italy has less to gain from the partnership.

IDEOLOGIES AN OBSTACLE

On the other side, the ideological barrier, while not a prime factor in either capital, does obstruct the negotiations between London and Moscow. In the triangular conversations to be held this week in Geneva the British and the Russians are expected to reach a compromise on the terms under which they will work together to stop Germany. Stalin wants a full alliance. Mr. Chamberlain wants the bond as limited as possible. The catch

is that Poland and Rumania turned to Britain to escape Soviet protection against the Reich, and now the British are unable to fulfill their pledge without Russian help. But a deeper obstacle is the distrust of each government for the other.

These are elements which cannot be weighed until the armies begin to march. To the observer on the diplomatic war fronts it has seemed that the axis powers were threatening a military pact, and the entente powers a military alliance with Russia, in the hope that they wouldn't have to go through with it. If both reluctant bargains are sealed, it means more therefore than if the positions were taken by choice. It means that each side has drawn up its heaviest artillery in an effort to finish a war before it starts. We have not yet the perspective to be sure what this demonstration implies, but as a show of hesitation at the barricades it is one of the most extraordinary spectacles in history.

Crab Orchard Lake

EXTENSION OF REMARKS

OF

HON. EVERETT M. DIRKSEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1939

LETTER FROM SECRETARY OF AGRICULTURE

Mr. DIRKSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the Secretary of Agriculture:

DEPARTMENT OF AGRICULTURE,
Washington, May 17, 1939.

Hon. EVERETT M. DIRKSEN,
House of Representatives.

DEAR MR. DIRKSEN: This will acknowledge your letter of April 7, transmitting a letter from Mr. Frank Ledbetter, of Carterville, Ill., relative to the Crab Orchard project.

Your letter suggests that a report be made on this project. Dr. Bennett, Chief of the Soil Conservation Service, who now has administrative jurisdiction over this project, recently had a very complete investigation made of this project by a competent engineer who has had no previous contact with either the program or the project.

As you know, the Crab Orchard project was initiated by the Resettlement Administration when it was an independent agency and before its program was transferred to the jurisdiction of this Department. This project was originally conceived by the State relief commission as a means of furnishing productive employment to a large number of stranded coal miners. Its fulfillment was prevented by the lack of any agency which could buy the land for the reservoir. The project was submitted to the Land Policy Section of the A. A. A. December 13, 1934, by the Big Muddy Valley Flood Control Association, but was rejected because the land did not qualify for acquisition under that program. It was later resubmitted to the Division of Land Utilization of the Resettlement Administration by the State relief commission and the State department of public works and buildings. The project was sponsored by Congressman KENT E. KELLER, and was formally approved by the President on February 12, 1936, and work was initiated soon after.

When this project was transferred to the Department, considerable progress had already been made on the construction of the dam and acquisition of the land and there was no alternative other than to carry it to completion. There seems, however, to be considerable merit to the project. I shall not attempt to answer each question raised by Mr. Ledbetter, but shall confine my remarks to a few of the more important points. The entire project is located in a problem area designated by the State and planning commission as unsuitable for agriculture. The report of the soil survey of the University of Illinois indicates that these soils will not respond profitably to treatment to increase their productivity. The bottom lands are heavy, poorly drained clay. The slopes are subject to sheet and gulley erosion. The flat ridge tops are subject almost anually to serious damage from drought, because they do not carry sufficient humus to resist long periods of light precipitation during the growing season. The dam will provide sufficient water storage to impound the entire run-off from the watershed of Crab Orchard Creek, which has contributed to the loss now occuring annually from floods in one of the important tributaries of the Mississippi River. Much of this land has been subject to overflow from the Crab Orchard Creek annually and for this reason not more than three crops out of 5 years can be counted upon from the bottom lands.

Our records here indicate that the valuations placed on lands to be purchased were checked by the appraisers of the Federal land bank and that the land-production values are reflected in reports of the University of Illinois. As you know, it is always difficult to say whether or not the Government is paying the owner a fair price for his land. We must try to protect the Government's interests by spending the money wisely and economically, and at the same time I assure you it has not been our desire to bargain for it too closely. In view of the fact that at least two-thirds of the area has been voluntarily optioned, it looks as though these people at least are reasonably well satisfied with the deal.

According to a recent report, the area embraced by the project comprises approximately 6 percent of the area of the county, but will remove only about 1½ percent of the total assessed valuation from the tax base. Since the county receives only 44 percent of its receipts from tax levy, the net effect of this loss is reduced still more. While the project area includes about 40 percent of the Carterville High School district, the assessed valuation is only about 12 percent. The records show that in 1936 the assessed valuation was $1,516,294, the levy amounted to $25,482.32 and collections to $16,831.97. Inasmuch as only 12 percent of the assessed valuation in the Carterville High School district is to be removed by Government purchase, the effect upon tax return should be much less than indicated in Mr. Ledbetter's letter. To offset this, 25 percent of the receipts for the use of project lands and facilities will be made available in accordance with the provisions of title III of the Bankhead-Jones Farm Tenant Act to the county for school and road purposes, so long as the project continues in its present status. It has been agreed in the Department that the Crab Orchard project, when completed, should be transferred to the Forest Service for administration in connection with the adjacent forest purchase unit. If and when this project is transferred to the Forest Service as a part of the national forest it would become subject to the act of May 23, 1908 (35 Stat. 260), under which one-fourth of the gross receipts would be returned to counties for school and road purposes, or to an amendment of said act that might later be enacted.

Considerable reforestation has already been carried on in the area and about 6,000 acres remain to be planted in pine, black locust, oak, gum, and ash under the current work program. Eventually this should be the source of considerable revenue from the sale of timber products.

The dam on Crab Orchard Creek is one of 11 advocated by State agencies, including the University of Illinois, for flood control on Big Muddy watershed. While the influence of the Crab Orchard Reservoir by itself is limited, if the 11 reservoirs proposed are to be built eventually, their combined influence would be considerable.

In a county where the records show that approximately 60 percent of the people are on relief, the project has employed an average of about 530 men each month since its inception, and its contribution therefore to the immediate relief problem has been considerable.

Four cemeteries, containing 182 graves, will be wholly or partly inundated by higher water from the reservoir, and therefore need to be moved. It is proposed that a new cemetery be located on land owned by the Federal Government of sufficient size to accommodate the remains now in these cemeteries.

Mr. Ledbetter suggests that in the hilly land south of the Crab Orchard Reservoir lakes could be built for recreational purposes. In this connection it is the intention to build two additional reservoirs, the Little Grassy and the Devil's Kitchen, on lands which are being acquired for this purpose. These dams will have considerable recreational and scenic values, as well as in controlling run-off into the large reservoir.

The committee which recently made the investigation referred to above endeavored to obtain a cross section of existing public sentiment concerning the building of the Crab Orchard Reservoir and the two reservoirs on Big and Little Grassy Creeks through random contacts with farmers on the project and with business and professional men in nearby towns. It is reported that during the past year there has been a marked change in the attitude of the people in and near the area toward the project. This change to a more favorable attitude may have resulted in part through a change in project managers.

We appreciate the fact that whenever lands are acquired for the purposes of constructing reservoirs the abandonment of homes, schools, and churches always brings sentimental forces into play which must be reckoned with. It is well realized that mere payment of the commercial value of one's farm and home cannot adequately compensate the farmer when his land may have been in the possession of his family for generations. Our records indicate that many of the farmers displaced by the Crab Orchard project are purchasing other places in the general locality of the project and many of the older people have retired to the nearby towns where they have married children residing.

I want to assure you that much thought and consideration have been given to this project and only those things are being done which are necessary to contribute to the success of the project, in which the Government already has a considerable investment.

The correspondence which was attached to your letter is returned herewith.

Sincerely,

H A. WALLACE, *Secretary.*

Why We Need the St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. BERNARD J. GEHRMANN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1939

RADIO ADDRESS BY HON. BERNARD J. GEHRMANN, OF WISCONSIN

Mr. GEHRMANN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address recently delivered by me:

Greetings to this radio audience, this is the third of a series of broadcasts which I am making. The first gave my views on war and the propaganda and hysteria that some small groups are attempting to work up. Thank God, they are not succeeding very well. The second one was on the plight of the farmer and why I believe the Government should step in and establish the minimum price the farmer should be paid for the major agricultural commodities. This, the third of the series, I intend to devote to the very important subject of Why We Need the St. Lawrence Seaway.

Two years ago, a group of Congressmen interested in the seaway formed a committee whose duty it was to keep alive the issue and to inform the public of its advantages; also to check on doubtful Senators. I was selected as vice chairman of this so-called steering committee. The question of ratification was defeated in the Senate a few years ago, not because of any lack of merit but because in the campaign for the improvement too much stress has heretofore been laid on the purely local benefits of the seaway and not enough attention has been given to acquainting the people of those sections not immediately tributary to the Great Lakes with the benefits which will accrue to such sections. Advocates of the seaway have been fond of saying that the seaway will benefit 26 States and 44,000,000 people, when we should have been saying, as the fact is, that it will benefit 48 States and 130,000,000 of people.

If we are to succeed in this campaign, the subject must be approached from a national point of view—a view which includes the other 22 States and the other 70,000,000 of people. It is not only a question of our right to this improvement but a question of getting the support of enough Senators to ratify the treaty. The logic of the situation demands that before we can expect a Senator to vote for ratification he must be shown that the seaway will benefit the people of his particular State and that possibly he cannot safely oppose a project which would benefit his constituents who are producers and shippers and who are constantly looking for better markets and more prosperity.

To California we can truthfully say that the principal market for the product of its people—their oranges, grapes, and figs—is now, always has been, and always will be in the midcontinent of America; to our friends from Georgia we can say that the market for peaches, peanuts, and pecans would soon be more than doubled if the treaty is ratified; to the people of Connecticut we can say that their market for dollar watches and wooden nutmegs would increase by leaps and bounds; to the people of Louisiana, that they would sell more rice and that the port of New Orleans would do more business than ever before if the empire to the north of it were fully developed.

These Senators are reasonable, conscientious men, willing and anxious to do anything that would further the material interests of the people of their several States. They would be glad to vote for the treaty if they can be convinced that it would be for the best interests of the great mass of their people as against special interests or localities who care nothing for the general welfare.

President Roosevelt, in submitting the treaty to the Senate for ratification, had the situation clearly in mind when he said:

"It is, I believe, a historic fact that every great improvement directed to better commercial communications, whether in the case of building railroads into new territory or the deepening of great rivers, or the building of canals, have all been subject to opposition on the part of local interests which conjure up imaginary fears and fail to realize that improved transportation results in increased commerce benefiting directly or indirectly all sections.

"I am convinced that the building of the St. Lawrence seaway will not injure the railroads or throw their employees out of work; that it will not in any way interfere with the proper use of the Mississippi River or the Missouri River for navigation.

"On the affirmative side I subscribe to the definite belief that the completion of the seaway will greatly serve the economic and transportation needs of a vast area of the United States and should, therefore, be considered solely from the national point of view."

Further quoting from President Roosevelt in his message to the St. Lawrence seaway meeting held in Detroit 2 years ago, stated in part: "I wish the conference at Detroit to be assured not only of continued unremitting effort to complete the seaway and power development but also of my strong conviction that recent events have helped to clear the way for action, upon the broadest lines of public benefit.

The use of electric energy is gaining so rapidly today that no sane person would dare to assert that after the 7 years required for construction of works, St. Lawrence power would provide a surplus above actual needs.

As a matter of fact, careful studies have shown that there will be a serious shortage of electric energy in the Northeast before the project can be completed.

The Great Lakes-St. Lawrence project is in keeping with the spirit of the times and with the policy of cooperation now firmly established on this continent.

For the United States and Canada to demonstrate the full value of such a policy on a frontier that spans a continent would contribute immeasurably to security and progress in the Western Hemisphere.

There is absolutely no one that questions President Roosevelt's complete loyalty to the cause of the seaway. But it is encouraging and significant that the last Republican Presidential candidate, Governor Landon, of Kansas, is also very much for it, and advocated it, not only as a candidate for President but as Governor long before he thought of becoming a candidate. On March 12, 1934, Governor Landon sent a petition to the United States Senate urging ratification, and among other things said: "I demand the setting aside of special privilege and sectionalism in the consideration of this great national and international undertaking. In voicing that demand I speak for the homes, for the industries, for the agriculture, for the united common need of a great body of the American electorate, impelled by one great desire—that the doors of transportation opportunity shall be opened to the widest possible extent by bringing the sea base into the heart of the North American Continent."

I have not stressed the fact that the starting of this great work will put thousands of unemployed to work. I have preferred to stress the great future advantage to our country and especially the fact that all of us should view this treaty in the light of the benefits which it confers on the people of the United States as a whole.

No section of this continent is sufficient unto itself. The wealth produced in the great Mississippi Valley continually enriches the manufacturing cities of the East and affords an outlet for the products of the West and South. This area tributary to the Great Lakes and the Mississippi River is capable of supporting a population and industry and production of wealth of four or five times the present totals.

Wisconsin does not want the waterway merely because it will give her a few seaports, but so it will give the country round about us cheaper transportation, so we can save more money to buy more cotton so the cotton farmers can get more money to buy more Wisconsin cheese, so we can get more money to buy more grapefruit so that the people of the South can buy more canned peas, so we can get more money to buy more Florida oranges, North Carolina cigarettes, Virginia apples, more subscriptions to the Saturday Evening Post—so everybody can get money to spend their summers in the North so we can get enough money to spend our winters in the South.

As has been true in the past, so it will always be true that the benefits of the production of wealth in the Mississippi Valley will spread in every direction and enrich every nook and corner of the Nation. As a pebble thrown in a pool will drive its circling waves to the edge of the water, so the prosperity of the midcontinent will be wafted to the Atlantic on the east, to the Pacific on the west, to the Arctic on the north, and the Rio Grande on the south.

The general benefits of this project are too great to admit of any meritorious sectional opposition. In the distribution of the enormous increase of wealth which this waterway will bring, all parts of the country will share. In the territory served by the inland ports of this waterway will be built an empire with the greatest purchasing power the world has ever known. The coastal cities of the Atlantic seaboard will find markets heretofore undreamed of within the borders of their own land. The cotton, fruits, oils, and minerals of the South and West, the manufactured products of the East, will find enlarged and constantly increasing markets.

It may be said that this waterway will benefit this particular city or be a detriment to a certain other city. It is a matter of little moment that a few inland ports may be increased in population. Any growth such cities may have will be only incidental to the development of the country served by them. The benefit to any given city or State will be but a trifling thing compared with the increase in wealth of the country as a whole.

Owen D. Young, in an address on the economic situation, said: "No permanency of any trend can be guaranteed unless we have sound and fair balance between all the units of our economic body."

There is no better way to give sound and fair balance in the matter of transportation than to give to the interior what the South, West, and East already have. We have the markets of the world at our door. With the blasting away of a little barrier in the St. Lawrence River, the United States of America would have the markets of the world opening the door and coming all the way in. All existing harbors and transportation agencies will have not less but more business than ever before, because there will be vastly more business to be done.

Now let Detroit, Milwaukee, Duluth, Superior, and all the other cities and States and Senators who want this waterway for what it will do for their people or their constituents get their heads out of the sand and look for and find the benefit to the people

of the States whose Senators have not before been in favor of ratification. Let us stop talking about a marooned area and our local selfish interests that only tend to stir up opposition and jealousy. Let there seemingly be no limit to the beneficent influence of this seaway, and in the language of President Roosevelt, consider the question "solely from the national point of view."

With the attitude, with this spirit, with this purpose constantly in mind, our efforts to secure this great improvement will be crowned with success, and with the coming of the waterway will come the beginning of the impregnable commercial supremacy of the North American continent.

Now, my friends, I have talked on the merits of this case. There should no longer be a necessity for preaching the merits of this deep-waterway problem. It stands so strong in merit and economic necessity that in itself it pleads like "angels, trumpet-tongued," for its speedy building and consummation as one of the world's greatest transportation arteries. It has been too long delayed. Our great empire to the west of us has grown up and we have stupendous produce waiting for shipment. The great railroads of the West have developed and stand ready with vast steam and train equipment to handle this commerce in any amount, both east and west. We should have long ago blasted down these barriers in the St. Lawrence rapids and let ourselves into the commerce and transportation of the world. But instead of using dynamite and steam dredge, we have contented ourselves with crooning songs of hope. We have stood on the shore of these great tideless seas and looked lazily to the east, waiting and praying for the phantom ocean ships that never came.

With everybody interested in this project using their influence with those in a position to help, we will have the treaty ratified and work actually started within a very short time.

I thank you.

Forward America—Which Way and What Speed—From the Republican and Democratic Viewpoints

---

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1939

RADIO DISCUSSION BY HON. ROBERT A. TAFT, OF OHIO, AND HON. T. V. SMITH, OF ILLINOIS, TUESDAY, MAY 16, 1939

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a timely and important discussion on Forward America—Which Way and What Speed, disclosing the Democratic and Republican points of view on the subject as presented by Senator ROBERT A. TAFT, of Ohio, and Representative T. V. SMITH, of Illinois, Tuesday, May 16, 1939, over the Columbia Broadcasting System:

REPRESENTATIVE T. V. SMITH

My fellow countrymen, this marks the end of these friendly debates with my legislative colleague, Mr. TAFT, junior United States Senator from Ohio. In spite of frank talk and hard blows from each of us—never personal, however, from either of us—I am happy to recall at the end our joint hope expressed at the beginning that we would raise partisanship a notch in the direction of patriotism.

Underneath our earnest differences, we are both Americans, belonging to great parties both of which are American, and engaging in a type of sportsmanship that is truly and deeply American. I wish particularly to express my pleasure at having drawn an opponent in these debates who is both literate and articulate, who is both honest and courageous. All conservatives I willingly believe to be as honest as other men, but how few conservatives have, like Mr. TAFT, the out-loud courage of their inner thoughts. It will be a safer day, politically speaking, when more conservatives out with it—as Mr. TAFT has here done—on both our basic national institutions (the Constitution, the Executive, the Congress, the Judiciary, and the States) and the major national problems now engaging attention (unemployment, security, war and peace, labor, agriculture, and the debt). I'd like indeed to register before my fellow countrymen my appreciation of Mr. TAFT and my admiration for his example. He's one of the very few conspicuous and ambitious conservatives who does not prefer silence to speech, one of the rarest of the rare who shows himself willing to go up or down with his own honest convictions boldly expressed before the country.

I salute the Columbia Broadcasting System for the courtesy of its network, and I thank the many of you who have written in and the millions of you who have not written in. I thank Mr. TAFT again for helping me help him demonstrate that one of the foundations of democracy is to accept opposition as also a standard form of cooperation. I salute you, I salute him; but I warn you that he's trying to lead America backward, whereas our concluding subject is "Forward America."

But what is "forwards", what "backwards" for America? Let me remind you of some simple truths. We live in a highly organized world and few of us like the way organizations cramp our individual style. Why, in many cities even citizenship itself is hard to enjoy because of the bossism which encrusts it. Some of my friends who belong to labor unions have talked to me frankly at times about how little voice they have in their own union. They feel squeezed by the very organizations they joined to protect their freedom.

What these labor-union men tell me, Senator TAFT says the farmers of Ohio have been telling him. The farmers have organized to aid themselves and now feel regimented, he says, by what you and I know to be the program of farm organizations. You remember the Senator in a previous debate hazarded the bold statement that his Ohio farmers resented so strongly what he called regimentation that they'd rather have no program at all than this one they've already worked out for themselves. Though many Illinois farmers tell me otherwise and though some of Senator TAFT's Ohio farmers have written me protesting his statement, I dare say that the farmers find, and will find, organizations as galling as do labor-union members.

In this discontent at the loss of individuality I believe that the farmer and the industrial laboring man are but typical of modern men in general. Listen for the same complaint from the retailers meeting in Washington next week. Moreover, the rest of us see that the labor unions have grown so strong that they can, almost upon the order of a single man, arrest the flow of coal or electric current or even of milk for our children. We see that the farmer can now limit his acreage or reduce his marketing quota and thus hoist the prices we pay for what we eat or wear. We see and resent the social danger of such organized power. It touches us as consumers. But it touches the worker as producer and consumer and narrows his rights as a man.

This epidemic abroad in the world deserves a name. Let us call it organizationitis. When it strikes, it limits our freedom and hurts our dignity as men and women. Echoing in advance one complaint of the retailers, it's chains everywhere—not only chain stores, but chain unions, chain farm federations, chain schools, and even chain churches. In our heart of hearts we all know that the spirit of the "chain gang" has broken out of prison and roams at large making the whole world a sort of prison house for free spirits. A new feudalism is upon us, in which each of us becomes, as the old word was, a "masterless man" unless we join something and let our organization try to master other organizations with which we have to bargain for a living—and then, alas, end (our own organization end) by mastering us. The universality of this feeling makes appropriate Lincoln Steffens' attribution of the secret of it to the devil—the secret that the way to ruin any and every good cause is "to tempt men to organize it."

II

I speak feelingly about this, because it hits me hard. It hits me hard as one born in a log cabin where self-help was the rule; it hits me hard as a Democrat, who distrusts organization; it hits me hard an an independent politician, who unjoined all organizations possible before standing for public office. Yet Mr. TAFT has throughout these debates blamed my party for too much government, especially for what he calls regimentation of the farmer. I admit that we have enabled the farmers the better to organize. I have even tried to claim Democratic credit for making democracy work in the factories also, through the Wagner Act and the National Labor Board. Indeed, I remind you now that the major promise of the Democratic platform of 1932 was to try to equalize upward bargaining and the purchasing power of both agriculture and labor. But—I hear a voice from the northwest corner of conscience! Don't I know that Thomas Jefferson foresaw that when America got organized in cities and collectivized in spirit, America would become like Europe and individualism would be dead or dying? Yes, I know it; and I frankly admit that I'm sad about it.

What Mr. TAFT ought to be sadder about, however, and isn't, is this—that under Republican influence America was so onesidedly organized by 1932 that the old free competition called capitalism had actually become a financial feudalism. The Republican folklore of capitalism had entrenched itself behind a folklore of fatalism which made voluntary change impossible because it held change itself unnecessary. Weren't the right men secure, even when not prosperous? When the right men are secure, they worry little about the rights of men.

There's little doubt that these conservatives were and are honest in the aristocratic belief that a moral receivership is better than democracy for the American people. They hold honestly to the "seepage" theory of welfare. Make wise and good men—that is themselves—prosperous at the top and whatever welfare is possible for the people will seep through.

They may be right about their own superiority. But no Democrat could believe it and still be democratic. Nevertheless, their organized strength was too great to be directly disbanded. Such drastic action would have required revolution in the depths of Republican depression. That was our predicament when it came our time to go forward for America in 1933. Let me illustrate it with a story.

A countryman was asked by a tourist down State how to get to the capital.

"Start here," said the countryman. "Go straight ahead for 2 miles, then turn left 1 mile, then right. No, that won't do. Let's come back and start over. Beginning here, go straight ahead 2 miles, as I said. Then don't turn left, but right for 1 mile—then left. No, that's not right either."

Thoughtfully he paused a puzzled moment and then looked up at the tourist to confess:

"Say, mister, if I wuz you and wanted to go to the capital, I'd not start here."

That was, I repeat, exactly our predicament in '33. Revolutionists might have started some more romantic place than the hole where the Republicans left the country. But we Democrats had to start where we were. Communists would have started elsewhere by drumming up class hatred that did not exist in America, not even in the hardest times. Nazis would have found a scapegoat to conceal their taking over the financial power and then would have used the power against farmers, laborers, and the capitalists themselves. But we were Democrats who had to start where we were, with vast corporate interests overorganized against the American people.

The Republicans see this evil of overorganization, but see it only by halves. They really don't want labor to organize nor the farmers either, though they bear such ills as best they may in hope of 1940 and beyond. But they do want the present corporate structure to remain and the predominant influence of business to continue (200 corporations, if not the 60 families, controlling America). Their own self-interest organized as conscience prevents their clearly seeing that if finance and business are thus overorganized, workers must overorganize or suffer eclipse of their rights as human beings. And if both these sides of the industrial process are overorganized, farmers must overorganize. And if both great producers, industrial and agrarian, are thus overorganized to protect their interests, consumers must eventually overorganize to protect their rights. And so organizationitis spreads from this single Republican source of group selfishness and rages throughout the body politic. We Democrats, not being revolutionists, have had to treat the disease homeopathically, appearing to make it worse as the only peaceful means of making it better. So much for the disease, its cause in corporate selfishness, and its development arrested by the counter-claims of farmers and industrial workers.

III

What now about the future? And is there realistic ground for choosing one party rather than another to hold the disease in check and to go forward to a cure? Yes; there is ground for this choice, though the situation is chronic and confused. Ground for choice there is, however, and room for hope as long as the liberal spirit of the Democratic Party endures, in whatever form.

Neither party, of course, knows what to do about unemployment; and neither can balance the Budget save by a prosperity which both will woo but which neither knows how to win. But the Democratic Party will keep the Nation balanced meantime by doing its duty to the unemployed gladly, rather than glumly with Herbert Hoover. As regards social security for the unemployed, it's the Democratic Party overwhelmingly; for we not only caused social security, but we believe in it. The Republican Party does not believe in it as an ideal—at least Mr. TAFT has said that he doesn't—and so it tolerates social security as political expediency, flirting the while with wild and strange innuendoes of $200 a month dispensed according to the political rather than the financial calendar. All checks are equally good, you know, until you have to cash them.

As regards a more lasting remedy, moreover, for organizationitis, the Republican Party is clearly at a disadvantage. It cannot renounce its old allegiance to the one-sided organization of life which it has fostered. Nor can it rob itself of the fruits of its corporate organizations by suffering agriculture and labor to as strongly organize as it has organized industry. So the best we could hope through it would be a return to financial feudalism, labor and agriculture knuckling under to a dishonorable peace. That would involve such a loss of purchasing power as again to undercut the financial feudalism as in '29. That's the best to hope, however, from the Republican Party, recurring spiral of disaster.

The worst to fear from it is that agriculture and labor fighting back through the organization we've given them the corporate power will again lay hold of the Government, as under Coolidge, roughly pushing labor toward serfdom and agriculture toward peasantry. Even if the party then escape the corruption of the old Ohio gang and the honest lethargy of Hoover, it will become a sort of Republican fascism. Fascism arises, you know, from having all great interests organized and incorporated. Then the state finds it easy if not, indeed, necessary to become the incorporation of the corporations. Organizing thus the organizations, the state proceeds to work upon the many the will of the few incorporators, now turned conspirators. Mussolini, let us remember, calls his form of government the corporate state. And any government that arises from strident competition among corporations is likely to become itself the corporate holding company of all the other organizations incorporated under it. If that's the road ahead, let Republicans lead. They'll find it more natural. But does America want fascism, even if we could get it without its cruelty? If with the Republicans at their worst, we are to move backward to this corporate fascism, or at its best to an older feudalism of wealth, let us pray that our retreat be not in the wintertime and the speed be slow.

I for one am convinced that the American people do not want that ending and so do not want to journey down that road. Indeed, we do not want to live in the shadow of such pressure groups as already make our politics closely akin to war, whether the group pressing be labor, agriculture, or business. The only road of safety is to keep these organized pressures equal and balanced against each other until their fierce competition can be subdued together into a more cooperative order. It's certainly not safe to let either of them run away with the show, as Republicans have let the commercial interests. I refuse myself to believe that the middle way of practical democracy, already operative in small countries like Sweden, cannot be attained in this great Republic, through our traditional spirit of equality and friendliness. Pending the return to cooperative individualism, the least modification of capitalism which the times permit is to equalize between these great bodies the competition which capitalism presupposes between equal individuals.

But there's no way to maintain this modification or to return toward the cooperative democracy of competing individuals save through the machinery of representative government. Public power is the only possible antidote to private power. And I may add that public taxes are much better than the private taxes of prices controlled from behind the scenes. It is the genius of the Democratic Party to accept, therefore, a paradox that terrifies honest Republicans and enrages selfish Republicans. It is the paradox that more government is required to get more freedom for the most people. The only power we Democrats finally recognize is the power of the whole people, which is government. Today we have used that power to curb corporations of business. Tomorrow we may have to curb corporate labor. And who knows that day after tomorrow we may not need it to curb farmers grown too fiercely strong through organization? This common power of democratic government is our only reliance against corporate greed, however organized and wherever found.

To break the old bottlenecks of control and to prevent new bottlenecks from forming we are streamlining our democratic government. Seeing the call for more public control of pressure organizations, I have in these debates thought it useful to give a new and unexciting name to a government adequate for the tasks before us. This philosophy of government I have called the new federalism. I call it federalism because, like Alexander Hamilton, the great old Federalist, I believe that where government is required it ought to be made efficient through coordinating powers long left inefficient by separation. I call it new because, unlike Hamilton, I do not believe "the people a beast, sir," but the source of all power and the only rightful beneficiaries of their own power efficiently organized as representative government.

This democratic centralism is giving us cheap electric power. This ought to enable us to decentralize industry. That done, we may democratize finance by a general policy of lending at cost. Both these done, farming and labor could again become, as work should be, a way of life instead of, as now, an individual struggle for existence and an organized competition against corporations for power and place. Democratic centralism of government thus points to the decentralization of every privileged form of collective power and promises a slow cure for the worst form of that social disease, organizationitis.

I say "slow" advisedly, for, as the White Queen remarked to Alice: "Here, you see, it takes all the running you can do to keep in the same place. If you want to get somewhere, you must run at least twice as fast as that."

Whether we shall actually move forward in this direction toward individual freedom or backward with Republicans to feudalism or fascism it is for the people themselves to say. As for me, I am grateful that tonight we can still enjoy in humility the American way of friendliness and humor. Such a happy way of life enables a Smith to look at a Taft and counsel a Taft to argue with a Smith. Thus the American way unites in tolerance a mellowed tradition and family pride, on the one side, with a joy in skill and a feel for the multitude, on the other.

Long may it remain so!

Now, as the Senator and I, contentedly alone, or happily together, stroll from this studio down the grassy Mall, we'll pass from Washington's lofty monument in sight of Lincoln's majestic home, on down by the new shrine rising to Thomas Jefferson. Beyond Jefferson's place, the river, which just keeps a-rolling along. This quiet Potomac, lazily coursing its way to the sea since before Washington was, will become tonight for me a silver symbol of national unity across the gulf of years, softening the landscape of all present political differences. It is fitting that in "Old Man Ribber's" presence we thus celebrate at the end of controversy our common devotion to a beloved fatherland: In our eyes its beauties of nature and in our souls the legacies of its great sons.

Triumphing over the palsy of fear felt elsewhere in the world tonight, the glory of such a Nation as this we'll feel in the high beating of our common pulse of gratitude. And as our eyes wander from lights of city street and sheen of river to the evening skies above, we'll commune for you all with a vast "universe not measured by our fears," until—as the great dead Holmes further said—"after the sunset and above the electric lights there shine the stars."

SENATOR TAFT

Citizens of the United States of America: In this closing debate, I wish to thank Representative SMITH for his kind words regarding myself, and even more for the spirit of tolerance and friendship which has governed our differences of opinion. It has been the greatest pleasure to debate with him, in spite of his steadfast opinion that I am always in the wrong. I admire his eloquence, and his wonderful command of the English language. If, with all his ability, he is unable to find a logical and consistent defense of the New Deal, certainly it is not his fault, but that of the New Deal itself.

Forward, America. But which way is forward? Surely we have been going forward during the last 150 years toward a goal which the Pilgrims established in 1620, and which was carried on by the founders of our Nation. That goal has increased individual freedom, with more material welfare to enjoy it. Surely we went forward in spite of this talk about financial feudalism. Men were more free in 1932, before the New Deal, than they were in any other country in the world. Their material welfare had steadily increased until the average workman had a standard of living three times as high as it was in 1820. The average new dealer seems to think that because 1933 represented the bottom of a financial depression, there was no democracy or prosperity in the United States before Franklin D. Roosevelt. Surely a majority of the people decided every 4 years what kind of a government they wished, and surely the Congresses then, as now, voted the way they thought their constituents wanted them to vote.

It is the new dealers who no longer wish to go forward along our well-marked path. They started along that path in 1933 for a few years, but they have wandered further and further into the forest of Government regimentation until, in complete darkness they are moving back in the direction of the Middle Ages. It is quite true, as Representative SMITH says, that they "have moved in both directions at once." Some of their measures have sincerely tried to make our system work; others threaten to destroy America as we have known it.

Unlike Representative SMITH, many of the new dealers have no concern whatever for individual freedom. They are collectivists, like Marx and Lenin and Mussolini. They believe in planned economy; that the Government should regulate every detail of industrial and commercial and agriculture life. They are willing to sacrifice individual freedom in order supposedly to improve the condition of the poor and increase their material welfare. But in this purpose the policy has completely failed. There are more than 10,000,000 people unemployed today, and the largest relief expense this year, 10 years after the depression, than any in the history of the United States. Farm prices are lower than they have been for 6 years. Businessmen are discouraged and indignant. Deposits have piled up in the banks because rich and poor alike are afraid to put their time or money into private enterprise, because they fear that Government regulation will prevent success, and Government taxation will take whatever profit there might be. The New Deal policy is the only one which has ever plunged us into a second depression before we were out of the first. If any policy leads backward and not forward, it is the policy of spending billions of borrowed money, and piling up a tremendous debt for future generations to pay. A policy which inevitably leads to bankruptcy and inflation of the currency will not only make the poor people poorer, but it is likely to force a socialism which will utterly deprive them of individual freedom.

Representative SMITH tonight states the philosophy which dictates this backward policy. He says, "The way to get less regimentation of our individual lives is to suffer more governmental regulaton." He adds, "We have added political regulation to economic regimentation, and have made it stick." He admits that a continuation of this policy leads to the corporate state of Mussolini, and his only suggestion for avoiding that goal is that we support the work of the Monopoly Committee, which is trying to find out whether monopolies exist. Think of it. The new dealers, who know everything in the world about labor and securities and agriculture and every other man's business, excuse themselves from failure to prevent monopoly in industry because they have only had 6 years to find out about it. No, the New Deal policy is leading us rapidly backward today, and it is a faint hope that its direction can be turned by any monopoly committee of Congress.

It is the Republican Party today which looks forward, and I am quite willing to accept Representative SMITH'S proposal that we start from 1932. Instead of throwing away all past experience and embarking on uncharted seas, we would keep the good things which the American system produced, encourage the principles which produced them, and correct the abuses which crept into it as they will creep into any system. Let us remember that conditions in the twenties in many ways were better than they ever have been since. Farm prices were more than twice what they are today. Unemployment practically did not exist. Men were eager to engage in new industries, expand old industries, and build up both production and employment. If we had the same national per capita income today as we had then, we would have ninety instead of sixty-seven millions and if we had this 35 percent more income than we actually have today, we could put most of the unemployed men back to work. We must restore conditions in which thousands of men and women every year were willing to invest their time and money in building up the United States and the prosperity of the people of the United States.

Representative SMITH says that I "wish the many well through the assured welfare of the few." Of course, this is not true. No one has ever assured the welfare of any business enterprise until the new dealers tried to do it under the N. R. A. It is said that two out of every three new businesses fail. It is not the assurance of success; it is the existence of conditions which make it likely that a man of exceptional ability or ingenuity, who is willing to work hard, shall have a chance to obtain exceptional rewards for himself or his family, a chance which shall not be destroyed by Government regulation and interference. This, says Representative SMITH, is the "seepage theory of welfare." As a matter of fact, the men who are put to work in new jobs by new enterprises get their living and their purchasing power many months and often many years before the men who started the enterprises receive their reward, if they do receive it.

We have tried the alternative theory of producing prosperity based on dishing out Government funds to great classes of people, and while such action has been necessary it has certainly failed completely to produce general prosperity, and has not even restored those men who receive it to the material welfare they enjoyed in the twenties.

What were the abuses to be corrected in the system of the twenties? There were too many people rich beyond their deserts. I thoroughly approve of the New Deal measures to prevent fraud and sharp practice through the sale of securities, which was one of the principal methods of undeserved wealth. There were undoubtedly some monopolies whose owners received profits greater than they deserved. I may say, however, that the monopolies before 1932 were nothing to the monopolies fostered and built up by the New Deal under the N. R. A. For a number of years the New Deal was dominated by the theory that all business should consist of Government-controlled monopolies. Undoubtedly the Government should keep competition free and open, so that men may not make profits which they do not deserve, but I feel that the existence of business monopoly has been exaggerated. In practically all of the articles which average people buy there exists today, and existed in 1928, the most intense competition, notably in foodstuffs and clothing and automobiles.

The Republican Party believes in a sincere effort to keep competition free and open to the end that prices may be lowered and undeserved profits reduced. I might add that more antitrust suits were filed under my father's administration than under any Democratic administration since that day. If wealth has been gained fairly, we believe that it can be reduced and is being reduced by income and inheritance taxation, and that there still prevails largely in America the old tradition of the nineteenth century, "From shirt sleeves to shirt sleeves in three generations."

Another abuse of the system of the twenties was that the distribution of income was not sufficient for a decent living for the poorer groups. I might point out that this condition has always existed under every system, and certainly exists in Russia under communism today. To increase the condition of the poor has been the earnest desire of every public-spirited statesman in either party. The question is not one of purpose, the question is, What method will improve that condition? The Republican Party thoroughly approves of old-age pensions, unemployment insurance, relief when necessary, and subsidized housing, but all of these together have not improved the condition of the poor over what it was in the twenties. There are more underprivileged today than there were in the twenties. There are more people wholly unemployed, and many more earning a bare subsistence on relief. If we could restore the economic and business activity of 1928, we could add $23,000,000,000 to the national income, most of it to the relief classes. Relief and old-age pensions together do not add more than $4,000,000,000 at a maximum.

Finally, in the twenties it is probable that the laboring groups and the farm groups were at a disadvantage in dealing with individual employers and individual buyers of farm products. The Wagner Act, to promote collective bargaining in the labor field, and the farm cooperative acts, to encourage collective bargaining on the part of the farmer, are sound measures, if properly administered, to see that oppression does not arise in the normal processes of bargaining and competition. But Representative SMITH wholly fails to distinguish between measures designed to assist cooperative organization, and measures proposing that the Government regulate agriculture and labor and industry. He confuses self-organization with governmental bureaucratic organizations. It is no slight confusion. It is the difference between freedom and slavery.

In the Guffey Coal Act to regulate prices and wages in the coal industry; in the Wage Hour Act, except to the extent that it is a real minimum-wage law; in the agricultural acts, which practically fix the prices of agricultural products; in the administration of the Wagner Act, which goes far beyond the purpose of that act to tell employers how they shall run their business; in the power sought to make arbitrary changes in the value of the dollar and the currency to effect some individual's idea of what prices should be, we see being worked out a complete Government-controlled economy. In order to allow the farmer to organize it is not necessary for the Government to pay out $850,000,000 in benefits or loan money on cotton and wheat in excess of the value of cotton and wheat. These measures, like the N. R. A. and the A. A. A., lead backward. If we ever get to the point where the Government fixes the price of all basic commodities, we cannot stop short of complete regimentation. There is a fundamental distinction between measures intended to keep the course of competition and investment and

individual incentive open, and those measures intended to direct the activities of the men who engage in that competition and industry. Above all, we have the entire Government regulation process stimulated by the theory that Government spending can produce prosperity, a theory utterly disproved by our actual experience and by every sound economic principle.

The new dealers today no longer go forward along the path which this country pursued for 150 years. They admit it. They say that everything is changed; a new era has come, requiring new methods. I don't believe it. Americans are still American. They have the same basic ideals which they have had for hundreds of years. They are just as eager for individual freedom. They are just as anxious to be let alone by Government agents. They are just as anxious to run their own local affairs and their own schools. They don't like relief, and they know that a reasonable prosperity can do away with the necessity for relief. They know that thrift and ability and hard work ought to bring rewards today, as they did in the "horse and buggy" days, if it were not for Government interference. They know that only the Republican Party can avert the disaster which will inevitably result from deficit spending, arbitrary price-fixing, excessive taxation, and Government regulation of everything and everybody.

We have heard a good deal about the depression of 1933, and the terrific condition left by the Republicans. But the depression of 1933 existed throughout the entire world, while the depression of 1937 was a special American depression, created by New Deal policies. Even the depression of 1933 was not solely a Republican affair. The biography of CARTER GLASS, which has just appeared, makes it very clear indeed that the bank crisis of 1933 was largely produced by the course of Franklin D. Roosevelt between the day of his election and the day of his inauguration. It is now perfectly clear that Roosevelt not only blocked the sound fiscal policies proposed by Hoover, but that he refused to correct the impression, which really had such a sound basis, that he was contemplating a devaluation of the dollar.

Retrogressive Tendencies Since the Second The Hague Conference of 1907

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 22, 1939

ADDRESS BY HON. FRED KENELM NIELSEN

Mr. GEARHART. Mr. Speaker, on May 10 last, the Honorable Fred Kenelm Nielsen delivered an address to a joint meeting of the Federal Bar Association and the section on international and comparative law of the American Bar Association which will be regarded, in the light of the developing international situation, as a most timely expression. His address deals with important international problems under the significant title of "Retrogressive Tendencies Since the Second The Hague Conference of 1907."

In view of Mr. Nielsen's wide experience in dealing with specific problems arising out of international relations, his thorough familiarity with and understanding of the general subject of international law, a field in which he is regarded as one of the greatest living experts, anything that he might say will command the respectful attention of the Nation.

His labors as chief counsel for the United States in arbitrations which the United States has conducted with Great Britain and Holland before the Permanent Court of Arbitration at The Hague and as the American representative on numerous international tribunals and conferences, coupled with his years of public service as Solicitor for the Department of State under previous administrations, qualify him particularly to speak on the subject which he selected for the occasion I have mentioned.

Mr. Speaker, in accordance with the unanimous consent of the Members of this body, expressed but a moment ago, I hand the text of Mr. Nielsen's address to the Public Printer and ask that it be spread upon the pages of the CONGRESSIONAL RECORD.

Mr. Nielsen's address follows:

For a considerable period I have been concerned with realities in the fields of international law and diplomacy. And in retrospect today there is not in my mind any fascinating panorama of international affairs. My concepts may be inaccurate and muddled, when I have a sense of having lived through two rather distinct epochs.

DECADENCE OF "THE EMPIRE OF LAW"

In 1907 many nations assembled at The Hague, through representatives, to make some international law—conventional law, as we say—written international law, formulated in so-called law-making treaties, multilateral agreements, having the general, or substantially general, assent of the nations of the world, which is the foundation of international law. They proceeded to duplicate, in a measure, and to amplify work undertaken at the so-called First The Hague Conference of 1899. They formulated projects to further the settlement of international disputes by judicial methods and other forms of friendly adjustment, mediation, good offices, commissions of inquiry. They framed agreements to control or regulate the conduct of warfare. Preambles of conventions recited purposes to extend "the empire of law" and to give effect to established principles of law, springing from "the usages established among civilized peoples, from the laws of humanity, and the dictates of the public conscience."

At these conferences, as is usually the situation at similar gatherings, conflicts of views and of interests, and I may add, at times vanity and stubbornness of negotiators, may have influenced the formulation of arrangements, which were lacking in desirable concreteness and comprehensive scope. Yet I think it may be said that there was then a manifestation on the part of governments and representatives of a considerable degree of sincerity of purpose, and that the conventions adopted were interesting landmarks in international relations, not without practical value, if they should be respected. It was planned to have a Third The Hague Conference, but, after 30 years, the third conference has not yet met. Of course the World War was a serious interruption.

Since the termination of the war, there have been economic conferences, political conferences, conferences to codify law, conferences to limit naval armaments. At some of them, little or nothing was accomplished. And assuredly subsequent attempts, or lack of attempts, to give useful permanent effect to such arrangements as have been concluded record no inspiring nor heartening accomplishments.

When I say this, there readily comes to mind the closing session of the so-called Disarmament Conference, held in Washington in 1922, seemingly under auspicious conditions. Particularly do I recall the impressive, beautiful address delivered by President Harding in that pleasing manner which graced his utterances on formal occasions. He expressed deep gratification over the accomplishments of the conference, and he said that faith plighted there and kept in honor would mark a new and better era in world affairs.

I think that all delegates present shared his hopes and his beliefs. Yet today the tangible results of that conference have vanished. Nations are not engaged in limiting naval or land armaments. And the international society is largely in a jungle state. That may be said when account is taken of rules and principles of law pertaining to war, civil war, and international war, as we have seen conflagrations of war in recent years. Equally pronounced, though, of course, less horrifying, is the degradation of law pertaining to other subjects entering into international relations, such as respect for property rights; respect for the sanctity of international covenants; respect for national sovereignty; the settlement of international disputes by judicial methods.

PROBLEMS IN THE WESTERN HEMISPHERE

In this Western Hemisphere, we have had difficulties with countries south of the Rio Grande such as not infrequently arise between nations. With those countries, questions pertaining to the conduct of warfare, which have been discussed considerably of late, have given our Government but little trouble. Occasionally we have been confronted with complicated situations arising out of periodic insurrections with which these younger states have had to deal, since they themselves became successful insurrectionists.

In our relations with our southern neighbors, we have often been concerned with questions relative to the protection of rights of person and property of aliens. Interests of Americans in some of these countries have been jeopardized, damaged, destroyed, or confiscated. From time to time, complaints have been made against authorities in our own country with respect to acts or omissions affecting rights of person or property of aliens residing or sojourning here.

QUESTIONS BETWEEN THE UNITED STATES AND MEXICO

I presume it may be accurately said that such problems have arisen most frequently and most acutely between the United States and Mexico. Over a considerable period, the chief issues have been with respect to article 27 of the so-called Carranza constitution of 1917 and Mexican legislation enacted to give effect to that article.

Whether or not it may be correctly said that these constitutional provisions were drafted with purposes hostile to foreigners, the foundation was laid for measures which foreign proprietors considered to be inimical to their interests. And the Government of the United States has contended that acts of Mexican authorities affecting property of American citizens have been in derogation of well-established principles of international law. Mexican authorities have explained that these constitutional provisions were framed in furtherance of an enlightened policy; to safeguard the interests of the Mexican nation and its citizens; to insure future

economic progress by preserving national resources and affording opportunity to Mexicans to enjoy them. Much detail being omitted, it may be said that two classes of provisions have been the principal subjects of controversy; those declaring direct ownership of certain subsoil products to be vested in the nation; and those having for their object the division of large estates and the increase of the extent of communal holdings. These are now rather long-standing questions. Recently a further complicated situation arose out of the seizure of oil properties, called an act of expropriation.

With respect to the taking of land in the execution of the so-called agrarian policy, the principal objection of our Government has been that payment was not made to unfortunate owners. The Government of Mexico has contended, while observing that Mexican law requires compensation for expropriated property, so-called, that international law does not. I hope that this contention may properly be regarded as unsound. The Mexican foreign office has further declared that the taking of property for Mexican public purposes is a domestic question and has declined to arbitrate some pending issues pursuant to the General Treaty of Inter-American Arbitration, concluded at Washington, January 5, 1929.

In a sense, expropriation is obviously a matter of domestic regulation. However, I do not consider that the exercise of rights pertaining to the taking of property of aliens involves solely a domestic question, as that term is understood in the technical meaning of international law. Broadly speaking, international law recognizes that a nation has plenary sovereign rights with respect to all people and all property within its jurisdiction, although acts of authorities of a government and its laws must square with the prescriptions of international law, since that is the supreme law of all members of the family of nations with reference to subjects entering into international relations. Of course there are some objects with which the law of nations is not concerned, even though they importantly enter into discussion between nations. And there are some relatively few so-called "domestic questions" which may be said to relate to things with reference to which international law recognizes that a nation has such plenary rights, that no action taken with reference to them can violate international law, such as immigration, emigration, exports and imports, the coming and going of ships in a nation's harbors. Limitations of time prevent me from inflicting on you a discussion of interesting questions of international law and domestic law involved in the protracted controversies between the two Governments, or discussion of the narrow scope of the arbitration agreement of January 5, 1929, resulting from numercus reservations.

The Pan-American Treaty of January 5, 1929, was intended, I understand, to provide for compulsory arbitration, so-called. Toward the close of the proceedings of the conference which framed it, a distinguished American delegate, the present Chief Justice, announced that the Government of the United States was prepared to accept the treaty as framed without any reservations. A Mexican delegate, Dr. Gonzales Roa, made a statement at a session of the conference regarding reservations, and he said that they would not be discussed. It seems to me to be somewhat odd that it should be briefly explained that there should be no discussion of reservations, which might be, and probably were, of more relative importance than any provisions of the arbitration agreement itself. The delegate subsequently presented a Mexican reservation to the effect that the Government of Mexico would not arbitrate, conformably to the treaty, any differences falling under the jurisdiction of the courts, as it was expressed, except denials of justice predicated on final decisions of the courts. Other governments followed with a variety of reservations similar to that presented by Mexico. The Mexican reservation evidently in specific terms abridges as far as possible the scope of arbitration. Some previously concluded arbitration agreements of comparatively recent date had a tendency in the opposite direction.

THE PLIGHT OF INTERNATIONAL ARBITRATION

I have referred to the convention concluded at The Hague in 1907 relative to the settlement of international disputes. At this point I may briefly touch on a tendency with reference to the general subject of the adjustment of differences among nations. I do so with a feeling of great chagrin. The procedure has been an outstanding American principle. I have been extensively concerned with international arbitration, but it is a very sorry subject with me. Over a long period I have seen mockeries made of proceedings befitting of sovereign nations appearing as litigants. The saddest feature of that situation is that our own Government has been so greatly responsible for the retrogression, to use an utterly unjustifiably mild expression, in that system of settling disputes.

It would be easy to furnish an abundance of illustrations of delays, some interminable, in the settlement of controversies; lack of interest in the subject; a failure to improve arbitration agreements and methods of procedure; and, immeasurably worst of all, a lowering of standards in the personnel of those entrusted with work of this character. Given a disposition to contribute something more than lip service to the cause of international arbitration, some improvements could readily be made. Others would require understanding, intensive, conscientious efforts.

"INTERNATIONAL STANDARDS" AND "DOMESTIC STANDARDS"

My subject makes use of the word "tendencies." I have referred very sketchily, merely for purposes of illustration, to controversial questions between the United States and Mexico relative to property rights, so-called. It is interesting to take note of a somewhat recent tendency in the policy of dealing with problems pertaining to both rights of property and person of aliens. I have in mind the signing by representatives of the United States and representatives of South and Central American states of a convention or treaty at Montevideo on December 26, 1933, at a pan-American conference. That convention, relating to rights and duties of states, contains stipulations making a declaration of the so-called national-treatment theory; that is, that international duties are fully met, when aliens and nationals are treated precisely the same, conformably to local law, under which they enjoy equal protection. The convention also declares that no state has the right to intervene in the internal or external affairs of another state. By far the most common form of intervention in the internal affairs of a country is that undertaken in behalf of nationals, when a government considers that the conduct of internal affairs of another government has been of such a character as to entail international responsibility on the part of the latter. However, neither the United States nor Mexico seems to have felt precluded by the convention of December 26, 1933, from exercising that form of intervention. Both have done so in recent years.

For better or worse, over a long period, our Government emphatically rejected the idea that the standard of the propriety of governmental acts must be determined solely by local law, except perhaps as regards acts committed in contravention of that law. We endeavored to maintain the international standards. Under international law, aliens at times receive better treatment than that accorded to nationals. International law prescribes certain standards of civilization, so to speak, and the propriety or impropriety of the treatment of aliens is tested by those standards. As I have already observed, not alone acts of authorities of a nation but also its laws, must square with the supreme law of members of the family of nations if a nation's honorable position as a member is to be maintained. Not infrequently our Government has complained in behalf of its citizens against laws, which it has considered resulted in confiscation of property.

Of course nations in this hemisphere cannot by a treaty alter the law of nations; that can be done only by the general assent of the nations of the world. But I assume that they can properly, from a legal standpoint, agree that, with reference to certain subjects, the law shall not be given application as among themselves.

A state can confiscate the property of its own nationals, and of course that is no concern of international law. And, as I have observed, I presume that a state can bind itself by treaty stipulations not to invoke rights which inure to its nationals under the law of nations. Constitutional guaranties stand in the way of confiscation in our country and safeguard vital personal rights. I like to think that those guaranties, some with respect to rights of person in the sixth amendment to the Federal Constitution, and others with respect to rights of person and property in the fifth and fourteenth amendments, exemplify the international standards.

Of course, these constitutional provisions, with the great superstructure of interpretation framed by our courts, are not written into any conventional international law. But, without any misleading confusion of domestic law with international law, effect may usefully be given to the broad principles underlying these provisions, as judicially interpreted, in the solution of internatonal problems involving rights of person and property aliens. I believe that, in the administration of our domestic jurisprudence, these guaranties have, on the whole, been given application in a gratifying manner by our courts in cases involving rights of aliens.

The American delegation to the conference which framed the treaty of December 26, 1933, made a reservation with respect to substantive articles. According to international practice, a government may, with the assent of other contracting parties, exempt itself from the operation of a part or parts of a treaty. Perhaps the reservation made in behalf of the United States might be called an interpretative reservation, since it did not specifically eliminate our Government from the operation of any stipulation. It was stated by Secretary of State Hull that "no government need fear any intervention on the part of the United States during the Roosevelt administration," and Mr. Hull further declared: "I desire to say that the United States Government in all its international associations and relationships and conduct will follow scrupulously the doctrines and policies which it has pursued since March 4 which are embodied in the different addresses of President Roosevelt since that time and in the recent peace address of myself on the 15th day of December before this Conference and in the law of nations as generally recognized and accepted."

OBSERVATIONS RELATING TO CIVIL WAR AND INTERNATIONAL WAR

In connection with some brief observations with reference to law pertaining to war, I shall pass over methods employed by belligerents in the conduct of hostilities. My information is too meager to warrant any discussion of recent wars, even if time permitted it.

I have referred to the Convention of The Hague of 1907 relative to the conduct of war on land. I might at the same time appropriately have mentioned the unratified agreement concluded at London February 26, 1909, with regard to naval warfare. To be sure, there is something ironical in the thought of refining instrumentalities of destruction and death employed in settling international disputes. And the distortion during the World War of reasonably well-established rules and principles of maritime law affecting rights of neutrals is fresh in our minds. However, it seems to me that it may still be worth remembering, that over

a long period there was some effort throughout the world to mitigate the horrors of war. And these international agreements aimed at least at some little progress in alleviating the condition of noncombatants as affected by operations on land and on the sea.

In taking account of the conflict in Spain, it seems to be possible to draw some interesting comparisons with the situation resulting from our own great internecine struggle in the sixties.

Some high British officials were unfriendly to the Federal Government. The British Government did not fully live up to their obligations of neutrality.

Our own Secretary of State, Mr. Seward, slipped, I think, with respect to at least one important problem of law. But in doing so, he probably committed no harm except, perhaps, to his own cause. Early in the war, he complained against the action of some European governments, including the Governments of England and France, in recognizing a status of belligerency, so-called, of the Southern States. In progressively inconsistent reasoning he continued to complain of the recognition of a clearly existing situation, recognized through his own declarations and acts of the Federal Government itself.

Roughly speaking, it may be said that insurgents attain the status of belligerency, when they occupy a definite area of a country, exercise some form of governmental authority, have organized armies, and conduct hostilities in accordance with the rules of war. They may properly be recognized as successful insurgents, as the new, established government, when, but not before, it is shown beyond doubt that they have extinguished the previously existing government.

Acts of some governments with reference to the struggle in Spain revealed, it seems to me, little or no concern for the maintenance of well-established rules and principles of law. We observed odd types of recognition, not resorted to during our Civil War. Early in the struggle, when it might be doubted that the insurgents could justifiably be recognized as belligerents, two European governments and three Central American governments purported to recognize them as the existing government of Spain. We heard of proposed bargainings with respect to recognition. Early in the war authorities of a government announced that they would not tolerate interference with the commerce of their country by the loyalist government or by the insurgents. Yet the Spanish Government assuredly had a right to interfere with neutral commerce on the high seas and in Spanish waters by proper exercise of measures relating to blockade, contraband, and visit and search of neutral vessels. The insurgents had the right to do so, I believe, when they met the requirements of a status of belligerency which I have roughly sketched. Rights and obligations derived from law pertaining to these subjects are, in my judgment, determined by existing facts, not by political policies of governments. Foreigners personally sympathetic with the cause of the North enlisted in the Federal armies during our Civil War. Doubtless some foreigners enlisted in Southern armies. Such acts had no significance from the standpoint of international law. Organized troops sent to Spain occupied an entirely different situation. An undeclared international war was carried on in conjunction with a civil war.

BELLIGERENT OPERATIONS ON THE SEA

Neutral nations often have a very direct, important interest in warfare between other countries and in civil strife which may arise there. Such interest on the part of our own country in the past has been linked in the main with problems as to the proper exercise of so-called belligerent rights; rights of belligerents to interfere, to a limited extent, with neutral commerce on the high seas and in belligerent waters.

From the earliest days of the Republic our Government made efforts to curb the activities of war. In other words, we have labored toward an objective sometimes loosely designated as the freedom of the seas; the maintenance of the seas, as far as possible, as commonly owned highways, in time of war as in time of peace. I think that those efforts had their origin largely, at least, in a conviction that their progressive realization would be progress in an advancing march, however slow, toward obviously rational objectives.

However, in recent years much has been dogmatically said to the effect that a continued stand for traditional policies has become not only illusory but also indefensible. It has been explained, perhaps truly, that we should rationally realize that in the future those remaining at peace will be conceded just such privileges of commerce as unfettered belligerents may consider will not interfere too much with their hostile operations. That, to my mind, is a remarkable glorification of the activities of war.

Assuredly the prospects for improvement in the application, development, and clarification of law are not promising at the present time. Bad cases make bad law, we often observe among members of the legal profession. Conditions such as those under which we live may easily be conducive to some sophistical reasoning, even among lawyers. What are rational deductions of the lawyer from the mass of evidence of the decadence of "the empire of law"?

THE PLIGHT OF INTERNATIONAL RELATIONS

It may not be strange, that in these days we should occasionally hear remarks to the effect that for practical purposes the system of international law has disappeared through gross violations. But violation of law does not ipso facto abolish or alter law. Furthermore, it is to me a repulsive view, whatever justification there may be for it—and assuredly there is some—that there can be no real and useful system of international law, unless back of it there is sanction, such as in domestic law is enforced through the sheriff, the marshal, sometimes the Army and the Fleet. And I do not feel that it can accurately be said that international law, so-called, is really not law, because it has no sanction other than national honor. That should be the most solemn, the most-potent sanction. When we do not speak in terms of legal physical force, can it not be truly said that the ultimate sanction back of any system of law, international or domestic, is the honor of a government and of its people? It may be somewhat consoling, as well as disturbing, to recall that the sanction of national honor has at times sufficed to maintain international law, when important rules and principles were under a strain, greater, it seems to me, than that to which they should have been subjected in recent years.

References to conventional terms such as "family of nations" and "international standards" may sound somewhat naive to ears that recently have heard from a high source descriptions of some kindred relationships as "bastard relationships" and of the "relationships between states" as "the relations of force." However, I might have referred to a broad discussion of international standards by a contemporary scholarly Italian jurist of high distinction. The operation of these standards is excluded from some limited groups, he observes toward the close of his discussion, where he says: "Nomadic tribes or savages, because of their inability to comprehend and consequently to desire the standards which are the foundation of international law, have no share in their maintenance or in their benefits."

Another contemporary, equally eminent, German jurist, while referring, shortly after the World War, to the heavy anxieties of younger generations, expressed high hopes and expectations, seemingly reasonable at the time, with regard to future international activities, in these words: "the younger generations may find their compensations in a realization of belonging to an age, which with unparalleled boldness, has undertaken a task, designated by the great German philosopher Kant as the greatest problem of the human race; the establishment of an organization of a humane society, founded on law." The alternative to life under a system of law is a jungle, of which we have seen some hideous patches in the world in recent years. At least until the Golden Rule diplomacy, proclaimed by Secretary of State John Hay, shall have penetrated the world, including the United States, with an abundant bloom, such as he probably never visioned, even in dreams, we must still have recourse to the makeshifts of law in international relations, as we must in domestic affairs.

Some interesting questions are readily suggested by pronounced tendencies noticeable during the last two decades. That cannot be convincingly said as to categorical answers.

With regard to influences tending toward the abolition or abridgment of what I have termed the international standards, is it clear that either will be conducive to the very desirable elimination of friction among nations? Seemingly it should. But, rather than an alteration of the standard, might a wiser course be to abolish altogether the right of governments to interpose for the protection of their nationals abroad? It is interesting to note that, after certain practices had continued, as Secretary of State Hull recently complained, for many years, and 5 years after the signing of the Montevideo Convention, containing a declaration of Dr. Calvo's equality and non-intervention theory, Mr. Hull invoked the international standard. Have attempts to maintain the standards degraded principles of law in respect of national sovereignty or impaired the administration of external or internal affairs of government, or has the result perhaps been just the reverse?

With respect to efforts to curb the activities of the warriors on the seas, have past efforts of our Government and other governments been ill-conceived and futile? Are we forced to the conclusion that they have merely led us up a blind alley? In whirlpools of confusion, have we in recent years charted a course toward a true goal, however distant it must be?

Is a sometime outstanding American principle of the settlement of international disputes by judicial or quasi-judicial methods on a high plane merely a humorous fetish? Is pecuniary redress for losses not a worth-while subject of seriously conducted international litigation? Are arbitrations dealing also with other subjects not worth the trouble and expense they entail? Have decisions of competent, honorable international tribunals and opinions explaining such decisions but an inconsequential value in clarifying and strengthening law? Should we view with indifference and perhaps with a sense of humor, grotesque methods of procedure and worse methods and even fraud, when according to international law a government's honor and its sound judgment as to law and facts must be back of an international reclamation?

When we take account of some of the tendencies to which I have referred, and of the distressing obstacles hampering the formulation of all worth-while international arrangements, and of the wreckage of the structure of law consequent on war, and of the comparatively recent destruction of two weak nations through undeclared and unprovoked wars, and of other phenomena, such as the violent extermination of two peaceful, cultured nations following threats of far-flung, sanguinary conflict, are we constrained to reach the conclusion that determined attempts to uphold law in serious crises must eternally almost inevitably result in plunging nations into war; that reasonably satisfactory efforts to uphold law are illusory? I have in mind some answer to such provoking, inci-

dental queries, but it is probably not very comprehensive, convincing, nor comforting.

Some incidents of war, not its worst horrors, but loss of life and property, can in a sense be summarized in figures. Such figures with reference to the World War have often been referred to as well-nigh astronomical. I recall a very interesting writer's estimate of 30,000,000 lives, $400,000,000,000 in property. If such figures furnish some measurement of the degree of effort and heroic, frightful sacrifice which nations make for the settlement of disputes by destruction and slaughter, and propaganda of falsehoods, and desperate diplomatic moves to drag neutrals into conflict, are they not also pungent suggestions of what governments might have had the capacity to accomplish, had they been disposed to consecrate to the upholding, clarification, and development of law and the formulation of mutually beneficial arrangements, molded on principles of comity, a measure of thought and activity, having at least some infinitesimal proportion, let me say atomic proportion, to the efforts devoted to war and the preparation for war? In the juxtaposition of the conflagrations of forces of destruction with the lambent flames of peaceful process of civilization is an obtrusion of an odious comparison, not very useful perhaps, but I believe, not altogether inapposite.

THE ROLE OF OUR OWN COUNTRY IN INTERNATIONAL AFFAIRS

The role of our own country in international affairs is, of course, of primary interest to us. I can enjoy a bit of buffoonery at times. But I find no humor in a jibe such as the often and mirthfully quoted observation of the late Will Rogers, that "the United States never lost a war and never won a conference," whatever the latter may mean. He intended to imply an invidious comparison with respect to achievements in international affairs And it is the ugly truth, lurking in such a quip, which explains the failure of our Government at times to occupy a commanding position of leadership and warns us of the danger of participation in international complications, in the solution of which we might, under far different conditions, contribute the services of a mighty nation.

There is of course no reason, no rational explanation, why our Government should not be represented as ably as any other government in connection with any international activity, diplomatic or judicial; no reason why our country's influence should not be as great as that of any other country, or greater, in view of the Nation's position of wealth and power.

Our unfortunate showing at times is by no means due solely to want of understanding. To be sure, we hear it said occasionally that we are a young Nation; we haven't learned the fine arts of diplomacy practiced in other countries; "things are put over on us"; we become confused before the astute and resourceful minds of other lands. Some of the earliest pages of American diplomatic history, written well over a century ago, reveal no such factual nor postulated situation.

It is inspirating to recall the rousing welcome home given an American representative, a noted Virginia lawyer, John Marshall, after a diplomatic failure at Paris at the close of the eighteenth century; a kind of an immediate failure which was inevitably consequent on the impossibility of harmonizing the American representative's uncompromising concepts of personal honor, of national honor, and of fundamental, rational principles of maritime law, and law pertaining to the status of neutrality with the crude, purile moves of the celebrated Talleyrand.

A few years earlier, an American Chief Justice, a man of great distinction before he attained the exalted station of Chief Justice—John Jay—was sent to England to grapple with grave problems of vital concern in connection with the administration of both internal and external affairs of the infant Republic. He succeeded in the negotiations which he undertook, but the treaty which he concluded evoked a storm of violent, abusive protest. Yet in that comprehensive unique treaty, threatening, outstanding problems were dealt with on the basis of law, law having a basis in international morality.

Among stipulations found in that treaty were some inaugurating three international arbitrations. For the chief legal posts in one of them our Government designated a leader of the Massachusetts bar, "the legal preceptor of Daniel Webster," Christopher Gore, and a celebrated Maryland lawyer, William Pinkney. I promised you some unpleasant observations, but I shall not go so far as to attempt a comparison of Pinkney's masterful efforts in the field of international litigation with some performances in behalf of the United States which have come to my notice in recent years, and in sight and sound of which I have squirmed.

Recently questions have been propounded whether our foreign office has a definite foreign policy. Such questions may at times admit of no very specific replies. Doubtless we can all agree that conditions have been somewhat kaleidoscopic of late. A defined policy may easily become useless. Great Britain for many years had a policy with reference to the balance of power in Europe. Perhaps that policy has not been working out so very well in recent years; in any event, it seems to me that pranks have been played on it from time to time.

However, I readily have the temerity to suggest, as I have done on several occasions, a consistent policy or practice, useful and sound at all times, indispensable at once to national security, and a worthy role. It is that in all serious crises, and with respect to all international problems, our Government should stand unshaken on a foundation of law, giving reasonably satisfactory application to such a policy through a foreign office equipped with a staff guided by high purposes and intensively grounded in the law and practices of nations.

The great American judge, who at an early date before he ascended the bench, took a fling at diplomacy at Paris, was under the disadvantage of representing a very young, weak nation. It seems to me that, even though there be no resort to war, the influence of a powerful nation, capable of taking an impartial, firm, lofty stand for observance of law, may at times be underestimated. A century and a quarter after the episodes at Paris, our Government was confronted during a period of European conflagration by problems similar to those with which Marshall dealt under like conditions. In the later period there was an opportunity for a test of the weight of the influence which a powerful neutral nation might exert in impartially upholding international law, and perhaps by that method, in promoting peace.

In memoirs published in 1935 the American Secretary of State during that period has recorded his purposes in these declarations with regard to some diplomatic exchanges:

"The notes that were sent were long and exhaustive treatises which opened up new subjects of discussion rather than closing those in controversy. Short and emphatic notes were dangerous. Everything was submerged in verbosity. It was done with deliberate purpose. It insured continuance of the controversies and left the questions unsettled, which was necessary in order to leave this country free to act and even to act illegally when it entered the war."

Such a record seems to me clearly to be unjust to a peace-loving President under whom the Secretary served and unjust to the Nation. Furthermore, it can readily be shown by records that everything was not written to effect the objects which the Secretary explained. Some things—many—were written not with the purpose of subverting law, but of upholding the law of the seas, the purpose subsequently proclaimed by Congress in a declaration of war.

Our Government has engaged in hostilities in furtherance of national policy. And we have fought to vindicate legal rights. I do not question the sincerity or wisdom of the declaration of war made in 1917. However, I hope that in any future conflict, whether we shall fight alone or in conjunction with others, whether resort to arms shall be justified on grounds of policy or of law, the awful step may have a justification, which in the good conscience of our people can and will be confidently and solemnly proclaimed without such preliminaries as are indicated by the passage I have read, including measures to lay a foundation for expedient violation of law.

Tributes to the Late J. D. Ross

EXTENSION OF REMARKS

OF

HON. GEORGE W. NORRIS

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 23 (legislative day of Friday, May 19), 1939

ARTICLES BY FRANK FARRAND AND RICHARD L. NEUBERGER

Mr. NORRIS. Mr. President, one of the heroes of civilization was Mr. J. D. Ross, who, as we all know, passed away but a few days ago. I hold in my hand a copy of the Journal of Electrical Workers and Operators, a magazine published in this city. In that magazine is an article written by Frank Farrand, in which he pays tribute to Mr. Ross. Mr. Farrand prints at the head of his article a poem written by Mr. Ross a short time before his death. It is one of the most beautiful poems I ever read, and I want to read the last four lines, which are as follows:

I'll not forget, I'll ever be your friend,
Till memory dies and I have reached my journey's end.
I'll not forget until for me
The sunlight dies,
In western skies.

I have also a magazine article written by Richard L. Neuberger, in which he describes "Seattle's $4.05 week-end Skagit tours, the astonishing side line of Puget port's municipal power plant, furnish strength through joy to the whole Northwest." In the article reference is also made to Mr. Ross.

I ask that the two articles, together with the poem by Mr. Ross, be printed in the Appendix of the RECORD.

There being no objection, the poem and articles were ordered to be printed in the RECORD, as follows:

[From the Journal of Electrical Workers and Operators for May 1939]

L. U. B–77 PAYS TRIBUTE TO J. D. ROSS

(By Frank Farrand, L. U. No. B–77)

THE HOME BEHIND THE PINES

(By J. D. Ross)

Tonight as time rolls back,
Before me pass the bygone years
Of joy and fears.
The ones we loved, the friends we knew
That made life bright for me and you.
And best of all the home that
'Round my heart entwines
Behind the pines.

Each day was spent among my closest friends,
And each brought duties I was glad to do;
And cares were few.
I did your school work and I sighed
When absent from your fireside.
And each day brought its work
To read into life's lines
Behind the pines.

The old Pacific's waves roll high,
Beneath my feet the good ship ploughs the foam
And bears me home.
Again I waken to the new world from the old,
To life to be from life that has been told.

The Olympian mountains raise their snow-clad crags
Above the clouds.
I watch the silver shafts of light
Fade into night.
Again I think of what tomorrow brings,
The work that I must do,
For hours are few.

The wheeling seagulls gray their vigils keep,
Seattle's lights flash out across the deep.
Gleaming afar from hill on hill,
The ramparts of the night,
To love and home across the lea
They welcome me.

And life is full for me, and there is much to do,
Ere I am through.
But still I won't forget whate'er this life assigns,
The hours we've spent in that old home,
Behind the pines.

And often over hill and plain,
Across the miles on miles, I'll bridge, to you,
The span of time and space, face to face,
And I'll see you in the memory of the past that ever lives,
Hear your welcome as of yore.
Now once more.

I'll not forget, I'll ever be your friend,
Till memory dies and I have reached my journey's end.
I'll not forget until for me
The sunlight dies,
In western skies.

There are but a few great men in a generation. Men who are great, not through wealth, inheritance of birth, but great in their personality and ability to influence the lives of countless thousands of living and those yet unborn. When such a man comes from the ranks of electrical workers we are particularly interested. We, too, may be capable of higher development.

In 1902 the late J. D. Ross was wiring houses in Seattle. On January 2, 1903, he went to work for the city of Seattle, installing the first unit of a hydroelectric plant on the Cedar River. From that beginning, without a university background, J. D., as he was known in Seattle, worked and studied until he became a national authority as a consulting electrical engineer and financial advisor. In addition to superintending and building Seattle's million-horsepower hydroelectrical development, Mr. Ross in 1931 was appointed by the power authority of New York State as a consulting engineer on the St. Lawrence Waterway project.

President Roosevelt appointed J. D. Ross, in 1935, as a chief engineer on the P. W. A. power board. When he had completed the job, the President named him as a member of the Securities and Exchange Commission to handle the problem of unraveling some $20,000,000,000 worth of holding companies. He resigned that position to take the job of distributing Bonneville power.

Those of us who have been privileged to live in Seattle and especially those who work for City Light feel that through Mr. Ross' association with President Roosevelt, we, too, have come to know our President better. Mr. Ross taught us to think of our President as a leader who believes in the revolution of man rather than of institutions. Mr. Roosevelt's revolution is not against institutions but against selfishness.

The dream of J. D. Ross was to live to see the day when electric power from Bonneville, Grand Coulee, the Skagit River, Boulder Dam, and Fort Peck would be available to the common people in Chicago and New York for cooking and lighting their homes, power to be transmitted across the continent over a super-high-voltage direct-current network. We understand one of the transmission lines from Bonneville is to carry through the use of electron tubes 200,000 to 300,000 volts constant direct current as a test line for that type of transmission.

In an address before the Investment Bankers' Association of America at their Augusta, Ga., convention, Mr. Ross said: "It is a fact that the use of electricity is only a small fraction of what it can easily be. The whole industrial structure of our Nation is cramped for the lack of power. The work in the home is vastly greater than it should be. There are 6,000,000 farm homes in the Nation that are without the advantage of electricity. The market for electric power is about what we make it."

In the near future we may expect to be employed in the building of a power system that will tie public and private plants into a network dedicated to the happiness, security, and service of the common people. This will be in line with Mr. Ross' request that we join wholeheartedly with other power units in a cooperative pool of electric energy.

Not until that last day did we realize the magic of Mr. Ross' greatness, as we sat in that flower-banked church packed to the doors, overflowing far down the streets with men and women from every walk of life—Governors from several Western States, President Roosevelt's personal representative, high Federal and State officials, military officials and guards, city officials, police and firemen in uniform, private power officials, and union leaders, and thousands of common people—all come to reverently pay their last tribute to that man whom we have all known affectionately as J. D.—a humble man because he was great enough to appreciate the magnificence of humanity.

[From the Coast]

SEATTLE'S $4.05 WEEK-END—SKAGIT TOURS, THE ASTONISHING SIDELINE OF THE PUGET PORT'S MUNICIPAL POWER PLANT, FURNISH STRENGTH THROUGH JOY TO THE WHOLE NORTHWEST

"The useful and the beautiful," said the Corinthian, Periander, "are never separated." Five years ago the late James D. Ross decided this homily applied to Seattle's municipal light plant on the Skagit River. Why could not the same facilities provide holidays as well as electricity? That idea was the origin of the most novel vacations in the United States—vacations that cost only $4.05 a person and to date have been participated in by more than 100,000 people. Another 20,000 will take part this summer.

Skagit tours are an institution in the Pacific Northwest. Nowhere in America is there any feature to match them. Each week, from May to September, an average of a thousand men, women, and children spend 2 memorable days at the dams and powerhouses which generate Seattle's electric supply. For $4.05 these people get three whopping meals, a comfortable bunk, transportation on City Light's private railroad line, snacks of food between meals, a boat ride, movies, dancing, and other miscellaneous entertainment, including an excess of Cascade Mountain scenery. The $4.05 covers only the actual cost of all this; there is no profit on the venture.

Skagit tours helped make J. D. Ross the most popular man in Seattle. For 30 years he was superintenent of the City Light system, but the citizens remember him mainly as the innovator of a bold, new experiment in public vacations at cost. Everyone called him "Jaydee." A massive peak above the river was named Ross Mountain by the people, and Washington State clubwomen erected a neon sign in the wilderness to announce that fact. When a Seattle mayor discharged Ross, the voters recalled the mayor and City Light's superintendent was triumphantly reinstated. A few weeks ago Ross, still jolly and active at 66, died suddenly. All Seattle mourned the loss of this man who had proved that a power plant could produce vacations in addition to kilowatts, and President Roosevelt spoke of him as "one of the greatest Americans of our generation."

Delegates to the Third World Power Conference in 1936 agreed that Diablo Dam on the Skagit River was the most picturesquely situated power project in North America. This scenic beauty was what had impelled J. D. Ross to begin the Skagit tours 2 years previously. One bright spring afternoon in 1934 he looked around him. Canyon walls converged on the Skagit in fortress-like magnificance. Beyond the chasm's rim Pyramid Peak pointed skyward. Thunder Mountain, snow-mantled above, tree-blanketed below, dominated the scene like a vast, jagged battlement. At the bottom of the vista the river foamed white around its rock barricades. From ridge to ridge steel-latticed transmission towers stretched away toward the distant city. Could the people of Seattle enjoy this grandeur only through the vicarious touch of the wire that entered their homes? Would the useful and the beautiful have to be separate, after all?

The City Light superintendent took inventory of his equipment and facilities. There were the bunkhouses where the men building the power project had lived. Right next to it were the mess halls where they had eaten. Twisting down the canyon like a shiny serpent was the railroad on which thousands of tons of steel and concrete had been hauled into the upland fastness.

Ross felt he had a great idea. He talked it over with his subordinates. Vacations at cost. Mountain week ends for people who never before had been able to afford such holidays. And why not? The essential equipment was already on hand, at least, practically all of it. The only thing needed was passenger cars; the people could not ride in the freight vans that had transported the steel and concrete. Ross and his assistants went out and bought the coaches of the Oregon Electric Railway and other interurban lines that had been forced into insolvency by bus competition. They repainted the cars a gay, cheerful yellow and lettered them "City Light Lines." The Skagit tours were under way.

The response to the innovation has been astonishing. Each summer since 1934 more bunkhouses have had to be built. The trips are advertised neither by newspaper nor radio, yet they are invariably sold out. Last Christmas reservations were in for tours this summer. On a July or August week end as many as 2,500 people may be turned down. Frequently the personnel at Diablo Dam and Gorge Powerhouse rolls up in blankets on the floor to make every cot and bunk available for tourists. Originally started as a minor appurtenance, Skagit Tours are now an integral part of City Light. They occupy a big department, and they purchase 15 tons of food daily at the crest of the summer season.

Once a Seattle politician suggested the only way to hold down the rush was to raise the price. "No!" said Ross, as he banged the desk for emphasis. "The people have already paid their share through their power bills. Skagit tours are not to make money; they are intended to provide vacations. In fact, I'd like to cut the price if I possibly could."

Skagit tours begin at Rockport, where the Skagit River turns westward toward Puget Sound. This is 105 miles north of Seattle. Most travelers get to Rockport by automobile, though some go on special Skagit tours excursion trains that the Great Northern occasionally runs. Rockport is off the main line. But whether a man arrives in a new Cadillac or a ramshackle Maxwell, distinctions cease at Rockport. Skagit tours are an experiment in democracy as well as in mass vacations at cost.

There are no first-, second-, and third-class accommodations on the long chain of interurban cars that clanks down out of the mountains to pick up the assembled wayfarers. Everyone travels the same. A banker and his wife sit in one plush-covered seat. Just ahead of them a W. P. A. worker gets his first glimpse of the inner ramparts of the Cascades. A Seattle businessman tells his companion why the New Deal is ruining the country. Across the aisle, looking out the window, is John Boettiger, President Roosevelt's son-in-law, who edits the Hearst Seattle Post-Intelligencer. A leader of the American Legion, who has just demanded the deportation of Harry Bridges, squeezes into a place beside Howard Costigan, Washington Commonwealth Federation secretary, who thinks the C. I. O. is a splendid thing for the Nation. A gossipy Tacoma grocer points out T-Bone Ridge to Prof. Harold J. Laski, of the University of London, who is listed in John Gunther's Inside Europe as an English tradition.

Before the tourists board the train at Rockport they are served coffee and doughnuts. Lemonade is an alternative. There is no limit on the quantity. It takes an hour for the train to cover the 23 winding miles from Rockport to Gorge Camp, and the interurban cars are hauled by a puffing steam locomotive. Forest rangers stride from coach to coach cautioning travelers to put out their cigarettes, since the Skagit River drains the Mount Baker National Forest and no smoking is permitted during the dry season.

Gorge Camp is the headquarters of the Skagit tours. There the travelers stay overnight in clean, airy bunkhouses. There are three people to each room, men and women sleeping in different buildings. Probably this ruling stemmed from the same moral righteousness that impelled Ross to abstain from alcohol and tobacco all his life. At any rate, Skagit tours have no objection to man and wife sharing one room, but separate the sexes because mere oral affirmation of marriage is not always infallible proof that such a relationship actually exists. The bedding on the cots is clean and crisp and each guest has two impeccably white towels. Near the ceiling of each room is a little grillelike apparatus, resembling a ventilator, which is an outlet for the camp's public-address system.

Three meals are eaten in the spacious mess hall—dinner the first day and breakfast and lunch the second. Everyone sits where he can find a place, and Skid Row passes the gravy to University Heights. Here is a typical Skagit dinner: Vegetable soup, breaded veal cutlets, mashed potatoes, country gravy, fruit salad, string beans, bread and butter and jam, apple pie with cheese, and coffee, tea, or milk. All the food is served in deep bowls and there is no restraint on anyone except his own appetite and discretion. As many "seconds" as wanted can be had. An average Skagit breakfast entitles you to as much as you want of the following: Grapefruit, corn flakes, oatmeal, fried eggs with ham or bacon, hot cakes with jam or sirup, toast, muffins, butterhorns, and coffee. Tables are waited on and the bunkhouses tended by young men working their way through the University of Washington.

After dinner the people with stout wind trudge through the strange tropical gardens that grow luxuriantly on the slopes below the cliffs of the canyon. Ross long contended that soil, not climate, principally determines the ability of certain plants to survive. Engineering associates from all over the world sent him quantities of sod, and in this environment in the high Cascades, within sight of eternal snows, palms and century plants flourish in rich profusion. Here also are peacocks from Java, guinea hens from Africa, and Peking ducks from Peiping. "No bird ever migrates on account of temperature," said Ross. "Migration is in search of food." Everywhere grow trees and plants from such friends of the City Light superintendent as Harold Gatty, the world flyer; Morris L. Cooke, former head of the Rural Electrification Administration; and Dr. Clarke Foreman, Director of the P. W. A. Power Division. Twenty-nine trees are from the President's home at Hyde Park.

Ladder Creek Falls plummets 1,500 feet through this setting of botanical splendor in a series of cataracts. At night colored lights transform the strip of water into an icy rainbow that twists and shimmers against the crags. Somewhere in a hidden ravine an electric organ plays waltzes, and Tales From the Vienna Woods and Sleeping Beauty echo between the granite walls of the gorge. Most of the participants in the Skagit tours go to bed on this breath-taking note, but a few of the more vigorous stay up and dance or see the movies in the recreation hall. More than one Seattle romance culminating in marriage has started on these trips.

At 6:30 in the morning the electric music box sounds not between the cliffs of the canyon but into each room through the grille-like vent. Reveille comes first, then Let's All Sing Like the Birdies Sing, and finally Lazy Mary, Will You Get Up? After breakfast everyone boards open cars for the last 7 miles to Diablo Dam. Above Gorge Camp the chasm narrows and deepens. The river surges swifter. Here the curves are too sharp for the steam locomotive, and a canary-yellow electric engine pulls the train. Granite bluffs as huge as cathedrals hem in the line. Candid-camera fans lean perilously from the cars, and two or three youngsters occasionally get the thrill of their lives through being allowed to ride in the cab.

Below the 400-foot face of Diablo Dam at Reflector Bar the railroad line ends. The morning is taken up with a boat ride on the 6-mile lake back of the dam. The scenery here is like the Alps; white peaks are a choppy sea above the green mountains. There are more glaciers in this region than in all the national parks combined. The boat, named *Alice Ross* as a tribute to the superintendent's wife, goes into the core of the Cascade Range, where City Light engineers are building a second great dam to plenish Seattle's source of power. This barrier, which is now known as Ruby Dam, but which later will probably be named for J. D. Ross, is on the Skagit River at the upper end of Diablo Lake.

Once the excursions consisted principally of young folks, who could easily trudge the 400 feet of steps between Reflector Bar and the *Alice Ross* dock on Diablo Lake. But soon grandfather and grandmother began to make the $4.05 trips. The staggering succession of stairways was impossible for them. Now a huge lift takes care of the ascent. Women and girls always scream shrilly on this precipitous ride. Ironically enough, the only person ever to get even slightly injured on the rise was Victor Aloysius ("Just Call Me 'Vic' ") Meyers, the jazzband impresario who is Lieutenant Governor of Washington. He stumbled against the railing and was bruised.

After the boat ride everyone goes back to Reflector Bar, where the electric engine waits. The interurban whistle sounds impatiently, and the train starts down the canyon. Now there is no grade to buck, and the cars sway along giddily. The train rolls over lofty trestles and twists around dizzy ledges. At Gorge Camp the open cars and electric engine give way to the plush-seated coaches and the steam locomotives. While this is done there is time to eat a lunch of cold meat and potato salad, with a bountiful supply of other accessories, and to pack suitcases. Shortly before 4 in the afternoon the train pulls into Rockport, lemonade and cookies are served, and the Skagit tour is over. Each traveler has spent $4.05 (children, $2.05) and has had himself a complete excursion in the Cascades.

"This is a magnificent idea," said Professor Laski as he and his wife got off the train at Rockport. "It seems to me one of the most splendid things I have observed in America—this furnishing of a holiday to so many people at so low a cost." Other notables have handed down a similar verdict: Stuart Chase, Pare Lorentz, Ben Cohen, and Ambassador Joseph P. Kennedy.

As the Skagit tours have become an institution in Seattle, so, too, has City Light. Once the private power company in the city monopolized the electric business in the community. Now City Light serves three times as many customers as its private competitor. When housewives visit the combination summer resort and power plant on the Skagit, they begin to think of City Light in terms of gorgeous flowers and dashing waterfalls. From then on, promotion work and advertising are practically superfluous. People on the Skagit tours become thoroughly conscious of the hydroelectric system that is at the base of their unique holiday. They are taken through the power plant, and always on the train ride they are aware of the steel towers high above that carry electricity to Seattle.

Ross used to say the success of the Skagit tours was proof that the average American likes his neighbors and appreciates an honest attempt to give him his money's worth. For example, few features of the tours win more favorable comment than the fact that City Light employees go over the parked automobiles at Rockport, while the cars' owners are in the mountains, and repair flat tires, fill empty radiators, and clean smudgy windshields.

Summer is almost at hand again, and 20,000 people are ready to go on America's No. 1 excursion novelty. They will ride the old interurban coaches, see the lighted cataract, eat big wedges of pot-roast and thick slabs of pie, examine the trees that Mr. Roosevelt

sent, and hear the electric music box summoning them to get up in the morning. The season will be different for only one reason: J. D. Ross will not be there.

A few weeks ago they took his ashes out on the gaunt shoulder of Ross Mountain and strewed them there. The wilderness wind whipped them away—down to where the buildings of Gorge Camp squat below the white water of the tailrace, and where "the useful and the beautiful are never separated."

RICHARD L. NEUBERGER.

Trade Treaties

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1939

RADIO ADDRESS BY ARTHUR BESSE, PRESIDENT OF THE NATIONAL ASSOCIATION OF WOOL MANUFACTURERS, MAY 3, 1939, OVER THE WJZ NATIONAL NETWORK, UNDER THE AUSPICES OF THE GENERAL FEDERATION OF WOMEN'S CLUBS

Mr. TREADWAY. Mr. Speaker, under leave to extend my remarks, I include the following address on the subject of trade treaties by Mr. Arthur Besse, for many years president of the National Association of Wool Manufacturers, former chairman of the Wool Textile Code Authority under N. R. A., and an officer of the Besse system of clothing stores.

We have heard and read so many speeches by State Department theorists with reference to the trade-treaty program that it is refreshing to read such a splendid and devastating criticism of this ruinous policy to this able and practical businessman.

Mr. Besse's speech follows:

Many of us are fearful that the reciprocal trade agreements are "selling us down the river." Our fears are not allayed in the least by numerous statistics cited by the proponents of the program. These figures are not conclusive one way or the other. Foreign trade is not developed overnight and even if it were, the past 2 years can in no sense be considered as a period of normal trade activity.

One of the important influences bearing on foreign trade during the past few years has been our tremendous export of potential war materials. The increase in these exports can hardly be attributed to concessions in tariff rates which we have obtained abroad. I certainly hope that war materials are not going to become one of our normal exports, but who can predict whether, when such exports cease, they will be replaced by the export of plowshares, wheat, and cotton. My own feeling is that the nations of Europe will be so burdened as a result of their efforts to arm themselves that—whether there is a war or not—they will be ill-prepared to absorb large surpluses of American products unless we are again willing to loan foreign countries the money to pay for them.

In this connection it is pertinent to challenge the State Department's use of export figures on two grounds. First—because the vast amounts of war material exports cannot be considered as normal and recurring, and, second—because it is inconsistent to justify a program which was designed—so the Congress was told—to promote peace, by pointing to export gains in which are hidden the figures covering the exports of instruments of war.

It is my opinion that the use of present figures on our foreign trade is misleading and confusing. In certain particular industries there have been increases in exports or in imports which can be attributed, at least in part, to concessions which we have received or given, but even these increases indicate a trend without giving a clear idea as to how far the movement may go. Especially is this true as respects our imports, since, at the moment, most of the low-cost producing countries are much too occupied with other problems to thoroughly exploit the possible market for their products in this country.

The reciprocal trade agreements program with our most-favored-nation policy, which automatically extends concessions to nations other than the one with which we negotiate directly, is laying this country open to destructive competition from the products of low-paid foreign labor. That we are being made more vulnerable to this competition there can be no doubt. The degree to which this competition may prove destructive, only time can tell.

Our concern over the probable ultimate results of this program is intensified because of the fact that the State Department appears to have forgotten the purpose of a "protective" tariff and because they either ignore or do not comprehend the underlying theory of international trade.

Although it seems rather elemental, I think it is important to emphasize the object of a "protective" tariff. Approximately two-thirds of the merchandise imported into the United States is admitted duty free. The other third consists of products which compete with similar goods produced in this country. The purpose of the tariff is to protect American industry against foreign goods which are more cheaply produced—generally because of markedly lower labor costs. The tariff is not a capricious instrument for raising prices in this country, and so defrauding the consumer. It is, as the term "protective tariff" indicates, a means of equalizing the price of competitive imports so as to protect our domestic industry against the products of low-cost foreign labor.

If there are articles which we now make in this country but which we no longer desire to produce and for which we are content to become dependent upon some foreign source, we may well give consideration to the abandonment of the duty as respects such articles. This, however, is quite a different matter from bargaining away a part of the duty on products which we feel we should continue to make in this country. If the reduction in duty which we bargain away brings the rates on specific articles below the rate adequate to afford protection, the tariff no longer performs its function. The domestic manufacturer can continue to operate on the former scale only if his labor will take a reduction in pay such as will put our workmen on a basis more nearly comparable with foreign workers. A tariff is not a "protective" tariff unless it protects, and a percentage of whatever rate may be adequate does not provide proportional protection, but may fail utterly of its purpose.

Although the tariff is to protect our higher American standards, the State Department is engaged in making general reductions in the tariff at a time when the actual need for protection is increasing. Shorter hours, higher rates of minimum pay, social-security benefits, and other socially desirable movements in this country have recently widened the spread between costs here and abroad, thereby increasing the need for protection in industries which compete with foreign producers. Factors which indicate the need for greater protection are, however, ignored by the State Department, which has shown an unrestrained determination to reduce rates throughout the tariff schedule.

The State Department's attitude is not based on a desire to damage American producers (although I believe that is exactly what they are doing) but rather on the erroneous conviction that increased imports are necessary and desirable. The key to their attitude and to their misconception of the value of foreign trade is expressed in their contention that, "We must import more in order to export more." Such a statement shows a complete lack of knowledge of the value or purpose of trade. No trader accepts an article in order to acquire the privilege of giving something else in exchange. His purpose in giving goods to another trader is to acquire from that trader something which he himself desires. But his desire for acquisition, not his desire to dispose of his own property is the compelling motive. It is the same in international trade. We do not import in order to export. On the contrary, we export in order to import those things which we want and do not have. The value of trade is judged by the need to acquire, or to import, rather than by the desire to export. Thus the State Department should concentrate on ascertaining what unsatisfied needs we have in this country and on finding means of stimulating the production for export of goods particularly wanted by those in a position to supply whatever unsatisfied domestic needs may have been uncovered.

But the State Department, quite properly concerned over the problem of actual agricultural surpluses and perhaps potential surpluses in certain manufacturing fields, is attacking the problem from the wrong end and is concentrating on exports, not realizing that it has the cart before the horse. Assuming that the reciprocal trade agreements program accomplishes what the State Department hopes—namely a reduction in these surpluses—what it will amount to is this: That we will have given foreign countries the right to dump their surpluses here in exchange for the privilege of dumping our surpluses on them. The benefits to be derived from such a procedure are somewhat obscure; the damage which may be sustained by individual industries, however, will be more readily evaluated. It is to be doubted if anything is to be gained by transferring a surplus from one commodity to another, or from one locality to another. Unless we can find something to import which we really want and do not now have, we have no possibility of finding a permanent market for our surpluses abroad.

Other nations recognize that foreign trade in the long run is governed by the need to acquire rather than the wish to sell, and hence are at a great advantage in trading with our own State Department. Our negotiators start with the understanding that we desire more imports, not of particular products but in general, and they are prepared to give concessions which will result in increased imports on the theory that thereby foreign countries secure credits with which to whittle away at our surpluses. The State Department hopes these concessions will not greatly disorganize those industries which are asked to bear the burden of this treaty program, but neither they or ourselves really know what the ultimate damage will be. Contrast our negotiators' attitude with that of the representatives of foreign countries. These countries state quite frankly—at least at home—that they do not want to increase their imports. Here, then, is the picture—two groups of negotiators sitting down to barter concessions in import duties—one group (our own) committed to concessions which will be

effective in admitting more goods, the other group (that is the foreign representatives) determined, as far as possible, to make concessions, which while they may appear important, actually will have a minimum effect on the volume of their own imports. It does not take much imagination to guess whether the concessions which we receive are worth those which we make. It seems to me inevitable that we receive the short end of the stick.

Not only are many of the concessions we receive of doubtful value in stimulating current export trade but with the industrialization of so-called undeveloped nations and the growing desire among nations to be self-sufficient in emergencies, our exporting industries are finding it increasingly difficult to cultivate sales abroad. The concessions we receive, therefore, will tend to prove less and less effective; the concessions we give will prove more and more serious to us as low-cost nations turn from their preparations for war to the development of industrial activity. Add the fact that when we make a trade bargain, we make our concessions available to all nations but one, whereas we ourselves get concessions from no nations except the one with whom we negotiate, and it seems that the chances of promoting economic recovery through the reciprocal-trade agreements are slight—to put it as mildly as I can.

To my mind, no foreign trade program can advantage any nation unless that nation seeks primarily to supply unsatisfied domestic needs rather than to find dumping grounds for its surplus products.

If We Don't Have a War

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1939

EDITORIAL FROM THE SATURDAY EVENING POST

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following leading editorial from the Saturday Evening Post of May 20, 1939, entitled "If We Don't Have a War":

[From the Saturday Evening Post of May 20, 1939]

IF WE DON'T HAVE A WAR

What we write here is for the record, and we pray as we write it that the occasion to refer to it shall not arise.

For a year and a half the President of the United States has been talking war. He began it with the "quarantine speech" in Chicago in October 1937, saying there was no escape for us through mere "isolation or neutrality" and that the "peace-loving nations must make a concerted effort" to quarantine and stop the aggressors.

The speech was not very well received. People were somewhat dazed. The mind of the country had not been prepared for it. We do not say that what followed was with conscious intent to create a war neurosis. We say only that it had that effect.

Continuously thereafter the Roosevelt administration seized every opportunity to implant hatred of foreign nations where more than enough was seeding itself and to propagate the thought that if Great Britain and France were attacked we should have to take part to save democracy in the world, because American destiny, too, would be involved.

Utterances of this purport, some of them very offensive to nations with which we were then at peace, came from responsible officers of the Roosevelt administration, and especially from members of the President's Cabinet. The President could have stopped them. He did not stop them. He encouraged them, with the result that when he came himself to say, in his message to Congress last January, that whereas words were futile, still there were many methods "short of war, but more effective than mere words" of bringing aggressor nations to account, the American mind was receptive. It had been prepared. What the President was supposed to be talking about then was economic war.

A few weeks later, when he had had the members of the Senate Committee on Military Affairs at the White House to receive momentous revelations in secret, there was a leak. It was reported that he had made them shudder by telling them that America's first line of defense was in France. This report produced an immense political sensation in the world. Two days elapsed. Then it was evident that again he had overpassed what the American mind was prepared for. Thereupon he called in the reporters and said to them that he had never said such a thing, had never thought such a thing, and that anyone who said he said it or thought it was a boob or a liar. That was on February 3. Mark the date.

Sunday, April 9, on leaving Warm Springs, Ga., he turned to the people who had come to the station to see him off and said to them: "I'll be back in the fall if we don't have a war."

It was a gratuitous saying. Literally it meant nothing at all. Even in the midst of war a President may go on such little journeys for relaxation and rest. Mr. Roosevelt certainly would. But, politically, it turned out to be a saying both calculated and significant.

In what sense did he employ the collective pronoun "we"? Did he mean, "If we, the American people, don't have a war"? Or did he mean, "We, the democracies of the world"?

On April 11 the Washington Post printed a long editorial, saying: "By 'we' he undoubtedly meant western civilization * * *. In using the collective 'we' the President told Hitler and Mussolini * * * that the tremendous force of the United States must be a factor in their current thinking * * *. He made it plain that a war forced by them would from the outset involve the destinies of a nation which, as they fully realize, is potentially far stronger than Germany and Italy."

The same day, at his press conference, the President said to the reporters that his "we" meant exactly what the Washington Post said it meant; he adopted the editorial, saying it was very good, very clear, and very honest.

Thus it happened that on April 12, in the same place where the news had been on February 3 that the President called anyone a boob or a liar who said he had said our first line of defense was in France, the New York Times printed the following:

"WASHINGTON, April 11.—President Roosevelt strongly implied at his press conference today that he believed the involvement of the United States in any general European war was inevitable and that this Nation should stand shoulder to shoulder with Great Britain and France against Nazi-Fascist machinations aimed at world domination by force. The President made known his belief by expressing his approval of a newspaper editorial interpreting his use of the collective pronoun 'we' in his farewell remarks at Warm Springs, Ga., Sunday, when he promised to be back again in the fall 'if we don't have a war.'"

If we are going to stand shoulder to shoulder with Great Britain and France against German and Italy, where is our first line of defense?

Many people who had been shocked by that thought in February were very familiar with it in April, so easily is the national mind conditioned.

Since February the President had been helping to condition it. He had said that the United States could not remain indifferent to the spectacle of aggressor nations swallowing up little nations. He had caused his Secretary of State to issue a statement naming Italy as an aggressor nation, whereby it came automatically under the threat of "methods short of war, but more effective than mere words"; and he had abolished the Atlantic Ocean as our natural defense against aggressors. In his speech to the governing board of the Pan American Union he had said, "Beyond question, within a scant few years air fleets will cross the ocean as easily as today they cross the closed European seas."

It is the great affliction of the world at this moment that in so many cases the words uttered by responsible heads of governments do not mean what they seem to mean.

In a formal statement on February 3 the President said: "We are against entangling alliances, obviously. The foreign policy has not changed and is not going to change."

What did those words mean? We do not know. We do know that our foreign policy has changed. Nothing in our traditional foreign policy is compatible with notice beforehand to Hitler and Mussolini that if they start a war in Europe they will have to meet the tremendous force of the United States, or notice beforehand that we shall stand shoulder to shoulder with Great Britain and France against them.

There is apparently much that we do not know about our foreign policy. It has no relation to its past. On April 13 the British Prime Minister announced the Franco-British pledge to aid Greece and Rumania in the event of aggression upon them, and that Germany and Italy had been warned to keep their hands off the Mediterranean. Rising then in the House of Lords, the British Foreign Secretary, Lord Halifax, said: "The judgment of His Majesty's Government is not only shared by the overwhelming mass of opinion in Britain but by most states of Europe and by the United States."

Did the British Foreign Secretary know what he was talking about? If so, did the American people know? When, how, and upon what authority was the judgment of His Majesty's Government shared by the Government of the United States?

Two days later the President of the United States daringly produced his Saturday surprise. News of it first came to this country from Europe. That was his direct challenge to Hitler and Mussolini. Would they cease from their aggressions? Would they bind themselves for a term of years not to attack or invade certain specified European countries?

The shoulder-to-shoulder reaction to this American adventure in the game of world politics was reported the next day by Pertinax, the foremost political writer in Europe, who said that now "American isolationism will probably recede into the background, American policy will go forward more boldly to the side of the great European coalition now being formed, and the various nations included in that coalition will, as a consequence, gather courage to stand firmer in their resistance to Germany and Italy."

On the record, as at this point we leave it, we say—

That the state of the American mind toward war in Europe is a cultivated obsession;

That the change in our foreign policy, so far as the executive will of government has been able to change it, is such that only 2 years ago the unobsessed American mind would have rejected it with horror;

That emotionally, morally, and politically we are already deeply entangled in the quarrels of Europe;

That so far as the executive will of government has been able to commit us, we are committed not to be neutral if war comes in Europe, which means that we may be fighting again on European soil on the side of Great Britain, France, and Russia under the slogan, "Save democracy," but really in defense of the division of spoils that was made under the Versailles Treaty that we did not sign; and

That for all of this the President of the United States is responsible.

When these things are debated in Congress, as they are from day to day, the legislative principle takes refuge in the thought expressed by Senator GEORGE, saying: "Undoubtedly there has been propaganda in this country—very widespread propaganda and very subtle in its nature—to get us into war—that is, to create the war sentiment and mold the war mind here in the United States. The issue of peace and war, however, lies right in this body and in the body at the other end of the Capitol. It ought to be made abundantly plain and clear that we do not propose to carry the country into war; that when that issue arises there are those of us here, humble though we may be, who will not vote to have the country go to war. Anyone, whether in high or in low place, who gives assurances to European nations that this country is ready to go to war and will go to war is simply misleading European nations, because the Congress of the United States and the American people have no idea of again engaging in a foreign war."

That sense of security in the power of ultimate veto may turn out to be false. It is true that only the Congress of the United States can declare war. But what we may forget is that the President of the United States, as Commander in Chief of the military forces, has the power to commit war and the power also to provoke other nations to commit acts of war. What would the Congress of the United States do about it?

Analysis and Definitions of Certain Sections and Subsections of H. R. 6466—The New Townsend Bill—The General Welfare Act

---

EXTENSION OF REMARKS

OF

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1939

Mr. HENDRICKS. Mr. Speaker, many advocates of the Townsend plan as the solution for our economic ills feel that not enough emphasis has been placed on the indirect benefits of the plan of the young and middle-aged and to the Nation as a whole. Dr. Townsend has, by his wonderful contribution to human welfare, made the Nation pension-minded, and the need for old-age security is felt everywhere, whereas before he startled the Nation with his plan the agitation for more adequate old-age pensions was confined largely to the sponsorship of State plans for this purpose. Even now, however, people are prone to think of the Townsend plan as a measure to aid the old people at the expense of the rest of the public. Nothing could be further from the truth, as the indirect benefits of the plan to the Nation as a whole and to all groups and classes of people are as great, if not greater, than the direct benefits which would come at once to those needy citizens over 60 who have waited so long for its enactment into law. Its title, the "General Welfare Act," will help in a great measure to crystallize public sentiment in favor of the bill as a measure that will help all classes and people in all walks of life.

When the general public awakens to a realization as to what the Townsend plan would do for the Nation as a whole and that the bill as now drafted will work in actual practice as applied to everyday situations which we meet, the plan will take an ever greater hold upon the public than it has in the past, and the walls of opposition that have confronted us as we have fought for it will crumble as rapidly as we hurl the full force of the bill as now drafted against these walls of ridicule, prejudice, and preconceived ideas. The Townsend plan has been drawn upon a practicable basis and will stand the closest scrutiny of those who oppose it, as their opposition has been based largely on ignorance and a fear that it would not work out in actual practice. One reading of the new bill should convince them to the contrary and we should sell them on the idea that it is really for the general welfare of the United States of America, as its title implies.

TECHNICAL CHANGES IN WORDING OF BILL

You will note the changes in the method of taxation, also in wording, which add immensely to the bill by making it understandable to all and by stating its fundamental principles and precepts in as clear and concise language as it is possible to do, also by making it as constitutional as it can possibly be made, in line with principles already enunciated by the United States Supreme Court in adjudicated cases.

DEFINITIONS

Section 2 of the bill deals with definitions, and much repetition of words and ideas has been avoided by clearly defining therein the terms used throughout the act. The term "transaction," for instance, is defined so as to cover business transactions of any nature, including "transactions" wherein actual money does not change hands.

Under the definition of "sales value" we have made an important change which will bring in millions monthly in additional revenue and which will eliminate the objection that has been raised that the manufacturers who produce their own raw material will pay fewer transaction taxes than those who cannot do so and that we will thus foster monopolies and drive out the "little man" so that the big dealers that remain will be able to charge "all that the traffic will bear" to the detriment of the general public. This definition will bring under the act all those producers who, by using their own raw material, would otherwise escape the tax and would be able to engage in all kinds of unfair competition at the expense of the general public. They will pay the taxes whether they sell the finished product or not. It is felt that this change will have a great appeal to all those who believe in the equality of opportunity, upon which this Nation was founded.

The terms "transaction" or "business transaction": Under H. R. 2 the specific "transaction" to be taxed was somewhat vague. This revised method is being used in an attempt to better define what the subject of the act shall be. We are attempting to tax business transactions of every nature with certain exemptions, as specified in section 6. You will note that this subsection (a) of section 2 includes all activities engaged in or caused to be engaged in with the object of gain or economic benefit, either direct or indirect. This, I believe, is all-embracing and covers all forms of business, legitimate or otherwise.

The term "person" or "company": This subsection is, I believe, self-explanatory and defines the kinds of business which shall be taxed—all businesses which have taxable transactions.

The term "sale": This is an additional yardstick by which all business transactions shall be taxed and includes barter of any kind. I believe that if this were not included in the act, barter could be carried on extensively without taxing liability if the tax were to be measured only by the amount of money received or to be received. This subsection takes care of any such contingency.

The term "sales value": Because of the fact that we are taxing business transactions of all kinds under this act it is necessary that we devise a method of measuring the tax upon a business transaction which is handled by one entity from the source of supply or the raw-material stage to the manufacturing plant and thence to its retail outlet. In cases where one entity controls all of these factors it would create unfair competition against the small-business man, who, upon buying his merchandise, must necessarily pay the pyramided taxes which are passed on to him, whereas, with one entity controlling all these factors, the tax would not be pyramided if the actual income received from the sale of such products were the only method of measuring the tax. The term "sales value" is being used in an attempt to define, or, rather, to arrive at, an amount of money which would have been received had these products been sold to the manufacturer or to the retailer by another entity. Opposition may be encountered to this term "sales value," as there are any

number of methods of arriving at "value." However, the intent here is not to arrive at a "value" as such making it an ad valorem tax, but to arrive at an amount which would have been received had same been sold by a disinterested party. My reference is to "income" and not "value." The intent of this definition is "the equivalent amount of gross income which would have been received had such products been sold by a disinterested party."

The term "gross proceeds of sales": This section, I believe, is self-explanatory. You will note that the term "tangible property" is used instead of the term "tangible personal property." The word "personal" was deleted so that the act would also cover the sales of real property.

The term "gross revenue": This subsection is defined to include the gross revenue received from the sale of services or tangible property, or both, and also levies a tax upon income received from other sources where the surplus of a business has been diverted to other channels and interest, dividends, and so forth, are realized from such investments.

"Imposition of taxes; rates": This section has been so drawn to enumerate the different rates of tax which may be applied upon the several business activities. In order to prevent the pyramiding of the tax a lower rate is being recommended for certain business activities.

"Tax on producers": This subsection defines the business activity of "producing" so that the rate of one-half of 1 percent upon this particular kind of business transaction may be accordingly applied.

"Tax on manufacturers": This subsection is an attempt to define the business activitity of "manufacturing" so that the lower rate of one-half of 1 percent may be applied thereto.

"The measure of the tax on manufacturers": This subsection is self-explanatory. The "value of the entire product" referred to is the "sales value" referred to in subsection (j) of section 2 of this act.

If any person liable for the tax on manufacturers: This subsection covers the method of arriving at the base for purposes of taxation under this act, upon products which are shipped in foreign commerce without being sold. The "sales value" of such products immediately before entering foreign commerce is used as the measure of such tax.

"In computing the tax levied on manufacturers": This subsection defines the method of measuring the "income" of products sold where transportation charges are included and shown upon the invoice. The taxpayer is permitted to deduct such amount of transportation charges prepaid provided such transportation charges are shown as a separate item upon the invoice. It means that the seller of the merchandise advanced for the convenience of the buyer, the amount of the transportation charges, therefore, when the buyer pays the total amount of the invoice which includes the transportation charges, he is only refunding the amount of money which the seller advanced as transportation charges, as such.

"Tax on wholesalers or jobbers": This subsection defines the business activities of wholesaling or jobbing for the express purpose of applying the lower rate of one-half of 1 percent. You will note, however, that in order to get the rate of one-half of 1 percent, the wholesaler or jobber must sell his products to someone who in turn resells it for purposes of resale or resells it to the ultimate consumer. If such wholesaler or jobber sells directly to the ultimate consumer, then such wholesaler or jobber shall pay the higher rate of 2 percent. The kind of business engaged in is not the subject of this definition, it is the particular "business activity" which governs. If this were not so, then the jobber could sell to the ultimate consumer, paying a tax of only one-half of 1 percent upon such sales and thereby create unfair competition, which the retailer, who would be forced to pay 2 percent upon such sales, could not cope with. It is for the protection of the one who sells to the ultimate consumer and thereby pays the higher rate of tax that this subsection has been defined as written.

"Tax on other business": This subsection covers all other business activities, whether retailing, professional, or otherwise, and excludes only the other classifications previously mentioned, such as producing, manufacturing, and wholesaling or jobbing.

The term "producer": This subsection covers the definition of a producer by defining the business activity of producing. Anything which is produced shall be included in this subsection. A producer may also be a manufacturer or a retailer, or both. A rock quarry, for instance, would be termed a "producer." If the rock, however, is sold directly to the ultimate consumer or user of such rock, then such sale shall be termed a "sale at retail" and the higher rate of 2 percent applied, even though such sale is made by a producer. In other words, we are attempting to tax the particular business activity and not measure such tax by the particular kind of business which a person may be engaged in.

Manufacturer: The term "manufacturer" here is used to define the kind of business which a person may be engaged in. This does not particularly mean, however, that a manufacturer could not also be a wholesaler or a retailer, or both, as a person who is known to the trade as a manufacturer may also sell to the ultimate user or consumer. The measure of the tax shall be the particular kind of business activity consummated and not by whom consummated. When a manufacturer sells merchandise to the ultimate user or consumer such sale shall bear the higher rate of 2 percent.

Wholesaler or jobber: This subsection defines the particular kind of business engaged in and not the business activity or activities which may be engaged in. You will note that in order to bear the lower rate of one-half of 1 percent such wholesaler or jobber must sell to either a licensed retail merchant or jobber for purposes of resale; to a licensed manufacturer where the manufacturer includes raw materials or commodities in the finished or salable product which he in turn resells; or to a licensed contractor of materials or commodities which are to be incorporated by such contractor into the finished work or product required by the contract and which materials or commodities shall remain in such finished work or product in such form as to be perceptible to the senses.

Exemptions: Subsections (a) and (b) of section 6, are, I believe, self-explanatory.

PORTIONS OF AN ANALYSIS OF H. R. 2 PERTINENT TO H. R. 6466

The following is a portion of an analysis of H. R. 2, which is pertinent to H. R. 6466. This analysis makes distinctions between H. R. 2 and H. R. 6466—which are the same bills except for minor changes—and Townsend bills previously introduced in Congress. The section numbers referred to in this analysis are the section numbers of H. R. 6466.

REQUIREMENTS AS TO ANNUITANTS

The main change in section 7 is the elimination of the exemption barring as annuitants those who have incomes from other sources. It was felt that it would be next to impossible to systematically and honestly administer the law if the pro rata due is subject to change each month after the examination of the returns made in this regard and if we are to rely solely on such individuals disclosing all sources of income.

Another major change made in this section was to definitely set the date the annuity becomes due, to-wit, the first day of the calendar month following approval of the application by the Secretary of the Treasury, not the date of filing the application for it as provided under the old bill. This eliminates the necessity for any reserve fund to take care of delayed applications and the pro rating can be made with absolute certainty that no injustice is being done to anyone.

Another major change was to definitely set forth in the law itself the basic legislative rules so as not to leave the law subject to the criticism, from the constitutional standpoint, that legislative powers were delegated to an administrative board. In fact, the costly and cumbersome administrative boards provided for in the old bill are done

away with altogether. Thus the expenses of administration are cut to a minimum and the legislating is done by Congress as it should be under our constitutional system of Government, divided as it is into three departments—the legislative, executive, and judicial. To illustrate, the basic rules for proving age and citizenship are laid down by Congress in the act itself rather than being left to the executive department to determine. This may seem unimportant, but when it is considered that an administrative interpretation might bar an applicant for an annuity from receiving $200 per month for the rest of his life, the real importance becomes evident.

Other important changes made in section 7 may be itemized as follows:

(1) Applicants for annuities must file with their applications photographs and fingerprint records for identification purposes. This is to prevent one person from applying for and receiving annuities in several States and simplify the administration of the act in other particulars.

(2) Applicants must swear to their applications and must agree therein to spend the annuity.

(3) They may spend their annuities en route to or from our Territorial possessions, which will enable the annuitants to do a little traveling if they so desire.

(4) They cannot spend the money for gambling.

(5) They may take out life insurance on their own lives of not exceeding $1,000 to insure themselves a decent burial and in a measure protect their dependents. They may also continue paying premiums on life or endowment policies taken out over a year before the effective date of the act.

(6) They must pay bona fide debts incurred before they became annuitants, but cannot expend more than 10 percent each month for debts and gifts combined.

(7) If they receive any money or property by disposing of property purchased with annuities, they must dispose of such money or property within the first full calendar month thereafter in the same manner as the annuities must be spent. A major loophole in the old bill was plugged up by this provision, as it will prevent gambling in stocks, hoarding away money received from the sale of homes purchased with annuities, and so forth. If a home is sold, a new home may be purchased or an automobile, house trailer, or even a yacht, so as to create prosperity for those manufacturing such things.

(8) No annuities are to be paid to persons forcibly confined in penal or other institutions. If voluntarily confined, they may receive the annuity. Almshouses will thus be closed. Jails will continue but with fewer inhabitants, because the incentive to steal and commit other crimes will be lessened.

(9) The Post Office Department must return to Washington all checks issued to annuitants who die or are forcibly confined in institutions.

(10) No assignment of or order on any annuity is valid.

(11) Any annuitant may waive his right to a portion of the annuity or may apply for less than the $200-per-month maximum. This provision was made to permit the acceptance of less than the full amount without the necessity of being convicted of a misdemeanor under the law in order to reduce the amount if the annuitant voluntarily wants to take less. It must be remembered that he is the disbursing agent for Uncle Sam, and if he is too old and feeble to go about spending the full $200 to create prosperity for others, he should be allowed to take what he needs for his comfort and happiness and leave the rest in the fund for those who do want it and will spend it properly. On the pro rata basis we should cut down on all those who do not want the full amount, and by convictions and penalties provided for in the act cut down on those who do not deserve the full amount, as this will raise the pro rata figure for the other annuitants so as to bring them up that much sooner to the $200 mark.

(12) Annuitants must have been full citizens for 5 years. This will prevent an influx from other countries to share in the benefits and will further cut down on the number of annuitants.

ADMINISTRATIVE PROVISIONS

A major change is made in section 8, pertaining to the administration of the act, by taking the administration away from the Administrator of Veterans' Affairs and giving it to the Secretary of the Treasury, to whom it logically belongs. The necessity for administrative boards and a duplicative set-up paralleling our present governmental machinery is thereby avoided. There is no reason why our present Government officers cannot be utilized for the enforcement of this law as well as other laws they enforce instead of building up new bureaus to eat up the money that should be available to the annuitants under this act. Efforts have therefore been made, throughout the entire bill, to utilize the following long-established Government agencies in the enforcement of its provisions:

(1) The Secretary of the Treasury.
(2) The Collector of Internal Revenue.
(3) The Post Office Department.
(4) The United States district attorney.
(5) The United States district court.

In accordance with the above, provision is made in the bill for distribution of the annuities by means of checks mailed out from Washington by the Secretary of the Treasury under Uncle Sam's franking privilege, with little extra cost to the Government.

Forms for the use of applicants and annuitants are to be made available through the local post office, already established in every village and hamlet, within 30 days after the act takes effect. These forms are to be filed with the postmaster, after being sworn to, and are to be checked by him and then forwarded to the Secretary of the Treasury at Washington. The returns from annuitants are likewise to be sworn to and filed with the postmaster for forwarding to Washington, unless he finds that any return shows violation of the law, in which case he is to turn it over to the United States district attorney for appropriate action. The district attorney may be called upon for advice and legal assistance by the postmaster and by applicants for annuities, as well as the annuitants. Provision is also made for petitioning the United States district court for a determination of any person's rights under the act and the procedure in this regard is made as simple and inexpensive as possible. Postmasters and their assistants are given the power to administer oaths and are to charge 25 cents for each verification of a return for an annuitant, which 25 cents becomes a part of the revenue of the Post Office Department in order to cover the additional expense to which that Department is put. This revenue will amount to several million dollars monthly, as annuitants will naturally patronize Uncle Sam rather than a notary public, for they will gain by doing so.

APPORTIONMENT AND DISTRIBUTION OF FUNDS

In section 9, the pro rata idea is, of course, retained. There is, and has been, no thought of changing it, as it has been realized all along that the plan is one that will have to be carried on a "pay as you go" basis and that the Government should not be called upon to underwrite a payment of $1,600,000,000 per month to the 8,000,000 or so citizens over 60 who will be eligible to apply for the annuity. On the pro rata basis we will have everything to gain and nothing to lose as the tax will certainly bring enough to pay the expenses of administration, which under the act as it is now drafted should not be great. It is a certainty that whatever amount is brought in the first month, there will be an increase in it the next month, and a greater increase each succeeding month, as there will be increasingly more transactions and consequently more transaction taxes. That is why a limit of $200 per month has had to be made, and this limit will soon be reached under the pro rata basis. The $200 per month has always been our goal and Dr. Townsend has consistently opposed every effort to lower the age limit and give to more citizens an annuity of say $100 per month, as this would lower the standard of living in America and would not

be fair to the working people of the Nation, who are entitled to insist on maintaining at least the $200 per month standard as the minimum in the way of a comfortable living wage.

Disbursements are to be made between the 20th and last of each month to all annuitants whose applications have been approved by the Secretary of the Treasury by the 20th of the month, and the checks are to indicate that, as to the annuitants, they are for the following calendar month.

All applications not approved by the 20th, and all moneys received after that, together with all moneys withheld from the annuitants as penalties for violating the act, or waived by them, and all moneys returned from deceased annuitants and those forcibly held in institutions, are carried over into the next month.

By means of these definite rules distribution will be on a systematic basis and very little of the money collected under the act will be held at Washington for more than 15 days. The delay of 5 months in getting the first checks will enable industry to prepare for the increased buying, and prices will not be skyrocketed by a sudden release of buying power.

Any surplus over and above the $200 per month maximum would be used to pay off the national debt, until the same is cleared, after which the surplus goes into the general fund.

RULES AND REGULATIONS

Section 10 gives to the Secretary of the Treasury the power to issue and promulgate administrative rules and regulations under the act instead of the Administrator of Veterans' Affairs.

Section 11 appropriates the money collected in the general welfare fund and sufficient money from the general fund to establish and maintain the act, subject to reimbursement out of the funds collected thereunder, something which the old bill neglected to do, although subdivision 7, section 9, of article I of the United States Constitution provides that "no money shall be drawn from the Treasury, but in consequence of appropriations made by law."

DISQUALIFICATION

In section 13 the only change was to add "or en route between the States and such territorial possessions" so as to permit annuitants to travel to and from our territorial possessions.

DELAY IN PAYMENT—REMEDY

In section 14 there was made a change in wording so as to give the annuitant but 1 additional month in which to spend the accumulated annuity checks on his hands at the same time. The old bill allowed several months.

CERTAIN OFFENSES MISDEMEANORS—PENALTY

Section 15 was changed very materially, not only in wording but in effectiveness, and, as redrawn, will add much toward making the entire act practically self-enforcing. It should convince even our bitterest opponents that the Townsend plan is now practicable.

Annuitants may not engage in any gainful pursuit "in any way or upon occasion" under the new wording. This makes a conviction possible to obtain, whereas under the old wording it would have to be proved that the violation existed over a period of time, which is often a very difficult thing to do by legal evidence from the practical standpoint.

It is made a misdemeanor to fail to spend the annuity or proceeds of the annuity within the time required by the act or to spend it in any way other than as required.

The bill provides that the annuitant may not maintain any person in drunkenness or gambling in addition to maintaining any able-bodied person in idleness, as the old bill provided; also that he may not employ any person at a salary "entirely and clearly" in disproportion to the service rendered. This latter change was made so as not to discourage annuitants in paying what they consider fair wages to employees, even though such wages might be higher than the average wage paid.

It is made a misdemeanor for any annuitant to refuse to pay any just obligation incurred under the act, or to refuse to pay 10 percent of any month's annuity on just obligations incurred prior to the time he became an annuitant. The creditors of a person taken out of productive industry are certainly entitled to payment and this is the only means of protecting them.

A graduated scale of penalties for violation of the misdemeanor provisions of the act is set up. Under these provisions an annuitant would, upon conviction, forfeit each month for the remainder of his life one-fourth of the annuity to which he would otherwise be entitled. He and his neighbors would become very careful not to violate the law again. If he does, another one-fourth is taken away. If he does a third time he forfeits another one-fourth, and for a fourth conviction he loses the annuity altogether. This would make the act as self-enforcing as it can be made, as each violation vitally affects the annuitant's pocketbook. A large army of "snoopers" or enforcement officers will therefore not be necessary and much of what would ordinarily be the enforcement fund will actually be spent for relief work to the aged, or rather for "general welfare" work for the entire population, as will become increasingly apparent when the significance of the new title to our bill and the new name for our fund becomes fixed in the public mind.

CERTAIN OFFENSES A FELONY—PENALTY

Real teeth are also put into the bill by the new wording in section 16. Under the old bill it was made a felony to make false statements in a tax return, but a tax return was not required by the bill. Under the new bill returns are mandatory, must be sworn to, and must state the truth, and all of the truth, or the party becomes guilty of a felony under the act in addition to being guilty of perjury under State laws. It is also made a felony to fail to pay any tax, whereas the old bill made it merely a misdemeanor. Stiff maximum penalties are provided for first convictions and stiffer penalties as well as severe minimum penalties are provided for subsequent convictions.

In addition, machinery is set up for the collection of civil penalties of double the amount of the tax plus interest at 7 percent in all cases of attempted tax evasion.

The theory of this section, under the new wording, is to simplify the collection of the taxes imposed by the act by dealing severely with offenders and by dealing more severely still with second and third offenders and to prevent tax evasions as far as possile.

To section 17 has been added a provision to make parts of the act severable from other parts so that if one part should be found invalid, through one of the 5 to 4 decisions for which our Supreme Court is famous, other parts of the act will not be affected thereby.

CONFLICTING LAWS REPEALED

Section 18 of the act was added to make it clear that all conflicting acts are repealed to the extent of any conflict. The Social Security Act would, of course, become unnecessary when our bill passes, and unemployment will be abolished entirely and wages raised and hours lowered for all workers by the operation of the fundamental economic law of supply and demand. The compulsory method of trying to make industry pay living wages and work reasonable hours and provide against unemployment by sheer force of law will soon be abandoned when it is seen how simply the whole problem can be solved under the Dr. Francis E. Townsend plan as embodied in this bill.

Section 19: This section has been included in order that certain titles of the present Social Security Act may be specifically repealed as we do not believe that with an all-inclusive tax upon all business transactions or activities such as we recommend that the additional taxes required under title 8 of the Social Security Act should be levied.

The final change made by the new bill is to add section 20, providing that the act shall take effect upon its enactment. Let us all hope and pray and work in order that this day may soon be with us.

America's No. 1 Farm Problem Becomes More Chaotic Under 21 Government Programs

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1939

ARTICLE FROM THE WASHINGTON POST

Mr. CRAWFORD. Mr. Speaker, America's farm problem No. 1 continues to grow in size and it becomes more chaotic. I specifically refer to King Cotton.

Twenty-one Government programs in 10 years dealing with the production, plowing up, control of marketing, and lending money on cotton have only further aggravated the general situation.

Seven price-supporting loan programs, six acreage-restriction programs, eight miscellaneous programs, and, with another appropriation bill before Congress calling for approximately $140,000,000 to be applied to cotton, are all a fair illustration of "planned economy" insofar as this major crop is concerned.

Today we find a huge surplus stock of cotton under Government control, dwindling exports, with the 7 months of the current crop year 42 percent less than in the same period of last year and exports the lowest for any corresponding period since 1881–82.

This deplorable condition increases while India this season shows exports 62 percent larger than a year ago. Furthermore, our neighbor republic, Brazil, reports a 21-percent increase for the last August–December period over the previous high record for similar months. Foreign production of cotton rapidly expands, world consumption of cotton continues to increase, and while this occurs the primary producer of cotton in the United States faces extinction.

Under leave to extend my remarks I submit herewith an article in the Washington Post, May 23, 1939, dealing with the ruinous effect of the Government program:

[From the Washington Post of May 23, 1939]

LOAN COTTON CALLED RUIN TO EXPORT TRADE—ONLY 28 PERCENT BOUGHT BY BRITAIN IN APRIL WAS AMERICAN STAPLE

NEW YORK, May 22.—Evidence continues to accumulate that the holding of the most of the supply of American cotton in the Government loan stock for prices above levels competitive with prices of foreign growths is progressively destroying foreign markets for the American staple, Alston H. Gerside, economist of the New York Cotton Exchange, said today.

During April British mills took only 73,000 bales of American cotton, compared with 78,000 in the same month last season, but they took 184,000 bales of foreign growths, compared with only 110,000 in April last season. Their takings of American cotton constituted only 28 percent of their takings of all cottons in April this year, compared with 41 percent in April last year.

During the first 9 months of the current cotton season, from August 1 to April 30, the United States exported only 2,977,000 bales of cotton, compared with 5,066,000 in the same portion of last season, but India exported 2,233,000 bales, compared with 1,485,000. British spinners recently appealed to the United States Government for the release of loan cotton.

DOMESTIC DEMAND HURT

In this country, also, the impounding of most of the supply of cotton in the Government loan stock is undermining the demand for domestic cotton. In this country the shortage of the supply of cotton in commercial channels is operating against mill demand chiefly by forcing prices of spot and nearby deliveries of cotton to large premiums over prices of more distant deliveries.

This is greatly restricting forward buying of goods, and, in turn, is making it impossible for mills to obtain remunerative margins on goods sold. During the past week the average gross mill margin on three print cloths was approximately 10.29 cents a pound, compared with approximately 12 cents 2 months ago, about 12.50 cents a year ago, and about 19 cents 2 years ago.

In consequence of the fact that the movement and consumption of Indian cotton are not throttled by any Government price-pegging loan, the stock of Indian cotton in India has been reduced to a much lower level than a year ago. On the other hand, because of the fact that the movement and consumption of American cotton have been throttled by a Government price-pegging loan, the stock of American cotton in this country has increased to the highest level ever seen in the history of the industry.

Tennessee Stirred Up Over Failure To Collect Taxes Because of T. V. A.

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1939

Mr. JENKINS of Ohio. Mr. Speaker, under leave to extend my remarks, I wish to comment briefly on an editorial appearing in the Knoxville Journal of a few days ago. It is in line with some speeches that I have already made on the floor of the House in which I have set forth the fact that the authorities and citizens of Tennessee have come to realize that the T. V. A. program was not a sound one. No consideration was given to the fact that a yardstick could not be a correct yardstick unless it took into consideration all the expenses incident to the setting up of the T. V. A. activities. For instance, they gave no consideration to the fact that the establishing of the large and unnecessary lakes in the Tennessee River would flood thousands upon thousands of acres of valuable land which were then on the tax duplicate at a reasonable figure and would take those lands off the tax duplicate. Likewise, it gave no consideration to the fact that when they ruthlessly put out of business and lowered the value of the power companies already operating in the State and paying heavy taxes therein, that something would have to be done to take the place of those tax payments when those companies were driven out of business by ruthless competition or were purchased by the Tennessee Valley Authority.

Now the newspapers in that State are all stirred up and stirring the people up over the fact that the tax income of the State is far too small to meet the State budgets.

The sum and substance of this whole situation is that the State of Tennessee was perfectly willing to accept millions upon millions of dollars in river improvements and is still glad to accept these gigantic donations if it will give to them cheap power. They want the United States Government to make up their loss of taxes and still permit them to have the cheap rates. In other words, they would expect the United States Government to provide them with facilities costing many hundreds of millions of dollars adapted to the purpose of producing cheap power and at the same time they would expect the United States Government to make up any shortage in taxes that they might experience by reason of the overflow of valuable land and the impairment of the value of the physical properties of privately owned corporations.

Let me quote you a few extracts from an editorial appearing in the Knoxville Journal of a few days ago:

What shall it profit the people of the Tennessee Valley if they gain a saving on their electric bills of $4,000,000 and at the same time have approximately that amount added to their tax bill?

This is the question raised by the inevitable tax loss which will be sustained by the State of Tennessee, her counties and cities, when the Tennessee Valley Authority acquires the properties of Commonwealth & Southern unless the present Congress acts for replacement of tax revenues.

It is the biggest fiscal question which has faced the State of Tennessee in the past 20 years and it is one which, if not settled now and properly, will mean that for the next 50 years this Commonwealth will be one of the worst tax-ridden governmental subdivisions in the country.

* * * * * * * *

Further, it should be pointed out that there is an urgency about congressional action on the tax replacement problem fully as great as that recognized for the prompt passage of the enabling legislation by which the Tennessee Valley Authority can make its purchase.

Tennessee counties before long are going to face their individual budgets for the coming fiscal year. In numbers of them the county courts will have a choice between hiking the tax rates—in one county as much as two-thirds—or of entering upon the coming year's operation with the knowledge that a deficit will be incurred.

Development of American Culture and Civilization Through P. W. A. and W. P. A.

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 23, 1939

SPEECH OF HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, MAY 11, 1938

Mr. SIROVICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to say that our great President of the United States, Franklin Delano Roosevelt, has had his first plan on Government reorganization approved. Under this plan the Federal Works Agency will be established, consisting of the Bureau of Public Roads, Public Buildings Branch of the Procurement Division, building management of the National Park Service, the United States Housing Authority, the Federal Emergency Administration of Public Works, and the Works Progress Administration.

This afternoon I had a conference with our great President of the United States, Franklin Delano Roosevelt, and in behalf of a great number of Members of the House of Representatives, I urged him to name the Honorable Harold Ickes, the eminent, brilliant, and distinguished Secretary of the Interior, as Federal Works Administrator, in complete charge of all the bureaus and organizations that would be listed under the Federal Works Agency. I told the President that this work would not interfere with the continuation of his duties as Secretary of the Interior. Most of the Members of the House of Representatives have the highest personal affection and regard for the Secretary of the Interior, for his honesty, for his integrity, and the magnificent accomplishments he has already rendered in his patriotic services to our country. Mr. Speaker, as an evidence of the profound regard that I entertain for this faithful public servant, I want to incorporate in the RECORD of Congress a speech delivered by me on May 11, 1938, on the floor of the House, which testifies to the magnificent services rendered by the Honorable Harold Ickes, Secretary of the Interior and Director of the P. W. A., aided by the genius of his First Assistant Secretary, Hon. Ebert K. Burlew:

Mr. WOODRUM. Mr. Chairman, I yield 15 minutes to the gentleman from New York [Mr. SIROVICH].

Mr. SIROVICH. Mr. Chairman, I have listened with profound interest to the very eloquent, constructive, and patriotic speeches that have been made on the subject of this recovery bill by both Republican and Democratic Members of the House. With your respectful consideration and kind indulgence, I shall endeavor to speak upon this controversial subject along lines that have not been approached by any Member of the House of Representatives. I shall endeavor to discuss the tremendous influence that the expenditure of these billions of dollars will have, on present and future generations, through the development of culture and civilization in our Nation.

Mr. Chairman, as the countless centuries marched across the proscenium of time they have presented two colorful and powerful dramas, enacted through pump priming, that paid for the labor of the unemployed—one labeled culture, which is the source of human happiness, the other civilization, which is the basis of our comfort. Both of these entities, culture and civilization, have left their profound and indelible impress upon the development and progress of races and nations through the ages.

The knowledge of every human being comes through the five windows of our personality—hearing, seeing, smelling, tasting, and feeling. The extension, prolongation, and development of these five senses, aided and abetted through tools, machinery, or equipment, is responsible for civilization. The basis of all civilization is therefore man's organic weakness. As mankind is too weak to struggle for existence with his natural weapons, he must resort to the creation of artificial weapons, through his creative brain, which has brought about the development of tools, machinery, and mechanical appliances. These extensions of mechanical tools to be used by man's five senses are termed "civilization."

Since the mind of no animal can make a tool, animals are incapable of possessing a civilization. The expansion and development of the mind through the aid of writing, printing, art, and science is culture. Since the mind of no animal possesses these gifts, no animal possesses cultural opportunities. Therefore, culture and civilization belong to the human family.

Mr. Chairman, civilization is only another word for applied physics, for it deals mostly with tools and bodies. Its main task is to produce more and better tools to increase man's comfort. Because civilization deals with tools, it involves space, or the eye, just as culture dealing with ideas, notions, terms, similes, involves time, or the utilization of the ear. The American people have been trying now for 150 years to establish a new civilization on this continent. That it also simultaneously established a culture only testifies to the creative energies of the American people. Of course, our civilization has been of much greater importance to ourselves and to humanity than our culture. We have invented some tools of our own which have increased enormously man's comforts. In these enterprises we have been excelling the Europeans for a good many years, but as far as culture is concerned, they still outrank us and can teach us a thing or two.

Like the Romans of old, we are primarily creative in the field of civilization. Our field of activity is our vast spaces, comprising a whole continent, but the field of activity of ancient Greece, whose culture is to the present day a source of inspiration to all humanity, was not space but time. Of the former there was very little. Athens and Sparta were both but villages in comparison to our metropolitan cities, and civilization as a special entity was nonexistent. Part of it was found in Asia Minor, another in Italy, and a third part in what is today called Greece. The Greeks, whose genius was not space, but time, thought in terms of eternity, but the ancient Romans thought in terms of continents, what was to them tantamount to infinity.

Ancient Rome and Greece are not the only examples of this great division in history—civilization and culture. Ancient India and ancient Egypt represent a similar division. Ancient India had all the culture, all the metaphysics, all the poetry, all the philosophy, but ancient Egypt had all the irrigation machinery, all the tools, all the great monuments, all the architecture, all the building activity, all the pyramids. Ancient Carthage and ancient Judea represent a similar division. Ancient Carthage had all the commerce, all the shipping, all the machinery, but ancient Judea had all the religion, all the poetry, and all the metaphysics. It is true that there was poetry, music, and philosophy in ancient Rome, just as there was art and religion in ancient Egypt, just as there were tools in ancient Greece and ancient Judea. The point is that while the center of gravity in ancient Rome was civilization, it was culture in ancient Greece.

In ancient Rome the appellation given to the king was the Latin sentiment "Pontifex Maximus"—the great bridge builder. When Rome was destroyed that title was adopted by the Pope, the Pontiff. In ancient days the adage "all roads lead to Rome" symbolized the powerful construction work done by the ancient Romans in building roads, highways, bridges, and tunnels in order to accomplish their military mission in conquering the then known world.

During the Dark Ages there was no civilization, but we had a modified form of static ecclesiastical culture. Education was in the hands of the church, which disseminated it to all those who sought the influence of the church for learning and education. With the development of the Renaissance real civilization and culture began. Roads, bridges, cathedrals, monuments, highways, art galleries such as the Uffizi and Petti Gallery of Florence, Doges Palace of Venice, Vatican in Rome, and the Museum of Naples which shows the relics of Pompeii and Herculaneum, the civilization of 2,000 years ago. The Louvre and Cluny galleries in Paris; Versailles, the home of Louis XIV and the Bourbon kings who succeeded him; the Schönbrunn Palace, the home of the Hapsburg dynasty, with its priceless art treasures in Vienna; Potsdam, the mansion of the Hohenzollerns, filled with works of art and sculpture; the Hermitage and Sczarko Zelo palaces in Leningrad; and Kremlin, the abode of the Romanoffs, with its magnificent collection of oriental art treasures, culture, and paintings of medieval times; these are evidences of the contribution of civilization and culture from the Renaissance up to the present time in the various great nations of Europe.

In modern times the great dictatorial nations such as Russia have only civilization and no culture. Culture preserves freedom of personality and permits the mind to express itself independently of restrictions and censorship. The modern Nazi state of Germany has only a civilization, but is destroying culture that formerly existed under a democratic regime. In modern Italy civilization is marching onward and upward, but culture is being destroyed through the enslavement of the mind. In Japan, another great autocratic nation, only imitative civilization exists. No culture has been developed, and not one philosopher of eminence has ever been produced in Japan, but the great parliamentary constitutional democracies, such as England, France, and the United States, because they grant freedom of mind and expression, have developed the greatest civilization and potential possibilities of a greater culture.

Mr. Chairman, to the extent that the center of gravity in ancient Rome was civilization, building roads and bridges, tunnels and canals, creating tools and machines, and establishing a vast organization of life, in that same measure is it in modern America—it is primarily civilization. In the cities the skyscrapers

almost threatening the heavens remind us of the predominance of civilization, and out in the wide open spaces, the roads, tunnels, sewers, bridges, and all the dams, like Boulder Dam and Coulee Dam, remind us of it. To meet the emergencies arising out of the economic crisis we have embarked upon great enterprises of civilization, building more roads, planting more forests, constructing new dams, and creating new sources of power to serve the needs, not only of the already established settlements but also to serve the needs of the settlements to be established. It is true we have not forgotten our cultural needs altogether. Through the constructive genius of Harry Hopkins and his able assistants, Col. F. C. Harrington and Aubrey Williams, we have developed the Works Progress Administration. We have created a Federal theater project and have harnessed the creative energies of countless numbers of cultural workers, actors, painters, musicians, sculptors, writers, and the like, but we have concentrated, not on culture but on civilization. We did it not as a caprice but to live up to our historical destiny. The center of gravity in America is civilization and not culture, and when the necessity arose to planfully revitalize our energies and at the same time give employment to millions of unemployed people, our first concern was instinctively enterprises of a self-liquidating character within the domain of civilization. More has been accomplished in this field in the last 5 years than would probably be accomplished under normal circumstances within 25 years.

Our Public Works Administration, under the brilliant and gifted leadership of the greatest Secretary of the Interior that this Nation has ever had, honest Harold Ickes, has enriched enormously American civilization that future generations of American citizens will pay tribute to. The same holds good of many other enterprises of a similar character that Mr. Ickes and his distinguished, efficient, capable, and loyal assistant, Mr. E. K. Burlew, an eminent career man in public service for 25 years, and their magnificent organization of P. W. A. workers have been perfecting all over our Nation.

Many of our people complain about the rising public debt, but they are either not wise enough, or honest enough, to admit that we have something to show for this debt—public buildings, good roads, bridges, hospitals, tunnels, dams, parks, public markets—whose values are never included in our Government balance sheet. When a private business concern draws up a statement showing liabilities and assets, it surely includes among its assets such properties as buildings and improved lands, and will surely include such items as the Boulder Dam, Muscle Shoals, Grand Coulee Dam, and similar pieces of valuable property, but for reasons unknown our Government only lists its liabilities. The citizens of this great country must know that the rising liabilities are matched by great assets which are a source of health and strength to our people. These assets are everlasting contributions to American civilization and a monument to the genius of President Roosevelt and his ablest Cabinet officer, Harold Ickes. [Applause.]

They embellish our cities with parks and playgrounds, they strengthen our landscape with new roads, new bridges, new dams, and new forests, and constitute the greatest contribution to American civilization made in the last 50 years. Those of us who think in historical terms instead of in terms of everyday emergencies, those of us who think in national terms instead of local terms, must wish that we continue to make these contributions to American civilization, not only because in so doing we continue to employ millions of people, but because we continue to enrich our country, we continue to develop our civilization, we continue to increase the security, comfort, and happiness of future generations of Americans. I am so convinced of the necessity of the continuation of the P. W. A. that I would advocate its prolongation into a permanent agency, even had we not to face a recession almost bordering on a major crisis. In the course of our daily business we forget that only by special effort can we continue to tap the vast resources of our country and to develop them, that only by special effort can we develop our avenues of communication. With the increasing traffic we must have more and better roads. To prevent further devastation of the soil we must have more reforestation. To secure cheap power for vast electrification of sections of our rural population we must have more dams. To beautify the skylines of our cities we must clear the slums. To provide our lower middle classes with modern, up-to-date housing facilities we must embark upon a vast building program. Our cities need more parks, more and better schools, bathing pools, and more playgrounds for children. In dozens of cities in the East hundreds of new school buildings must be established because the old buildings have outlived their usefulness and can no longer serve their purpose. All that necessitates the continuing of the Public Works Administration, which has been the greatest agency of our Nation in developing our present and our future civilization. The budget of the P. W. A. should never be decreased, but increased, for money spent on the P. W. A. is money spent on the development of our civilization, which is the primacy of our life and the glory of our Nation. Our Nation is fortunate in having at the helm of the P. W. A. Hon. Harold Ickes, a man of great vision, a profound student, who is aided and assisted by that loyal, faithful, honest, and hard-working Assistant Secretary of the Interior, Elbert K. Burlew. [Applause.]

It should be the policy of the American Government to keep the wheels of our civilization moving and to keep its parts in good shape. We must not permit our public buildings and markets to become dilapidated. We must not permit traffic to become too congested, and to prevent this we have to continue to build new roads. We must not permit our communications to decline because of lack of highways, bridges, and tunnels. America will be as strong as its civilization, and will be as modern as its civilization. To continue it means continued activity. Civilization, like culture, is a continuous process. It cannot be interrupted for a second. To keep it moving and growing a special agency—now it is the Public Works Administration, later it may be the permanent Public Works Department—always must be kept busy. Not only is the money involved well spent, but the best possible national investments we could make to promote recovery and ultimately bring back prosperity. The preparedness of a nation is coequal with the efficiency of its civilization, and the greatness of a nation, of America, can only be measured by the greatness of its civilization. Its greatness expresses itself in its continuity. Through the great agency of the P. W. A. we must continue to build, continue to improve, continue to replace the old with the new; continue to be active, continue to bring form, harmony, and beauty out of chaos in order that American civilization should endure. That is the great task before us, and only an agency like the P. W. A. can perform this task. Let us therefore continue to strengthen and revitalize, fructify, and embellish the phenomena called American civilization. When you consider the P. W. A., do not look at the hundreds of millions of dollars involved; look at the things accomplished. That is the only possible approach to the problem, and it is the approach of true statesmanship and true American patriotism. Culture and civilization are the foundation upon which the superstructure of prosperity, happiness, and comfort will forever rest and thus bless our American people and enrich our American homes, hearths, and firesides. [Applause.]

Effects of Inflation

EXTENSION OF REMARKS

OF

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1939

Mr. RUTHERFORD. Mr. Speaker, it is time for all of the people of the Nation, whether they be old dealers, new dealers, conservatives, or liberals, to stop, look, and listen. Yes, it is time that we stopped and honestly looked into the financial condition of the country and having stopped and looked, then when we have thoroughly grasped the exact situation to seriously ask ourselves "Where do we go from here?" In the early months of this administration, when the President and his New Deal advisors were handling the affairs of the Nation with the skill and nonchalance of movie actors, a large number of persons took the situation lightly and sang "We don't know where we're going but we're on our way." The situation is very much different today than what it was then so far as it relates to the financial condition of our country, because today we know where we are going and we are definitely on our way. We are headed for inflation with all of its attendant evils and nothing can stop us if the administration continues its new spending policies and theories. That the administration is going to continue its spending policies is quite evident from the President's speech on Monday evening. It was my privilege to serve upon the special committee on national-debt policy appointed by our minority leader, JOSEPH MARTIN, and our committee submitted its report to the Republican conference on May 16, 1939. My part of the committee work related to national debt and inflation and in the gathering of data I had the assistance of some of the foremost economists of the country. We studied the effects inflation upon endowed institutions, upon insurance companies and their policyholders, upon savings-bank deposits, and while inflation may never come to America in such magnitude as it came to Germany, Austria, and France, yet it will do the Members of the House no harm to study the terrible effect that inflation had upon those countries. It can happen here. In this talk I want to discuss with you the effect of inflation on endowed educational institutions, charitable organizations, and hospitals. At a later date I will give you the benefit of our studies on the effect of inflation on savings-bank accounts and the effect of inflation upon insurance companies and their policyholders.

THE EFFECT OF INFLATION ON ENDOWED EDUCATIONAL INSTITUTIONS, CHARITABLE ORGANIZATIONS, AND HOSPITALS—THE VULNERABILITY OF ENDOWED INSTITUTIONS UNDER INFLATION

Endowed institutions of all kinds stand in a particularly vulnerable position with respect to inflation. Endowments given to institutions are granted by their donors either in the form of investments, from which the institutions in question draw the income, or are turned over in the form of outright payments, which the institutions themselves invest—sometimes it may be a combination of the two. In the former case, business precaution has been responsible for the fact that such investments usually are in high-grade bonds of government or corporations of a category termed "gilt edged," the yields from which may be expected to be steady over the years. If institutions are called upon to invest or reinvest money or securities given to them outright, not only business precaution but law restricts their investments to securities having as small an element of speculation as possible, which, again, means, in effect, high-class securities bearing a fixed rate of interest. It should be further added that a large proportion of endowments are inviolable, meaning that the principal must be kept intact, leaving only the income for use by the recipient of the endowment.

Now, it is just this type of investment that is affected most disastrously by inflation. It pays by contract a fixed percent, which remains unchanged even though the purchasing power of the sum so paid has fallen practically to nothing. And for this very reason the face value of the securities themselves falls precipitously, and little, if anything, can be realized from their sale. This is in contradistinction to common stocks, which pay on earnings, and hence whose yields and face value go up during an inflationary period, though not nearly so much as the purchasing power of the currency unit declines.

DEPRECIATION OF THE ENDOWMENTS OF THE UNIVERSITY OF FRANKFURT

A striking effect of the German inflation on endowments of educational institutions may be noted in a table which lists the face value of the 38 inviolable endowments which constituted the main support of the University of Frankfurt, first in 1922, just before inflation became uncontrollable, and then after revalorization. It should be noted that under the German revalorization law—February 14, 1924—the currency was stabilized on the approximate basis of one trillion paper marks to one gold mark; and, furthermore, in this general revalorization law certain types of securities were decreed to be worth more than that at which they were currently quoted. Thus, Government and other high-grade bonds were revalorized at 2½ to 12½ percent of their face value—according to qualification—savings bank deposits at 10 percent, and mortgages at 25 percent. Under this dispensation it will be noted in the table—which on account of its length is appended hereto—that less than 15 percent of the face value of these endowments was recovered and that the one endowment—Jakob Schiff—which returned better than 50 percent was due to the fact that 57 percent was invested in American railroad bonds. It should be further noted that 11 of the endowments were revalorized at less than 10 percent and 3 of them at 2½ percent or less.

THE STROOF ENDOWMENT

Another example is worth citing at considerable length because it is not extreme but is typical of what happened to endowed institutions—educational, charitable, and medical—as a result of Germany's experiment with inflation. Its parallel will also be found in other European countries, the extent of the ensuing disaster being contingent on the degree and severity of the course of inflation in the individual countries concerned.

In 1921 there died in Germany one Dr. Stroof, who, being a public-spirited man, in his will endowed the University of Frankfurt with the sum of nearly 8,000,000 marks for the purpose of fostering research. The only condition imposed was that certain employees of Dr. Stroof should be paid pensions out of this fund amounting to approximately 666 marks a year. The first installment to the university consisting of 1,000,000 marks in inconvertible Reich treasury notes was paid in January 1922. By that time the German inflation characterized by ever larger issues of currency irredeemable in gold was under way, and so the 1,000,000 marks in question was worth only 25,000 gold marks, or about $5,950 at the pre-war rate of exchange. One month later a second installment of 1,000,000 marks in treasury notes was paid, but by that time it was worth only 22,000 gold marks—$5,236. Again in March 1922 a third installment—this time of 1,250,000 marks—was transferred to the university, yet this larger sum was worth only 18,000 gold marks—$4,284. No payments were made for the next 13 months, but in April 1923 Prussian state bonds, with a face value of 450,000 marks, were turned over to the fund. By that time the uncontrollable phase of the German inflation had been reached and the entire sum was equivalent in value only to 86 gold marks—$20.46. In May 1923 the fund received 700,000 marks in treasury notes, but this amount—nearly twice as large as the sum paid 1 month earlier—was worth only 90 gold marks—$21.42; and in July an installment of 171,000 marks in treasury notes had a value of only 2.6 gold marks—about 62 cents. The final chapter was written when in December 1923 the last installment of 3,250,000 marks in treasury notes was paid. This installment, it will be noted, was about three times as large as any previously made and yet it was worth only thirty-eight one-hundred millionths of a single gold mark, or such an infinitesimal fraction of 1 cent in American money as almost to defy computation.

Put into the following tabular form the figures become even more startling:

	Face value of installments	Gold value of installments	Approximate value in American money, pre-war rate of exchange
	Marks	*Marks*	
January 1922	1,000,000	25,000	$5,950
February 1922	1,000,000	22,000	5,236
March 1922	1,250,000	18,000	4,284
April 1923	450,000	86	20.46
May 1923	700,000	90	21.42
July 1923	171,000	2.6	.618
December 1923	3,250,000	0.000000038	(?)
Total	7,821,000	65,178.6+	15,512,498+

It should, of course, be understood that whatever the value with relation to gold marks, the various installments had at the time they were paid into the fund, these steadily depreciated, and, in fact, they all reached the level of the value of the final installment of December 1923. In short, by December 1923 the gold value of the entire Stroof endowment shrank to such an infinitesimal fraction of a single gold mark that for all practical purposes it was completely wiped out.

An ironical aftermath may be found in the fact that the university was still bound to pay the small pensions of the Stroof employees, and, in fact, after the revalorization of the mark, had to do so out of the small remnant of funds still left to the institution even though the Stroof endowment itself had been inflated out of existence.

THE CASE OF THE THERESIAN ACADEMY OF VIENNA

This institution, equivalent in standards to an American high school, was founded in 1778 by the Empress Maria Theresa, and by 1914, and through funds added to its original endowment, had approximately 8,000,000 crowns—about $1,600,000. At the beginning of 1925, when the Austrian crown was finally stabilized after the inflation period on the basis of about 14,400 paper crowns to 1 gold crown, this endowment was discovered to have a value of just over $112, as compared with $1,600,000 in 1914. Under this severe loss the school was no longer able to care for needy but deserving students. It had to take with little discrimination only students who could pay their own way, and besides it had to curtail its plant and equipment in every possible manner even to the extent of renting unused rooms and turning the school stables into garages, which were rented to outsiders.

THE THIERS FOUNDATION

While the course of inflation in France was not nearly as severe as in Germany or Austria, the franc being stabilized in 1925 at about one-fifth its pre-war value, nevertheless,

it was sufficiently severe to cause tremendous losses, particularly to those whose living was derived from fixed incomes. The case of the Thiers Foundation was a typical case in point. This institution was founded by Adolph Thiers, the first President of the French Republic, as an aid to students in obtaining the highest instruction in law and medicine and also to qualify them for doctors' degrees in literature and science. It received the income from a fixed capital fund invested in Government bonds and in coal-mine securities. The institution had already had its income severely curtailed during the war through the occupation of the French coal-mine area by the German armies. But after the war the rising tide of inflation so depleted the purchasing power of its income that it became necessary to secure permission from the state to sell the jewels of Mme. Thiers, which were conserved for the foundation in the Louvre Museum. Even though this sale nearly doubled the foundation's capital, the purchasing power of the increased income was little more than one-seventh of the purchasing power of its original pre-war income and left the institution close to the brink of insolvency.

CHARITABLE AND WELFARE INSTITUTIONS AND FOUNDATIONS

So far we have cited only examples relating to educational institutions. The consequences of inflation are equally disastrous upon charitable and welfare institutions of all kinds. For instance, the city of Frankfurt, like nearly all German cities, possesses numerous institutions of this character supported largely by trust funds—contributed by philanthropic citizens—which under the loan have to be invested in "mundelsicher" securities—that is, highest grade State, municipal, and corporation bonds, paying fixed rates of interest. In 1914, foundations for the care of children and young people possessed assets of about 922,000 marks, and foundations for the poor possessed assets of approximately 5,372,000 marks. But when these assets were revalorized at the beginning of 1925, the assets of the former had shrunk to about 112,000 marks and the latter to 665,000 marks—these sums being in each case about 12 percent of the 1914 assets. The highest amount recovered in any of the individual foundations was 37 percent and in many cases the rate of recovery was 5 percent or less of the original amounts. Tables showing the details relating to these foundations are appended. Obviously the drastic curtailment of the income and assets of these foundations under inflation meant that the poor, the aged, and the destitute had to be denied the help they needed.

HOME FOR THE AGED AND INFIRM (FRANKFURT)

Nowhere are the disasters of inflation upon the poor and aged more strikingly brought out than in the case of the Home for Aged and Infirm in Frankfurt. Again it should be reiterated that this is only one typical case selected at random out of many.

This institution was founded in 1816 and was originally a workhouse, but later developed into a home into which aged men and women—to the number of 300—purchased a life residence out of their meager savings and in addition any additional savings which they possessed were entrusted to the institution which paid them interest on it. These entrance fees and savings funds constituted the main portion of the working capital of the home, and consequently under inflation it found itself utterly unable to provide for its inmates or to pay the small amounts of interest due them from the savings which had been entrusted to it. Furthermore, as inflation progressively advanced, great pressure was brought upon the home to aid more and more people who themselves were rendered poverty-stricken by the disastrous economic conditions which inflation was producing. Obviously the home had to refuse further aid, no matter how necessitous the circumstances.

An idea of the astronomical character of Germany's inflation may be visualized in the fact that the food bill for the home in the fiscal year 1923–24 reached a total of 23,293,366,276,337,266 paper marks—the item for black bread alone was 2,986,973,878,061,080 paper marks—while it cost 10,246,434,361,231,396 paper marks to supply heat for the establishment. The income from all investments during this year, reckoned in paper marks, covered less than 3 percent of the food bill alone. And whereas in 1914 the income of the home from its investments amounted to more than two-thirds of its total receipts, in 1923–24 it was less than one-seventieth of the total. In short, the home itself became dependent upon the city of Frankfurt for aid, and hence lost its character as a self-supporting institution, whose large and growing endowments had enabled it to meet an expanding need in the community.

WELFARE INSTITUTIONS IN AUSTRIA

Endowments of charitable and welfare institutions in Austria fared worse than those in Germany, because even though in the former currency depreciation did not go so far as in the latter, Austria did not revalorize as did Germany. Without going into detail, a survey made in 1927 shows that only about 6 percent of the charitable institutions in Vienna in 1914 still remained, that their capital and revenues were only 1 percent of the 1914 total and that they were rendering assistance to only 2 percent of the people cared for in 1914.

THE SITUATION IN THE UNITED STATES

With the above examples in mind can it be doubted as to what would happen under inflation to endowed institutions in the United States? Whether they are educational, welfare, or charitable institutions the result would be utter disaster.

Consider first that over one-half of our higher education is being carried on by privately supported colleges. Consider also that the endowments of such institutions total over $1,500,000,000. Consider, finally, that endowments of this character are considered to be of such great social importance that in the words of E. W. Kemmerer:

> We protect many of them by special laws which restrict the investment of trust funds to a limited and supposedly safe field of investments. In these restrictions, high grade bonds and mortgages are favored, and common stocks are usually disfavored. This policy is enforced both by law and by traditional public opinion (Endowments in Jeopardy, The Atlantic Monthly, December 1937, p. 737).

For example, six of our best-known endowed educational institutions are Harvard, Yale, Princeton, Cornell, the University of Chicago, and the University of Pennsylvania. As of 1936 the total endowments of these universities reached a total of $355,000,000. Of this total about $311,000,000 was invested in securities, and of this sum approximately $213,000,000, or nearly 69 percent, was invested in fixed-income securities, such as bonds and mortgages, as against only $98,000,000 invested in equities consisting mostly of common stocks. This 69 percent is an average, be it said, for Princeton University has nearly 82 percent of its invested endowment in fixed securities, and Harvard has over 72 percent of its endowment so invested.

While this example covers only educational institutions, the type of investment made by charitable institutions is of an exactly similar character and would be subject to the same disastrous consequences under inflation.

And once these endowments were impaired or destroyed, how would they ever be restored? To quote Professor Kemmerer again:

> In the face of our large and growing governmental control of business, in the face of increasing resort to highly progressive income, inheritance, and gift taxes on the part of both our National Government and the States, taxes whose combined rates in the higher brackets are already the highest of any advanced country in the world, and in the face of the commonly neglected fact that inflation continually pushes all taxable incomes into higher and higher brackets, although the real or purchasing-power value of these incomes may be actually declining—in the face of such facts, who will restore the endowments of these educational institutions if they are greatly depreciated or destroyed by inflation?

To sum up, then, the ultimate threat of inflation to endowed institutions is as expressed in the words of Professor Kemmerer:

> Excessively burdensome Government debts are usually not paid by taxation. The political resistance to taxes adequate for the purpose becomes too strong. Such debt burdens are usually reduced to politically workable proportions by inflation. The burden is thereby shifted largely from vigorously protesting taxpayers

who have votes by the millions, to bondholders, and other "economic royalist" creditors whose numerical protest at the ballot box is weak. In this class belong our privately endowed colleges, universities, scientific research institutions, and hospitals. In America, the greatest and most irreparable damage that unsound monetary policies and Government financing by inflation threaten is the undermining of these great public-welfare institutions.

The greater part of the material presented above was derived from the following sources:

(1) Inflation and After—Philip G. Wright (published by the Duke University Endowment).

(2) Inflation—E. C. Harwood and Donald G. Ferguson, American Institute of Economic Research.

(3) Endowments in Jeopardy—Prof. E. W. Kemmerer, Atlantic Monthly, December 1937.

I suggest to the Members of the House that they take time to read and study the above three sources of material and information and in that way they will get a more complete view of the whole matter of inflation.

Tributes to the Memory of Haym Salomon

EXTENSION OF REMARKS

OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, May 25 (legislative day of Friday, May 19), 1939

ADDRESS BY HON. ALBEN W. BARKLEY, OF KENTUCKY, AND LETTERS FROM THE PRESIDENT AND GEN. JOHN J. PERSHING

Mr. LUCAS. Mr. President, on the evening of May 21 last the distinguished majority leader of the Senate, the Senator from Kentucky [Mr. BARKLEY] delivered an address of tribute to Haym Salomon, Revolutionary patriot, at the Patriotic Foundation dinner in Chicago. The address is most appropriate and highly inspiring.

In connection with the same patriotic meeting the President of the United States sent to the Patriotic Foundation at Chicago a letter of tribute to Haym Salomon, and Gen. John J. Pershing also sent a letter.

I ask that the address and the two letters be printed in the Appendix.

There being no objection, the address and the letters were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. ALBEN W. BARKLEY

Mr. Toastmaster, distinguished guests, ladies, and gentlemen, I felt greatly honored when, through your distinguished senior Senator, SCOTT LUCAS, I was invited to participate in your program on this eventful occasion.

I wish at the outset to express in a word my admiration for and confidence in not only your senior Senator, who has but recently entered upon a full 6-year term in the United States Senate, but also I wish to congratulate the Governor and the State of Illinois upon the appointment of the junior Senator [Mr. SLATTERY] to succeed my very dear and long-time friend, the late James Hamilton Lewis.

The occasion which brings us together this evening is one which might well fill the heart of any American with deep gratitude and enthusiasm, regardless of race or clime from which he or his ancestors came.

On the 4th day of last March we celebrated in the city of Washington the one hundred and fiftieth anniversary of the beginning of the American Congress. All branches of the Government were represented. The ceremonies were outstanding for their dignity, as well as the tone and substance of what was said by those who took part in them.

Most of the things that were said and thought on that occasion are familiar to the American people as a whole. It was impossible to review in any detail the development of the American Nation over a period of a century and a half.

But the spirit in which the occasion was set raised all those who witnessed it above the sordid consideration of selfish attainments, and in a sense rekindled the spirit which originated and has perpetuated our American institutions.

We have but recently also celebrated the two hundredth anniversary of the birth of George Washington in ceremonies covering the whole country and a considerable period of time which have brought to our people a new conception of the indispensable part played by the Father of his Country in the establishment of this great Republic.

In April, about 1 month ago, on the front porch at Mount Vernon, the President of the United States delivered an address commemorating the one hundred and fiftieth anniversary of the departure of George Washington from his home in Virginia to the city of New York to take the oath of office as the first President of the United States.

We meet this evening in what is perhaps the first commemorative celebration of the life of one whose services were indispensable to Washington and the Revolutionary patriots in making possible the attainment of independence and the establishment of a new nation.

I often speculate on what might have been the fate of the world if some event, apparently accidental or trivial at the time, had not transpired.

When George Washington was 14 years of age he started to enlist in the British Navy. He sent his trunk from his home in Virginia to a British man-of-war at the seashore. When he was telling his mother good-bye at the front door, she wept copious tears over the departure of her son. What American mother would not weep over the departure of a 14-year-old son to enter into the naval or military service of his country, however worthy the spirit which actuated it?

In a fit of petulance at his mother's demonstration, Washington canceled his enlistment and remained at home. Who knows what might have been the fate of the American people if Washington had completed his enlistment in the British Navy? We might today be a part of the British Empire instead of the world's greatest republic. For if there was one man whose services were indispensable during the whole of the American Revolution, that man was George Washington.

I have often wondered what might have been the fate of Europe and of the world if a small boy had not directed a lost general with his army to the Battle of Waterloo where Napoleon and his ambitions were finally defeated.

Within a few miles of each other and within a short space of time Jefferson Davis and Abraham Lincoln were born in the State of Kentucky. For reasons that at the time were apparently trivial or accidental, Davis' father moved to Mississippi and Lincoln's father moved to Indiana and thence to Illinois. Jefferson Davis became a soldier of the United States in the Mexican War, Secretary of War, and then President of the Confederate States of America.

Abraham Lincoln became a Member of Congress, an unsuccessful candidate for the Senate, and then President of the United States. These two men, born in close proximity as to time and space, faced each other in the great struggle from 1861 to 1865, from which we have emerged as a nation more firmly knit together than ever before in its entire history.

What would have been the fate of America if Lincoln's father had gone to Mississippi and Davis' father had moved to Indiana or Illinois? Would Lincoln have become President of the Confederacy and Davis President of the United States? Or would both of them have remained in the oblivion out of which they came to immortalize their names in the history of America and of the world? Who knows?

These speculations and incursions into the possibility of what might have happened may appear futile, and probably they are; but, nevertheless, they are interesting and they emphasize the fact that we are not always masters of our fate, and sometimes circumstances over which we have no control fix the environment and conditions of our lives.

These contemplations and speculations have arisen in my mind in connection with the life and service of the man in whose honor we meet this evening. History has been tardy and neglectful in paying to him the honor and recognition to which he has long been entitled. If Washington was indispensable to American independence as the military and spiritual leader of a struggling people, Robert Morris, of Philadelphia, was no less indispensable as the financial director, who, in the darkest hours of the Revolution, assumed the task of raising the funds necessary to keep the Revolutionary Army in the field. And if Robert Morris was indispensable to George Washington, and the cause for which he fought as history now concedes, then Haym Salomon was no less indispensable to Robert Morris and to the success of that same cause.

Washington and Morris have received their full meed of national and international recognition for the transcendent services which they performed in behalf of American liberty and the conception of liberty throughout the world.

But for some unaccountable reason Salomon has never received the recognition which his services deserve in the efforts which he put forth in behalf of this same cause.

The history of this man's life is both fascinating and tragic. Born in Poland in 1740, he grew up amid the stirring events associated with the Polish struggle for liberty. In his youth he seems to have wandered through various countries in the Old World and thus acquired that knowledge of the French, Polish, Russian, and Italian languages which caused the Hessian commander in New York City to remove him from the incredible prison known as the provost. This dismissal from prison was not actuated so much by humanitarian sentiments as it was to make use of Salomon's ability as a linguist in dealing with the Hessian soldiers and those with whom they came in contact.

As a result of some revolutionary activities among the Polish youth in the struggle for liberty, Salomon came to America in 1772, but 4 years prior to the adoption of the American Declaration of Independence.

Although a penniless immigrant, he began at once to show that character of business acumen which not only brought to him personal financial success but made his services so indispensable to Robert Morris, who is known in history as "the financier of the American Revolution."

Because of the local difficulties surrounding the occupation of New York by the British forces, Salomon removed to the city of Philadelphia, leaving his wife and a month-old child in the city of New York. He established himself on Front Street. He became the financial agent of the French Government. His success as a financier and his enthusiasm as a patriot, although not a citizen of the Colonies, brought him to the attention of Robert Morris at what seems now to have been a psychological hour in the ebbing spirits of the Revolutionary Army.

The tragic appeals of Washington for financial aid from Congress are known to every schoolboy in America. The unwillingness or inability of that Congress to comply with Washington's urgent requests for financial aid is also a matter of universal knowledge. From 1779 to 1781 it was seriously questioned whether the Revolution would be a success or the Colonies remain a part of the British Empire. In 1781 Robert Morris accepted the appointment as superintendent of finance for the American Revolution, and in that year George Washington wrote to him as follows:

"I felt a most sensible pleasure when I heard of your acceptance of the late appointment of Congress to regulate the finances of this country. My hand and my heart shall be with you; and as far as my assistance can go, command it. We have, I am persuaded, but one object in view, the public good, to effect which I will aid your endeavors to the extent of my abilities and with all the powers I am vested with."

Not long thereafter Morris enlisted the service of Haym Salomon, whose financial genius was by that time fully recognized not only in Philadelphia and in Pennsylvania but by the Government of France, which made him its financial agent.

During the remaining years of his service in this capacity, Robert Morris entered more than 70 notations in his diary giving Salomon credit by name for his assistance which he was rendering to the cause of American liberty.

He negotiated loans for the Colonies. He discounted paper; he signed notes and obligations and bills of exchange with his own personal obligation in order to raise money for the Continental forces; and when he died he held obligations of the Government for nearly $350,000, which were or became worthless and for which he never received compensation. Though in his youth abroad he had been financially successful; though he had manifested in America, without much delay, the financial ability which made him a success in his personal relations and made him an outstanding success in helping to finance the struggle for American liberty, he died penniless. Neither he nor his heirs have ever received compensation for the money he lost, loaned, or gave away in the colonial struggle. He served under Robert Morris without compensation. The failure of a grateful people to reimburse him for his financial sacrifices cannot be easily understood. Many others, including Robert Morris himself, suffered almost incredible financial losses for which there was never to be financial reimbursement.

But one of the strangest miscarriages of justice, as well as one of the most lamentable misdirections of history, is the fact that he has been known as "the forgotten man of the American Revolution."

This probably is the result of his modesty and his unassuming character. Other distinguished Polish patriots also rendered conspicuous service in the American Revolution. The names of Casimir Pulaski and Thaddeus Kosciusko are known to every school child in the Nation. I would not detract from the glory of their records. They were likewise descendants of Poland and had grown up and lived in the atmosphere of the perpetual struggle for human liberty. But if this Polish Jew, Haym Salomon, had not devoted his services as a sort of financial wizard to the indispensable effort to feed, clothe, and equip the Continental Army, it may be doubted whether the services of Pulaski and Kosciusko would have made to the cause of liberty the contribution which is now universally recognized.

It is, therefore, with great pleasure and deep gratitude that I am glad on this occasion to speak a few words in recognition of the services of this man. He recognized the fact that liberty is not geographical nor political. He recognized what we recognize today, that all races, regardless of their geographical location or their historical background, must struggle and battle eternally for not only political liberty, but religious and economic liberty.

He recognized, as we all recognize, that freedom is not something to be attained only by the enactment of a statute. He recognized, as we all recognize, that in America and throughout the world the enjoyment of freedom—political, religious, or economic—can only be obtained by making the organized agencies of democracy function for the attainment and perpetuation of the inalienable rights of man.

He recognized that the glow of the human spirit in its aspirations for equality must be accompanied by the ability of democracy to serve mankind in a complex life as well as in a simple life.

Not only did Salomon render conspicuous and invaluable service to the cause of American liberty and common justice collectively, his benefactions were received in a personal way by some of the outstanding legislative patriots of the Revolutionary period. He gave personal financial aid to his Polish friend, General Kosciusko. From him General St. Clair was a frequent borrower. James Madison, later to be President of the United States, and who became known as the "Father of the Constitution," wrote to Edmund Randolph, of Virginia, that without the aid of Haym Salomon he could not meet his expenses as a Delegate to the Continental Congress in Philadelphia. James Monroe's brother-in-law, Joseph Jones, likewise repaired to the brokerage office of Haym Salomon to obtain funds for the same purpose. Very likely Edmund Randolph himself secured necessary funds to enable him to attend the Continental Congress. Many others whose names are not recorded and need not be sought have received aid at his hands, which to them perhaps was as invaluable as was his aid to the Army as a whole.

When we consider that this man was not a citizen and that he had arrived in America but 4 short years prior to the Declaration of Independence and but 3 years before the Battle of Lexington, there arises in our minds a sort of romance that sanctifies the memory of such a man and glorifies the race from which he sprang.

And so I congratulate you upon the conception and the ultimate consummation of the monumental recognition to be accorded this triumvirate whose services were linked together in the establishment of American independence, George Washington, Robert Morris, and Haym Salomon. I am told that this is the first instance wherein a Jew has been recognized by the erection of a monument to commemorate his services in the American Revolution. Not only the monument to be erected, but this very meeting here tonight in a broader sense typifies the almost incredible development of the American Republic.

From every race and every clime men and women have come to America and have poured into the crucible of American life their flesh and blood and their historic background.

Not only in the Revolutionary War, but before it came, and in every year of the 150 that have followed it, men and women of every race and religion have made America what it is today. The Jew and the gentile, the Catholic and the Protestant, the zealot and the nonconformist, the black and the white, the rich and the poor have in ways unknown and unaccountable developed here a nation powerful in all that makes power worthy of its strength. It would be invidious for me to attempt to draw comparisons among the various races and creeds which have glorified the development of the real America. They have given us political freedom; they have given us religious freedom; they have given us the freedom to worship or not to worship; the freedom to speak or not to speak; and while there are those in our midst who complain that our liberty has been restricted because of the complexity of our lives and the consequent necessity of regulation of our conduct in the interest of common and universal justice, I am happy to believe and to say that we enjoy in America a greater degree of liberty than is enjoyed in any other nation on this earth.

In addition to religious and political freedom, we have been and are constantly in search of economic freedom. The equality which we seek is not physical, intellectual, or financial, because nature has set bounds upon the ability of us all to attain physical, intellectual, or financial superiority. The equality which we seek and some day will attain is equality of opportunity as God gives us the vision to recognize opportunity and the equality of rights before a just Government in all of its institutions. And I rejoice to believe that in America that opportunity knocks at every door on every day.

The brilliant John J. Ingalls, of Kansas, wrote a beautiful poem called Opportunity, in which he sets forth the theory that opportunity knocks but once at every door and then returns no more. But somehow I prefer Walter Marlow's answer to that question. He says:

"They do me wrong who say I come no more
When once I knock and fail to find you in,
For every day I stand outside your door
And bid you rise to fight and win."

Let us from the spirit of this occasion and from the events of the life which it commemorates take with us a renewed dedication of our own lives to the service of our country and to mankind. Without regard to race or religion, color or creed, every man and every woman can contribute to the sum total of human happiness.

As Haym Salomon was the forgotten man of American history, so will be thousands of others who in the quiet ways and secluded spots add their full measure of devotion.

Some of us who were honored for a brief period with a temporary office, puff ourselves up with a mantle of accredited authority. But in assessing the value of any man's life, who shall say that the Senator or the judge or the Governor has rendered to society a greater service than is rendered by him who in the middle of the street lays a pipe or cable or a wire that men and women may enjoy the comforts of modern life. Let us hope that in the fullness of history this man will no longer be the forgotten man of American history. May his example serve as a beacon light to other men of all races, all religions, all creeds, all political faiths to make America the freest, the happiest, and the most prosperous nation throughout the world.

I do not express this hope in a selfish spirit. God grant that some day the people of every nation may rise and stand erect in the full enjoyment of the things which we hope and are determined to attain for ourselves.

THE WHITE HOUSE,
Washington, August 24, 1936.

Mr. BARNET HODES,
Cochairman of the Patriotic Foundation of Chicago,
33 North La Salle Street, Chicago, Ill.

MY DEAR MR. HODES: I am indeed gratified to learn that belated recognition is to be made of the invaluable services rendered to the cause of the American Revolution by Haym Salomon. History was for a long time strangely silent concerning the unselfish and munificent financial support accorded the struggling Colonies by this Philadelphia banker.

It was never disputed that at a critical period in the affairs of the Revolution Haym Salomon came to the rescue of the Continental Congress with large loans freely extended. The debt of gratitude which the Nation owes Salomon's memory will in part be paid through the fulfillment of plans of the Patriotic Foundation to erect in Chicago a monument which will portray Salomon with his fellow patriots, George Washington and Robert Morris. I bespeak for the undertaking the fullest measure of success.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

TUCSON, ARIZ., *April 27, 1939.*

Mr. BARNET HODES,
Cochairman, the Patriotic Foundation of Chicago,
33 North La Salle Street, Chicago, Ill.

MY DEAR MR. HODES: I have read with deep interest your letter of April 19 regarding the monument project of the Patriotic Foundation of Chicago, and have been especially pleased to note that the plan includes recognition in this form, for the first time, of the services of Haym Salomon in the Revolutionary War.

Though an alien at the time, Salomon embraced wholeheartedly the cause of the struggling colonists. His business genius and self-sacrificing financial aid at critical moments were invaluable and contributed greatly to the success of our arms. The vital part he played is truly symbolic of that fine American tradition in which we take such pride—that all creeds and nationalities have shared in the founding and growth of our country.

It is most fitting that the figure of Haym Salomon should appear with those of George Washington and Robert Morris on the monument that the Patriotic Foundation of Chicago proposes to erect, and I extend to the foundation my best wishes for the success of the undertaking.

Sincerely yours,

JOHN J. PERSHING.

Our American Schools

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, May 25 (legislative day of Friday, May 19), 1939

RADIO ADDRESS BY HON. ALLEN J. ELLENDER, OF LOUISIANA, MAY 24, 1939

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD a very interesting address delivered by the distinguished Senator from Louisiana [Mr. ELLENDER] on Wednesday, May 24, 1938, over the Red Network system of the National Broadcasting Co., on the program Our American Schools, sponsored by the National Education Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Ladies and gentlemen, I have been allotted only 6 minutes during which to talk to you this afternoon on the subject of education. Since my time is so brief, I will say only a few words in behalf of the children of our Nation.

I come from the South where we still raise them. It is common knowledge that the size of the American family has greatly decreased in the last 50 years. A family of six or eight children was nothing uncommon not so many years ago. There are now States that average considerably less than one child to the family. In contrast I can show you many families of numerous children today in Louisiana, as well as in other Southern States. North Carolina, for instance, has more than twice as many children per 1,000 grown-ups as California has.

The South excels in the number of children per family. An alarming fact from the standpoint of the Nation's future is that inadequate educational opportunity is so frequently found there. One would expect that the citizens of a nation concerned with conserving and developing its most valuable resources would find some way to provide at least average schooling where the most children are Unfortunately, the American people have not done so. The average annual expenditure for education in the United States is $75 per child. The average in the Southern States is not half as much. In some of them it is not one-third as much. Is it sound national policy to spend least for education where the greatest proportion of the children live?

There were in the United States this last school year more than 3,000,000 children of school age—not in school because they had no school to go to. There were almost as many who went to school part time or in temporary buildings that were insanitary and unsafe.

The inadequacy and inequality of educational opportunity in America should be especially alarming to all who believe in democracy and wish to maintain it here. Children from the poorest schools are citizens. Some day they will vote. Some day they may be called to bear arms in defense of their country. Some day they may be elected to public office. All of them, every day, will be expected to obey the laws, respect the flag, make an honest living, and contribute to the economic and social advancement of the whole Nation. The whole Nation owes children preparation for good citizenship, whether they live in New York, or Mississippi, or Louisiana, or Michigan.

Wealth was fairly evenly distributed throughout the Colonies when the Liberty Bell in Independence Hall proclaimed freedom throughout the land. The profits from natural resources in one State increased the ability of another State through added taxable wealth to support education. Absentee ownership resulting from the development of large corporations has further reduced the taxable wealth of many States and increased the taxpaying ability of others.

Of the four major industries in Texas—for example, electricity, sulfur, oil, and gas—over 90 percent of the profits are drawn to New York, Delaware, and Pennsylvania. Not one-tenth of 1 percent of the profit-making stock of the 15 major electric companies in Texas is owned in that State. The Governor of Texas, in a speech to the legislature, said that one of the out-of-State-owned pipe-line companies made over $8,000,000 net profit the year before and paid less than $100 in taxes to the State of Texas.

It is obvious that all the children of the United States are its citizens; that in keeping with the spirit of democracy each child is entitled to a fair start in life. It is quite as obvious that the future of America depends upon its children today, wherever they may live. It is quite as obvious that the freedom and opportunity which millions of children enjoy is only freedom and opportunity to grow up in ignorance.

The only solution for this undemocratic discrimination against childhood is the participation of the Federal Government in the support of schools. There is a bill now before Congress which would provide Federal aid to education. Introduced by Senators ELBERT D. THOMAS, of Utah, and PAT HARRISON, of Mississippi, it is sponsored in the House of Representatives by Congressman LARRABEE, of Indiana. The Senate Committee on Education and Labor has endorsed this bill and recommended its passage. It would provide funds for lessening inequalities of educational opportunity next year. It would make provision also for more adequate training of teachers whose present salary does not enable them to improve their qualifications.

It would enable States to erect modern school buildings, organize more effectively their State departments of education, and to create the means whereby adults may continue their education after leaving school. If this bill passes, it will permit the establishment of libraries in many rural communities where citizens young and old have never enjoyed such privileges. This bill for Federal aid to education was drawn to conform to the recommendations of a committee appointed by President Roosevelt to study the needs of the American schools and the relation of the Federal Government to them.

One of the important provisions of this bill is that the management of the schools should remain as now—in the hands of local citizens. Any control by the Federal Government is specifically prohibited. There are few indeed who would advocate that any but the elected representatives of local communities should have charge of the schools. For a century and a half the Federal Government has aided in various ways to support schools without depriving local citizens of the responsibility of controlling them.

In early days the Federal Government appropriated public lands to the schools. For a hundred years the Federal Government has appropriated money for the support of the land-grant colleges and the higher institutions of learning attended by a privileged few. It is now time that the benefits of education be granted to those who are enrolled in our elementary schools—to those who enrolled in our schools everywhere—to make "a fair start in life" more than an idle dream—to extend the principle begun long ago by our forefathers when they began to tax wealth wherever it was for the benefit of children wherever they lived.

"What Is Liberalism?"

EXTENSION OF REMARKS

OF

HON. HIRAM W. JOHNSON

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, May 25 (legislative day of Friday, May 19), 1939

RADIO ADDRESS BY FRED BRENCKMAN MAY 20, 1939

Mr. JOHNSON of California. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address by Fred Brenckman, Washington representative of the National Grange, delivered over stations of the National Broadcasting Co., on May 20, 1939. The title of the address is, "What is Liberalism?"

There being no objection, the address was ordered to be printed in the RECORD, as follows:

At the recent annual meeting of the American Council of Education, held in Washington, Dr. Mortimer J. Adler, an instructor in the philosophy of the law at the University of Chicago, characterized American education as demagogic rather than democratic. He said that our high schools and colleges were turning out graduates so untrained that they were ready to follow the first demagogue who sought to beguile them. Dr. Adler characterized this as a genuine danger to democracy and urged the adoption of a program to stamp out false liberalism. He said this should be done by instilling a clear concept of the meaning of liberalism

While I have little first-hand knowledge of what is being taught today in our schools and colleges, I agree with Dr. Adler that the word "liberalism" is being used in a perverted sense, and that there should be a clear understanding as to what it really means.

In former times when kings ruled by "divine right" and were possessed of absolute power, it was the function of liberalism to curb or hold in check the power of the king or monarch. Those who were instrumental in diminishing the powers of the sovereign and giving them to society or to the subject were liberals and deserved to be so called.

The word "liberalism" has many shades of meaning, and it would be impossible to satisfactorily define it in a single sentence. It seems to me that liberalism connotes at least a certain degree of toleration. No bigot nor narrow-minded witch burner, figuratively speaking, has a right to masquerade under the cloak of liberalism.

TRUE MEANING OF LIBERALISM

True liberalism has always believed in giving the greatest possible measure of freedom to the individual that is consistent with maintaining the rights of others. John Stuart Mill, one of England's foremost Liberals during the last century, has this to say on the subject in his celebrated essay on Liberty, which is one of the classics of our language:

"The only freedom which deserves the name is that of pursuing our own good in our own way, so long as we do not attempt to deprive others of theirs or impede their efforts to obtain it. Each is the proper guardian of his own health, whether bodily or mental or spiritual. Mankind are greatly gainers by suffering each other to live as seems good to themselves rather than by compelling each to live as seems good to the rest."

I think that Americanism and liberalism mean substantially the same thing. The fundamental creed of Americanism is contained in the Declaration of Independence, penned by Thomas Jefferson, who was one of the greatest liberals of any age. According to the Jeffersonian concept, the true function of government is to restrain men from injuring one another and to leave them otherwise free to follow their own pursuits. If this philosophy may seem too simple to meet the needs of our complicated modern civilization, a little honest thought will convince any fair-minded person that it could be applied to conditions as they exist today.

Those who favor the many dubious experiments in state socialism that are being fastened upon the American people today are not real Liberals. They deserve to be classified as Tories or Reactionaries. They would hand the people over, bucked, gagged, and bound, and place them at the mercy of the Government. I repeat that this is not liberalism.

LIBERALISM OF THE CONSTITUTION

The men who wrote the Constitution of the United States were liberals. I am among those who believe that the Constitution still contains the best brand of liberalism to be found on the planet. The Constitution protects human rights and property rights and it stands for equal and exact justice for every citizen. Under the Constitution, the will of the people is sovereign, and those who have been elected or appointed to any public office, however exalted, are the servants of the people and not their masters.

Among the cardinal features of the Bill of Rights, contained in the first 10 amendments to the Constitution, are the guaranties respecting free speech, free press, the right to worship God according to the dictates of our own consciences, the right of public assembly, and the right to petition the Government for a redress of grievances. The right of the people to be secure in their persons, houses, papers, and effects against unreasonable search and seizure is also set forth, as is the right of public trial by an impartial jury. Excessive bail or fines and cruel and unusual punishments are forbidden in the Bill of Rights.

All this is liberalism of the best kind. It has been subjected to the test of experience and it has worked for 150 years.

With democracy on the back track in many lands there is justification for saying that under prevailing conditions the Constitution is all that stands between us and the fulfillment of that dreary doctrine of tyranny and dictatorship that man is the creature of the state.

It must be admitted that since the advent of the machine age the problems with which society is confronted have grown more complex, and the task of safeguarding democracy presents many puzzling problems. However, none of the difficulties with which we are faced is insuperable. We can still have democracy if we want it and are willing to fight for it.

In the minds of many, the test of liberalism consists in putting the man above the dollar. In other words, in placing human values above property values. There can be no doubt that this is sound. The farmer is greater than the farm, and so is the farmer's wife; the miner is greater than the mine; the builder is greater than the building. However, it must not be forgotten that one of the most sacred of all human rights is that of being secure in the possession of property that has been honestly earned or acquired.

No man who covets absolute power and wants to lord it over his fellows; no man who is imbued by the spirit of bureaucracy, can be considered as a true liberal. Bureaucracy and liberalism are as far apart as the poles.

LINCOLN'S USE OF POWER

Abraham Lincoln was one of the greatest of all liberals. It has well been observed that nothing discloses character like the use of power. If you wish to know what the principles of a man really are, give him power. This is the supreme test. It is to the glory of Lincoln's memory that, having almost absolute power, which was conferred upon him during the exigencies of war, he never abused it, except on the side of mercy. As one who knew him well has beautifully expressed it: "He loved to see the pearls of joy on the cheeks of a wife whose husband he had rescued from death."

The writer of a recent magazine article well says that the historic aim of liberalism has been to resist and cut down the coercive power of the State over the individual. But he declares that in the middle of the last century liberalism turned tail, abandoned its philosophy, and went over, bag and baggage, to what he calls statism, which has for its aim the maintenance and increase of coercive State power over the citizen.

This tendency has grown particularly strong during recent years. Many things are being done in the name of liberalism and progressivism in the United States today that would not have been tolerated for a single moment by the true liberals who founded this Republic.

What currently passes for liberalism is all too often simply a combination of wishful thinking and unsound economics. No policy can be considered as truly liberal unless it meets the test of soundness and workability.

PEOPLE ENSLAVED BY DEBT

According to the conception of certain elements in the population, liberalism consists in making huge appropriations of public funds and distributing the money with a prodigal hand in every direction. It does not matter to people of this type that the money which is being spent has been borrowed and that it must be repaid with interest by this and succeeding generations of Americans. That kind of liberalism leads to one of the most hopeless forms of slavery, the slavery that goes with debt.

We have already traveled that road entirely too far. The total public debt today—National, State, and local—is approximately $65,000,000,000. The interest alone on our colossal national debt of more than $40,000,000,000 amounts to more than a billion dollars a year. About 20 cents out of every dollar collected in taxes by the Federal Government goes for the payment of interest.

Every true liberal should be willing that those who succeed us on the stage of life should have as fair a chance as we have had to live happily and to enjoy the liberties that were bequeathed to us by the hardy spirits who carved this Nation out of the wilderness and laid the foundations for its freedom and greatness.

Speaking of our form of government and the liberalism which characterizes it, Justice Joseph Story, one of the ablest men who ever graced the bench of the Supreme Court of the United States, said:

"The structure has been erected by architects of consummate skill and fidelity; its foundations are solid; its compartments are beautiful, as well as useful; its arrangements are full of wisdom and order; and its defenses are impregnable from without. It has been reared for immortality, if the work of man may justly aspire to such a title.

"It may, nevertheless, perish in an hour by the folly or corruption or negligence of its only keepers—the people. Republics are created by the virtue, public spirit, and intelligence of the citizens. They fall when the wise are banished from the public councils because they dare to be honest, and the profligate are rewarded because they flatter the people in order to betray them."

Profits of Leading Corporations

EXTENSION OF REMARKS

OF

HON. JOSIAH W. BAILEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, May 25 (legislative day of Friday, May 19), 1939

EXCERPTS FROM THE BULLETIN OF THE NATIONAL CITY BANK

Mr. BAILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain tables from the bulletin of the National City Bank relative to the profits of leading corporations for the years 1935, 1936, 1937, and 1938, and the first quarter of 1939.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

TABLE 2.—*All active corporations in the United States*

[In millions of dollars]

Year	Gross operations including (a)	Total taxes paid (b)	Net included after tax (c)	Net to gross income	Net worth Jan. 1	Net profit after tax (c)	Net profit to worth
				Percent			*Percent*
1927	143,241	3,145	5,880	4.1	119,260	7,538	6.3
1928	151,388	3,387	7,566	5.0	132,403	9,483	7.2
1929	158,565	3,415	8,084	5.1	142,887	10,677	7.5
1930	134,017	3,009	1,365	1.0	160,369	3,937	2.4
1931	106,088	2,630	−3,145	−3.0	161,282	−1,176	−.7
1932	80,378	2,373	−5,375	−6.7	143,363	−4,115	−2.9
1933	82,208	2,547	−2,379	−2.9	133,569	−1,353	−1.0

GENERAL NOTE ON TABLES 2 AND 3

In 1936 a number of changes were made in the methods of compiling the statistics of income. Under the Revenue Act of 1936, intercorporate dividends were for the first time made subject to tax, and in the official statistics were included in the statutory net income. This means that the net income, after taxes, of one corporation, when passed on to another corporation in the form of a dividend, is again subject to tax and is again counted as net income in the official statistics. The result is a duplication, and in many cases a multiplication, of the taxes paid and the reported corporate income.

Many corporations operate certain departments of their business through separately incorporated subsidiaries or hold stock in other corporations as an investment. Although dividends represent real income to the individual corporation receiving them, they do not, for the corporate system as a whole, represent real income, but merely bookkeeping transfers within the system.

Since 1934 corporations have not been permitted to file consolidated returns in which intercorporate transactions are eliminated, as is the usual practice in preparing reports for shareholders and for publication, but are required to file separate returns for the parent company and each subsidiary. This change also causes duplication in the statistics.

In the net-worth figures, made up of outstanding preferred and common stock, surplus and undivided profits, minus deficits, there is also duplication to the extent that the stock is held by other corporations instead of being outstanding in the hands of the public. A minor offset to this duplication is the shortage of balance sheets, due to the fact that some corporations do not submit balance sheets with their income returns from which the net-worth figures can be tabulated.

There is a tendency for the amount of this duplication of reported net income and net worth to diminish, because of the action by many large corporations in dissolving their subsidiaries and transfering the business to the parent company, in order to avoid duplicate taxation and to effect other economies.

In the summaries here given, the percentage of net to gross income (excluding intercorporate dividends) indicates the margin of profits from sales and other operations, while the percentage of net profit (including intercorporate dividends) to net worth indicates the rate of return upon total shareholders' capital.

Net profits of leading corporations for the years 1935 and 1936 are shown after depreciation, interest, taxes, and other charges and reserves, but before dividends (net worth includes book value of outstanding preferred and common stock and surplus account at beginning of each year)

Industry	Number	Net profits, years		Percent change	Net worth, Jan. 1		Percent change	Percent return

[1] Deficit.
[2] Sample not representative of all branches of the industry because of the limited number of published reports available.
[3] Before certain charges.
[4] Figures refer to shareholders only. Because of the large proportion of bonded indebtedness, actual return on the property investment, is less than the above.
[5] Fire and casualty. Figures represent shareholders' combined gains or losses on underwriting and investments.
[6] Net income shown as reported, not including such profits or losses on investments sold as were carried directly to surplus or reserves, or changes in the market value of portfolios.

Net profits of leading corporations for the years 1937 and 1938 are shown after depreciation, interest, taxes, and other charges and reserves but before dividends (net worth includes book value of outstanding preferred and common stock and surplus account at beginning of each year)

[1] Deficit.
[2] Before certain charges.
[3] Includes air transport, stockyards, docks, warehousing, etc.
[4] Figures refer to shareholders only. Because of the large proportion of bonded indebtedness, actual return on the property investment is less than the above.
[5] Includes pipe lines, radio broadcasting.
[6] Includes shipbuilding.
[7] Fire and casualty. Figures represent underwriting gain, and net interest, dividends and rents earned.
[8] Net income shown as reported, not including such profits or losses on investments sold as were carried directly to surplus or reserve, nor changes in market value of portfolios.

Net profits of leading corporations for the first quarter are shown after depreciation, interest, taxes, and other charges and reserves, but before dividends (net worth includes book value of outstanding preferred and common stock and surplus account at beginning of each year)

[In thousands of dollars]

British Surrender

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, May 25 (legislative day of Friday, May 19), 1939

ARTICLE BY BARNET NOVER

Mr. TRUMAN. Mr. President, the British Government has used its diplomatic umbrella again, this time on Palestine. It has made a scrap of paper out of Lord Balfour's promise to the Jews. It has just added another to the long list of surrenders to the axis powers.

I ask unanimous consent to have inserted in the RECORD, as a part of my remarks, an article on the subject by that able and distinguished writer on foreign affairs, Barnet Nover, which appeared in the Washington Post of May 18, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 18, 1939]

BRITISH SURRENDER

(By Barnet Nover)

A MUNICH FOR THE HOLY LAND

The Chamberlain government's capacity for "appeasement" was apparently not exhausted by the surrender of the Sudetenland to Hitler or by the capitulation to Mussolini on the Spanish question. Palestine is the latest part of the world to feel the impact of the Munich mentality.

Judged in its most charitable light, with due allowance being made for the difficulties of the British position in the world today, the latest white paper on Palestine must be regarded as a repudiation of obligations voluntarily undertaken and no less binding because there are real difficulties in the way of fulfillment.

The white paper announces the British Government's intention of establishing an independent state in Palestine.

The plan is obviously designed to meet the clamorous demands of the Arab states—Egypt, Saudi Arabia, Iraq, Transjordan—which have made the cause of Palestine Arab nationalism their own. It is also designed to insure the support or at least the neutrality of those states and others in the Moslem world in the event that Great Britain is forced into war.

The new state, when and if formed, will, it is assumed, be bound by the closest military and diplomatic ties to London. Its external freedom of action will presumably be as great, but no greater, than that of Iraq. And if Palestine were Iraq or Egypt—which won its actual independence of British control some while ago—something could be said for the British plan concerning the Holy Land.

Palestine, however, is not Iraq or Egypt. A majority of its inhabitants are Arabs. But the principal minority consists of Jews, who are there, in the words of Great Britain herself, "by right and not of sufferance," who came there because under the Balfour declaration and under the League mandate the British Government solemnly pledged itself to the establishment of a Jewish national home in Palestine. Into the building up of that national home has gone a tremendous amount of energy, idealism, and the expenditure of vast sums of money.

The white paper provides for Palestinian independence in 10 years. A great deal can happen in that time, including the shelving of this plan, as previous plans for the solution of the Palestinian problem—for instance, the partition scheme of 1937—have been shelved.

But the latest British program also provides for the limitation of Jewish immigration into Palestine to 75,000 during the next 5 years, after which, presumably, all Jewish immigration would cease. That provision, being of immediate applicability, will no doubt be carried out. The plan would also grant power to the British high commissioner "to prohibit and regulate transfers of land," a provision which, it is understood, would apply chiefly to Jewish acquisitions of land.

Theoretically, under the new Palestinian dispensation, the Jewish national home would continue to exist, with the Jews enjoying all the rights and privileges of full-fledged citizens of the new state. But since the white paper stipulates that the Jewish population in the Holy Land shall not exceed a third of the whole, it is open to question whether these rights and privileges would mean anything.

They might if Great Britain agreed to protect the Jewish minority and if she lived up to this pledge. In that case, however, Great Britain would continue to bear the very burdens she is now so anxious to drop from her shoulders. In other words, having by

the Balfour declaration and her assumption of the mandate encouraged the Zionist experiment to go forward, Great Britain now washes her hands of declaration and mandate and forces the experiment to fend for itself in what is certain to be an extremely hostile environment.

Certainly the fact will not be forgotten that it was not long after Iraq, with Britain's consent and approval, achieved her independence that the Assyrian minority in that Arab land was massacred by the tens of thousands. The same horrid sequel to independence may not occur in Palestine. But there is no guaranty that it will not.

The fact is that Great Britain's administration of the Palestinian mandate has, from the first, been hamstrung by bureaucratic insolence and stupidity, by muddling and double-dealing, by weakness and timidity. The story is one of opportunities forever wasted. And bad as the situation already was by 1937, it was made worse by the announcement of the partition plan which showed very clearly that Great Britain could be intimidated into the surrender of a difficult position. This surrender is now complete.

In the meantime the restriction of Jewish immigration to an average of 15,000 for the next 5 years cuts off one of the few places on earth to which refugees could go. Indeed, despite immigration restrictions that have prevailed in the past, and despite the turmoil and confusion through which the Holy Land has been passing, Palestine has managed to absorb a goodly number of the victims from the Nazi terror in central Europe.

For Palestine, Guiana, and Tanganyika and the other areas Mr. Chamberlain would open to harassed Jews are no substitute. Where bread is called for, Mr. Chamberlain offers a stone.

Agricultural Imports

EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

Mr. HORTON. Mr. Speaker, I wish to present certain figures from the Department of Commerce, concerning imports of agriculture products which show the disastrous effects which the so-called reciprocal-trade agreements are having, not only upon the farmers and ranchers of this country, but upon the laboring man and the industrialist as well.

These so-called reciprocal-trade agreements, Mr. Speaker, are nothing but glorified Argentine canned beef, in that they are robbing the farmer, the laborer, and the industrialist of the American market, which is the greatest market in the world, and which must be regained for them before we can hope for real prosperity.

Import item	1938, first 3 months	1939, first 3 months	Increase (+), decrease (−)
Cattle.....head	89,000	274,000	+
Cheese.....pounds	11,231,000	13,220,000	+
Wheat for milling and export.....bushels	83,000	2,595,000	+
Wheat byproducts feeds.....tons	5,000	69,000	+
Flaxseed.....bushels	4,719,000	6,391,000	+
Wool and mohair.....pounds	11,881,000	64,667,000	+

Practically all of these imports come from the British Empire, and are dated after the recently negotiated so-called reciprocal-trade agreement.

What's This, Economy?

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

ARTICLE FROM THE WASHINGTON DAILY NEWS OF MAY 25, 1939

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News:

[From the Washington Daily News of May 25, 1939]

WHAT'S THIS, ECONOMY?—A CONGRESSMAN ACTUALLY MOVES TO SAVE UNCLE SAM SOME POTATOES ON DISTRICT OF COLUMBIA LAW CODE REVISION

(By Charter Heslep)

When a committee of Congress says it can do for $32,500 a job outsiders figure will cost $100,000, that's news.

The job is revision of the District's law code. Congress is supposed to attend to this chore every 5 years. The last one issued was in 1929. Lawyers say that that one is awkward and inconvenient to use and many of them still rely on the old 1901 code.

The District Bar Association set out to remedy the neglect. After long study it produced the draft of a bill which was approved unanimously by the board of directors.

Identical drafts were sent this week to Chairmen WILLIAM H. KING and JENNINGS RANDOLPH of the Senate and House District Committees. They planned to introduce the bills at the Bar Association's request when up popped Chairman EUGENE KEOGH of the House Committee on Revision of Laws.

This is not one of the major committees of Congress but it gets a $6,500 appropriation to issue supplements to the local code and is now about ready to publish Supplement IV, bringing the 1929 book down to date as of June 1938.

Under the preceding chairman, this committee was not overly active, but young Representative KEOGH is a go-getter. He is making several innovations in Supplement IV calculated to make it more useful to the bar and admits that the 1929 codification is pretty clumsy.

BAR ASKS $100,000

He has pending before the House Appropriations Committee a $32,500 item to revise the 1929 code. He hopes to have it included in the third deficiency bill, on which hearings will start shortly.

Now, the bar association bill would have the Attorney General pick five lawyers, four of whom must be from the local bar and all recommended by our local judges, and give them 3 years to do the job, paying the five $6,000 a year. That's $90,000 in salaries. The Justice Department would furnish law clerks, office help, office space and equipment, which would easily run another $10,000, probably more.

The New York Congressman still is smarting under the blow his committee received when a revision of internal revenue laws was handed over to the House Ways and Means Committee. He is determined that the District Code shall not be swiped and given to the Attorney General.

So the bar association's bill is held up temporarily. But the local lawyers are tired of using either the antiquated 1901 book or the clumsy 1929 code and hope something is done at this session of Congress to get the job started.

The United States Chamber of Commerce, Economics, and Organized Labor

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

EDITORIAL FROM THE TACOMA LABOR ADVOCATE OF MAY 12, 1939

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include herein a

very interesting editorial written by the brilliant and scholarly John McGivney, editor of the Tacoma Labor Advocate, a weekly publication which serves as the official organ of the Central Labor Council, embracing all unions of the A. F. of L., in my home city of Tacoma, Wash.

In this editorial there is discussed the attitude of the United States Chamber of Commerce as enunciated in its recent program and recommendations. The analysis of the situation confronting America today is penetrating and cogently phrased. I commend its careful reading to those who are interested in the solution of our economic ills.

[From the Tacoma Labor Advocate of May 12, 1939]

PROGRAMS AND PROGRAMS

The United States Chamber of Commerce has a very definite program for the rehabilitation of the country. It wants taxes upon the rich to be slashed; it wants welfare expenditures to be cut down; it would repeal the S. E. C. and blue-sky laws; throw out all labor legislation and leave the farmers to save themselves.

They didn't put their program in words as crude as these, but that in effect is the substance of their demands. There is really nothing new about them. They have been substantially the policy of laissez-faire, and they are the same which are responsible for the condition in which business and industry find themselves and for which they blame the New Deal.

It requires no prophet to say that that too is the program of the stand-pat Republicans and the Bourbon Democrats. Indeed, representatives of those political faiths in attendance at the chamber's reunion voiced such sentiments and it is clear that they all feel that if they are let alone they would bring back prosperity.

It is unnecessary to point out that that is precisely what the program will not do. It is the identical program followed in the post-war period and which knocked out prosperity with some degree of permanence since 1929.

Time was, indeed, when such a program would work. It would work out of the depression through years of suffering for the workers, employed and unemployed, and restore at their expense the industrial activity that brought back good times.

That was possible in America and the industrial nations because foreign trade offered an opportunity for dumping surpluses, emptying warehouses; and by eliminating the weak, made the strong businessman stronger and restored industry to normal activity.

Today the situation is different. Every nation is striving for self-sufficiency. Every nation is erecting trade barriers and endeavoring to keep what it has got from rivals. Colonies of Great Britain that once consumed vast stores of British goods, for example, now have tariffs of their own to build up their own industries. That applies to India, to Australia, to South Africa, to Egypt.

The imperialism of Japan is directing its efforts to secure in China a great field of cheap labor to exploit Chinese resources and for Japanese trade. In India the Indian industrialists are expanding their own modern steel plants, textiles, and other factories and rivaling all industrial nations in the markets of the world.

It is not so much that in America the last frontier has been reached. It is that each nation is forbidden by economic laws and developments to find a way for home rehabilitation in foreign trade.

The program of the chamber of commerce would no doubt in another day have provided ways and means of restoration. But not today. Today this country has to look toward another sort of self-sufficiency. That is the self-sufficiency of the consuming markets which buy the product of American factories. They buy it now only because of the lending-spending program of the United States Government. And rearmament has this advantage that it puts men to work not only in the munition factories, navy yards, and aircraft factories but in steel and plastics, in lumber and building all over the Nation.

It will help nothing to cut down expenditures of the Government. Nor will it restore prosperity by cutting down taxation. Taxes are not dumped in the sea nor are they boxed away and hidden in a hole in the ground. They are spent by consumers who buy the products of industries.

Right today rival trading nations are at daggers' points with a struggle between the have-nots and the haves. The whole world is jittery over this condition; those who should be least concerned in America are more jittery than all the rest. There is no hope that American industry can be rehabilitated by foreign trade. The hope is in increasing the consuming ability of the American people.

There are at present 11,000,000 or so unemployed. Almost all of them are living on lower than subsistence relief. How will any one or all of the items on the chamber of commerce program help them? Slashing expenditures for relief will not increase consumption. Employers will not produce now. What is their explanation? There is no demand for commodities they make. How, therefore, can slashing money that would go into consumption expand markets?

There is no shortage of money in the Nation today. The banks have enormous sums idle on deposit. Interest rates are lowest in history. Government borrowing as the only field for investment is grabbed up almost before the call is made. But the lack of markets stands in the way of investment, that and nothing more.

Talk of lack of funds for expansion, and taxes upon funds otherwise available for that purpose is contradicted by all the facts and statistics of money so available. But why expansion? People do not expand when the industries can take care of all market demands and then some. True obsolescence has been creeping with paralytic effect upon many industries. But when the mills are modernized, the demand is so limited the older and more obsolescent either close down or slash wages.

Increasing wages increases consumption and increasing consumption increases employment. But when business, as in 1937, felt that recovery had come they destroyed the useful effects of pump priming by raising prices beyond the speed limit, resulting in the collapse of the progress that had been made as relief spending was cut.

What increases consumption increases business. And business will not budge until its goods are salable. Business has explored all the possibilities of the markets today. It knows the limitations of the markets and it is a preposterous proposition to ask sensible people to believe that by giving industry, commerce, and finance, big industry, big commerce, and big finance the world on a silver platter one more man will be put to work.

If 50,000,000 people in industry buy more bread, can buy more clothes and shoes, and comforts and necessities even in a small sum during the year it is astonishing how quickly industry will respond to the stimulus of their buying. But when the dead load of the unemployed and unemployable is increased by the slashing of expenditures for them and what they eat is further limited by taxation and what they wear or otherwise consume shares the same fate, the result is neither good for business nor for the Nation.

The fact is, unpleasant as it may be to industry, commerce, and finance, restoration of activity must begin at the bottom by increasing buying power to absorb the products of industries. It is not to come from any other source under the sun. Wealth production by labor and machinery—yes; but that wealth production must be distributed more equitably so that consumption of industrial goods can be assured.

World Peace

EXTENSION OF REMARKS

OF

HON. ED. V. IZAC

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

EDITORIAL BY E. A. FITZHUGH

Mr. IZAC. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include herein an editorial written by my friend, E. A. Fitzhugh, managing editor of the Imperial Valley Publishing Co., and written in the interests of world peace:

IT IS NOT YET TOO LATE TO BRIDGE THE CHASMS OF HATRED

(An editorial, written by E. A. Fitzhugh, in the Imperial Valley Press, El Centro, Calif., April 13, 1939)

The world stands today over an abyss of which no man can see the bottom. Half the peoples of the globe poise themselves on the edge of eternity, like a young man eager for adventure who strains his eyes forward and upward to a mirage of mad propaganda while the pit at his feet goes unseen. One careless stride, or one vengeful push from behind, and his magnificent body will be a horrible, mangled thing on the jagged rocks below.

There is still time to step carefully back to the firm footing of a saner path. There are still materials at hand to bridge the chasm opening to swallow civilization in a threnody of shellburst and insane hatred. With the steel of determination and the strength and courage we, the peoples of the world, might yet swing a span upon which to march safely above the hell of war across to the goal of progress and understanding which guides us.

The way is simple, yet it is one which would drain the last ounce of courage and dip deeply into the final reserves of forbearance. It is not easy; it is only possible. It is this:

Let us today call upon our leaders for an armistice.

Let us draft our treaties of peace now, drawing their terms from the calm deliberations of a world saved from war, not from the jealous hatreds of nations still dripping with one another's blood.

Let us not have another Versailles, where the greed of political madmen can break the heart of a Woodrow Wilson and lay the explosives for still another more terrible conflict.

Let us strive in the light of reason to do every nation full justice, foreswearing alike the swaggering lust of the victor and the cringing acceptance of the vanquished.

With all the power that is ours who are governed only because we allow ourselves to be governed, let us today demand that this time our armistice must be an armistice to prevent war, not an armistice

to end war. Let us, the peoples of the world, send the wisest men of all nations to the conference table, by our mandate to treat with one another for lasting peace.

Theirs would be a task unequaled since Christ toiled up Calvary; theirs could be an accomplishment of the thing for which He died.

Courage must be theirs, for today it will require courage not to fight. It is easy to make war when narrow nationalism has stirred racial hatreds to fever pitch. It is hard to exercise the calm wisdom which reminds us that the armistice of 1918 could not give back the eight and a half million lives spent in the mud of European battlefields.

Patience must be theirs, for the problems set up by years of international wrongdoing cannot be solved in a day. Unselfishness and forebearance must be theirs, too, for great sacrifices will be required of each if success is to crown the efforts of all.

Theirs will be the task of remaking the map of the world, not with bombs and bayonets but with calm logic and warm cooperation. The world's markets, the world's raw materials, the world's factories and trade routes would be theirs to shuffle into a new pattern.

A costly proceeding this, but what would be the cost compared to the $219,000,000,000 cost of the last World War? It is an item the world can well afford.

No; we need not follow tremblingly into chaos and despair in this latest crisis that grips the world. We need only count the millions of lives lost needlessly, the billions of dollars spent wantonly, the unending suffering undergone fruitlessly by those who gave themselves up to hatred and madness in the World War of 1914 to 1918, and then resolve that today we shall forestall a yet more terrible fate by demanding peace before war, not after.

We want no armistice after the world is half destroyed.

We want it now!

Tribute to the Late Bert Lord

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

Mr. PLUMLEY. Mr. Speaker, it is with a very personal sense of loss that I realize that in the death of my friend BERT LORD, the third Member of the group called "The Four Horsemen" by former leader Bert Snell, has reached his journey's end.

Goodwin and Thomas and Lord, of New York, and I had many interests in common, as some of you will recall, and were so mutually fond of one another and so often together in conference or in our votes, that the appellation was not displeasing.

And now BERT LORD has followed Thomas and Goodwin. He is gone.

> They say we meet him. None knows where or when;
> We know that we shall not meet him here again.

All that has been said with respect to his training, experience, and qualifications as a legislator is true and very moderately stated. Only those who knew him intimately can evaluate him as the real man he was.

I cannot bring myself at this time to add to this my tribute of affection and to his memory, for I am remembering in my sorrow at his passing the hours of pleasant and profitable companionship; of mutuality of interest; his anxiety, readiness, eagerness, and capacity to serve; the countless virtues that make it seem almost impossible that he can have gone away; but I am sure that somewhere—

> Where the Immortals keep; where Homer now
> Has back his sight, David his little lad;
> Where all those are we dully call the dead,
> Who have gone greatly on some shining quest,
> He takes his way.

Government Spending

EXTENSION OF REMARKS

OF

HON. PEHR G. HOLMES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

EDITORIAL FROM THE WORCESTER (MASS.) TELEGRAM OF MAY 24, 1939

Mr. HOLMES. Mr. Speaker, under leave to extend my remarks in the RECORD I include the following editorial from the Worcester Telegram of May 24, 1939:

[From the Worcester Telegram of May 24, 1939]

PRESIDENT IN A VACUUM

The President's address to the forum of the American Retail Federation reads as though it were composed and delivered in a vacuum. So much that is vital is missing. The essential basis of national prosperity is ignored. As Will Durant made his Story of Philosophy a best seller by the simple dodge of leaving philosophy out, so the President has contrived an economic argument, which may impress the unwary, by the similarly simple dodge of leaving business out.

That is exactly what he has done—left business out. The tone of his delivery would indicate that he himself did not believe in what he was saying. And, indeed, how could he? He knows better. In the past Mr. Roosevelt has uttered some startling economic vagaries, but always he has seemed to believe in them, always he has been the assured master of the situation. Not so before the retail forum, however. The old self-confidence, the old ring of conviction were absent.

It is literally astounding that the President could dwell so insistently on the buying power of consumers and at the same time refuse to acknowledge where that power must come from, if prosperity is to be reestablished in this country. Apparently he sought to inspire in his hearers the notion that Government spending was the source of that power. It is difficult to escape the feeling, the depressing feeling, that here was a deliberate attempt to mislead.

In an emergency, Government spending may, undeniably, be made an auxiliary source of consumer buying power. Government spending has been so employed under this administration. But Government spending, by itself, can never supply adequate buying power. During the great depression the bulk of consumer buying power has come from business itself in the form of wages, salaries, and whatever dividends there were. Otherwise the country would have gone bust long ago.

Moreover, an emergency is supposed to be but temporary, although this Rooseveltian emergency gives every sign of being permanent. And, if our national economy is ever to regain its health, Government spending as a source of consumer buying power must be temporary. In the nature of things it cannot go on forever, because Government must get its revenue—which it spends—from the same source from which all consumer buying power is derived in normal times, namely, business.

It is elementary to say that the business of the country rests squarely on what are known as our basic industries, the so-called heavy industries, the industries which President Roosevelt in his retail forum speech affected to contemn. One does not have to look beyond Massachusetts for an illustration of this truth. When our basic industries slump, when they close up, when they leave the State, other business slows up, languishes, sometimes dies.

In fact, one does not have to look beyond Worcester for proof of this truth. The city's prosperity stems straight from the prosperity of our basic industries. When those industries are in the doldrums all the business of the city is in the doldrums. That has been demonstrated not so often, happily, but more often than we like to think of

If the American Steel & Wire Co., the Norton Co., Crompton & Knowles, and a few other of our bigger concerns were to be eliminated from the Worcester business scene, what does anyone suppose would happen? Could a Government dole take their places? Hardly. What would happen would be that our Main Street stores would hit the rocks, and the smaller stores around the corner as well. And the banks would hit the rocks, and our professional men, too.

These are jagged facts which the President's soft words cannot cushion. Government spending as a source of consumer buying power can never take the place of our basic industries. Our basic

industries are the creators of our wealth; they are the goose which lays the golden eggs. If they are killed off, our economic lives are ended.

To get at the heart of the matter, a Worcester retailer need only ask himself one question: Does he prefer a customer with a welfare department slip or a customer with, say, a Norton Co. pay envelope? And the customer need only ask himself this: Does he prefer to go into a store with a welfare department slip in his pocket or with a pay envelope from private industry in his pocket?

No; it is not the money which the Government pays out to W. P. A. workers or in doles of one kind or another; it is not the money which is paid to regular Federal, State, or city employees which makes possible our stores, big and little, and enables them to operate on their present scale. The money which makes our business wheels go round comes from private industry, from our basic industries, from those heavy industries against which the President is determined to carry on a feud.

The International Labor Organization

EXTENSION OF REMARKS

OF

HON. MARY T. NORTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

ADDRESS BY SMITH SIMPSON, APRIL 26, 1939

Mrs. NORTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address by Smith Simpson, assistant professor of law, Wharton School of Finance and Commerce, University of Pennsylvania, before the Women's City Club of Philiadelphia on April 26, 1939:

After such a generous introduction I fear your expectations concerning this evening's address have been carried to great limits. Before I proceed to disillusion you, let me supply an achievement which Mrs. Lefferts omitted. The amiable Dr. Oliver Wendell Holmes used to say that if one could not arrange to be born in Boston, the next best thing he could do was to go and live there. Unlike Dr. Lefferts, I was unable to arrange to be born in Philadelphia. But I have done the next best thing. I have come to live here.

After having heard that I have at different times served as an adviser to workers' groups, to employers' groups, and to governments you must wonder what kind of a hybrid I am. Rabid partisans of workers and employers, if there are any such in the audience, will remember the anecdote of the Virginian who lived so near the Mason and Dixon line at the outbreak of the Civil War that he had difficulty making up his mind which side to join. Finally he compromised by wearing a Union jacket and Confederate trousers. When the two armies converged you can imagine what happened to him. I am glad to have noted that on tonight's program there is no place reserved for a civil war between workers and employers. If anyone has come in without having deposited his munitions at the door, we can pause now to give him time to do so.

It is difficult these days, when labor disputes are so frequent, to keep a disinterested and reasonable point of view toward the issues in dispute. Yet this is very necessary if strife is to be reduced to a minimum and a satisfactory solution arrived at. This is one of the great things about the International Labor Organization. It solves the great problems with which it deals by reason and argument, by ballots, and not by bullets. It affords representation to all interested groups. Workers and employers take part in it on a completely equal footing. No one group dominates. The I. L. O. is an effort to solve our problems which relate to labor standards by a democratic procedure.

The International Labor Organization deals with conditions which affect labor standards. One of those conditions is unemployment. My own contact with the I. L. O. came in 1933 when I was seeking comparative material with which to judge better the nature and extent of our unemployment problem in the United States. I spent 6 weeks of travel and study of unemployment and unemployment compensation in Great Britain. I then wanted additional information about the unemployment problem of other countries without spending the time and money necessary to visit other countries. The existence of world-wide unemployment, furthermore, suggested the operation of common causes of unemployment throughout the world. So I went to the International Labor Office and I found there not simply all the information I wanted but the one group of people who are concerned with these common causes of this world-wide problem and concerned also with finding a solution of it.

And so, from my own experience, I know that an important contribution which the International Labor Office makes to the solution of labor problems is serving as a clearing house of information. From all over the world it assembles facts concerning industrial and agricultural conditions. It has at its command facilities for the gathering of facts which no other institution in the world has. Not only has it 6 branch offices in China, France, Great Britain, India, Japan, and the United States, and in addition 18 national correspondents, but national governments, as well as employers' and workers' organizations are also sources of information which the I. L. O. by its constitution is permitted to draw upon. Sometimes special missions of investigation are sent to different countries by the International Labor Office.

This information has proven of great value to governments throughout the world in the drafting of social legislation and to those groups which are interested in obtaining this legislation. It is due to the reports of the International Labor Office on the subject of occupational diseases in industry—diseases like silicosis—that more adequate legislation is developing on the subject in this country. If reason rather than force is to prevail in the relations of workers, employers, and governments, we must know our facts. We can reason only from facts. Hence, the fact-assembling and fact-publishing activities of the I. L. O. have a great influence in promoting understanding and cooperation not only between nations but between groups within nations.

The International Labor Organization also makes use of this information. The International Labor Office is more than a fact-gathering agency. It is also a laboratory in which all this information is constantly worked over, studied and restudied, analyzed, and interpreted, and used for the initiation of international agreements. It is no simple matter to obtain international agreements even in the most favorable times. A great amount of information has to be assembled; thought and study must be given to the ways as well as the objectives of agreement; conferences must be held; differences in opinion must be reconciled; the language of the agreement must be adjusted to meet everyone's desires; and finally the agreement must be ratified and enforced.

The development of international agreements on those problems which affect labor standards is one of the chief tasks to which the International Labor Organization is devoted. The I. L. O. has, therefore, what we may call a law-developing function as well as a fact-assembling function. The organization consists primarily of an international labor office, a governing body, and an international labor conference. The office is the permanent staff of the organization, an international civil service, appointed by the director of the office in accordance with civil-service rules. The principal functions of the office are to collect information and to publish it; to prepare for the international labor conference and the many technical conferences and committee meetings which are held within the organization to facilitate agreements; to take the initiative in suggesting agreements, or in developing them; to consult governments, employers, and workers so as to facilitate agreement; and to coordinate the work of the entire organization. The governing body consists of representatives of governments, workers, and employers from 16 countries. It meets four times a year—its eighty-seventh session having been held this past week in Geneva—to carry out the decisions of the conference, to consult with the director on the affairs of the organization between the annual sessions of the conference, and to fix the agenda of the conference. The conference, which meets annually, consists of governments', workers', and employers' delegates from all member states and is the body which adopts the international agreements which governments later ratify. These agreements are called international labor conventions.

In addition to gathering information and promoting international agreements, an important function of the I. L. O. is seeing to it that conventions, once adopted and ratified, are enforced. This it does by a system of annual reports. Each government is required to furnish reports on its enforcement of all conventions ratified by it, and these are examined by a committee of experts. If there is any delinquency, the government is requested to correct it. Although this seems like a very casual way to secure enforcement, and theoretically the system may be open to some objections, no difficulty has been encountered to date in this system of enforcement. It has worked extremely well.

To date the International Labor Conference has adopted 63 conventions. These have received more than 840 ratifications. That is an amazing record. The international labor organization has been going for 20 years and some of those years have been distinctly unfavorable to the development of international agreements as all of us know. Nevertheless 63 agreements have been adopted and ratified by governments. That is a little better than an average of three conventions a year—three agreements a year for the protection of the living standards of the peoples of the world. This record becomes even more significant if we break it down into the pre-depression period and the depression period. Before 1932, 31 conventions had been adopted, or an average of a little over 2 a year. From 1932 to 1938, 32 conventions have been adopted, or an average of 4½ conventions per year. That is, in the 7 years, 1932–38, inclusive, more conventions have been adopted than in the 13 years 1919–31, inclusive. At a time when other international institutions have diminished in usefulness, the I. L. O. has not only maintained the tempo of its activity but has expanded and increased it.

This acceleration of I. L. O. activity has coincided with the assumption of a difficult task by the I. L. O. Since 1934 the I. L. O. has been experimenting with the development of international agreements establishing the 40-hour week. Agreements on hours are the most difficult of all to negotiate. Nevertheless, from 1934 to 1938, five 40-hour international labor conventions have been adopted establishing the 40-hour week in sheet-glass works, in glass-bottle works, in the textile industry, on seagoing ships, and in public works. The convention on sheet-glass works has been ratified by Belgium, Czechoslovakia, France, Great Britain, Mexico, and Norway, and legislation is in progress in Sweden which will make possible ratification by the Swedish Government. The glass-bottle convention has been ratified by Czechoslovakia, France, Ireland, Mexico, New Zealand, and Norway. The textile convention was only adopted in 1937, and has been ratified by New Zealand. The French Government has recommended ratification to the French Parliament. This convention alone, if ratified by all textile-producing countries, would blanket 14,000,000 workers under the 40-hour week.

International labor conventions cover a wide variety of subjects, including not only hours of work but child labor, night work, placement of workers, weekly rest, workmen's compensation, unemployment compensation, old-age insurance, sickness insurance, invalidity insurance, and accidents. Some 13 conventions cover the field of social insurance; and the work of the I. L. O. in this field has been a great stimulus to the origin and development of the limited program of social insurance which has been launched in our own Social Security Act in this country. They have been the basis of labor legislation in a large number of Latin-American, far eastern, and European countries.

The purposes accomplished by the international agreements which the I. L. O. has developed are three: (1) They protect the employer from unfair competition in the markets of the world; (2) they protect the workers having high standards from the danger of losing their high standards because of competition from workers having lower standards; and (3) they protect society at large from the deteriorating effects of low labor standards. The I. L. O. does not proceed upon any dogma or theory. It obtains international agreement where international agreement is possible. It does not attempt to force any agreement upon anyone. Since employers are equally represented with workers, and governments hold the balance of power, it is obvious that the I. L. O. is not partial to any group. Employers have ample opportunity to object and to oppose agreements which they feel are detrimental to their interests, and they have frequently done so. Hence the 63 agreements which have been adopted represent a general consensus of opinion that these agreements are necessary. It is a good example of reason operating upon information to secure a gradual improvement which everyone is willing to accept.

In view of this record, and particularly in view of the important work which the organization has done since the depression set in, it is understandable why popular interest in the I. L. O. should be increasing now. Until 1932 the I. L. O. was viewed as an organization incidental to the League of Nations—a case of twins, one of which made the headlines of the newspapers and outshone and outdazzled the other. The League was regarded as the principal performer and the I. L. O. a sort of accompanist whose chords were heard only when the performance of the chief attraction momentarily ceased. But now the accompanist has been recognized as an artist in its own right and an unusual performer entitled to an independent appraisal. People are now asking seriously: "What is it? What has it done? What hope does it hold for the world?"

As those of us know who deal with the I. L. O., people in the United States are keen to know more about the I. L. O. The United States joined it in 1934. Our representatives have taken an active, and sometimes a leading part in it. Together with other countries the United States has made possible several notable advances in international labor legislation. An American has recently been elected director of the International Labor Office. For the first time in the history of the international organizations established by the treaty of peace in 1919, a member of the United States Cabinet last year attended a session of the annual conference of one of those organizations—the International Labor Conference. The United States last year ratified five International Labor Conventions which, when ratified by other maritime countries, will save the United States millions of dollars a year in subsidies to our merchant marine. Ratification of others are now under consideration by the Senate. With the constant pressure of industrial, maritime, and agricultural problems in this country and the necessity of international cooperation if some of them are to be solved without continuing governmental subsidies, the I. L. O. promises to be of increasing importance to the United States. It is no wonder, therefore, that people in the United States are taking a great interest in it.

But other peoples are also. The awakening of popular interest in the I. L. O. is not confined to the United States. It is occurring elsewhere; and when governments withdraw from the League of Nations, they often retain their membership in the I. L. O. This was true of the Hungarian Government, for instance, when it resigned from the League this month.

The chief underlying cause of this increasing world-wide interest in the I. L. O. is the increasing efficiency and usefulness of the organization in the present chaos of the world. Some of the reasons why the I. L. O. has been expanding in the face of a general international break-down are therefore worth exploring.

To begin with, the I. L. O. was created to serve the welfare of the masses of the people directly and not merely indirectly. It is designed to improve living standards and labor standards. It is thus concerned with the well-being of the masses of the people. It is not concerned with the perpetuation of national sovereignty. It is not concerned with national sovereignty at all. The fact that the institution was created to further the common good and the general welfare is as much a source of strength to the I. L. O. as it is to the United States Government or any other government.

In the next place, the International Labor Organization is not an institution conceived and utilized for the perpetuation of the status quo. On the contrary, it was created for the purpose of effecting change. Labor conditions and labor standards, living conditions and living standards, are continually changing, continually improving as technical progress marches on, and the I. L. O. was established to facilitate and, if need be, to initiate the changes in law which change in social and economic conditions require. This dedication to change has enabled the I. L. O. to keep step with the times and to genuinely effect a larger and larger measure of improvement to the well-being of peoples. In the beginning of the I. L. O., there was a certain suspicion and hostility on the part of governments whose policy was the perpetuation of the status quo. This produced a serious obstacle to the organization. But this handicap has been overcome and the direct contribution which the I. L. O. has made to the common good has been a tower of strength to it as well as to the masses of the people themselves.

The ability to promote and bring about change in international relations has saved the I. L. O. from those debacles which have sometimes characterized the League of Nations. The League has played a useful and necessary part in the political and economic relations of nations. It has served as a machinery by which governments desiring change could work for it and help keep before the world the need of change. But the League has been composed only of governments. The common people have had no direct voice in it. Hence, in the League, governments have had an opportunity to play power politics and to prevent international agreement even when the masses of the people have earnestly desired it, as in the limitation and reduction of armaments.

In the International Labor Organization, not only governments are represented but workers and employers as well. When governments have stalled the workers' group has pressed for action. When governments, as in the League of Nations, have sought to substitute diplomatic pleasantries for substantial progress, the workers' group, through its own representation in the International Labor Conference, on committees of the conference, on the governing body, on committees of the governing body, and in technical conferences, have been able to outmaneuver governments and press forward the great work of the organization. The mere fact that the I. L. O. was created to serve the common welfare and to effect change were not enough to make the organization great. It was necessary to incorporate into the organization those economic groups—employers and workers—whose interest is in change and in the constant improvement of the welfare of the masses of the people.

There are other reasons for the unusual success of the I. L. O. But I cannot ask you to indulge me further. The thought I would like to leave with you in ending this inadequate address is this: The present situation in the world is depressing, but when we have an exemple of international cooperation such as that of the I. L. O. we cannot be wholly desperate. We cannot feel there is no chance for unity and the peace which comes from unity. We have seen how peoples can assure progress even over the protests of their governments. This example is cheering. It is also illustrative of the point that as long as national governments have the only voice in the conduct of international cooperation progress is impossible. But if the people themselves are given a voice progress and the common welfare will be served.

Squander Hypodermic Not a Cure

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

Mr. REED of New York. Mr. Speaker, President Roosevelt's address at the meeting of the National Retail Federation leaves no doubt that the New Deal intends to follow the counsel of the spend-tax-elect boys and to give the ailing Nation another shot of the squander hypodermic, not in a sincere belief that it will cure the patient, but in the

hope that at least it will produce a state of coma until 1940 which will be less painful than alert awareness.

The threat to our economic stability of a public debt which has passed the $40,000,000,000 mark and is increasing at the rate of three billions a year is a more serious threat to our national safety than anything else.

Briefly, the threat to our economic stability is that the increase in our national debt will so inflate bank deposits that an uncontrollable credit boom and inevitable collapse will result.

The threat to our national safety arises from the fact that a nation, no matter how well prepared and equipped its armed forces be, faces a serious handicap in borrowing to finance a major war if it starts with a forty- or fifty- or sixty- or one-hundred-billion-dollar debt.

If to warn of these perils is to merchandise horror, then horror is merchandised by the red traffic signal at crossings and the Danger sign on the dynamite storehouse.

Let us look first at the inflation danger. Only yesterday Comptroller of the Currency Preston Delano announced that the assets of 5,218 active national banks reached a new all-time high on March 29. Deposits totaled $28,169,251,000, exceeding by $118,575,000 and $1,931,009,000 the amounts reported on December 31, 1938, and March 7, 1938. Investments in United States Government obligations, direct and fully guaranteed, aggregated $8,573,784,000, an increase of $481,622,000 in a year. Direct Government obligations held on March 29 were $6,861,577,000 and indirect obligations totaled $1,712,207,000.

Now, wherein lies the danger of this? It lies in the excessive borrowing of the Government from the Nation's banks. Senator HARRY F. BYRD, of Virginia, a stanch Democrat steeped in the traditions of his party, felt it his duty to call the attention of the Senate to the fact that the banks and institutional investors today own approximately half of our public debt.

Bank deposits are built up by loans. And since the larger part of the new obligations being floated by the Treasury is being acquired by the banks, a corresponding expansion of deposits results. And that situation, as the history of this Nation demonstrates, leads to uncontrollable credit booms followed by disastrous collapses.

Billions have been spent, but 11,000,000 American employables are now jobless. Still the spending goes on; still the taxes pile up, until the point has been reached where business is completely bogged down by the tax burden.

How long can this go on? It can go on only to the point where business corporations and individuals either cannot or will not pay more taxes. Corporation taxes are the most lucrative source of Federal revenue. But corporation taxes are paid on profits. If there are no more profits, there is nothing left to tax. And when an individual reaches the point where he no longer can earn a living, he also ceases to produce tax revenue for the Government.

The new dealers argue that the danger is remote. But not even Cohen, Corcoran, or Eccles would attempt to argue seriously that there is not some point in the upward expansion of debt where it must be halted if the whole financial structure is not to collapse under the weight of insupportable taxation.

And even more dangerous is the fact that nobody can tell when that point is reached by mounting public debt. The limit of safety for our public debt is fixed by law at forty-five billions. Undoubtedly it could go higher than that without disastrous consequences. But how much higher? That is the question. A definite answer is impossible. The point is not determined by mathematical calculation. It is determined by mass psychology, just like a run on a bank which may actually be financially sound.

But when mass hysteria holds sway, there is no controlling it or predicting where it will lead. It is to such a day which every disciple of Lenin is looking to doom capitalism and our American system.

Sugar

EXTENSION OF REMARKS
OF
HON. FRANK E. HOOK
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

Mr. HOOK. Mr. Speaker, certain Republican Members of Congress have recently used the threatened closing of a sugar plant in Michigan as a peg on which to hang a bitter, unfair, and unjustified attack on the New Deal's sugar program in that State and elsewhere. I am afraid, however, that their attacks were not as effective as they would have liked them to be, because the mill-closing announcement was followed very shortly by one stating that the mill would, after all, operate. I wonder if this sudden reversal did not make it necessary for my friends across the aisle to revise rather hurriedly some of their intended remarks. Nevertheless, I should like to discuss first the Michigan mill episode and then see what treatment Michigan and other sugar-beet growers have received under legislation enacted during the Roosevelt administration.

Toward the end of April the Northeastern Sugar Co. announced that it would have to close its plant at Mount Clemens, Mich., because it did not consider the 1939 sugar-marketing allotment received by it under the Sugar Act of 1937 sufficiently large to warrant operating the mill. Instead of seeking relief through the machinery provided in the Sugar Act, the firm proceeded to try its case in the public press. As you know, there is in the act a protective clause which provides that any person who feels he has been unfairly treated in the matter of a sugar-marketing allotment may, as a part of the procedure, appeal within 20 days directly to the United States district court of appeals for an impartial review of the allotment determination. The 20-day period has just ended, but the firm has filed no appeal.

However, before providing the House with information on the particular marketing allotment received by the Northeastern Sugar Co., and asking the Members of the House whether or not they think the firm was equitably treated, I should like to point out that the Sugar Act does not give the Secretary of Agriculture authority to make special allotments for each company on the basis of local conditions. The act requires uniform treatment of all sugar processors in any producing area in the United States, based on standards specified in the act and on the record of the public hearings. The Michigan sugar-processing companies, like those in other States, were represented at the public hearing on marketing allotments, held in Chicago in February of this year. After the hearing a period was allowed for the filing of briefs presenting arguments for and against the various proposals made at the hearing. Later on tentative allotments were announced and interested parties had a period in which to register their objections to the tentative findings of the hearing officers.

It happened that the formula which the Department decided upon as being the one most fair to the industry as a whole and to each individual processor worked out in favor of the Northeastern Sugar Co., since it gave only 25 percent weight to marketings in the years during which the company had a low production because of floods, droughts, and other causes, while it gave 75 percent weight to the 1938 production of 179,086 bags, the firm's largest production in any of the past five years. In spite of this heavy production of 179,086 bags for 1938, during which year there were no restrictions on the amount of sugar any beet processor could market, the Northeastern Sugar Co. disposed of only 47,920 bags for the entire year.

The firm received a 1939 allotment of 139,400 bags. How did this allotment stack up with the firm's past production

and marketings? Well, during the most recent 5-year period, 1934–38, the company's production amounted to 114,678 bags, and their marketings to 97,010 bags. As I have already pointed out, the sugar company's marketings in the full calendar year 1938 totaled only 47,920 bags. In other words, the allotment received by the firm is almost 25,000 bags greater than its average production during the 5-year period mentioned, more than 42,000 bags larger than the average quantity marketed by it during the same years, and nearly three times as large as the quantity marketed by it last year. Under such conditions, why should the company have considered it necessary to announce on one day that it would close its Mount Clemens mill and then a few days later reverse its position?

I am informed that some companies which withheld sugar from market in 1938 have sugar stocks too large to be marketed completely this year under their 1939 marketing allotments. I understand, however, that most sugar-beet processors have in the past taken the position that the industry should be allowed to carry substantial sugar reserves from years of large production, such as 1938, so as to have sufficient supplies of sugar on hand to meet the beet quota in years of shortage. This attitude is not surprising inasmuch as in every year since 1934 the beet-sugar industry has failed to fill its quota—in 1937 by as much as 375,000 tons of sugar. It appears that in such years it was necessary in accordance with the Sugar Act, to reallot this quota deficit to other producing areas which could furnish the sugar. Obviously, beet-sugar interests were not happy over the loss of such opportunities to market the full quota for the area, and chiefly for this reason, it seems, many processors stated they wished to carry substantial reserves.

It has been said rather frequently of late in Congress by Representatives from some of the producing areas, that the 1939 sugar-marketing allotment determination of the Secretary of Agriculture was unfair. I therefore wish to call the attention of the House to the fact that no beet-sugar processor in the whole of the United States saw fit to appeal to the courts for a review of the determination. If this does not speak well for the fairness of the Secretary's action, then I do not know what does!

Shortly after the Department of Agriculture, at the request of President Roosevelt, had wired the facts to the Honorable Donald R. Westendorf, mayor of Mount Clemens, the sugar company announced that it had decided not to close the mill. I ask permission to insert in the RECORD a copy of the telegram sent by Mr. Westendorf to the President, and the reply of the Department. It is a pity that although the announced closing of the mill received plenty of editorial notice in the press of my State and elsewhere, the cancelation of the closing order has been hardly noticed.

The other day my colleague [Mr. WOODRUFF] stated that in Michigan there were 16 beet sugar-refining plants when the Roosevelt administration took office. That the plants were there is quite true, but were they all operating? According to my information they were not. In fact, as was pointed out on the floor a few days ago, during the 5-year period 1928–32 an average of only 10 sugar factories were operating in Michigan, whereas in the 5 years of sugar programs, 1934–38, an average of 13 factories functioned and it looks as though an equal number will operate this year. Moreover, the beet-slicing capacity of Michigan mills today is greater than it has ever been.

What about the situation of growers in Michigan? Well, I find that the acreage harvested by them in the 5 years preceding sugar legislation averaged 92,000 acres; in the 5 years of sugar programs, it was 105,000. Their income per ton of beets in the earlier period was $6.78, in the latter one it was $7.41, and, as you can see, this income was received on a much larger acreage.

The position of sugar-beet growers elsewhere has also shown notable improvement. In the 5 years preceding sugar programs, 1929–33, the average acreage harvested by American beet growers was 785,000 and the farm value of their crop $54,249,000; in the period 1934–38 the acreage was 798,000 and the farm value $60,428,000. Last year the acreage harvested rose to 931,000 and the value of the crop was more than $72,000,000. In fact, beet-sugar production in 1938 was the greatest on record.

The gentleman from Michigan [Mr. WOODRUFF] has said dramatically that the New Deal is trying to destroy the American sugar industry "acre by acre, factory by factory, State by State." Inasmuch as the beet-sugar industry in Michigan and other parts of the United States was experiencing some very bad days during the Hoover administration, whereas today both growers and processors are making money, I find it difficult to understand the meaning of his statement.

The telegrams referred to are as follows:

SUGAR DIVISION, *May 1, 1939.*

Hon. DONALD R. WESTENDORF,
Mayor, City Commission,
Mount Clemens, Mich.:

Your telegram of April 20, 1939, to the President has been referred to this Department for reply. The Northeastern Sugar Co.'s 1939 marketing allotment of 139,400 bags of refined sugar greatly exceeds their most recent 5-year average production of 114,678 bags, and their most recent 5-year average marketings of 97,010 bags. It is nearly 3 times their total marketings for the entire year 1938.

The act does not give the Secretary authority to make special allotments for each company on the basis of local conditions, but requires uniform treatment to all sugar-beet processors in the United States, based on certain standards specified in the act and the record in the public hearings which have been held on the subject.

The formula used in the computation of the 1939 marketing allotments gives recognition to the low production of the Mount Clemens area in prior years resulting from drought, flood, and other causes as it gives only 25 percent weight to marketings in such years and 75 percent weight to the large production of 1938, a year in which the company's production amounted to 179,086 bags. If the company deems this allotment unfair, it may avail itself of the recourse provided in the act. Within 20 days after issuance of the allotment order the company or any interested person who feels aggrieved may file an appeal with the United States Court of Appeals for the District of Columbia, to which the Secretary is required to reply.

Inasmuch as the quota for all areas including Cuba, are established in the act itself the statements being made to the effect that this Department could provide an increased allotment for the company by reducing the Cuban or any other quota are entirely erroneous.

We are working on administrative procedure which will permit the company to dispose by substitution of the quantity of approximately 28,000 bags in excess of their 1939 allotment to prevent any possible deterioration of such sugar.

Of course, it is possible that the company may have various reasons for wishing to close its Mount Clemens plant but we are unable to understand how the allotment already made for the calendar year 1939 would make it necessary for the company to discontinue operation of the factory.

JOSHUA BERNHARDT,
Chief, Sugar Division.

MOUNT CLEMENS, MICH., *April 20, 1939.*

FRANKLIN D. ROOSEVELT,
President, Washington, D. C.:

We feel that operation of Northeastern Sugar Co.'s mill at Mount Clemens, Mich., is of vital importance to Mount Clemens and Macomb County, 300 employees and 1,000 field laborers will be thrown out of work and 8,600 acres will be planted to surplus crops. If not operated many of our farmers surrounding our city depend entirely upon the growing of sugar beets for livelihood. Unless relief is given in marketing allotment the processor cannot operate. This local sugar factory operating means a great deal during fall and winter months to our city.

CITY COMMISSION OF MOUNT CLEMENS,
By DONALD R. WESTENDORF, *Mayor.*

The Child Refugee Bill

EXTENSION OF REMARKS
OF
HON. CAROLINE O'DAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1939

RADIO ADDRESS BY HON. SAMUEL DICKSTEIN, OF NEW YORK, MAY 23, 1939

Mrs. O'DAY. Mr. Speaker, under leave to extend my remarks, I include the following address of my colleague, the

Honorable SAMUEL DICKSTEIN, on station WEAF, Tuesday, May 23:

I am speaking to you tonight on a subject about which I imagine you have already heard a certain amount of discussion—the Wagner-Rogers bill, sometimes known as the child-refugee bill. I am particularly glad to have this opportunity to talk to you because this measure will, tomorrow, be the subject of public hearings before the committee of which I am chairman, the Committee on Immigration and Naturalization of the House of Representatives. At those hearings men and women who believe the bill should be passed will speak in its behalf. Those who hold the opposite view will also be given a full and free opportunity to state their case. We of the committee will listen and form judgments on which to base our recommendation to the House of Representatives.

Since it is not possible for all of you in different parts of the country personally to attend these hearings, I am very glad to have these few minutes to bring some of the facts and issues before you. For I feel it is extremely important that citizens and voters everywhere understand clearly just what this bill means and what it does not mean. It is only through such understanding that we who are your Representatives in Washington can interpret your will.

There has been much discussion about the Wagner-Rogers bill. There have been newspaper reports and editorials. There have been letters to the editor and radio comments. On the whole, this discussion has been the expression of that fine, generous, and humanitarian spirit which we know to be so typically American.

Our Congress has now a wonderful opportunity to perform the most humanitarian task which ever came to its official attention. Even the opponents of this bill could not very well muster any arguments against it which would appeal to the conscience of the masses. And so the story was allowed to go abroad that the admission of these children refugees will be fraught with great danger to this country. One was led to believe that if we open the doors to this wreckage left by the tides of European persecution, that somebody here will suffer, and that someone in America will be unfavorably affected. We hear people state that these few thousand children refugees will take away bread from the mouths of American workmen, and that they will become a great factor in increasing unemployment in the United States and similar statements of the same nature.

My object in addressing the radio audience tonight is to show that no such results are absolutely to be feared, and furthermore to show how we are definitely obligated by the ties of our historical tradition, and by the processes of true Americanism to speed this measure toward its enactment as a law.

In one sense, the interest in the bill has been greater than one would expect this kind of a proposal to stimulate. For, as a practical matter, the Wagner-Rogers bill will have no very great effect upon our lives here in America. What does the bill propose? It is a grant of authority—and only a grant of authority—to permit the entry into the United States of 10,000 refugee children, none of them more than 14 years of age—in each of the years 1939 and 1940, in excess of the present quota. This is not a large number of human beings in a country of about 130,000,000 inhabitants.

Furthermore, the bill creates no responsibilities for us, either as individual citizens or as taxpayers, for—and I want to make this as plain to you as I possibly can—not a single child will be admitted until satisfactory assurances are given that he or she will be adequately cared for by responsible private citizens who have already signified their desire to do so. In other words, the bill does no more than give to people who have a humanitarian impulse the privilege of expressing that impulse in a concrete way.

Who are these child refugees? They are children whose parents have either been killed or placed in concentration camps, or deprived of every means to make a livelihood for themselves, solely for the reason that these parents value human liberty more than they value lip service to a dictatorship, or parents whose only crime consists of belonging to the wrong race or the wrong religion.

Fortunately, this is not a religious question, and not even a racial question, and it cuts across all racial and religious lines. Among these refugee children there are some whose parents have been Aryan for generations, and some whose ancestors have lived on the soil of Germany for a thousand years. These children are unable to continue in that country since all means of livelihood for their parents have been dried up at the source. The German Government will not allow anyone to live in peace if the individual in question is not both an Aryan and an adherent of the regime.

And so, men and women have found themselves uprooted and removed from their occupations, trades, and professions in that country just because they refused to give lip service to its dictatorship, but wanted in their own humble way to express views and ideals which might be contrary to the political creed of the day.

Some of the greatest German scholars and scientists came to this country solely to escape the rigorous supervisions of their mental life which would be their portion if they lived under Hitlerism. And, mind you, many of these scholars and scientists were Aryan and some of them even German Protestants. How much worse is the lot of those who are not Aryan or are at least not 100 percent Aryan, or who happen to be adherents of the Jewish or Catholic religion. In their cases the entire force of the state has turned against them. They are not allowed to worship God in the manner in which they would like, and the least little infraction of any rule laid down by a brutal ruler, or the least deviation from the norm of conduct prescribed by a ruthless dictator finds them in concentration camps. Insofar as members of the Jewish faith or race are concerned, these can find themselves in concentration camps for no reason at all, except because their wealth might be coveted or their business wanted for a Nazi henchman.

We are now called upon to save from the hell that is a dictatorship, a few thousand innocent children, victims of the dictator's wrath. These children will not come here to compete with American labor. On the contrary, they will be put in American schools under the supervision of American welfare organizations. They will not become producers of labor but consumers of labor. Much as we might differ on the advisability of further restrictions of our immigration, there can be no difference of opinion on the advisability of not restricting this type of immigration. This immigration is solely in the interest of this country, and at one stroke we shall be performing a humanitarian act, and at the same time help this country and increase production of goods here for the maintenance of these victims of misfortune.

It is appalling to think what will happen if this country, with its vast resources and unlimited possibilities should decide to close the doors of opportunity to those helpless victims of persecutions. There is too much selfishness in this world as it is, and surely by encouraging more selfishness we shall not be doing our duty to our fellow men.

When our President called together a conference on the question of refugees last summer, there were those who expressed themselves rather critically of his efforts, mindful as they were of the fact that our country did nothing to alleviate conditions. A cursory examination of our immigration practice of recent years will show that the only aliens who were able to gain admittance to the United States were aliens who could demonstrate that they are in every sense of the word capable of taking care of themselves. Every alien who entered this country in the last few years came here not to work, not to take away a job from an American citizen, but on the contrary, came here with financial resources capable of taking care of his own wants, and in most instances to invest it in business and to give employment to American citizens.

We have the assurance of our welfare agencies in the United States that the aliens on relief at the present time are not aliens who were admitted in the last few years, but aliens who have been here for a decade or longer.

When our first restricted immigration law was passed only about one-half of those who were eligible entered this country, and even today the quota is not fully used up, and every year only one-third of those who were eligible to enter are allowed to enter. Some of the countries have never used their immigration quota and their being on the statute books is merely a gesture of no practical and material benefit.

Would it not be a beautiful gesture on the part of this country to throw its doors open to those children? For many years to come these children will be able to obtain instruction in our American schools and learn our American way. After the children have been selected and brought to this country, what will happen to them? Responsibility for them has been assumed by an organization which has been formed for this especial purpose—The Nonsectarian Committee for German Refugee Children.

This organization is headed by such distinguished citizens as Cardinal Mundelein, Bishop Bernard James Sheil, Canon Anson Phelps Stokes, Gov. Herbert H. Lehman, William Allen White, Dean Helen Taft Manning, President Frank Porter Graham, and Owen D. Young. Its executive director is Mr. Clarence E. Pickett, who is also executive secretary of the American Friends Service Committee—the man who was recently given the Bok award for his outstanding services to humanity. The treasurer of the committee is Mr. Newbold Morris, chairman of the City Council of New York City. Sponsoring the committee's program is a Nation-wide group which is a roster of outstanding names in industry, in education, in religious spheres, and in social welfare. That this is a responsible group we can have no doubt, and we may rest easy in the knowledge that such an organization has pledged its resources as a guaranty that these children shall not become public charges.

In an article published in the New York Times a day or two ago, the statement was made by one of its European correspondents, that we in this country are particularly fortunate in that in Europe you are a member of a nationality willy-nilly, and a Frenchman can never become a German, and a German can never become a Frenchman. But an American does not have to be born, he can be made into one. Here is a wonderful opportunity to make a few thousand new Americans who will realize that the system under which European nations who indulge in persecutions, is not the "American way." They will learn to know that the principles of justice and tolerance are not empty phrases but a thoroughgoing way of life, our American life. They will grow to learn the ideas and ideals of this unique country of ours, which at this particular time, with Europe torn into shreds by its racial, nationalistic, economic, and other differences, is the only place on earth where truth, liberty, and justice still prevail.

Wages and Hours

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1939

SPEECH OF HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES, MAY 23, 1938

Mr. SIROVICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a speech which I delivered on wages and hours on May 23, 1938, as follows:

Mr. WELCH. Mr. Chairman, I yield the gentleman from New York [Mr. SIROVICH] 15 minutes.

Mrs. NORTON. Mr. Chairman, I yield the gentleman from New York [Mr. SIROVICH] 15 additional minutes.

The CHAIRMAN. The Chair recognizes the gentleman from New York [Mr. SIROVICH] for 30 minutes.

Mr. SIROVICH. Mr. Chairman, when a symphonic orchestra with diversified mechanical instruments plays in harmony, in unison, and in one accord, we have unity of musical expression which is called rhythm and melody. Here we behold how a cooperative tendency results in transforming diversity to unity. Evolution always means the change from diversity to unity. This constant change from diversity to unity is not only true of mechanical nature but is true of biological nature, as well as of all manifestations of the historical process.

In religion, for instance, we see polytheism, the worship of the many gods, dying out slowly and being replaced by monotheism; that is to say, going from diversity to unity.

Political life of man begins with tribalism. In the course of political development tribes unite and form a nation. The way from tribalism to nationhood—many tribes and one nation—is again the way from diversity to unity.

In science we observe a similar evolution. First, man tries to gain knowledge of simple phenomena. When he accumulated a greater knowledge of a multitude of phenomena, he tried to discover the one principle governing them all. In seventeenth century physics Newton discovered that principle, gravitation. In twentieth century physics, Einstein discovered that principle, relativity. The greatest triumph of science is the discovering of one principle as the explanation for a multitude of phenomena. The fundamental and underlying principle of science consists, therefore, in going from diversity to unity.

The literary process shows a similar tendency. First, there are local expressions and then there is national expression. Before a nation produces its Shakespeare or its Goethe, its Hugo, or its Tolstoi, it experiences literary localism and regionalism. When a national expression embodies in the figure of one creative genius it replaces all local expressions; the literature of a nation has therefore reached its peak of development.

It stands to reason that economic development is not an exception to the ironclad law from diversity to unity. The many economic standards and the many economic laws governing our Nation must be replaced by one standard and one law of minimum wages and maximum hours. A fully developed Nation of 48 States can no more have 48 different and contrary economic laws than it can have 48 different languages, different civilizations, or different cultures. But as it is today, we have in America two different economics, governed by two different laws, and representing two different standards. In one section of our country the economic toiler is paid a living wage, though not a saving wage. In another section the worker receives starvation wages and is often so underpaid and so badly exploited that he can hardly meet both ends and can scarcely have a real feeling of human dignity. He is not only the underdog but he is also the underworm. The underworm, struggle as hard as he does, cannot be creative and cannot contribute to the physical, spiritual, and moral strength of the Nation. What the wage and hour bill really represents is an attempt to create one uniform minimum-wage standard for the entire fabric of our American economic life, replacing a diversity of wage-slave standards that is a reflection upon human dignity and the respect that America owes to its producing and toiling workers that have made our Republic great and glorious. [Applause.]

Mr. Chairman, everything that is produced in our country through agriculture and industry is the result of the labor of the beast of burden, the machine, and the human being. Whether we are reactionaries, conservatives, liberals, progressives, or radicals, whether we are in the habit of looking forward or backward, we must all admit that there is a tremendous difference between the labor of the beast of burden, between the labor of the machine, and the labor of human beings.

Let us analyze the wages of these three groups that I have just enumerated. What are the wages of the beast of burden today in our country? All that he receives from his master, whom he serves loyally and faithfully, is the oats, bran, hay, corn, and other food products necessary to keep him alive, besides the roof that shelters him from the ravages of the weather. In other words, all that the beast of burden receives as compensation is enough to live and to exist.

What is the wage that the modern machine receives for its compensation for producing day in and day out? The machine receives as its wage for the services and labor that it renders, metamorphically speaking, the right to be well oiled, well cleaned, well housed, and better taken care of than the beast of burden in order that the ravages of weather may not disintegrate the highly mechanized machinery.

Now, what are the wages of human beings throughout the length and breadth of our country in agriculture and industry? First, there is starvation wages which cannot keep body and soul together and is less than the beast of burden receives. Second, living wages which just barely keep body and soul together and does not equal the cost of the shelter that the modern machine receives. Third, is the principle involving saving wages, whereby the modern workingman would be able to receive wages that would enable him to save in times of affluence and prosperity for days of adversity and misfortune, which is the fundamental principle motivating our great President, Franklin Delano Roosevelt, and the New Deal, in order to give purchasing and consuming power to the millions of underprivileged and undernourished Americans who are crying and clamoring for a better day in this great and beloved Republic of ours. [Applause.]

Mr. Chairman, the human personality revolts against the identification of machine, cattle, and man. Human labor must not be treated as is the labor of the beast of burden, or of the machine, for they are of different qualities and orders. The machine or the animal is not held responsible for its work for being deprived either of intelligence or consciousness, or of both; it cannot be called to accountability. But man, being endowed with intelligence and moral consciousness, owes responsibility for his labor and its quality to his employer. Consequently, to treat human labor as other labor is treated is not only inhuman but even economically unsound, resulting in strikes, boycotts, and general labor upheavals.

This consideration that man cannot be used as a means, like the machine or the animal, is the main motive animating the labor legislation of wages and hours of the present administration. In conformity with our religious traditions that man has been created in the image of God—that is to say, that he is a spiritual being—the present wage and hour bill seeks to humanize our economic order and raise the standard of life of the American people by—

First. Standardizing a minimum wage by freezing a minimum below which no human being can be exploited, and thus curbing the acquisitive powers of the captains of industry and commerce.

Second. Raising the general economic life of the Nation by a gradual, more equitable redistribution of wealth by increasing through minimum wages a greater purchasing and consuming power of the exploited worker.

Third. Securing greater leisure for the working people through the maximum of 40 hours of work per week, so that working people will have more time to attend to the education of their children, to the improvement of their own knowledge, and to their participation in the spiritual pleasures of life. In times gone by painters and poets, composers and writers, created for the select few only. The rich and the mighty alone were the patrons and beneficiaries of the arts and letters, for the masses of people, having been used as tools and labor devices, were precluded from enjoying the higher pleasures of life that accompanied the beautiful, the good, and the true. It is the ardent desire of our great President, Franklin Delano Roosevelt, that the American people as a whole, and not the select few alone, be the patrons and beneficiaries of the arts and the letters and of everything that is noble and beautiful in life. Such an order of things requires greater leisure time, economic security, and social tranquillity. The vision of our humane President, Franklin Delano Roosevelt, is not so much a satisfied party as a contented and happy American people. [Applause.]

Mr. Chairman, to achieve the objects of the wage and hour bill, we must first bring about a standardization of our economic life. This is most important, since it will complete in America the entire economic process from diversity to unity. We have to bear in mind that only five generations ago our Nation consisted of a variety of political and economic units, representing a maximum of diversity and a minimum of unity. Within this short span of time we have become a united nation. We have produced a civilization of our own which is the envy of representatives of other civilizations. We have developed a culture of our own which promises to become the culture of tomorrow, largely because it is a fusion and a synthesis of the best and noblest that can be found in all great European cultures of all times. We have marched through the road from diversity to oneness at a much faster pace than any other nation in the Old World. The tendency toward unity in America must be considered nothing short of miraculous because, in the course of that process, millions of people not belonging originally to Anglo-Saxon nations have been made an organic part of American civilization, which is basically Anglo-Saxon. The only missing link in this unity is the economic factor. In the economic field we are still divided. We still represent a house divided against itself. This division will be eliminated and a complete unit established by the adoption of the wage and hour bill. When there will be one minimum wage for every American worker, no matter whether the scene of activity is in the North or in the South, the East or the West, the process of American civilization will be complete. I dare say that President Roosevelt, who is vitally interested

in seeing this bill passed, is only completing the work of our great unifier, the immortal Abraham Lincoln. Just as Abraham Lincoln has united the Nation politically, so Franklin Delano Roosevelt is trying his utmost to unite it economically. [Applause.] In these trying days unity is more desirable than at any other time. For in unity there is not only strength but hope. A united nation will be in a better position to weather the storm and to resist diversified forces than a nation divided against itself.

Mr. Chairman, if we fail to pass this bill, we will only be instrumental in continuing the exploitation of millions of workers, condemning them to a life of misery and squalor, and we will create the conditions for the rise and development of destructive forces. When the worker has a minimum of security he is likely to listen to all kinds of agitators trying to capture him for their dubious causes. The satisfied worker is sober-minded, patriotic, and conservative, but the dissatisfied toiler, whose starvation wage is scarcely sufficient to provide him and his family with the most elemental necessities, is just the ideal objective of the agitator and the false prophet.

Mr. Chairman, we often hear reactionaries singing the praise of a feudal order, because in that order the workingman, while deprived of freedom and many liberties, enjoyed a modicum of economic security. Today the American workingman enjoys all the liberty and freedom he desires; but he has no economic security, because he is badly underpaid, and has neither the benefits of feudalism nor the advantages of industrialism.

Mr. Chairman, we are all familiar with the contentions advanced against a wage and hour law, but all these arguments become invalidated by the one simple consideration that a unified wage and hour law will once and for all do away with unfair competition in our economic life. The American people simply do not care for cheap, exploited labor, and are ready and willing to pay the price for well-paid services.

The shameful commercialization of labor in many parts of our country means that the well-paid workingman is always endangered by cheap labor. The manufacturer who pays his worker a living wage is always threatened by the manufacturers who pay their workers a starvation wage. This is unfair competition and can be eliminated by the wage and hour law. If we fail to pass this bill, we only punish those manufacturers who pay their workers a decent living wage. Instead of penalizing we should encourage them, and the only encouragement we can offer them is to make this bill the uniform law of the land. A united American Nation wants one basic American economic law and one economic standard.

Mr. Chairman, American labor, like American civilization, must grow organically. It must grow like a plant. The symbol of the American worker is the tree, deeply rooted in the fertile soil, holding its position against all odds, weathering the storms, resisting the winds, and holding its own no matter what comes. Such growth testifies to health, to strength, to creativeness. But, in places where labor is cheap and the worker underpaid, he is always on the go, he is always moving, and is symbolized by the insect and not by the tree. The result is that localities that exploit labor, and treat them as economic slaves, undergo more changes than is good for them, and are interrupted in their development, to assume the character of armed camps, ultimately to be abandoned and deserted because a great section of the population migrated to other places, to look for better labor conditions. Cheap labor is the curse of every community. Well-paid labor is a source of strength and a blessing to every locality.

I have often heard foreigners traveling through our country tell me that there are two Americas, and two American civilizations, one in well-paid sections and the other in poor-paid sections. Their strange impression of our country is primarily traceable to the fact that in one part of our country labor is well paid, and consequently, towns and cities flourish, while in the other section, labor is underpaid, and the demarcation line between wealth and poverty is so sharp that where wealth ends, poverty, misery, and squalor begins. It is this kind of poverty, and the sort of squalor to which there is not any analogy even in the poverty-ridden countries of the Old World, that make us shudder at man's inhumanity to his fellow man. The adoption of the wage and hour bill will remedy these terrible conditions. It will make an end to that misery, suffering, and squalor which are a disgrace to American civilization.

Mr. Chairman, this bill must not be considered from the point of view of party interests, of local economic interests, of sectional, racial, or group interests; it must be looked upon from the point of view of our Nation at large, of the exigencies and requirements of the American civilization, and of the most elementary postulates of ethics. Its adoption will complete the minimum wage economic process that swings from diversity to unity. It will make the unity of our Nation and the American civilization complete and absolute. It will be a source of helpfulness and humaneness to our fellow man in places where labor is cheap. It will prove to be a source of strength in those localities in which the worker is always on the go in quest of better labor conditions. It will remove unfair competition. It will create a minimum unified economic wage standard in America. And it will make the dubious agitators and false prophets superfluous, for it will shut up the sources of agitation, discord, and propaganda, and especially of foreign propaganda, with its variety of "isms." The adoption of this bill must therefore be considered an event of great historic significance. The adoption of this bill, Mr. Chairman, will be the greatest patriotic act imaginable, for it will create for our Nation a source of health, strength, and happiness, and will make millions of suffering human beings contented. What greater service can a man do in life than make his fellow man happy?

Mr. Chairman, the Declaration of Independence established the principle that all men being born equal must share a minimum of equality, at least, extending to all spheres of life—political, economic, and social. At the time that great document was composed man had but a vision of equality, the Declaration of Independence becoming a promissory note calling for future redemption. The present administration, in its efforts to emancipate the struggling masses of the American people from the many fetters to which it is bound, and to bring about greater economic equality, merely is honoring a note signed by the founding fathers of our Republic. And the honoring of this note will be completed when the American people will enjoy greater happiness, greater freedom, and greater security. Mr. Chairman, this state of economic justice can only come by adopting the wage and hour bill, which will emancipate millions of exploited, inarticulate, unskilled American workers, who are praying for a better day in this great Republic of ours. [Applause.]

Mr. Chairman, the great prophet Isaiah once said, "And a little child shall lead them." That profound, mystic, occult, and intuitive vision has come down to us through the ages. Asia is the mother of every religion and is the founder of all culture. Europe is the father of all civilization. America is the child. That is the result of the fusion and synthesis of these diversified, continental groups that have come to our country in the past and have made America great, glorious, and prosperous. These same groups are responsible for the creation of the shibboleth and slogan of our Nation and our Republic, "E Pluribus Unum." Out of the diversified many has come one Nation, unified, indivisible, with liberty and justice for all. The passage of the wage and hour bill, with the abolition of child labor forever, will make America "the child" lead all the nations of the world in progress, in culture, in civilization, and in the respect and refining influences it pays to American labor that has made our Republic the greatest in all the world. [Applause.]

Blow at Bigotry

EXTENSION OF REMARKS
OF
HON. DUDLEY A. WHITE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1939

EDITORIAL FROM THE WASHINGTON POST

Mr. WHITE of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of yesterday:

[From the Washington Post]

BLOW AT BIGOTRY

Those who are familiar with the record of John Hamilton, chairman of the Republican National Committee, gave no heed to the innuendo apparently intended to connect him with anti-Semitism. For purposes of the record, however, it is well that Mr. Hamilton has reiterated his liberal and tolerant attitude before the Dies committee investigating un-American activities.

"All my life," says Mr. Hamilton, "any form of intolerance has been hateful to me. My first campaigns in public life were marked by my opposition to the Ku Klux Klan. I have always opposed any movement to penalize any man because of his race or because of the manner in which he chooses to worship God. * * * Intolerance, to my mind, is as great an enemy of these American institutions as is communism, fascism, nazi-ism, or any other alien 'ism.'"

Mr. Hamilton's statement is worth emphasizing, not only because it fully clears away false implications of previous testimony before the committee as to his personal attitude, but also because it reflects the traditional American view. Democracy can thrive only when racial prejudices are eliminated or submerged and when tolerance for differing beliefs is assured. It is a well-known fact that bigotry sometimes crops out even in this country, and that it is occasionally fostered by unprincipled politicians. But thanks to the high-minded attitude taken by most political leaders and the public at large, movements of this sort are more likely to act as a boomerang than a prop to any candidate associated with them.

In throwing his influence against the intolerant Rev. Gerald B. Winrod in the Republican primaries in Kansas last year Mr. Hamilton struck an effective blow at any bigotry in the Republican Party. Equally impressive was the repudiation by Thomas E. Dewey of any support that might have been given him in his New York gubernatorial race by intolerant groups. Representative DIES can count on full support from both the major parties in exposing the work of bigots so utterly out of harmony with the ideals of free government.

Influences Retarding the Flow of Goods

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, May 25 (legislative day of Friday, May 19), 1939

ADDRESS OF HON. JOSEPH C. O'MAHONEY, OF WYOMING, CHAIRMAN OF THE TEMPORARY NATIONAL ECONOMIC COMMITTEE, BEFORE THE AMERICAN RETAIL FEDERATION FORUM, MAY 23, 1939

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by the senior Senator from Wyoming [Mr. O'MAHONEY] before the American Retail Federation Forum on Tuesday, May 23, 1939, on the subject, Influences Retarding the Flow of Goods.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The very fact that an organization of retailers is meeting in the National Capital is itself a rather conclusive symptom of the economic and political disease from which the whole world is suffering—centralism. The primary reason why goods and services do not flow readily is that all the physical facts of modern life have been steadily producing a growing concentration of economic power and authority, with the result that this concentration has in turn been followed by a similar tendency to concentrated political power.

People struggle instinctively against these twin tendencies, but to date the struggle has been without effective results, because we have not succeeded in adjusting our individual human lives to the high-geared economic civilization in which we live.

Nothing is more local than retail distribution. It is the handing of commodities or services to the individual who uses them. The retail business, therefore, is found wherever men and women are found, but in a steadily increasing degree the local distributor has become part of a national system.

Time was when the retailer dealt primarily with goods which were produced in the immediate vicinity of the place in which they were consumed. That is no longer the case, and a very large proportion of the goods upon which the modern retailer's business depends is produced at great distances from the point of consumption.

Not only is that true, but until a comparatively recent period in our national development most of the goods which society used were produced by natural persons in the home and on the farm. We have seen the factory move out of the home, and we have witnessed the substitution of organizations for individuals in the production of goods. That, of course, is the industrial system. It presents to modern society the fundamental problem of adjusting the lives of people to the organizations which carry on the economic system.

NATIONAL ASPECT OF BUSINESS

The business organizations which dominate the modern economic field are necessary and beneficent instrumentalities of modern life. Without them few of the modern inventions which have placed life upon the luxury plane would be possible of either development or utilization. But precisely because they operate on a national scale instead of upon a local scale, they have, as it were, separated the consumer from the producer. They have resulted in specialization of production. Whereas in the earlier days of our history all types of production took place in the home—agriculture, weaving, sewing, preparation of food, etc.—nowadays each of these functions is carried on by a separate organization in a factory. Each one of us is a consumer of all things which are produced, but, so far as we are engaged in production, we are simply cogs in a specialized machine producing a particular commodity.

This is the reason why retailing has developed a national aspect. This is the reason why the retailers are assembled in Washington. They are here studying the effect of national producer policies and national political policies upon the local distribution of commodities to individuals scattered all over the United States.

Your organization, I am told, is not yet 5 years of age. Yet it has a membership of almost 200,000 stores, of 7 national retail-trade associations, of 25 State-wide retail associations, and 109 individual subscriber members. The very fact that you have 109 individual subscriber members and more than 175,000 stores is itself a demonstration of the progress which centralism has made.

Retailers have been compelled in self-defense to organize in order, quoting the pamphlet entitled "The American Retail Federation," which Dr. Craig placed in my hands, "to bring retailers together as a cohesive industry, to coordinate their efforts, and to protect the common interests of all retailing," so that you may have the facts with which to protect yourselves when State legislatures and the national legislature undertake to enact laws which affect retailing.

That retailing is a national business with a local aspect is a fact which we have been very slow to comprehend. Witness the fact that your organization is so young. What is true of retailing is true of the entire economic system.

The basic fact all business must learn is one which ought to be particularly obvious to those who are engaged in the distribution of goods to the ultimate consumer. It is that all business in the last analysis depends upon the capacity of the individual natural person to purchase the commodities and services which are offered for sale.

BUILD UP PURCHASING POWER

I say, therefore, that the most effective influences retarding the flow of goods are those which destroy purchasing power.

These destructive influences may be divided into two categories, first those which produce industrial unemployment and second those which make it difficult, if not impossible, for the farmer to operate at a profit. The industrial worker who is without a job and the farmer who cannot sell his crop at a profit are of no benefit to the retail trade.

Since the retailer deals with the ultimate consumer, that is to say, since it is his function to place goods in the hands of the natural persons who consume them, I have no hesitation whatsoever in saying that the primary concern of every retail establishment and every retail organization, of every person engaged in any way in retailing, is to do everything in his power to create employment and to solve the farm problem.

Whatever else you may consider at this gathering or in any other assembly, your efforts will be wholly fruitless and unavailing unless you help to solve these twin problems of industrial unemployment and agricultural surpluses. The two are inseparably tied together. As long as they exist, you will have an utterly inadequate market for the goods you try to sell. As long as they exist, our economic machine cannot function effectively.

Whatever we may do to create jobs at real wages for those who are now without them, and whatever we may do to make markets for the products of the farm and the ranch will contribute to the restoration of economic health. The solution of one of these problems will help to solve the other. The solution of both of them would carry this Nation and the whole world out of the desert into the promised land of prosperity and plenty.

PEOPLE COME FIRST

When we consider these aspects of the lack of purchasing power, we realize another fundamental fact which seems to have been obscured in modern thinking, namely, that economic organizations, like political organizations, are created to serve the people—not the people to serve the organizations.

The current political philosophy in a large part of Europe is that men are subordinate to the State, that the State may do anything it pleases with them, that they have no individual rights and indeed have no individual thoughts, except those rights and those thoughts which may be prescribed for them by those who for the moment happen to be directing the State.

This doctrine has no roots in American soil. Our people do not believe in such a philosophy. The people of America realize that the prosperity and happiness of men are the objectives which all governments are instituted to serve. The founders of our Nation announced this principle in the Declaration of Independence, and our people still adhere to it.

I am inclined to feel, however, that we have not realized that economic organization in the modern world has become so pervasive that the individual is lost before it. A business system which does not first of all provide for the individual cannot permanently provide for itself, because all business depends upon the ability of the individual to make use of it. If business would save itself, therefore, it must first save the people from those influences, whatever they may be, which have destroyed the purchasing power of the masses of Americans.

It will not do to jump to conclusions with respect to responsibility. As a matter of fact, in my opinion it is quite impossible to place blame unless upon the entire community. Government cannot point to business and say that business is responsible, nor can business point to government and say that government is responsible. The problem is much bigger than one of claiming credit or fixing blame.

Not so many years have elapsed since business was in the saddle and could do practically what it pleased. The result was not prosperity. The result was unemployment and a farm problem.

Today government in both State and Nation is adopting all manner of expedients to protect individuals from the unfortunate effects of centralism, but to date none of these has succeeded, because none of them takes account of the fact that science and invention have made business national in its scope and that the primary problem is one of adjusting the individual to the national economic organization. Some of these expedients, indeed, have themselves been new obstructions to the flow of goods.

STATE BARRIERS

We are, for example, witnessing the multiplication of State laws intended to establish local preferences. All sorts of barriers are being raised to interstate business by State legislatures. A battle, for example, is being waged in State legislatures between the independent merchant and the chain. Licenses, taxes, inspection fees, and the like are being levied for the purpose of keeping business at home, and although the framers of the Constitution sought to abolish all frontiers in trade except the international frontier we have lived to see an almost Nation-wide effort being carried on to

reverse this policy. Curiously enough, it is being made at a time when all the means of transportation and communication have the inevitable effect of widening the circumference within which trade and commerce are carried on.

It is not for me here to catalog these various expedients nor to pass judgment upon them. I attempt only to analyze them insofar as their purpose is concerned. They are the direct result of the inherent desire of the American people to be free in their individual activity. These laws are an expression of a desire upon the part of each individual citizen, a desire which cannot be eradicated, to be master of his own economic fate. They are the expression of a Nation-wide determination to free business from restraining influences which have brought about unemployment and closed the door of opportunity to free, independent enterprise.

That they are not succeeding is apparent to all. That they cannot succeed seems to me to be clear, because they are attempts to set up economic boundaries which were eliminated when the Constitution was adopted and utterly destroyed when men learned how to use steam and electricity.

If we can find the formula for putting men back to work, we shall speedily find that these barriers are not necessary, and we shall then be able, I am confident, to find the way to adjust the system of distribution to the system of production in such a way that the persons employed will find their proper places in the whole economic mechanism.

REAL JOBS NEEDED

That this cannot be done by made work through Government spending seems to me also to be perfectly clear. Business was unable to prevent the depression, because business had not found how to stabilize employment. Government has not eliminated unemployment; it does not have the resources to do so, even if it attempted it.

Government has, it is true, provided for relief, and no one in any position of authority has ever denied its inescapable responsibility to do so. But made work for the man out of a job is not a permanent cure for two reasons: First, because the work which is made is not a spontaneous and natural wealth-producing development of the system; and, secondly, because the wages paid are utterly inadeqaute to make the relief worker an effective consumer.

One characteristic of the modern system which must be recognized if we are to approach the problem intelligently is that the goods upon the production of which the modern economic system principally depends are luxury goods; things our fathers and grandfathers never had an opportunity to enjoy—the automobile, the radio, electric refrigerators, the plants and equipments which are necessary to produce these goods, silk stockings, ready-made tailored clothing. A thousand and one things to be found upon the shelves of the modern retailer are produced only because we have been at least subconsciously raising the standard of living in America.

These goods cannot be produced at a profit and cannot be distributed at a profit unless they are sold, and they cannot be sold unless we devote all of our energies and all of our patriotism to the creation of normal jobs in normal industry at normal wages.

THE MARKET AT HOME

When we do that for the industrial worker, we shall likewise open a market for the agricultural producer, a market which he does not now have. The millions of families upon relief and the millions which are receiving less than a thousand dollars a year are worth more than all the foreign markets of the world to the American economy. If we just make up our minds that all of these families are entitled to use and consume every luxury commodity that was ever produced.

I well remember the time when comparatively few persons wore anything but cotton stockings. That day has gone by, and well it has, too, for American industry. We cannot build prosperity in America and put the retail business back upon the road to prosperity upon any concept that will divide the people of America into two classes, one of which enjoys all of the luxuries which modern industry is capable of producing and another of which is compelled to eke out a meager existence upon a security wage.

Let us make up our minds, therefore, to the fact that we are one people, that this country of ours was created "to promote the general welfare," and that it is the supreme responsibility of the Government not to direct the activities of the people, no matter what line of activity they may choose to follow, but to establish the rule under which each may develop his own talents, and guide his own economic destiny, so long as he does not invade the similar rights of his neighbor.

All of this has a familiar sound. It has the approval of the great majority of our people. It will be called a "glittering generality." But it is not a "glittering generality." This is precisely the freedom which we have lost in an economic world which is dominated by organizations rather than be individuals.

There lies the problem.

RESTRAINTS OF TRADE

Restraints of trade committed by individuals in their individual capacity were simple enough to avoid. Their effect was naturally limited in scope. But restraints of trade, when committed by the huge organizations of modern commerce are difficult, if not impossible, to escape, and the whole population suffers.

When organizations follow restrictive practices which are intended to make it impossible for other organizations or individuals to engage in particular lines of business, the whole social body suffers. Practices which are intended to restrict production in order to maintain price have a deterrent effect upon the entire economy and produce the unemployment which destroys the market for the things which are produced.

These practices, which in the time allotted to me it is impossible to discuss this morning, are also very effective influences to retard the flow of goods and must be eradicated if we are to have a prosperous economy.

How to do this is, of course, the question that arises immediately in every man's mind. My own feeling is that the answer is much more simple than people are willing to let themselves understand. Because we naturally withdraw from every suggestion of discretionary Government control over business, our people have for 50 years turned away from the road out of economic disorder. But discretionary control is neither desirable nor necessary.

THE CORPORATE CONTRACT

The first essential is a recognition of the fact that modern business is carried on by organizations which we call corporations, that these corporations arise by reason of a contract between some government and the natural persons who desire to do business in the corporate form, that they could not exist without the authority of government, and that heretofore, because we have not realized the tremendous power which is vested in the corporate entity, we have paid no attention as a people to the drafting of the contract by which the corporations arise.

Every city in the country is a corporation operating under a charter granted by some State. For the most part such cities operate without interference or discretionary supervision on the part of the State which created them. The same principle can be followed in the economic field.

If we recognize the fact that the Constitution of the United States took away from the States and vested in the Federal Government the power to regulate commerce among the States and then realize that this very commerce is carried on by corporations which are the creatures of the States from which the framers took away the power to regulate interstate commerce, we shall begin to see that the primary need is a system under which the Government of all of the people shall in the common good draw the contract with those agencies which carry on interstate business. When that is done, we shall escape both discretionary government control of business and arbitrary private domination as well; we shall be able to fix the responsibility of these national organizations, and we shall be able to set them free to solve the unemployment problem, to solve the problem of agriculture, and to create a permanent basis of universal prosperity in America.

The solution of our difficulties is not to be found in economic tinkering but in the return to the fundamental principle of organization in the public interest.

Who Wants to Fight?

EXTENSION OF REMARKS

OF

HON. JACK NICHOLS

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

Mr. NICHOLS. Mr. Speaker, what we need in America is more Americanism, more good old-fashioned Fourth of July patriotism. What we need is more folks who think the United States of America is the best country on earth, that the people are the smartest, that the form of government is the fairest and squarest, that the automobiles are the fastest, the athletes the strongest, the girls the prettiest, and the scenery and climate the most attractive of any to be found on earth.

That is the form of optimism that made us the greatest nation on earth. If we lose our high place in the society of nations it will be because of mental troubles—not because we have not been blessed with enough material possessions.

We need to keep our eye and our attention on our own problems and let Europe and Asia take care of their quarrels. We do not want to fight anyone.

Hundreds of mothers have written to me in the last few months asking me to help keep America out of war. Thinking of these mothers, I am glad to do all I can to prevent war.

And I want to repeat here and now a pledge that I have often made to my people. I will never, under any circumstances, vote to declare war except in actual defense of our own Nation. And the day that I vote to declare war, I will resign my seat in Congress and enlist in the Army, resuming

my place as a buck private, which I held during the World War.

America is a great country—well worth fighting for. When the time comes to fight, I am ready.

But until that time comes, I hope we will devote our minds and our energies to taking care of our own people and our own problems.

The American Farmer—Peasant or Citizen

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, ON MAY 2, 1939

Mr. BENDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Senator ROBERT A. TAFT, Republican, of Ohio, over the Columbia Broadcasting System recently:

Farmers of America, in spite of the fact that Representative SMITH and myself come from the city, we represent farm States. In fact, from the point of view of the value of agricultural product, Illinois and Ohio stand fourth and fifth among the States of the Nation, exceeded only by California, Texas, and Iowa. There is only this difference between us—that the electoral majority which I had last November in Ohio came from the farmers, whereas Representative SMITH would never have been in Washington if he had had to rely on the farmers of Illinois.

I have listened with interest to all the benefits which Mr. SMITH says the New Deal administration has conferred upon the farmer. In fact, Mr. SMITH would have us believe that before 1932 no one ever realized that there was a farmer and he was rapidly sinking into the position of a mere peasant. Yet, strange to say, when we look at the gross farm income during the days of the twenties, when the farmer was supposed to be sinking into peasantry, we find that every year from 1924 to 1929 the gross income from agricultural production was between eleven and twelve billion dollars, whereas after 6 years of New Deal nursing it was only $8,400,000,000 in 1938, about three-fourths of what it was in the twenties, although there are 10,000,000 more people in the United States. Of course, the total farm income is more than it was in 1932. Nineteen hundred and thirty-two represented the bottom of a world-wide depression, which incidentally could not have been produced by Republican policy, because it occurred just as severely in Europe and Asia and Africa, where they never heard of Republicans; and it hit the city workman as hard as the farmer.

Of course, both political parties have always tried to help the farmer, and after the war Republicans adopted a whole series of forward-looking permanent measures in the interest of the farmer, including the Stockyards Act of 1921, the Capper-Volstead Cooperative Marketing Act of 1922, the Grain Futures Act of 1922, extensive farm-credit legislation, and numerous acts dealing with specific commodities. It is quite true that the Republicans did not adopt any panacea or trick device to raise farm prices, for the simple reason that they did not think such devices would raise farm prices; and they knew that in the long run Government price control would be against the best interest of the farmer. Our experience with 6 years of New Deal experimentation with currency inflation, production control, domestic allotment plans, processing taxes, and the like is hardly sufficient to convince us that the Republicans of the twenties were wrong. In fact, back in 1920 the present Secretary of Agriculture himself said, "Farmers have been the victims of exploitation. There are too many people in public office who seem to think they ought to exercise some sort of guidance or guardianship over the farmer."

Statistics don't mean a great deal, and I am quite willing to leave it to every farmer to decide whether he has really benefited by the New Deal policy. He certainly cannot regard his present situation as any solution of his problems. He knows that he is selling corn anywhere from 30 to 45 cents, 20 percent less than a year ago. He knows that hogs are down from 9⅞ cents to 7¾ cents in less than a year; wheat from 90 cents to 70 cents. The index price of all grains was 130 in 1926, 1927, and 1928, and now it is down to 63, or less than half what it was before the depression. It is slightly higher than it was at the very bottom of the depression, but no higher than the average in 1933, bank holiday and all. The drop in the price of cotton and cotton-seed is almost as bad. Incidentally, the drop has been a good deal worse in these products which have been regulated than it has been in meat and dairy products, poultry, and eggs, which have been more or less free to respond to the laws of supply and demand. I have referred to the tremendous drop in farm income since the twenties, and there again the drop is greater in the case of corn and wheat and cotton than in the general average. Furthermore, the cotton situation is even worse than the price indicates, because the Government, through its loan policy, has practically acquired the ownership of 11,000,000 bales of cotton, in which it has invested $550,000,000. There was plenty of criticism when the Hoover Farm Board acquired 3,000,000 bales to stem the drop in price during the depression, and it was pointed out what a disastrous effect that tremendous surplus had hanging over the market, but the Hoover Farm Board was a mere piker compared to the Surplus Commodities Corporation. The same dangerous New Deal policy has been pursued with wheat and corn, in which the Government now has invested several hundred million dollars. The public debt has been increased by $20,000,000,000, equal to a mortgage of $667 on every farm family and city family in the United States.

Furthermore, the policy of limiting production, killing pigs, and plowing up cotton ruined American markets abroad and brought a flood of foreign imports into the United States. In 1937 we imported $2,000,000,000 worth of agricultural products instead of the one million which we must usually import of products not raised in the United States. The country was flooded with Argentine corn, Polish meat, and other foreign products which never competed with the American farmer under pre-New Deal conditions. We imported more peanut oil than we produced, while southern acres lay idle. By artificial controls in cotton, restriction of production, Government loans, we have made it difficult to ship American cotton abroad and have so stimulated the production of cotton in Egypt, Brazil, and elsewhere that probably we will never recover our foreign markets. Such a loss is disastrous for the South. President Roosevelt has said that the South is the Nation's economic problem No. 1. I agree; the New Deal cotton policy has made it so.

I listened with interest to Representative SMITH's boast that the new dealers have conferred democracy on the farmer. I spent 10 months last year traveling through rural Ohio. If American rural sections aren't the most typical examples of democratic communities in the world I don't know where they can be found. The farmers of the United States know more about democracy when they graduate from high school than any new dealer will ever know before he dies. I suppose Representative SMITH is referring to the agricultural referendums. Those referendums are about as democratic as Hitler's plebiscites. The Department of Agriculture proposes a program, thought out by experts who never saw a farm. The voters are flooded with propaganda in favor of the program, and no one could get a list of voters to send any opposing propaganda to even if there were reason to organize opposition. As a rule, the Government announces that there will be special benefits from the Government for all those who join in the program, a proposal which would be called bribery in any ordinary democratic election. I have talked to a lot of farmers who say frankly they are against the whole program, but that under present conditions they vote "yes" because no alternative is offered. Either way they get Government regulation, and if they vote "yes" they may get some payments. Of course, they aren't given any alternative program to vote for on their ballot.

But they vote against the program when they go to the real polls in November. As a matter of fact, I feel very confident that the farmers in Ohio today would prefer no program at all to the present New Deal program. They deeply resent the orders from the Government to restrict their acreage. They don't like to have Government agents out measuring their fields. They don't like to have Government airplanes flying overhead, taking pictures to find out what crops they are raising and what use they are putting their own fields to. They don't even like the idea of taking Government checks, but they can't see any reason why they should not when everybody else takes them, and they have to help pay the taxes. The don't want to have a marketing quota applied and have a Federal padlock on their corncrib, so that they can't even use their own corn to feed their own stock on their own farms. The present New Deal farm policy rests on a basis of regimentation and bureaucracy, enforced by hundreds of thousands of Government agencies. It is as far away from democracy as anything which exists in the United States today.

The extraordinary thing to anyone in Congress is that the New Deal administration hasn't the faintest idea what to do about it today. They have not advanced any proposal that will make the farmer's plight the least bit better next year than it is this year. They are hopelessly divided over the question how to deal with the present cotton surplus. They are hopelessly divided over the proposal to increase the cash payments to the farmers, although they seem to be willing to subsidize the sale of wheat and cotton even to Germany to get rid of them. The guiding spirit in the Department of Agriculture seems to be a stubborn obstinacy to go on with all their present policies, including the reciprocal-trade treaties, and hope that something may happen. We don't even hear anything about the ever-abnormal granary.

Representative SMITH says the farmer was victimized by the tariff and by monopoly in general. But certainly the farmer has not been victimized by the tariff as much as he has been by the lowering of the tariff on many agricultural products through the reciprocal-trade treaties; and he hasn't been protected much against monopoly, because where the Republican administrations from 1921 to 1933 prosecuted an average of 13 antitrust cases a year, the New Deal, up to January 1938, had prosecuted an average of only 9 cases a year. For a long time they favored the N. R. A. policy of almost encouraging monopoly under Government protection.

There isn't very much doubt about the farmer's present condition. Last year I attacked the New Deal farm policy in every rural county in Ohio, and carried all but a few of those counties by overwhelming majorities. We can't cure the farmer's difficulties by fancy economic remedies and planned economy, but we can work steadily and soundly to improve conditions. America looks to its farm population for new blood, new ideas, and the preservation of sound American principles. Nothing is more important than to make life on the family-type farm as attractive as that of the average city dweller. Unless the farm people are prosperous, city production is steadily reduced. On the other hand it is useless to hope for good farm prices while the entire country is in the midst of a depression. We must encourage private industry to go ahead, so that it may put back to work some of the 11,000,000 unemployed so they can buy more farm products. We must reduce the burden of Government regulation, taxation, and control of business, so that men again may start new enterprises and enlarge old enterprises. The best single remedy for farm prices is a condition of general prosperity. The Government can stimulate business, and leave more money available for investment in private industry if it will reduce the tremendous Government expense, and incidentally give up the alliance with the C. I. O.

The basis of any American farm policy under present world conditions must be to secure the American market for the American farmer and build up that market. The Government should deliberately stimulate the domestic market for agricultural products, and should assist in finding new uses for them. A start has been made, and the chemurgic council is doing a good work in developing that field. Rather against the will of the administration, laboratories have finally been provided to find new uses for all the products of which there is a surplus. This policy should be energetically and sympathetically pursued.

The reciprocal trade treaty policy should be amended so that no tariff shall be reduced on any product below the difference in cost of production here and abroad as certified by the Tariff Commission. In the process of a progressive policy of conservation, the Government should buy or lease a great deal of the marginal land and take much of it out of immediate production by the planting of trees, which in time will enable the United States to produce more of its own paper and pulp.

I think the New Deal agricultural policy was less subject to criticism before the passage of the 1938 act, when reasonable benefits were paid for soil conservation. The farmer has to pay a higher price for some of the things he buys because of our tariff policy, whereas those farmers producing crops with an exportable surplus, like wheat and cotton, must sell at the world price. This condition justifies a reasonable subsidy in the form of benefits for soil conservation, but such payments should not be used as an indirect method of limiting production and controlling price.

There should be a further intelligent promotion of cooperative marketing, so that the farmer is not at the mercy of the buyer. Much may be done to reduce the cost of distribution, particularly through marketing in cities. The progressive work of Fellowes Morgan, commissioner of markets in New York, has so reduced the margin between the farmer and consumer that the farmer has received higher prices while the consumer has bought at lower prices and therefore been able to buy more food.

The various farm credit agencies can be coordinated and much red tape eliminated. In spite of the Government's lending policy, most farmers find it very difficult indeed to borrow money conveniently at low rates of interest from Government agencies. All these things can be done without Government dictation or the creation of a vast corps of bureaucratic inspectors overrunning the farms like a plague of grasshoppers. If they are carefully planned and consistently carried through, they can bring back the American farmer to the independent and respected position he occupied before the New Deal.

The National Debt

EXTENSION OF REMARKS

OF

HON. J. FRANCIS HARTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

EDITORIALS FROM THE BUFFALO COURIER-EXPRESS AND THE BUFFALO EVENING NEWS

Mr. HARTER of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Buffalo Courier-Express of date May 23, 1939, entitled "Sore or Halo," and also an editorial from the Buffalo Evening News of date May 23, 1939, entitled "No Retreat From Spending."

The editorials are as follows:

[From the Buffalo Courier-Express of May 23, 1939]

SORE OR HALO?

This is National Debt Week. The Republican National Committee asks you to take a look at what it considers a great national sore, a malignant growth which threatens the security of the American economic and political structure.

Of course, that is not how the spending boys of the administration view their creation. They count it a halo, bathing their great achievement with the pure white light of a great beneficence.

In the first view, the national debt is the foundation upon which we are building national poverty and continued financial distress. In the second view, the national debt is a stable foundation for the "abundant life."

The first is based on human experience; the second on hopeful wishing.

The Republican Party has made this National Debt Week because it believes that we should be made more debt-conscious than we have as yet become. So it stresses such facts as these:

In 1920 the national debt was twenty-four billion and some-odd million, most all of it due to our participation in that great adventure which was to make the world safe for democracy. By 1930 we had paid off some eight billion of that debt, during that period when we all sang the joyful refrain of prosperity. Then came the beginning of the bad days. Before the Republican Party was pushed out of power the debt had climbed again to twenty-two billion. That was in 1933, when the Democratic Party came into power, with the promise of its leader that he would promptly bury Old Man Depression—the Roosevelt phrasing—and end all Government deficits by a program of strict economy, all of which promises were speedily repudiated.

So, beginning with a debt of twenty-two billion at the end of the fiscal year 1933, the national debt has jumped annually, first by five billion, then by nearly two billion, then by five billion, then by three billion, then by one billion, until at the end of the last fiscal year it had reached $37,167,487,451. The estimated deficit for 1939 puts the debt at forty-one billion, with an estimate at the close of 1940 of nearly forty-five billion.

Looking at the facts from either the viewpoint of a malignant sore or of a glowing halo, that is quite a story, especially when one remembers that finis has not yet been written.

[From the Buffalo Evening News of May 23, 1939]

NO RETREAT FROM SPENDING

With the public debt approaching $45,000,000,000, the limit set by law, President Roosevelt announces he will continue to adhere to his spending policy. This he made known in an address before the American Retail Federation. He described critics who favor sound fiscal methods as "gamblers." But the New Dealers for 6 years have been gambling with the future of the Nation; this by devaluing the dollar, by increasing expenditures, by refusing to balance the Budget, by encouraging a variety of pressure groups to dip their hands into the Treasury. Yet the President regards himself as "conservative." He says that "a reasonable public debt will not impoverish our children."

Mr. Roosevelt said in 1932: "Any government, like any family, can for a year spend more than it earns; but you and I know that a continuation of that habit means the poorhouse." In the 6 years of the President's administration, the public debt has doubled. On March 4, 1933, it was $20,937,000,000; on June 30, 1940, it is expected to amount to $44,457,845,210. That is the kind of "gambling" which the New Deal has encouraged. The President told his audience Monday that "balancing the Budget today, or even next year, is a pretty difficult if not impossible job." It is difficult because Mr. Roosevelt has in the past made no effort to effect economies. He and his associates have spent with lavish hand. As a result, the per capita debt of the Nation now is $305, as compared with $131 in 1931. A break-down of the figures discloses that the Federal Government has spent, on the average, $15,000 every minute of day and night every year since 1933. In the same period its revenues have been only $8,000 a minute. The average citizen would regard such a spending policy as the wildest kind of gambling.

The President insists on maintaining the present tax system. He told the American Retail Federation Forum that, "for good sound business reasons," the Nation "ought not to raise less money than we are doing now." In 1932 Mr. Roosevelt said: "Taxes are paid in the sweat of every man who labors because they are a burden on production and are paid through production. If those taxes are excessive, they are reflected in idle factories in tax-sold farms, and in hordes of hungry people, tramping the streets and seeking jobs in vain." The present burden of taxation certainly discourages business enterprise.

In 1913 Federal taxes consumed 1.9 percent of the national income; last year they took 10.9 percent. Government revenues have swelled during the period in which the national debt has mounted to new heights. In 1934 revenues amounted to $3,115,554,000; this year they are estimated at $5,669,000,000. But no matter how much the Government receives, it spends more than it gets. The yearly deficit is added to the total of the national debt and the spending is continued.

The New Deal spending policy has driven "venture capital" into hiding. Mr. Roosevelt says that the new dealers are "the conservatives because we simply cannot bring ourselves to take radical chances with other people's property." But that is what the administration has been doing ever since 1933, taking chances with other people's property. Reduction in taxation must be accompanied by a curtailment of Government spending if the Nation is to escape financial disaster. There can be no recovery while business and industry are oppressed by taxation imposed in a vain attempt to defray the expenses of an administration that shows no restraint in spending.

The Road to Ruin

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

Mr. MUNDT. Mr. Speaker, this week alert Americans in every State of the Union are commemorating—one could scarcely say "celebrating"—National Debt Week, which has been so designated because for the first time in our history this Government has now acquired a national debt of over $40,000,000,000 and we are dropping further into debt every minute of every day. Since even the miracle men of the New Deal combined with their most suave and seductive propagandists have not been able to purge the multiplication table or repeal the principles of arithmetic by executive decree, it is well that patriotic Americans of all parties in the South, the North, the East, and the West give serious thought this week and every week hereafter to the solemn realization that unless reckless and unnecessary Government extravagance is stopped we are witnessing here and now the processes by which strong nations commit national suicide.

It is a sorry commentary on the manhood of our day to observe ourselves in the mirror of history as a nation of spendthrifts squandering not our own money but the future earnings and savings of our children and our children's children. Men used to be made of sterner stuff in this country; they used to be willing to tax themselves for their own advantages, and they used to be willing to sacrifice and do without in order that those coming after them could have opportunities at least equal to those which they enjoyed. But one of the most insidious doctrines of this New Deal is its new philosophy that men of the present should gaily spend and freely squander money which is borrowed from men of the future.

Apologists for today's carnival of spending are fond of trying to cover their cupidity by groundless statements to the effect that "deficit spending is not a New Deal invention; it was started by the Republicans prior to 1932." Weak as such an argument would be as justification for today's conscienceless squander mania if it were true, it becomes the silliest type of political tommyrot when judged in the light of facts of record, because it is not true.

DEMOCRATS STARTED DEFICIT SPENDING

A 60-second look at the record tells its own sordid story of when deficit spending started and who started it. Any schoolboy knows that the House of Representatives is the appropriations body of Congress; it is in the lower House that appropriations bills must originate and when economy is practiced here, governmental extravagance is impossible. Any schoolboy also knows from a glance at a history book that in 1931, the Democrats assumed control of the House of Representatives, a Democratic Speaker was its presiding officer, and the Appropriations Committee was Democratically controlled. And from these two inescapable statements of fact, any citizen can for himself place the finger of responsibility for wild deficit spending precisely where it belongs and that is squarely upon the shoulders of the Democratic Party. Since the Democrats have had control of the House since 1930, any fair and honest and valid comparison of Republican and New Deal Government records must compare and contrast the period before 1931 with the record of Government since 1931. Proceeding mildly and with caution at first the Democratic spenders got into full stride with the advent of the New Deal with its Aladdin lamp axioms of spend yourselves rich and squander yourselves solvent and the figures set forth from official Government records in the following editorial tell their own irrefutable story and put the blame for bankruptcy where it belongs. Regardless of what you or I may say on this floor or over the radio or in the contemporary press, the future generations who must struggle with the shackles of ruinous debt, will look back to the New Deal with all the resentment and sadness that peoples of other countries look back at the particular era in their history which changed them from governments of prosperity to nations of poverty. And in that record your names and mine will be permanently enscribed by virtue of the positions we now hold. Let us here resolve that from this time forth, at least, we shall do our part to write those records so that no blame can be directed to us for shouldering off on others responsibilities which are unerringly ours to meet.

Mr. Speaker, I now call attention to the following editorial from the Sioux Falls Daily Argus Leader of May 23, 1939, published in Sioux Falls, S. Dak., and edited by a sincere and able student of government, who sees clearly the signs of the times and writes lucidly of the goals to which they point. Ladies and gentlemen of the House, I give you this editorial from the pen of Fred Christopherson, of the Sioux Falls Daily Argus Leader, and commend it to your dispassionate study and your open-minded contemplation.

THE ROAD TO RUIN

This is National Debt Week—an observance sponsored primarily by the Republican Party.

But interest should be confined by no means only to Republicans. The national debt is the debt of all the people, Republicans and Democrats alike. And its payment is a task that will be placed upon the shoulders of all citizens.

It is well, therefore, to hesitate a moment in our active consideration of the ups and downs of the baseball leagues, the way the fish are biting, the picnic chicken, and give some thought to the national debt.

Over a period of several years it has been mounting steadily and rapidly. It has reached the point now where our fiscal solidarity is really threatened.

It is easy, too easy, however, to overlook the danger clouds on the horizon. The pleasures that come with big Federal spending are sufficient to lull us into a false sense of security.

Why worry, the imprudent soothsayers tell us. Eat, drink, and be merry, they advise.

But common sense is common sense and surely we in America have retained a bit of it, despite the topsy-turvy nature of our financial existence in recent years. The plain facts of arithmetic have not been changed by Roosevelt legerdemain—2 and 2 are still equal to 4. The rules of subtraction apply as usual.

And we can't spend more than we receive and remain in a state of solvency.

The following tabulation of the deficits and surpluses and national debt over a period of years tells a graphic story:

Year ended June 30—	Surplus or deficit	National debt
1920	[1] $212,475,198	$24,297,918,412
1925	[1] 250,505,239	20,516,272,174
1930	[1] 183,789,215	16,185,308,299
1931	[2] 901,959,080	16,801,485,143
1932	[2] 2,942,051,451	19,487,009,766
1933	[2] 2,245,452,980	22,538,672,164
1934	[2] 3,255,393,267	27,053,085,988
1935	[2] 3,782,966,360	28,701,167,092
1936	[2] 4,952,928,957	33,545,384,622
1937	[2] 3,252,539,719	36,427,091,021
1938	[2] 4,702,165,600	37,167,487,451
1939 (estimated)	[2] 4,072,229,000	41,131,502,010
1940 (estimated)	[2] 3,426,363,200	44,457,845,210

[1] 1920, 1925, 1930 showed a surplus. [2] Deficit.

Awesome as they are, however, these figures do not tell the entire story.

In the past few years the Government has assumed a contingent liability on obligations amounting to $5,416,000,000. These include loans made by the Reconstruction Finance Corporation, Commodity Credit Corporation, Federal Farm Mortgage Corporation, Federal Housing Administration, Home Owners' Loan Corporation, and the United States Housing Authority.

To assume that these agencies will be in a position to defray their obligations in full is to ignore the general record of the Govern-

ment as a banker. The showing of the past would indicate heavy losses when complete liquidation is achieved.

The Federal debt currently is about $41,000,000,000. If we are to add the approximate $5,000,000,000 of contingent liabilities, we have a total of $46,000,000,000. Using the estimated figures for the 1940 debt total of $44,457,645,210, the gross total is only slightly under $50,000,000,000.

As testimony to illustrate the fallacy of our Federal financial policy, we can point to nothing better than the comment made by Franklin D. Roosevelt himself several years ago.

On July 30, 1932, he said: "Let us have the courage to stop borrowing to meet continuing deficits. Stop the deficits. * * * Any government, like any family, can for a year spend a little more than it earns. But you and I know that a continuation of that habit means the poorhouse."

In his message to Congress March 10, 1933, he said: "Too often in recent history liberal governments have been wrecked on the rocks of loose fiscal policy. We must avoid this danger."

These arguments are as sound today as they were when Roosevelt advanced them. He might reread his early speeches and messages to his advantage and that of the Nation.

Prejudicial Freight-Rate Items

EXTENSION OF REMARKS

OF

HON. WADE H. KITCHENS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

Mr. KITCHENS. Mr. Speaker, on May 18 I made some remarks on further proposed railroad rate discriminations affecting my State, which is isolated in the southwestern zone with the highest rate on processed goods in the Nation. I showed that the freight rate on gasoline from New Orleans to Memphis, Tenn., is 15 cents per hundred pounds, while the rate per hundred pounds of gasoline from El Dorado, Ark., to Memphis is 33 cents. This is true, notwithstanding El Dorado is nearer by 140 miles. I mentioned the proposal to put in a similar rail rate from New Orleans to the markets in Alabama, Mississippi, and Tennessee for gasoline and kerosene, the real effect of which will be to reduce the refining of oil in my State, destroy contract water carriers, barge lines, and thus create a monopoly. In that connection I failed to mention last week the Cross refinery of Smackover & McMillan Petroleum Co., of Norphlet, Ark. They, too, will be affected adversely by the proposal.

The rail rate on gasoline from El Dorado to Little Rock, Ark., a distance of 160 miles, is 35 cents per hundred pounds. The truck lines have now procured a rate of 16 cents per hundred pounds on truckload shipments of petroleum products from El Dorado and intermediate points to Little Rock, applicable on shipments of 16,000 pounds or more.

It is thus plain that railroads, charging 35 cents per hundred pounds of gasoline for the same haul, have been charging more than a fair freight rate. It is further plain that the refineries in my congressional district are not only discriminated against and handicapped by the railroads so far as interstate rates are concerned but as to intrastate rates. Necessarily, if the trucks can transport profitably at 16 cents per hundred pounds, the railroads will lose the business on a 35-cent rate. Railroad workers will lose in wages and jobs. This loss will cause the average cost per mile of rail rates in my State and zone to be increased on other hauls. This will give a further argument against an equalization of such rates with and into other zones.

The time is imminent for the railroads to adjust their rates in my section on a fair, equitable, and nondiscriminatory basis. The railroads will haul freight a distance of more than 500 miles to Memphis, Tenn., at a cheaper rate than they will haul the same freight a distance of 135 miles to Little Rock, Ark.

Mr. Speaker, Magnolia, Ark., is my home. It is located 19 miles north of the Louisiana line. Magnolia business institutions have in some instances forced the railroads to unload at that line freight destined to Magnolia. Such freight has been unloaded, then trucks sent from Magnolia, the freight reloaded, and then hauled by truck while the empty cars of the railroad then are pulled into Magnolia. This, to me, is an intolerable situation. It is an economic waste, injurious to the railroads, its employees, and unfair and injurious to the people of my community and State.

Mr. Speaker, these discriminations, preferences, and differentials in the treatment of different sections of this country, at arbitrary zone or State boundary lines, must be abolished. They unduly burden part of the people for the benefit of all. Everything the farmer or other laborer uses or consumes in any way costs more by reason of these higher freight rates to my section.

I want the railroads to prosper. They cannot do so under present chaotic freight-rate conditions. I want their labor to have jobs and reasonable wages, but surely other means of transportation inevitably will jeopardize those jobs and wages in the rail rate discriminated sections. Other laborers likewise have their jobs jeopardized, their wages kept lower because industry in my State cannot pay a higher freight rate and at the same time pay the same wage as industry in other sections. The final result will be, if such conditions continue, we will have no industry and all of our natural resources will be exhausted and nothing left for those who follow us.

Effect of Inflation Upon Savings Banks and Insurance Companies

EXTENSION OF REMARKS

OF

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

Mr. RUTHERFORD. Mr. Speaker, in view of the determination of the President to continue to borrow and spend it might be well to consider just where such a policy will carry us. The following article by Gen. Hugh Johnson may be read with profit by those who believe that "pump priming" is a sure road to recovery:

Since its first brilliant 100 days, the only white rabbit our Government ever pulled to give to business even the semblance of a shot in the arm was to spend billions blindly. All the other bunnies, instead of increasing activity, have decreased it. It is not even certain that the 6 years' squandering spree has increased it.

The fundamental condition of business and Government after more than twenty billions of deficits or forty billions of outlay is worse than it was when it began. It not only hasn't worked to produce the result intended—recovery—it has worked to the reverse of that.

Among even the most radical of the "tax-spend-elect" boys, there is none who does not admit that there is some point in the upward expansion of debt and the increasing burden of taxes where the whole financial structure of any nation must collapse. Neither they nor anybody else knows at what point that will happen. But it has happened over and over again in the world's history and twice in our own country, and always for the same reason—that the debt becomes so heavy that it never can be paid and the burden of taxes so great that nobody can earn a living. Now, the money of a nation is simply its debts. Look at the greenback in your pocket or any Government security. They are only promises to pay. When those debts are so large in relation to revenue that everybody knows the debt is no good, then money is no good.

At that point, every savings account in banks, every insurance policy, every fixed income in interest, annuity, pension, or social security becomes as worthless as autumn leaves.

The radicals who now control our Government, while recklessly pursuing a course which admittedly leads inevitably to this result, argue that we are nowhere near it and can therefore safely continue to gamble on squandering ourselves into prosperity.

Where is this tragic dead line of debt? Is it forty, sixty, eighty or one hundred billions? Nobody knows. Congress once said forty. Some of the squanderers now say eighty. There is no yardstick, because it is a matter of mass or mob psychology which nobody can time, regulate, or direct. The catastrophe will come when, because of debt, enough people begin so to doubt the value of money that to save themselves they rush to turn their money into things which they can see and touch—land, commodities, and common stocks. Such movements always become panic and they drive prices so high that money has no value.

These New Deal genii who are driving us toward this certain dead line, which they admit but cannot locate, are like a man in impenetrable night stumbling toward a precipice which he knows is ahead but doesn't know how near—yet keeps on walking. Our Government also doesn't know and keeps on walking, but keeps on walking faster. It is obviously shooting craps with destiny by inexperienced, irresponsible zealots. The stake is only our democracy, the capitalist system, and all that has been accumulated here by 150 years of sacrifice, work, and frugality. Fade you the works and roll the bones!

If it fails, what? After us the deluge. They have personally nothing to lose and this experimenting is such fun. Furthermore, all their policies are in such collapse that their last desperate chance in 1940 is to bid billions for their reelection and devil take the result. They think they could ride even complete collapse to glory in 1944.

As the general says:

Where is the dead line of debt? Is it forty, sixty, eighty, or one hundred billions of dollars? Nobody knows.

He is correct; nobody knows. But this we are sure of: If we keep on borrowing and spending, the end will surely come, and when it does inflation will be here in earnest. What effect will inflation have upon our savings-bank deposits and upon our insurance companies and their policyholders? We can only judge the future by the past. We know what happened in other countries. It can happen here. Today I want to discuss with you the effect of inflation upon savings-bank deposits and upon insurance companies and their policyholders.

THE EFFECT OF INFLATION ON SAVINGS-BANK DEPOSITS

As of June 30, 1938, the Comptroller of the Currency reported that there were in the United States 42,683,225 holders of savings-bank accounts. The value of the deposits so represented was $23,725,288,000, or an average of $545.30 per account. This indicates that, speaking in general terms, the savings-bank depositor is a person of modest means and that in most cases the sums so deposited—along with perhaps an insurance policy—represent his or her main security against unemployment, sickness, old age, and death. Any government which of its own volition brings about inflation to a degree that would destroy or impair the assets of savings institutions or seriously depreciate the purchasing power of the money represented in savings deposits must be answerable to a great cross section of the American people.

SAVINGS BANKS UNDER GERMAN INFLATION

The fate of German savings banks and their depositors under the period of extreme German inflation may provide an instructive object lesson as to what would undoubtedly happen to our own savings banks and depositors under similar conditions. At the outbreak of the World War the German people had on deposit in German savings banks the sum of 19,000,000,000 marks, or a little more than $4,500,000,000 at pre-war rates of exchange. On November 27, 1923, when inflation reached its height, this entire sum of 19,000,000,000 marks had a purchasing power of less than one-fourth of a cent in American money.

This statement presupposes that at the peak of the German inflation there actually were 19,000,000,000 marks on deposit in German savings banks, but obviously such was not the case. It is true that during the earlier stages of inflation, up to 1920, the German people attempted to offset the steady decline in the value of money by increasing the amount of their savings, and indeed the actual amount of such deposits in 1920 was 44,563,000,000 paper marks, though the purchasing power of this amount was equivalent to only about 3,000,000,000 marks as of 1913. However, beginning in 1920 the purchasing power of the paper mark began to fall faster than the volume of savings could be increased. Hence began what writers on currency matters term "a flight from the mark." In other words, people sought to convert their paper marks, which were rapidly becoming worthless, into goods and services of whatever character and whether needed or not, and instead of further saving, they drew out of the banks the savings they had so far accumulated. This is tantamount to saying, in effect, that depositors lost all future benefit of their savings, and the mere statement is utterly inadequate to give a picture of the shattered hopes and aspirations of millions of people who were saving for old age, for the purchase of homes, and as a guard against unemployment and illness. Inflation defeated all the fruits of thrift and sacrifice.

The effect of this "flight from the mark" upon the savings banks themselves can well be imagined. Between 1913 and 1923 they lost 99.9 percent of their total deposits and to meet this situation they had to liquidate all available assets at any price. In fact they virtually ceased to be banks in the accepted sense of the term and many of them closed their doors never to open again. By 1924, when the Germans had stabilized the mark at about 1,000,000,000,000 to 1 and had revalorized deposits in savings banks at about 10 percent of their face value, there were found to be 4,870 savings-bank offices as against 10,890 in 1913, and 1,780,000 accounts on their books as against 22,739,000. Even as late as 1927, the value of all German savings-bank accounts was only 4,650,000,000 marks as against 18,967,000,000 in 1913.

AUSTRIAN BANKS UNDER INFLATION

Austrian savings banks also lost practically all their business as a result of inflation, having in September 1922—at the inflation peak—only seven one-hundredths of 1 percent of the deposits that they had in 1913. Depositors also lost practically everything, for while the Austrian currency did not depreciate quite as fast and far as German, its final stabilization at 14,400 paper crowns to 1 gold crown virtually wiped out all but a few fortunate speculators.

It is interesting to note also how inflation changed the customary methods of Austrian savings banks in investing the funds of their depositors. While the following table applies specifically to the Central Savings Bank of Vienna, it is typical of the vast majority of other Austrian savings banks as well.

Distribution of funds of Central Bank of Vienna (percent)

	1914	1922
Check deposits	0.0	31.9
Mortgage loans	51.8	1.0
Mortgage overdraft credits	.0	2.5
Loans to public corporations	7.4	.0
Advances on securities	1.7	.3
Bills payable	.7	.9
Overdraft credits	.0	18.4
Cash in vaults	.6	37.1
Securities	37.8	7.9
Total	100.0	100.0

It will be noted that in accordance with sound banking practice, 97 percent of all items in 1914 were mortgage loans, securities, and loans to public corporations. In 1922, on the other hand, check deposits, cash, and overdraft credits made up 87 percent of the total; mortgage loans, securities, and loans to public corporations made up only 8.9 percent.

FRENCH INFLATION AND THE SAVINGS BANKS

French savings banks, due to the less drastic character of the French inflation, escaped, except for a few months in 1926, the drastic withdrawals of deposits which left the German and Austrian banks with virtually no deposits at all. Nevertheless, the savings-bank depositor in France saw the value of his hard-won earnings depreciate by practically four-fifths, and the investments of banks which were largely in fixed-income securities—a considerable percentage being in government bonds—were similarly reduced. This left them in a seriously weakened position and only the hardier institutions survived.

THE SITUATION IN THE UNITED STATES

Turning again to the American scene, we can readily appreciate the devastating effects of a major inflation on the purchasing power of our $23,000,000,000 of savings deposits, with the consequent wiping out of the hard-earned savings of 40,000,000 men and women. As to the banks themselves, their resources are invested almost entirely in fixed-income securities, which are particularly vulnerable under inflation. This situation is bad enough in itself, but a more ominous condition exists in the fact that the banks of the country are being made unwilling partners in the administration's deficit financing program, which carries this on

by means of the deposits created for it through the sale of Government bonds to the banks—in itself a highly inflationary procedure. Thus the Comptroller of the Currency reports that as of June 30, 1938, the 15,341 active banks of the country held United States Government securities valued at $16,774,262,000 as against $7,796,000,000 as of June 30, 1933. This is an increase of about 115 percent. This is an average of about 35 percent of their entire loan and investment portfolio amounting to $47,656,639,000 in 1938. This has placed the banks in a position which has been well outlined by Mr. Carl P. Dennett, chairman of the National Economy League in the following words:

Many of the banks have already reached, if not exceeded, the limit of Government bonds that they can safely carry. Taking 10 important banks at random, the following startling facts were revealed: If there should be a decline of 22½ percent in Government bonds, it would wipe out the surplus and undivided profits of all of these institutions. In 5 out of the 10 it would seriously impair their capital.

Let us assume for the moment that some of the important banks of the country become convinced that the Federal Government is going to continue its reckless expenditures, that there is not going to be any serious attempt made to balance the Budget, and that inflation of the currency is inevitable. Ordinary prudence would demand that they reduce their holdings of Government securities, because fixed interest-bearing securities may and probably will decline rapidly in value if we have currency inflation. In France, for instance, where inflation was precipitated by just such financial policies as we are now pursuing, as inflation progressed fixed interest-bearing investments fell in proportion to the decline in the value of the franc. This has been true in other countries. It would be true in the United States. And, as I have pointed out, a decline of 20 percent to 25 percent in Government securities might cause a large number of banks in the United States to become bankrupt. The minute the banks begin selling their Government securities there will be a rapid decline in value, because there is no other adequate market for them. The Government can offer nothing to protect the Government bond market, except possibly the stabilization fund, which would margin the present Government securities outstanding only about 7 percent and would be entirely inadequate under the conditions mentioned. Government bonds have declined 20 percent in the past. United States Government 3½'s declined approximately 20 percent, and so did the 4¼'s. If totally tax-exempt 3½-percent bonds could decline 20 percent under vastly better conditions than now prevail, taxable 2⅞-percent bonds can easily decline more than 20 percent, especially in the absence of any adequate market in which the bonds can be sold in volume, which is now the case in this country; otherwise the banks would not have been called upon to carry practically all the financing for the Federal Government for the past 3½ years. On the other hand, even if the banks of the country do not sell their securities, but refuse to make further purchases, the Government will be unable to finance its requirements. Either of these conditions would bring about inflation of the currency, or printing-press money, and would have a serious effect upon the investments and deposits of savings institutions. (Speech at convention of National Association of Mutual Savings Banks, Atlantic City, N. J., May 15, 1936.)

It will be noted that while the above remarks were made nearly 3 years ago, this same condition exists in even more aggravated form as the administration has piled up further deficits which have been met by further issues of Government bonds largely taken by the banks. How many more they can absorb may be open to question, but there is no question that the banks of the country would be the first to feel the effects of any impairment of Government credit with disastrous results to their depositors.

THE EFFECT OF INFLATION ON INSURANCE COMPANIES AND THEIR POLICYHOLDERS—INFLATION AND GERMAN LIFE INSURANCE COMPANIES

The consequences of inflation in Germany on German life insurance companies were as follows: They lost 93.5 percent of their assets, 79.8 percent of the number of policies outstanding, and 95.6 percent of their investments. The effect on the German policyholder can best be visualized by the fact that in the latter stages of the inflationary period, when a check in payment of a substantial death claim was mailed to a beneficiary, the postage stamp on the envelope cost more than the check for the insurance was worth. In short, policyholders and their beneficiaries were robbed by inflation of practically all the income and security which this ordinarily safe form of investment is supposed to possess.

This melancholy situation was not due to the fact that German insurance companies were unsound financially. On the contrary, their methods were so sound and conservative that they attracted many policyholders from neighboring countries. Indeed they were so firmly entrenched that they were able to withstand the excessive losses of the war period without danger to their financial stability. Nevertheless inflation brought them to the brink of ruin.

The following table illustrates briefly the position of German life insurance companies at the end of 1913 and the end of 1924. In February 1924 the German revalorization law had been enacted which fixed arbitrary valuations on certain classes of assets above what they were quoted at the time. Hence, the figures in the table show the insurance companies in a considerably better position than they would have been at the end of 1923 at the height of uncontrollable inflation. However, the volatility of figures during that period was such and accounting was so difficult that most company records for 1923 at least are very unreliable.

Position of German life-insurance business

	End of 1913	End of 1924	Percent 1924 is of 1913
	Million marks	*Million gold marks*	
Policies outstanding	16,200	3,275	20.2
Premium intake	724	159	21.9
Total assets	6,060	389	6.5
Investments	5,700	251	4.4
Notes	258	4.5	1.7
Real estate	104	3	41.4

Comment as to the significance of this table has already been made in the first paragraph of this memorandum. It may be added here that real estate alone stood up fairly well, but even this declined nearly 60 percent.

The insurance companies tried every method possible to counteract the deadly influences of inflation and to protect their policyholders. Thus when policies came due these latter were asked to take out insurance in increasing amounts; sliding scale premiums with corresponding sliding scale principal amounts based on the cost of living were tried, and after 1922 when it was made possible by law policies were written basing both premiums and insurance in foreign currencies—dollars, Swiss francs, Dutch guilders, and the like. All of these devices, however, proved relatively unsuccessful.

A further threat to the solvency of insurance companies during this period was that while premium income was steadily declining both in volume and purchasing power the cost of doing business was steadily increasing. Wages, salaries, and commissions of employees had to be increased at least in some rough proportion to the rise in living costs occasioned by the disastrous depreciation of the currency, and also because of inflation new methods such as are outlined in the preceding paragraph had to be worked out if total collapse was to be avoided. Indeed, many attempts at economy were introduced by reduction of personnel, increasing use of office machinery, reform of accounting and management methods, and the like. One large insurance company between July 1922 and November 1923 managed to reduce its staff of 560 full-time workers to 77 half-time workers, but by the end of 1923 many companies had gone into liquidation or were absorbed by other institutions.

We have already indicated the consequences of inflation upon the life-insurance policyholder, whether as a recipient of a death claim, endowment, or annuity. The sums so paid to him simply had a smaller purchasing power first from week to week and then, as inflation became uncontrollable, from day to day and even from hour to hour. In 1918 a claim for 25,000 marks would buy a house; by the end of 1920 it would pay the rent for a room; by the end of 1922 it would buy only a suit of clothes; and by the end of 1923 it would buy practically nothing. In fact, it was only through the revalorization law that policyholders received anything, the sum total amounting to about 10 percent of the value of their claims.

AUSTRIAN LIFE-INSURANCE COMPANIES UNDER INFLATION

The situation with respect to Austrian life-insurance companies and Austrian policyholders was practically the same as in the case of Germany. While in Austria stabilization was achieved before currency depreciation had gone as far as

in Germany—in Austria stabilization was on the basis of 14,400 paper crowns to 1 gold crown; in Germany on the basis of 1,000,000,000,000 paper marks to 1 gold mark—there was no revalorization law in Austria, and in consequence both companies and policyholders had to bear the full brunt of inflation's losses. Its effect on the insurance companies may be seen from the statement of the Anchor General Insurance Co., a statement typical of many other insurance companies in Austria.

Item	Gold crowns, 1914	Gold crowns, 1922	Percent recovery, 1922 of 1914
Total assets	219, 412, 920	216, 200	0.099
Real and landed estate	16, 052, 622	1, 116	.0069
Securities	27, 823, 651	151, 209	.54
Mortgages	100, 853, 833	8. 742	.0086

Austrian policyholders did not even do as well as the companies. Many who had taken out endowment insurance, for example, in the hope of achieving the degree of security which goes with that type of contract, or who had purchased annuities, or who had sought to provide their heirs with the necessities of life, found that in exchange for the good money they had paid to the insurance companies year after year they had to accept paper crowns that were practically worthless.

INFLATION AND FRENCH INSURANCE COMPANIES

Although inflation in France did not go nearly as far as in Germany or Austria—the franc was stabilized first at about one-fifth of its former value, i. e., 3.9 cents as against 19.3 cents—it was severe enough to wipe out about four-fifths of an estate that a person may have sought to build through insurance.

As for the insurance companies themselves, their portfolios declined on an average to about one-fourth of the pre-war value. Their assets in general were distributed about 70–75 percent in fixed interest-bearing securities, 10–15 percent in investments with variable revenue and 15 percent in real estate, the fixed interest-bearing securities being in Government bonds or private obligations of French origin. These fell almost in direct proportion to the decline in value of the franc. At the height of the monetary crisis fixed revenues had fallen to about 10 percent and real estate to about 50 percent of pre-war values. Common stocks had, however, suffered only minor fluctuations. As a net result, one outstanding company, La Nationale, suffered a shrinkage in assets of about 81 percent between 1913 and 1925—the asset value being 673,000,000 francs in 1913 as against 126,000,000 in 1925. This decline was roughly typical of French insurance companies in general.

THE CONSEQUENCES OF INFLATION ON INSURANCE COMPANIES IN THE UNITED STATES

From the record just cited as to the consequences of inflation on German, Austrian, and French insurance companies and their policyholders, no great powers of deduction are necessary to visualize the effect that extreme inflation would have on the more than 60,000,000 policyholders in American life insurance companies and on the $110,000,000,000 represented by their policies. It would have an equally disastrous effect, as the German, Austrian, and French examples show, upon the assets of the companies themselves, which at the end of 1938 amounted to about $27,000,000,000. By law the greater part of these assets, for the protection of policyholders, have to be invested in instruments of the highest grade, which means, in effect, Government bonds and those of the best type corporations, first mortgages and preferred stocks, or, in other words, fixed-income securities. Thus, as of December 31, 1938, we find that the investments of 49 legal reserve life insurance companies, which hold approximately 93 percent of the admitted assets of all legal reserve companies, are in the following approximate proportions:

	Amount	Percent of total assets
Government bonds	$6, 540, 000, 000	25. 7
Mortgages	4, 942, 000, 000	19. 4
Corporation bonds and stocks:[1]		
Railroad	3, 082, 000, 000	12. 1
Public utility	3, 254, 000, 000	12. 8
Other	1, 453, 000, 000	5. 7
Policy loans, etc	3, 089, 000, 000	12. 1
Real estate	1, 982, 000, 000	7. 8
Other	3, 000, 000, 000	4. 4
Total	27, 542, 000, 000	100. 0

[1] Of this entire total only $115,000,000 was in common stocks.

Source: Proceedings of Thirty-second Annual Convention of the Association of Life Insurance Presidents (pp. 95–98).

In this entire category it will be observed that at least 85 percent fall into the class of investments having a fixed return, and these, as we saw in the case of Germany, Austria, and France, depreciated almost in direct ratio to the ultimate depreciation of their currencies. The fate of the policy holders in those countries has also been made clearly apparent, and it must be remembered that in the United States these constitute in number about 50 percent of the entire population of the country and in personal estate not only the "economic royalists" but a vast cross section reaching from the very rich to the very poor, whose present security through annuities and whose future security through endowments and death claims depend squarely upon the value of the currency in which they are paid.

Taxation and Unemployment

EXTENSION OF REMARKS

OF

HON. JOSEPH J. O'BRIEN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

RADIO ADDRESS BY HON. BRUCE BARTON, OF NEW YORK, ON TUESDAY, MAY 23, 1939

Mr. O'BRIEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered over the raido by my colleague from New York, Hon. BRUCE BARTON, on May 23, 1939:

More than a month ago I set to work to try to find a job in New York City for a young Irishman whom I will call Johnny O'Hearn.

Johnny is 23 years old, and he has a good, clean record. He is competent to be an office assistant or a bookkeeper, or a salesman inside or outside; he will drive a truck or sweep sidewalks. He just wants a job, any kind of an honest job.

I wrote to 20 men high up in business, presidents and chairmen of boards, and directors who are my personal friends. I asked each one of these men if he would use his influence in his own company to get Johnny a job. That doesn't sound like a very difficult contract, does it? You have heard a lot about the power of Big Business and you would say that it shouldn't be beyond the capacity of a corporation president to find a place for a $25-a-week young man.

Every one of my 20 friends answered my letter. And what kind of answers do you think I received? Here are two that were typical of all the others:

"DEAR BRUCE: You know how gladly I would do anything I could to help you, but here is our situation: In the past year we have had to lay off 2,800 people. Our business volume is down, but we could have managed to keep these folks on the pay roll if it were not for the increase in our taxes. But the tax load forces us to look for every possible economy, and, of course, this means

cutting the pay roll as well as every other expense. Our agreement with our employees is that these 2,800 old workers must be hired back before we can put on a single new worker. So you see my hands are tied. Much as I'd like to find a place for Johnny, there just isn't any place and will not be until these 2,800 are reemployed."

The second letter was to the same effect:

"DEAR BRUCE: There are 3,000 of our old employees who have first call on any jobs that may open up in our plant. Last year our company showed a loss for the first time in 20 years."

So, my friends, here is an almost unbelievable situation; it would be ridiculous if it were not so tragic. With all the so-called influence that I used to think I possessed, all the goodwill that I have built up in 30 years of business life in New York, all the prestige that goes with being a Member of Congress, I have to throw up my hands and confess that I can't even find one $25-a-week job.

I am telling you this story because I like whenever possible to bring our great national problems down out of the stratosphere of economic discussion and translate them into terms of everyday life. We hear lots of big talk about governmental deficits and the national debt, and you and I are tempted to think that the deficits and the debt are something remote from our lives. We assume that the debt will have to be paid some time, but that the payoff will not come until long in the future and that when it does come the money will be taken away from the big corporations or the very rich.

When we think about the debt in these far-away terms we are just 1,000 percent wrong. The cruel fact is that the debt is being paid right this minute, and by the people who are most innocent of any part in it and least able to pay. It is being paid by the Johnny O'Hearns and the millions of other young men and women all over the country who are willing to do any kind of honest work and just cannot find jobs.

Where do you think the money comes from to pay the interest on the debt? Much of it comes from corporations and businesses, big and small. And where do the corporations and the businesses get it? Part of it from the consumer in the form of higher prices. But a larger part of it comes out of economies in production and management. And economies mean putting in machines to do work that used to be done by people; they mean combing the pay roll week by week and month by month to see what jobs can be combined and what salaries and wages can be saved.

This is not because business is heartless or callous. Business has no choice. It must keep solvent or it can't employ anybody. And the only way it can keep solvent and still meet the terrific load of taxation is to produce at a lower cost. When you cut costs, it means cutting people.

In my home town, New York, a survey was made a year ago to reveal what is happening to the young men and women between 16 and 24 years of age. The results were shocking. Six hundred and forty-three thousand young people between those ages, young folks who had finished their schooling and were ready for work, have never been able to find any kind of work at all. Six hundred and forty-three thousand Johnny O'Hearns and Sally O'Hearns, tramping the streets, ringing the bells, knocking on the doors, and finding no door open. That is what is happening to the youth of America. And it is happening because taxes are taking the billions of dollars that ought to be going into pay rolls. Taxes are destroying jobs.

This week has been set aside as National Debt Week. You will hear many speeches and read many editorials about the terrible dangers involved in our mounting debt. Economists will talk, editors will write. I hope everyone of you, as American citizens concerned with the future of our country, will read these editorials and listen to these speeches.

And while you are reading and listening, keep in mind my young friend, Johnny O'Hearn. Have a picture of him as he goes in and out of my office with his hair combed and his clothes neatly brushed and the gleam of hope still in his eye—the hope that this morning I may be able to give him some good news.

Get it clear in your mind that the reason I can't find a job for him in industry is not because industry has suddenly grown cold or cruel. The reason is because industry has tens of thousands of older, trained workers whom it must hire back before it can find even one place for a new employee. And the reason it is still firing instead of hiring is because every day more money that ought to go into jobs is being drained away to pay for the extravagance of government. And when you see the pictures of all the beautiful post offices that Mr. Farley is dedicating, and all the big dams of the T. V. A., and when you read about all the billions that have been spent in trying to re-elect New Deal Senators or defeat the critics of the New Deal, just remember that all that expenditure is coming out of the country's pay rolls. That extravagance is being paid for in the blasted hopes of the 643,000 young men and women in New York, and the millions in other cities who can't find jobs. The new dealers may think they are kind-hearted men, but their taxes are throwing men and women out of work faster than the W. P. A. can put them on. The taxes aren't coming out of the pockets of the New Dealers. They are coming out of the empty pockets, and the frustrated lives, of millions of Johnny O'Hearns.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. PAT HARRISON

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, May 26 (legislative day of Friday, May 19), 1939

LETTER FROM HON. CORDELL HULL, SECRETARY OF STATE

Mr. HARRISON. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a communication addressed by the Secretary of State, Hon. Cordell Hull, to Mr. Millard D. Brown, president, Continental Mills, Inc., Philadelphia, Pa., under date of May 15, 1939, concerning the reciprocal trade-agreements program.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

MAY 15, 1939.

Mr. MILLARD D. BROWN,
President, Continental Mills, Inc.,
Armat and Lena Streets, Philadelphia, Pa.

MY DEAR MR. BROWN: I have received your letters of March 15, March 22, and March 29, 1939, attacking the trade-agreements program, and enclosing reprints of advertisements which your company inserted in the Daily News Record, New York, of the same dates, in which you attacked the trade-agreements program, with particular reference to the agreement with the United Kingdom, effective January 1, 1939, under which the duties on certain woolen and worsted textiles were reduced. Since it appeared that these attacks were taking a serial form, acknowledgment of your letters has been deferred pending completion of the series.

These widely publicized advertisements evidently seek to foster the belief among workers in the wool manufacturing industry, and on the part of the general public, that the trade-agreements program is contrary to the interests of the workers and of the Nation. In the interests of fairness and truth I cannot allow such statements to pass unchallenged.

The truth is that the trade-agreements program is not opposed to the real interests of American labor or of workers in the wool manufacturing industry. Moreover, it most certainly is not, as alleged in these statements, an "altruistic" program under which business is taken away from Americans and handed over to foreigners.

The essential facts are:

First. That despite your inferences to the contrary, actual conditions in the wool-manufacturing industry are not worse than they were before the trade agreement with the United Kingdom went into effect, but instead are decidedly better than they were last year.

Second. That the trade agreement with the United Kingdom has not resulted in such an increase in imports of wool products as could be seriously felt by the wool-manufacturing industry or by workers in the industry, whereas, on the other hand, the trade-agreements program as a whole is operating to the definite advantage of the industry and of those who gain their livelihood from it.

Third. That the trade-agreements program does not destroy but, on the contrary, promotes economic activity and employment in this country to the benefit of all important economic groups, including the wool-manufacturing industry.

As to the first proposition—the inference that conditions in the industry have been worse since the trade agreement with the United Kingdom went into effect on January 1, 1939—permit me first of all to call your attention to your own advertisement in the Daily News Record, under date of March 8, 1939. This advertisement—which was not included among those which you forwarded to me—stated, among other things, that:

"The general economic situation shows signs of marked improvement. More people are being employed; more money is being disbursed in private pay rolls; more impetus is being given to consumer purchasing power * * *. There is a real dearth of quality clothing in the marts of trade. A latent demand for merchandise of established character will be manifest in the new season. It behooves us to take steps to stimulate and supply it."

The fact is that the important indices of conditions in the industry reveal a decided improvement during the first quarter of 1939 as compared with the same period a year ago. The average number of persons employed increased by 28 percent. Average weekly pay rolls increased by 40 percent. Machinery activity increased by 68 percent. Consumption of raw apparel wool

increased by 106 percent. While, for reasons with which you are doubtless familiar, these percentages vary rather widely, they tell the same general story; namely, that the situation is much better than it was last year. Whatever the explanation may be, it is certainly a fact that conditions in the industry have not worsened, but rather have definitely improved, since the trade agreement with the United Kingdom went into effect.

The second point noted above—relating to the effects of the trade agreement with the United Kingdom, and of the trade-agreements program as a whole, upon the wool-manufacturing industry—calls for more extended discussion.

It is, of course, a fact that duties were reduced on various items in the wool schedule in that agreement. Naturally, it should be expected that imports will be larger than would be the case if the duties had not been reduced. Only on that assumption could we expect to obtain from the United Kingdom worth-while concessions on behalf of our agricultural and industrial exports. But these duty reductions on wool manufactures were carefully devised, from the standpoint both of types of goods selected and of magnitude of the reductions, with a view to giving reasonable assurance that any adverse direct effects upon the domestic industry on account of increased imports would not be serious and would be at least counterbalanced (in actual fact probably more than counterbalanced) by the favorable effects of the British agreement and the trade-agreements program as a whole upon domestic prosperity and hence upon the capacity of American consumers to buy the products of the wool-manufacturing industry.

Nothing has happened since the British agreement went into effect which would indicate that these calculations were erroneous. The figures you give as to imports in January 1939 and 1938 are not good evidence to support the alarmist conclusion which you seek to convey concerning the effects of recent imports of wool manufactures upon the domestic industry. To say that imports of wool fabrics, for example, amounted to 1,602,000 square yards in January 1939, as compared with 811,000 square yards in January 1938, may seem alarming to some. But an uncritical acceptance of such figures as representing a flood of imports fails to take into account not only that these increased imports are still only a very small percentage of our domestic consumption but also that imports immediately after the tariff reductions went into effect included considerable quantities which had been previously withheld from entry in anticipation of the reductions.

That this withholding of entries did in fact take place is quite evident from the figures. In November and December 1938 imports of woolen and worsted fabrics were smaller, even, than in the same months of 1937—and this, too, in spite of the fact that the domestic demand was stronger and consumption greater than in the preceding year. For the last 2 months of 1938, imports amounted to 905,000 square yards, valued at $543,000; whereas, a year earlier, they had amounted to 1,281,000 square yards, valued at $1,118,000. It is perhaps noteworthy also in this connection that imports since January of the present year have been receding rather than increasing, having declined from 1,602,000 square yards in January to 1,081,000 square yards in February, and 974,000 square yards in March.

In your statements you allege that these imports are a serious burden to the industry and to the workers in the industry. There are no real grounds, however, for such a conclusion; and the manner in which it is arrived at furnishes an excellent illustration of a basic weakness in your approach to the whole problem which is common to most of the attacks that are made on the trade-agreements program by industries on whose products tariffs have been reduced.

Your conclusion assumes that only a certain quantity of woolens and worsteds can be sold in the United States and that the sole question is whether the domestic industry shall supply all of the demand, or whether some part of the demand, however small, shall be supplied by imports. What this completely overlooks, apart from differences in type and quality of the imported products on which duties were reduced as compared with the vast bulk of the domestic production, is the fact that the trade-agreements program as a whole has a definite bearing upon the capacity of the American people to buy woolens and worsteds. Yet the facts are (1) that the general prosperity of this country is profoundly important to your industry, as to others; (2) that the rebuilding of our foreign trade is an essential phase of any program for establishment of stable conditions of prosperity; and (3) that the trade-agreements program, by removing excessive and unreasonable barriers to trade and reopening foreign markets for products of American agriculture and industry, is a major contribution to that end.

In this connection our recent tariff history is highly instructive. For it shows all too clearly what happens when tariffs are forced up to embargo levels and the foreign trade of this country is decimated in consequence of such extremism.

In 1930 the Hawley-Smoot Act was adopted, shutting out of our markets practically everything that could be produced in this country at costs not utterly prohibitive. In that act the duties on wool manufactures were still further increased, notwithstanding that they were already high enough so that imports comprised but a small part of our total consumption, and in substantial part were composed of high-priced specialties. In order to obtain these further increases, wool manufacturers acquiesced in the imposition of embargo tariffs on the products of other industries as well. The result was a most untimely contribution to the general economic collapse at home and abroad which brought severe depression not only to our great export industries, both agricultural and manufacturing, but to all branches of our economic life, including the wool-manufacturing industry.

How, actually, did the wool-manufacturing industry fare in this situation? Did the workmen in the industry obtain, as a result of this tariff legislation, that additional "$4 a month," or "$48 a year" which, in your very misleading advertisement, you now claim is being taken away from each workman on account of the tariff concessions on wool manufactures in the United Kingdom agreement?

Of course they did not. The result was not satisfactory to American workers in general or to textile craftsmen, or, indeed, to anybody. In 1929, at a time when 14,307,000 square yards of woolen and worsted piece goods, valued at $17,681,000, were being imported, there were 147,000 workers employed in the woolen and worsted industry, and their weekly pay roll averaged $3,157,000.

In 1932, when imports of woolens and worsteds had declined to 3,437,000 square yards, valued at $2,530,000, there were 101,000 workers employed in your industry and their weekly pay roll averaged $1,533,000. In other words, the number employed had fallen by nearly a third and the total pay roll by more than half.

Keeping out of the domestic market almost every trace of imports of woolen goods, as part of a general tariff policy which destroyed a large part of our foreign trade and contributed greatly to the general economic maladjustment, both in this country and abroad, did not prove to be a paying proposition for your industry or the workers in your industry. That imports of wool fabrics amounted on the average to only about 1 percent of our domestic consumption—as they did after 1930—was surely poor consolation for the 46,000 employees who were out of work and for the decline of more than half in the pay roll of your industry. As a matter of fact, a study of the trends of national income and of domestic exports and imports over the past 15 years shows that all three tend to fluctuate in unison. For example, in 1929, when national income reached $81,000,000,000, our exports amounted to five and two-tenths billions and our imports to four and three-tenths billions. By 1932, national income had fallen to forty billions, exports to one and six-tenths billions, and imports to one and three-tenths billions. Are not these figures sufficient evidence to any reasonable person that there is something radically wrong with the idea, which seems to be the underlying assumption of your statements, that a slight change in the small share of the domestic market supplied by imports is what makes the difference between good and bad times for the American industry?

It is idle to say that other factors besides the Hawley-Smoot Act contributed to the depression. That there were other important factors no informed person would deny. But neither would he deny that the rapid rise of trade barriers throughout the world—a development in which our own tariff policy after the World War, reaching its ultimate extreme in the Hawley-Smoot Act, played a sinister part—was an important factor in contributing to and greatly aggravating the general depression

The third point which I set forth at the beginning of this letter was that the trade-agreements program tends to promote economic activity and employment generally in this country. What I have just said concerning our experience under the Hawley-Smoot Act shows clearly enough what happens when the opposite policy, the policy of embargo protectionism, is followed. I desire, however, to comment further with reference to the attempt in your statements to induce workers in your industry and the public generally to believe that the trade-agreements program is merely an altruistic policy which aims to engender good will abroad at the expense of American industry and the American standard of living.

The fact is that the trade-agreements program has been remarkably successful in restoring foreign market opportunities for many products of our farms and factories. In the agreement with the United Kingdom alone—the main object of your unfair attacks—we obtained specific concessions on American products exports of which to the United Kingdom, Newfoundland, and British colonies in 1936 amounted to $326,000,000. It is obviously too early to judge the value of these particular concessions in terms of actual trade increases. However, it is significant that exports to agreement countries in the 2-year period 1937–38 were greater in value by 61.2 percent than the average for the preagreement period 1934–35, while exports to all other countries increased by only 37.9 percent. Agreements are now in operation with countries which in 1938 accounted for nearly 60 percent of our total foreign trade.

These are some of the facts you fail to mention which are vitally significant to the vast number of American producers of farm and factory products who must export or shut down or operate at a loss. When these American producers lose export markets as a result of embargo tariffs here and abroad or for any other reason, then the wool-manufacturing industry and other "protected" industries lose part of their domestic market, and we have what we had in 1930, 1931, and 1932.

Neither do you mention that the powers vested in the President by the Trade Agreements Act have been exercised with the utmost scrupulousness. The President has had the assistance of all the facilities of information and expert judgment available to the Government of the United States from official and private sources, and every detail of the agreements has been scrutinized by expert advisers with a degree of thoroughness such as has never before characterized the determination of tariff rates in this country.

In view of all the facts and circumstances, it seems to me that the misleading claims and inferences which are set forth in your advertised assertions cannot possibly serve any useful purpose either from the standpoint of the public generally or from that of the workers in the wool-manufacturing industry.

Without questioning the honesty of your motives and convictions in connection with these matters, I am convinced that you have not taken all of the facts into account. It is to be regretted that no opportunity was sought before your statements were published to discuss the whole subject with us. We would have been very happy to discuss it with you, and we are still ready to do so at any time.

Sincerely yours,

CORDELL HULL.

Germany's Immigration Quota

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, May 26 (legislative day of Friday, May 19), 1939

STATEMENT BY JOHN CECIL

Mr. REYNOLDS. Mr. President, I ask unanimous consent that there be published in the Appendix of the RECORD a statement before the subcommittee of the United States Senate Immigration Committee, made by John Cecil, president, American Immigration Conference Board, New York City, in opposition to Senate Joint Resolution 64, introduced by the Senator from New York [Mr. WAGNER], seeking to increase Germany's immigration quota by 20,000.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I appear today as president of the American Immigration Conference Board, Inc., with offices at suite 1200, 92 Liberty Street, New York City. We are a nonprofit membership corporation; a nonsectarian and non-partisan organization in daily touch with interested citizens and organizations in all parts of the country.

TEN THOUSAND PROTESTS

For instance, within the last 4 weeks I have received by mail over 10,000 individual signatures to communications in support of the complete stoppage of all immigration into this country for permanent residence, and therefore in opposition to this resolution. I do receive a very few letters from people who do not agree with our stand, but only a very few.

I am convinced that if the Wagner Senate Joint Resolution No. 64 were left to the direct vote of the people of the United States it would be snowed under, overwhelmingly.

The people believe that America's children are America's responsibility, and that refugee children in Europe are Europe's responsibility. They believe that first things must come first, and therefore, that America's children must be considered before we bestow our charity on Europe's children.

America's first duty is to feed, clothe, and educate her own millions of "ill-fed, ill-clothed, and ill-housed" American children.

Here are the grim facts: Every State in the Union has a tremendous number of children in want of proper food, clothing, medical attention, and better schooling.

TENANT FARMERS' CHILDREN

Millions of starving, half-naked children of 8,000,000 tenant farmers, scattered throughout all parts of the United States, live in hovels. Their tumble-down shacks have no windows. They sleep on rags. Their clothes are tattered and filthy. They eat thickened gravy and biscuits as a year-round diet. They have no medical care. They fall easy prey to disease. They are unschooled. From out of these dingy huts of tragedy comes a reeking army of destitution, while the false idea of humanitarianism and internationalism is wailed by propagandists.

Shall we first take care of our own children, or shall we bestow our charity on children imported from abroad?

Mrs. Franklin D. Roosevelt said in her newspaper column, on January 31, 1939: "I cannot help wondering about the sharecroppers * * *. I fear that human suffering is not confined to Europe."

What is American citizenship worth if it allows American children to go hungry, cold, naked, and unschooled, and without proper medical attention—while we import and care for children from a foreign country?

SLUM CHILDREN LIVE IN SULLEN POVERTY

In hundreds of American cities millions of worthy children are growing up in filth, squalor, and ignorance in slums. Huddled together in poorly ventilated, cramped rooms, these American children of every race and foreign extraction, cry for the right to breathe fresh air, eat good food, and for the right to play and live in the American way.

Shall we sentence these slum children to crime, poverty, and hopelessness while we import children from a foreign country?

The Wagner bill proposes to import 20,000 children from Germany.

These foreign children are to be placed in American homes.

Organized minorities who advocate bringing in these foreign children state that homes already have been provided for them by applications now on file. If that be true, this is America's answer:

If homes are available for the adoption of alien children, Americanism demands that needy American children be adopted into them.

These children are to be "14 years of age and younger."

In almost every State in the Nation children 14 years of age are allowed to work under certain conditions.

We cannot take care of 20,000 German children.

One third of all the unemployed in America are young people of working age under 25 years—over 60 percent have been out of school from 2 to 6 years.

FOUR MILLION UNEMPLOYED YOUTHS

Wherever you live, about one out of every three unemployed is a young person who has the right to an American job at American wages, but who cannot find a job at any price.

Six hundred thousand young people reach working age each year in the United States. These face a jobless future.

SLAVE MARKETS—AMERICAN GIRLS TO HIGHEST BIDDER

In one eastern city there is a "slave market" where Negro and white girls gather on the street corners in the hope of securing a few hours' work at from 15 to 20 cents an hour.

One-third of all crime committed in America is by unemployed youths. Thirty-five percent of all arrests in New York City are young people.

Four out of every five unemployed youths in an eastern city have no vocational education; there are not schools enough.

Thousands of American children are forced to go to school part time because schools are overcrowded.

This is not the first time such ill-advised proposals have been introduced in Congress.

In many sessions of Congress since the World War similar bills have been introduced in an effort to capitalize on the sympathy of the American people and for the purpose of breaking down restrictive immigation. In every case so far the common sense of the people has prevailed; not one such proposal has ever been enacted.

I recall that I once was regional director of the Near East Relief for several Rocky Mountain States, with headquarters in Denver, Colo. I was responsible for raising vast sums of money for relief of Armenian, Greek, and Near East children. With the money I helped to raise Near East children were given medical attention, food and clothing, and placed in schools. I believe that I helped to save the lives of literally thousands of these children.

I suddenly resigned from my office, however I began receiving repeated calls and letters demanding that I bring pressure to bear on our several State delegations in Congress to get legislation passed which would legalize the importation of 75,000 Armenian and 25,000 Greek refugees into this country.

ALIENS—"WINE, WOMEN, AND SONG"

While I was willing to apply whatever talents and time I had toward raising money to feed and clothe these starving refugees in the Near East, I considered it a culpable offense against the American people to be a party to using such public relief funds for high-pressure lobby purposes here in Washington. My judgment was vindicated shortly thereafter, because in less than a year the activity of aliens who were in the country under bond became a common scandal in the press. Washington dispatches appearing in such papers as the Cincinnati Times-Star captioned the story: "Wine and women are seeking admission of alien refugees. Wine is served at dinner given Congressmen by foreign lobbyists, and women are telegraphing that to refuse admission to refugees would be murderous." All this in the headlines.

The American people felt about this matter as I did, and the bills were defeated; shortly thereafter the Near East relief fell from popularity in the hearts of the people.

The Wagner resolution if enacted into law seeks to admit 20,000 "German children" in excess of Germany's enormous annual quota of 27,370; no one of these children would have to be a persecuted child under this resolution. Everyone could be a German Nazi child under this resolution. The bill, after the enacting clause, says nothing at all about these children having to be the offspring of parents who have been persecuted because of race, or religious, or political ideas.

BILL MUST BE AMENDED

Existing immigration laws provide for exemption from the literacy test of "aliens that have been persecuted" religiously or politically. If there were written into this bill the words contained in section 2 of the Immigration Act of February 5, 1917, with regard to religious and political refugees, then the bill would be made to do what proponents have been arguing for it, but only then.

PRESENT QUOTAS ADEQUATE

Proponents of this bill have been loud in their assertion that the situation confronting as many as 20,000 German children is so acute that, unless Congress immediately legalized their importation here, in excess of the quotas, we as a Nation will be guilty of murder. I deny this statement in its entirety. If conditions are as urgent as painted by the proponents of this bill, the situation demands that quota immigrant adults step aside and allow these children to come under quotas already set up. We have an

enormous quota already for Germany. It legalizes all whom we can possibly handle in any 12-month period, regardless of what the necessity for importation may be. It strikes me, therefore, that the situation is similar to a wreck at sea where the cry is "Children first." Let adults step aside.

Refugees are now coming to our ports by the shiploads and are being rushed into employment with as little delay as possible, particularly to New York City where I live. They are coming under the quotas. Many are coming under permits of temporary visitors, the number of which has no legal limit. These temporary permits are often extended time after time, for the benefit of aliens who hold American jobs.

More refugees have settled in the United States in the last year than the number who permanently settled during this period, in the rest of the world.

Refugees are at work everywhere in America and every time a job is filled by one of them, an American is thrown out of work.

This question resolves itself into the following proposition:

AMERICA HAS ALREADY DONE HER SHARE

No one is arguing that there is not intense suffering in Germany. No one is trying to establish that America has no sympathy for destitute and suffering children. The point I wish to make is that we are sympathetic, that we are concerned over the plight of these unfortunate people in all of Europe, and that we are actually now doing our full share, and we have been doing it all along. I cannot see why we should be expected to take care of these German sufferers to the exclusion of all other people suffering in the entire world.

If we are going to bring these German children in, why not enlarge our charity to bring the Chinese, and the Ethiopian, and the Spanish children, and especially the orphans of the many millions of white Christians who were starved deliberately in the Ukraine over the period of the last several years? Why has there been no outcry to Congress to take care of these other people?

"IN THE NAME OF HUMANITY"

For several days now sob-sisters have been appearing before this committee, appealing to the emotions of this Congress to admit 20,000 German children, "in the name of humanity."

Practically everything harmful which has been asked of this country during my lifetime has been offered "in the name of humanity."

When I was a youth I went to France as a soldier for 15 months "in the name of humanity" and "to make the world safe for democracy."

"In the name of humanity" America spent money like it was water and sent 2,000,000 young men to Europe to establish the political zig-zag lines of nationality, and "self-determination for all minorities in Europe."

Then, "in the name of humanity," we opened our Treasury to all of our alleged allies to rehabilitate bankrupt Europe.

WORLD SAFE FOR COMMUNISM

And what happened? Instead of making the world "safe for democracy" we have made the world safe for communism and nazi-ism, and fascism. Instead of bringing about self-determination of minorities we have succeeded in creating the most gigantic refugee problem ever known to history. Instead of rehabilitating Europe we have made ourselves the most hated nation on earth, and are called Shylock because we have asked for the interest on our money. All of this "in the name of humanity."

"In the name of humanity" we were asked to join the League of Nations, which has since proved itself the most dangerous proposal ever offered to the American people. "In the name of humanity" we were asked to join the World Court. It seems that the schemers, plotting the downfall of America, have always wrapped their phony packages in this self-same wrapper, "in the name of humanity."

"In the name of humanity" this resolution should be, and I believe will be, defeated.

Seventieth Birthday Anniversary of Rt. Rev. Msgr. John A. Ryan, D. D.

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, May 26 (legislative day of Friday, May 19), 1939

ADDRESS BY RT. REV. MSGR. JOHN A. RYAN, D. D.

Mr. MURRAY. Mr. President, last evening at the Willard Hotel a most distinguished audience assembled at a banquet to celebrate the seventieth birthday anniversary of Dr. John A. Ryan, the eminent theologian and economist of the Catholic University. Dr. Ryan has long occupied a foremost position in the field of economics and sociology, and long ago foreshadowed many of the important reforms which have taken root in this country in recent years. On the occasion of the tribute paid him last night Dr. Ryan delivered a noteworthy address relating to the perplexing problems still confronting the country. I ask unanimous consent to have that address printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I like to regard this splendid celebration as fundamentally a tribute to the causes with which I have been associated: social reform, social justice, the uplifting of labor, the defense of civil liberties, the fight against religious and racial intolerance, and the application of moral principles to social and economic life. These causes and activities are infinitely greater in importance than the years or the achievements of any man or any number of men.

How did I come to enter this field? Significant answers are to be found in my time, my early environment and my inheritance. The year of my birth was within the decade which included the Civil War. Minnesota was still a part of the frontier, and the historian Turner has made us all acquainted with the unique role which the frontier has played in the economic history of America. The neighborhood was rural, and here I wish to cite the man whose writings exercised a greater influence upon my formative years than those of any other author. Archbishop John Lancaster Spalding, in one of his earliest books, refers with approval to the saying of a certain philosopher, "There are 10,000 chances to 1 that genius, talent, and virtue shall issue from a farm house rather than from a palace." My parents were Catholics who had to leave their native land on account of the infamous system of Irish landlordism. My father and mother were heirs, therefore, to all the glorious traditions associated with both their race and their religion. This environment and this inheritance made it easy for me to become interested in the social question.

Subsequent developments nourished, stimulated, and increased that initial interest. About 57 years ago, I read, in part at least, Henry George's Progress and Poverty. In 1887, I rejoiced over the success which attended the efforts of Cardinal Gibbons and the other archbishops of the United States to prevent the threatened condemnation in Rome of the Knights of Labor.

Naturally, the most important factor in my early social education was the encyclical of Pope Leo XIII On the Condition of Labor. This great pronouncement appeared in 1891, about 1 year before my graduation from college. Some 3 or 4 years later I came upon Dr. Richard T. Ely's book, Socialism and Social Reform. This was, I am confident, the first work by an American economist which made any systematic or vital contribution to the discussion of modern economic evils and maladjustments.

At this time I was within 4 years of ordination to the priesthood. I had already determined to devote as much as possible of my time and energy to the study of economic conditions, institutions, and problems. I wanted to examine economic life in the light of Christian principles, with a view to making these principles operative in the realm of industry. It seemed to me that the salvation of millions of souls depended largely upon the economic opportunity to live decently, to live as human beings made in the image and likeness of God. That this is proper work for a priest seemed clear to me from the teachings of ethics and moral theology; the moral law governs economic transactions as well as every other sphere of conduct. In addition to this general truth, I had before me the specific exhortation and command of Pope Leo XIII. Near the close of his encyclical, On the Condition of Labor, he declares: "At this moment the condition of the working population is the question of the hour; and nothing can be of higher interest to all classes of the state than that it should be rightly and reasonably decided." Having pointed out the parts to be taken in this task by the wage earners, by the employers, and by the state, he outlines the contribution to be made by the church. "Every minister of holy religion," he says, "must throw into the conflict all the energy of his mind, and all the strength of his endurance * * *." Clearer or more authoritative encouragement than this no man could have desired.

Almost half a century has gone by since the publication of this great papal pronouncement. How have its doctrines and injunctions been treated in the United States? In attempting briefly to answer this question I shall divide this period of 48 years into 2 unequal parts: The 40 years between Leo's encyclical and that of Pius XI, and the 8 years that have since elapsed. This division has significance for our economic as well as for our religious history.

Speaking summarily, I observe that the encyclical On the Condition of Labor did not receive adequate consideration until almost 28 years after it had appeared. Then its teaching and influence found expression and recognition in 2 notable publications. These were the Program of Social Reconstruction, published February 12, 1919, by the bishops who constituted the administrative committee of the National Catholic War Council, and the Pastoral Letter of the Entire American Hierarchy, issued September 26 of the same year. The Social Reconstruction Program was very widely read and approved by both Catholics and non-Catholics. In fact, it obtained more attention and acclaim than all the other 60 plans of reconstruction which appeared in various countries between February 1918 and June 1919.

The year 1921 saw the establishment of the department of social action as an integral part of the National Catholic Welfare Con-

ference. In the first 10 years of its existence this department did more to make known Pope Leo's encyclical than all other agencies combined. Particularly noteworthy among its acts was the holding of anniversary observances of the encyclical for several years before the publication of Quadragesimo Anno on the fortieth anniversary.

During those 40 years economic reform made little progress in the halls of legislation. The right of labor to organize received some protection, but not nearly so much as the union leaders had expected, in the Federal law known as the Clayton Act. A majority of the States enacted measures restricting night work, requiring the maintenance of safety and sanitation in factories, and providing compensation for injured workmen. A considerable number of our Commonwealths passed laws reducing the hours of the working day for women. About a dozen adopted minimum-wage legislation for women and children.

One reason why more labor legislation was not passed during these 40 years is suggested by that historic interlude sometimes known as the delirious twenties. In that decade our country became submerged in sodden materialism and pseudo prosperity. These were not favorable conditions for the enactment of laws on behalf of the economically weak. Another obstacle was set up by the Supreme Court. Through declarations of unconstitutionality it rendered inoperative legislation which restricted the hours of labor for men, which forbade the discharge of an employee for membership in a labor union, and all our compulsory minimum-wage laws. These decisions not only nullified the statutes upon which they passed sentence but discouraged legislators who might have made efforts to enact similar legislation.

The second division of the period that we are considering begins with the publication of the encyclical of Pope Pius XI on Reconstructing the Social Order. This was on May 15, 1931. As most of us are aware, this great papal pronouncement reaffirmed all the main propositions in Leo's encyclical, explained and expanded some of them, and added an entirely new program for the reconstruction of the social order by means of vocational groups. Quadragesimo Anno repeated in even stronger language and in greater detail Leo's exhortations to bishops, priests, and laity to concern themselves with the reform of social and economic conditions. It has received most discussion, study, and approval not only from Catholics but from non-Catholics in the 8 years that have elapsed since it appeared than Rerum Novarum had obtained in the preceding 40 years. Moreover, it has greatly increased the interest in and appreciation of Leo's encyclical.

In some respects, the encyclical of Piux XI goes beyond the proposals and the language that in years past caused some of us to be stigmatized as radicals. Since the appearance of Quadregesimo Anno we feel quite safe and respectable. We even think that we have a right to call ourselves conservatives.

Turning briefly to the subject of social and labor legislation during the years since 1931, I note immense progress. There was the Norris-LaGuardia Act which greatly lessened the abuses of the injunction in labor disputes. This was enacted early in 1932, consequently, before the advent of the present national administration. Since 1933, however, more important Federal legislation has been passed for the reform of social and labor conditions than in all our previous history. Out of a very large number of these measures I select only four for brief mention. Perhaps the most important of them as regards the number of persons affected, is the insurance of bank deposits which has practically abolished bank failures. No one now fears to put his money into a bank. Recalling the 4 years immediately preceding April 1933, we realize that this law produced a veritable revolution. Already we have become so accustomed to its beneficent effects that we scarcely ever mention deposit insurance; we take it for granted. The second of the four reform measures to be noticed here is the Social Security Act, which provides insurance against old age and unemployment. Then there is the National Labor Relations Act, which effectively protects the right of labor to organize. Finally, I call attention to the Fair Labor Standards Act, which fixes minimum wages and maximum hours. All four of these laws are in complete accord with the two great papal encyclicals.

The Social Security Act and the Labor Relations Act have already been upheld by the Supreme Court, and the best indications are that the Fair Labor Standards Act will likewise be sustained if and when it comes up for judicial action. In all probability, the act providing for insurance of bank deposits will never be attacked in the courts.

In his introduction to the twentieth anniversary edition of the Bishops' Program of Social Reconstruction, Archbishop Mooney enumerates 11 major recommendations in that document and notes that 10 of them have become wholly or partially realized. That much success was probably more than any of us dared to hope for 20 years ago. At the risk of being thought lacking in modesty, I observe that, so far as I know, I was the first person publicly to advocate a family living wage ordained and enforced by law. That was in 1906. Today we have such legislation on the statute books of the Federal Government. While it is not adequate either in its terms or in its scope, it probably goes as far as is practicable at this time.

Yes, there has been progress toward social justice in my lifetime. Those of us who have been active in the movement know that the struggle has been well worth while. It has been interesting, zestful, stimulating, soothing to the conscience, and sufficiently fruitful to assure us that our labors and efforts have not been in vain.

Nevertheless we are well aware that much remains to be done. We see two economic problems before us which are more perplexing than any of those that have been solved. One of these present problems is immediate and very urgent; the other is less urgent but more fundamental. The first arises out of our enormous and persistent volume of unemployment. In its magnitude and setting it is a new problem. Concerning it I wish to make one negative and one positive statement. And I know that I am right in both. Our immense unemployment cannot be abolished, nor even notably diminished, by a vast increase in capital investment. Well-meaning persons who advocate this course have failed to realize two developments in our social life which are absolutely new. The first is that our economy has come to "maturity"; the second is that within a few years we shall have a declining population. What we need now is not more capital instruments but a better distribution of purchasing power, so that those who wish to consume more will have the means to do so and thus to bring about full use of our productive plants, and full employment for our workingmen. More of the national income must go to the farmers and wage earners and less to the owners of capital. Interest rates must be reduced everywhere by every effective device. We must have more spending and less saving. In passing, I would observe that if the recommendations of Pope Leo XIII and Pope Pius XI for higher wages, better-balanced prices, and a more equitable distribution had been accepted and put into operation the solution of the problem of unemployment would now be in sight. In the long run good ethics is good economics.

The more fundamental problem confronting us is that for which the outline of a solution was set forth by Pope Pius XI in Quadragesimo Anno. It is the reconstruction of the social order, the reorganization of our industrial system. As realists we must assume the continuation of the profit motive. As lovers of justice we must realize that historical capitalism cannot and ought not to survive. Private ownership of the great bulk of the means of production should be enabled to continue and flourish, but historical capitalism went far beyond this simple management. Speaking of the economic individualism which became the basis of modern capitalism at the end of the eighteenth century, J. L. and Barbara Hammond declare: "It involved the right to take what interest and profit you could get; to buy and sell as you please * * *; it substituted for the divine right of kings the divine right of capitalists." (The Rise of Modern Industry, pp. 216, 217.) In all the decades since the industrial revolution the spirit of capitalism has sanctioned the lowest practicable rates of wages, the highest possible rates of profit and interest, unlimited economic domination, and unlimited accumulation. To be sure a large proportion of capitalists and entrepreneurs adopted higher standards than these, but in so doing they were disregarding the spirit of the system.

To change all this, and to change it integrally and fundamentally, is the long-range program before the American people. But this change, the rational reorganization of our industrial system, does not imply communism, nor fascism, nor nazi-ism, nor any other form of totalitarian state. We want an economic reorganization which will be democratic and self-governing from top to bottom, from center to circumference. This means the adoption and adaptation of the guild system, as outlined by Pope Pius XI in his recommendations concerning occupational groups. This program offers the only escape from the twin extremes of fascism and communism.

In all probability the full actualization of this program will take a long time. It will keep you younger men and women busy for many years. But it holds out the secure hope of larger and wider benefits to labor and the common good than minimum wages or unionism or any of the other causes that have achieved substantial victory.

To all who are assembled here this evening, I am under a very great obligation of gratitude. To the speakers, I am particularly and profoundly indebted: To the Honorable Felix Frankfurter, Associate Justice of the Supreme Court, whom I have known for upward of a quarter of a century, and beside whom, in his crusading days, I was privileged to stand in more than one contest for human rights; to the Honorable Frances Perkins, Secretary of Labor, who has never missed an opportunity to show me kindness, and who has always been a devoted, intelligent, and effective champion of social justice; to the Honorable JAMES M. MEAD, Member of the United States Senate from the State of New York, whose long and successful defense of the rights of labor, both without and within legislative halls, has won for him a seat in "the greatest deliberative body in the world"; and to my academic superior, the Right Reverend Joseph M. Corrigan, rector of the Catholic University, honoring us with his presence and for his very kind observations concerning myself. I wish to stress in a particular manner my gratitude to the group of more than 100 ladies and gentlemen who have conferred dignity and distinction upon this event by acting as its sponsors. They comprise captains of industry as well as leaders of labor, statesmen, lawyers, journalists, financiers, social workers, clergymen, and bishops. I am thankful to the Right Reverend Michael J. Ready, general secretary of the National Catholic Welfare Conference, for his gracious and efficient performance as presiding officer and toastmaster; and, finally, to my university colleague, Rev. Dr. Maurice S. Sheehy, and his efficient staff for their exacting labors in making all the arrangements for a delicious dinner, served in a beautiful and spacious hall, under the direction of a kindly and genial host.

The shock of realizing that I am now definitely among those who have been overtaken by old age is considerably cushioned by

your touching manifestations of esteem and affection. "My way of life" may be, like that of Macbeth, "fallen into the sere, the yellow leaf"; but, unlike Macbeth, I have "that which should accompany old age, as, honor, love, obedience, troops of friends."

Forum on World Peace Through World Trade

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, May 26 (legislative day of Friday, May 19), 1939

MESSAGES AND ADDRESSES DELIVERED AT NEW YORK WORLD'S FAIR, MAY 4, 1939

Mr. THOMAS of Utah. Mr. President, leading advocates of the principle of world peace through world trade, from this country and abroad, recently participated in a forum on this theme at the New York World's Fair. Several notable messages and addresses were delivered in a program held in connection with the dedication to world peace of the Gallery of Science and Art in the exhibition hall of the International Business Machines Corporation. In addition to Mr. Thomas J. Watson, its president, other prominent members of the International Chamber of Commerce and the board of trustees of the Carnegie Endowment for International Peace took part in the forum which was broadcast throughout the world.

In these times when the people of all nations are seeking the road to peace, the forum held at the world's fair is of especial importance and significance. Because of its interest to all the people of America, I ask unanimous consent to have inserted in the RECORD a brief summary of the program from the magazine Think, together with a digest of the principal messages and addresses delivered on this occasion.

There being no objection, the messages and addresses were ordered to be printed in the RECORD as follows:

[Excerpt from magazine Think]

Mr. Grover A. Whalen, president of the world's fair, opened the Forum on World Peace Through World Trade, held in the Hall of Music on May 4, and presented messages from the Secretary of State, the Secretary of Commerce, Governor Lehman, and Mayor LaGuardia, addressed to Mr. Thomas J. Watson, president of International Business Machines Corporation and of the International Chamber of Commerce.

A unique appeal for the promotion of world peace through world trade was carried to all countries by radio broadcast, including the world-wide broadcasting foundation, WIXAL, the Canadian network of the Mutual Broadcasting System, and the short-wave station W2KE of the Columbia Broadcasting System.

At the conclusion of the Forum on World Peace Through World Trade, a musical program was broadcast from the Hall of Music by the Philadelphia Orchestra under the direction of Eugene Ormandy, with commentary by Olin Downs. The Gallery of Science and Art, including representative works by leading artists of 79 countries throughout the world, was officially opened to the public at ceremonies in the exhibition hall. Mr. F. W. Nichol, vice president and general manager of International Business Machines Corporation, introduced Mr. Grover A. Whalen and presented the proclamation designating May 4 as I. B. M. Day, with response from Mr. Thomas J. Watson.

ADDRESS OF GROVER A. WHALEN, PRESIDENT, NEW YORK WORLD'S FAIR

Opening the Forum on World Peace Through World Trade in the Hall of Music, Mr. Whalen read the following messages addressed to Mr. Thomas J. Watson, president of International Business Machines Corporation and president of the International Chamber of Commerce:

"I am glad to send this message of greeting to you who are assembled in celebration of the I. B. M. Day which has been dedicated to the cause of peace.

"The Government of the United States, supported by an alert public opinion, is endeavoring to employ the best methods for bringing about enduring peace.

"The utilization of every means for economic rehabilitation, the adherence to the basic principles of international law, the observance of treaties, the exercise of self-restraint, and the furtherance of the freest possible intellectual interchange between nations are fundamental and essential points in this program.

"This Government is carrying on a determined effort to promote economic appeasement and security through making possible the expansion of international trade along lines of constructive, peaceful effort and upon the friendly and universally beneficial basis of equal treatment. This policy is being followed in the firm belief that only by a healthy international trade can a full and stable domestic economy be guaranteed. It has been encouraging and gratifying to note the wide support which the business interests of this country have given to this policy.

"Every citizen has a grave responsibility in these days when menacing developments seriously jeopardize peace in many parts of the world. I confidently believe that the policy of economic stability through the lowering or removal of barriers to international trade and the application of the principle of equality of commercial treatment if generally supported would be an inevitable prelude to permanent peace.

"CORDELL HULL,
"Secretary of State."

"It is a pleasure for me to be able to join others honoring you on I. B. M. Day at the world's fair. In these troubled days, with threats of war hanging over Europe, it is thoroughly proper that we pay tribute to a business statesman who has served untiringly the cause of peace and good will in international relations. You have done this not only as an individual, but also as the guiding influence of a world-wide business organization which has maintained the highest standards of business conduct, both here and abroad.

"I am also well familiar with your contributions in the realm of public service. As a past member of the Business Advisory Council for the Department of Commerce and chairman of its Foreign Trade Committee, you gave the Government the same untiring effort that has characterized your work as a proponent of peace.

"I regret very much that I am unable to attend the ceremonies at the fair and extend my every good wish to you personally.

"HARRY L. HOPKINS,
"Secretary of Commerce."

"I have noted that on May 4 the New York World's Fair will observe I. B. M. Day and that the theme of the meeting will be peace.

"With the peace-loving nations of the world striving so hard at this time to avert armed conflict, it is both fitting and timely that your organization should use the I. B. M. Day at the world's fair as an occasion for emphasizing the benefits of peace and the destructiveness of war. President Roosevelt deserves the gratitude of all Americans for pointing out that while we in the United States are ever ready to promote world peace, at the same time we are prepared to resist political and physical aggression.

"My congratulations to you and your associates and my best wishes for complete success of the occasion.

"HERBERT H. LEHMAN, *Governor."*

"I am happy to have the opportunity to join in this well-merited tribute to one of New York's most public-spirited and forward-looking cititzens.

"Without the cooperation and earnest endeavors of the great business interests of New York, and the untiring efforts of those individuals who, like yourself, gave unstintingly of their time and energy, this great world's fair would not have been consummated. It is particularly appropriate and fitting, therefore, that this day should be set aside as I. B. M. Day, to honor a great industry and the man who has brought it to its present success.

"With sincere personal and official greetings and good wishes,

"F. H. LAGUARDIA, *Mayor."*

MR. WHALEN'S ADDRESS

This opportunity affords me great happiness. I have been asked to extend words of welcome on behalf of the New York World's Fair to the officers, employees, and guests of the International Business Machines Corporation. Thanks to the radio hook-up, I can also extend a welcome to all of our friends in this country and in many other lands.

The Fair Corporation, as you know, is honoring the International Business Machines Corporation and its president, Mr. Thomas J. Watson, by setting aside May 4 as International Business Machines Day. We have met here in the exhibition grounds in the Music Hall to consider a striking parallel, that of the New York World's Fair and the International Business Machines Corporation as international educational and good-will institutions.

The New York World's Fair is both the symbol and the product of international business and of the world desire for better understanding of international relations and further recognition of the interdependence of nations. It is an international meeting place where sixty-odd nations, the League of Nations, and the Pan American Union are not only exhibiting their best products but where they are exchanging their ideas and ideals.

The International Business Machines Corporation, I am told, now transacts business in 79 countries of the world. The citizens of those countries work together and compete for recognition of individual achievements and business honors. They also assemble in annual convention in the most friendly manner. This demonstrates in a practical way that there is no inherent antipathy between races and nationalities, and that man can cooperate for the common welfare of all countries. This is a vital contribution to the cause of international understanding and culture, and, in itself,

entitles International Business Machines to be honored by the New York World's Fair.

Both this international exposition and this international business have been built on faith. Faith has inspired the artists, the engineers, the designers, and all other persons who have worked in the creation of the fair; likewise, only faith in the inherent integrity of the majority of men and nations could have served as a foundation for the growth during the past 25 years of a small domestic manufacturing company to a world-wide institution for the promotion of trade and human welfare. Fairs have long played an important part in the spread of knowledge and in the development of the industries and the arts. Our fair is the biggest and most forward-looking of any heretofore conceived. Surely it is one of the most heartening examples of international cooperation.

Perhaps even more important than the goods exhibited are the ideas that are displayed, and it is this exchange of inspirational thoughts along the lines of trade, art, and culture that is invaluable in stimulating international understanding. The New York World's Fair is great enough to open a new period of world history. Civilization is at a turning point. We have discovered materials and resources. We have invented machines and methods, and we have specialized human activities, all to a point where we know a new era of prosperity and advancement in culture is within our power of attainment.

What we need now is cooperation and justice between individuals and between nations. In the circumstances, I feel sure that history will one day record that the New York World's Fair was an outstanding force in the nineteen hundreds in promoting international cooperative effort and world peace.

ADDRESS OF MR. THOMAS J. WATSON

It is appropriate that this program should originate from this great exposition whose theme is the World of Tomorrow.

We are all looking forward to a better future. But what the New York World's Fair will accomplish in this direction depends upon what is done by the people from all over the world, who are assembled here as representatives of their countries and as visitors, in helping to develop a better understanding and deeper friendship among peoples and nations.

As we view the grounds, the buildings, the exhibits, and the many other evidences of the fine organization he has built up, we recognize the tribute we owe to Grover Whalen and to all of his associates who have provided this oportunity for the people of the world to learn more about each other. We see on every hand the spirit, vision, and courage of Grover Whalen.

We must take advantage of this oportunity to accomplish some real and lasting results, so that when the fair is over we can all return to our respective countries and duties with the feeling that we have made some worth-while contribution to the World of Tomorrow.

We all know what a privilege and a blessing it is to have peace in our world. But we must also recognize the fact that this privilege carries with it an obligation, and we must live up to our obligations regardless of any personal sacrifice we may be called upon to make.

I am sure that every person in the world who is doing any intelligent thinking realizes the importance of peace, and desires peace above everything else.

But what are we, as individuals, doing about it?

The world as a whole is so enormous that most of us hesitate to take an active part in world affairs. We do not feel that anything we might personally do would be important or effective enough to make any difference.

But each of us has a world of his own, in which he can make contributions to the peace of the world at large.

Let us consider our own personal world. It is made up of our family, friends, business associates and others with whom we live and constantly come in contact.

As individuals working alone we cannot exert enough influence on the world as a whole to solve problems of world economics and peace. But as individuals working in our own communities, dealing with the people whom we know and who believe in us, we can wield a tremendous educational influence.

The International Chamber of Commerce is working for world peace through world trade. I believe that when we can have the proper movement of food and clothing across borders it will eliminate the necessity of guns and gas crossing those same borders.

As a businessman I think of universal peace as one of the most desirable, most worth-while ideals in the world today. It cannot be achieved by a few people working in widely scattered regions. The project requires a worldwide organization of enthusiastic, hard-working individuals, spreading the gospel of peace in their own communities to the people who know them and have confidence in them.

We must think of education, culture, and religion as a threefold force that will provide the means of bringing the people of the world to a better understanding of each other, because this is the first step toward universal peace.

Education enables us to gather facts. But facts are of no use until we know their value. Culture enables us to place a value on facts, and when we know the value of facts we are in a position to use them for the betterment of ourselves and others.

The last war taught us many facts, and since the war we have come to know the value of those facts. The facts are: The last war took a toll of 23,000,000 soldiers and civilians killed; twenty-two and a half million soldiers injured, more than one-half disabled for life; 10,000,000 children made orphans; 9,000,000 people made refugees. The value of these facts will be reflected in what use we make of them in maintaining peace and continuing to develop our civilization.

As individuals, let us constantly promote education and culture. Let us promote a spiritual revival, based on each individual's religious affiliation and the Golden Rule. Let us create a desire in the hearts of the people throughout the world to do right in their dealings with their fellow men, regardless of race or religion.

There are some 2,000,000,000 people in the world, all interrelated and interdependent. Anything that affects any part of our civilization economically, socially, or spiritually affects all mankind.

We must develop greater cooperation, eliminating factions and feuds. We cannot go from crisis to crisis and maintain our equilibrium, much less make any progress as a civilization.

I believe the world is going to improve, not for any particular group or class, but on a basis that will bring greater comfort, happiness, and security to everyone in every country.

Let each of us, whatever our race, our station in life, our religious belief, or our political creed, really work for this great cause of peace, for peace is in the heart of the individual. Let us not look for, or wait for, leadership in this cause, but let us create that leadership within ourselves.

The Supreme Ruler of the universe looks upon us as free moral agents, and we are expected to carry our share of responsibility for the evils of the world. It is within the power of each of us to understand what is right and what is wrong, and then act accordingly. There is work for all of us, for in the last analysis it is by collective and concerted decision and action that the people of the world will achieve lasting peace and happiness.

ADDRESS OF DR. NICHOLAS MURRAY BUTLER, PRESIDENT OF COLUMBIA UNIVERSITY AND PRESIDENT OF THE CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE

In this year of grace 1939 of the Christian era, why is the whole world at war—economic war, emotional war, intellectual war—and shivering under the threat of military war? How can such a condition be possible, after all that has been said and done through centuries of growing and ripening civilization to raise mankind, wherever he may be, to a higher level of satisfaction and accomplishment and to bring him into relations with his fellow men that will supply new sources of comfort and satisfaction as these years of life pass on?

How is this present outlook possible? What has happened? Bluntly, there has been, and there is, a complete break-down of moral conviction and moral principles in respect to national and international policies and relations, and an appalling incapacity on the part of the citizens of the world through free governments that are left to rise to the height of their responsibility and opportunity.

If you will take the written public record, war is impossible. Every civilized nation has formally and openly renounced it as an instrument of national policy. Why, then, has it not been renounced? Bluntly, again, because governments have not kept their word and have demonstrated that they can no longer be trusted to keep their word.

In consequence, every nation—east and west, north and south—is pouring all its resources, and far more than its available resources, into expenditure for what it calls defense. No government under any circumstances is preparing for offense. Every government is preparing for defense. If that be true, why is preparation for defense necessary? Because no one believes the protestations of governments.

You are living in an age where the ordinary relationships of nations no longer exist. The formulation of rules and laws which have been developing for 200 or 300 years and which we thought had established themselves in an elaborate and highly useful code of international law and conduct, have been thrown to the winds, and we are now confronted by pressure politics in the international field of a sort with which we are quite familiar on a much smaller scale in the national field.

One of the outstanding statesmen of Europe said to me in private conversation a few months ago that the appalling thing was that all this trouble in the world is being caused by not to exceed 1,200 or 1,500 men. He insisted that the peoples everywhere in the democracies, in the totalitarian states, in Asia and South America wanted peace and prosperity, but that some 1,200 or 1,500 human beings in positions of great responsibility and authority, that authority being largely based on emotional grounds, held the policies of the world today in their hands.

What can be done about it? There is only one answer, and that is that these people themselves must either compel their existing governments to do as they wish or they must find new instruments of government that will respond to their peaceful ideals.

Think what must be the feeling of the mothers of the world as they look out on this scene. Many of them remember only too well what happened to their husbands and their sons 25 years ago. How many of them can face with equanimity what might, within 24 hours, begin to happen to the husbands and sons of today?

What is the use of trade, what is the use of industry, what is the use of commerce, what is the use of effort, what is the use of trying to gain some return from all these in order to make mankind more comfortable, more fortunate and better protected in

old age and adversity? What is the use of it all? We are pouring away not only the world's earnings, but the world's savings, savings for a thousand years, and those savings are not illimitable. There comes a time when they will have gone, and what will the world do then unless it desists from this policy?

In the last war, some of the figures concerning which were given us just now by Mr. Watson, there was destroyed a value equal to five countries like France, plus five countries like Belgium. Should there be another war tomorrow, that destruction might be five countries like Great Britain, or five countries like the United States of America. And what would history have to say of that 100 or 200 years from today as a comment upon our intelligence, our courage, and our capacity to maintain civilization on the high plane—what?

Believe me, there is need for leadership. A new kind of leadership: not the leadership which meets force with force, not the leadership which regards war as inevitable and spends time and countless moneys in preparing for it, but leadership that understands there is only one way to get rid of war, and that is to remove the causes of war, and to remove the causes of war means international cooperation and international effort on an economic, a monetary, a social, and a political scale.

Why should not the Government of the United States go back to its traditional leadership in this field, which it had in its hands from 1899 until 1919 and which it has let pass out? Why should we not go back with our vast population, our high ideals, our wide political experience, our economic power, our convinced belief in peace and its possibility? Why should we not go back and make the reply on behalf of the Government which President McKinley made to the great rescript of the Czar of Russia, one of the greatest documents in human history, when, in 1899, he asked the nations of the world to do just what I am proposing they do now? Why should we not go back to President McKinley's great statement made with superb eloquence on the day before the assassin took his life?

The period of exclusiveness is past. Why should we not go back to Secretary Elihu Root's instructions to the American delegation to the Second Hague Conference in 1908, which resulted in the arranging for a Permanent Court of International Justice? Why should not we go back to the famous joint resolution passed by the Congress of the United States on June 24, 1910, by unanimous vote in each House, calling upon the President of the United States to lead in the organization of the nations of the world for peace with international security protected by the combined navies of the world?

Twenty-nine years ago the Congress of the United States passed that resolution without a dissenting vote in either House. Then came the Great War, the sad results of which I need not repeat. But here we are today faced with this perfectly appalling calamity, and voices saying that it is no concern of ours; that we need not care if one neighbor murders his neighbor, or if one human being assaults another human being, so long as they do not live in our house or belong to our family. That sort of neutrality is immorality.

The sooner and more completely that it is pronounced as such, and denounced as such, the further we will be along on the road to peace. That sort of conduct leads inevitably to war, no matter what professions may accompany it. If the United States Government from its present commanding position feels, for the moment, outside of and above the particular causes of conflict—except economic, in those we are involved—the particular causes of conflict that are likely to lead to military war, why should not the Government of the United States today say to the whole world:

"We remember what we said in 1898 to the Czar of all the Russias. We remember what we said in 1908 which led to the Permanent Court for International Justice. We remember that our Congress voted in 1910 to promote the peace of the world, and today we say to you, 'There is where we stand and that is what we propose to do.'"

ADDRESS OF MRS. VINCENT ASTOR, CHAIRMAN, WOMEN'S PARTICIPATION COMMITTEE OF THE WORLD'S FAIR AND DIRECTOR OF THE AMERICAN ARBITRATION ASSOCIATION

This great fair is dedicated to the world of tomorrow, and women have participated in its activities to a large degree. Certainly every woman should be interested in the world of tomorrow, because women have an opportunity to take their place in this world on a scale that was not dreamed of in the world of yesterday.

In 1880, before the use of typewriters and accounting machines, 82 of each 100 women employed were domestic or farm laborers, textile operators, or dressmakers. Women have always borne their share of the drudgery of the world, but 82 percent was more than their share. Now the ratio of women in the occupations which I mentioned has declined to 29 out of each 100 workers.

In 1880 only 1 out of each 100 women workers was a nurse or clerical worker. Now those ratios are 21 out of 100 in the case of nurses and 18 out of 100 in the case of clerical workers.

In half a century practically every occupation has been opened to women. This is a profitable part of an expanding standard of living where women now play a dominant part in determining how our national income should be spent.

Up to the present, the force of women's aspirations has never been integrated in support of any world-wide cause. Twenty years ago, at the end of the World War, when the resources of the world were partitioned off, new boundaries were established and a new set of rules promulgated, women had little or no voice in world affairs.

Today, women are wielding important influence in every phase of human activity. When a new world structure is established, as it must be sooner or later, let us hope that women may have a larger share in the responsibilities and a voice in the decisions that are made. For I believe that women will be idealistic enough to see the necessity of world order and world organization, and at the same time be practical enough to seek to do justice to all people rather than perpetuate things that have proved unjust.

For a decade or more, a few men, among whom Mr. Thomas J. Watson, have been outstanding in urging a revision of the restrictions upon the exchange of goods and services so that no people may be deprived of those things which will help them to raise their standard of living.

To a greater extent than ever before, women are molding their ideals and enlarging their horizons in order to shoulder their share of responsibilities in world affairs.

Nature has provided enough for all, and it is inexcusable that there should be want and deprivation in so many places, while unsalable surpluses create unemployment and distress in others. The time has come to substitute a balance of equity for a balance of power. Give us a world of tomorrow where women have their fair share of influence in world trade, and Mr. Watson's ideal of salesmen instead of soldiers crossing boundaries will be realized.

Let us then hope that this fair, dedicated to the world of tomorrow, may prove to be the rallying point for the women of the world in a campaign to bring about the new era of world peace and justice men have dreamed of, which we stand ready to assist them in making a reality.

United States Conference of Mayors

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Saturday, May 27 (legislative day of Friday, May 19), 1939

ADDRESS BY COL. F. C. HARRINGTON

Mr. WAGNER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a very interesting and enlightening address delivered by Colonel Harrington, Works Progress Administrator, before the United States Conferences of Mayors, at the Waldorf-Astoria Hotel, in New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure as well as an honor to appear before the United States Conference of Mayors. And it is for me a pleasure as well as a duty to talk about the Works Progress Administration.

In discussing our work program, I shall bear in mind that you gentlemen know more than I do about the specific situation in your respective cities, and I shall confine myself to the general or total situation throughout the Nation. The city governments which you represent, and the Federal agency which I represent have now been working together for almost 4 years, and I think that by this time we understand one another pretty well. The work which we have been doing together is to my mind a remarkable example of cooperation. I think it can truthfully be described as not only the largest and most successful achievement in peacetime cooperation in the history of our Nation, but one of the greatest in the history of the world.

I am very proud of my connection, past and present, with this great collaboration between the Federal Government and local governments in providing work for the needy unemployed and in providing municipalities with needed improvements and services. And I am in a position to know that it is because of the administrative diligence and skill of the officials of local governments that this gigantic and complex collaboration has been so successful.

It is inevitable that in carrying out such a program there should be differences of emphasis. I am aware that we in Washington and you in your various localities do not always see eye to eye in regard to particular details of W. P. A. administration and policy. But I shall not attempt to anticipate any criticisms that you may wish to make. If you have questions to ask me at the end of these remarks, I shall answer them frankly to the best of my ability. What I propose to do now is to take up several aspects of the W. P. A. program that seem to me most important at the present juncture and comment on them briefly.

The first thing I feel obliged to mention is one that concerns the degree of adequacy of our employment program. W. P. A. national employment stands for the moment—as of May 8—at 2,600,000. This figure does not represent the extent of the current

need. It is simply the number of jobs that the W. P. A. can provide with the funds appropriated to us by Congress. We know that there are additional large numbers of men and women certified by local governments as able to work and in need—who are not being provided with W. P. A. employment. The cooperation of the W. P. A. with communities in dealing with such needs is necessarily limited by the funds available for wages.

All of us have had to make up our minds as citizens upon what to do about unemployment. And once it was decided that Government had an obligation in that direction, there has been little doubt that it should take two distinct forms—one, toward needy unemployable people, and another toward needy employable people. The first large group is now being given Federal and State assistance, where the proper cooperation is forthcoming, through social-security benefits, or through local direct relief. Most of the other group is being provided with work on public projects. This is being done by our States and localities with the help of the Federal Government. I think you will agree with me in saying that our public-work program is now under the effective control of the States and localities in the respects in which such control is desirable and practicable.

It is the broad general policy that your local government relief agencies shall determine what workers are in need of W. P. A. work, and that your local governments shall plan and initiate projects. Since you help pay for them, it is to be presumed that you are getting what you want.

The President's message to Congress on April 27 supported our present arrangement as to sharing the costs of projects between the Federal and local governments. The rightful amount of the sponsor's contribution has, naturally, been a subject of frequent dispute between us in Washington and you in your localities. We have often thought that you should contribute somewhat more, while you have often thought that you should contribute less. But we have usually been able to come to a satisfactory understanding. That was possible because we on our part had no arbitrarily fixed requirements, except the very reasonable one set by Congress in 1938, which limits the expenditure of Federal funds for other than labor costs to a maximum of $7 per month per worker in any State.

It is my opinion that this type of control—namely, the limitation of Federal nonlabor funds in terms of dollars—is far more advantageous than any limitation in percentage of total cost. We have thus been able to meet, far better than would otherwise have been possible, the varying needs and capacities of local sponsors. I think you will agree that to set up arbitrary, unalterable percentage requirements for sponsors' contributions at the present time would not only make it quite impossible for many of your communities to continue various projects of undoubted value but would go far to cripple the work program as a whole.

Fundamentally we have to choose between continuing our work program along its present lines, and abandoning it in favor of the dole. The latter, in my opinion, would be a mistake of the most unfortunate kind. The President's message of April 27 contained these words: "I firmly believe that the advantages which accrue from the maintenance of the morale and self-respect of the worker and the creation of permanent public assets fully justify this increased cost, and that the adoption of the dole as the solution of this problem would be disastrous."

The vague phrase, "return relief to the States," is often heard these days. This ambiguous slogan covers the proposal to turn Federal work-relief funds over to the States and let them decide whether to use those funds in conducting a work program, or, if they prefer, to stop providing work and merely distribute Federal funds as a dole to the able-bodied unemployed. The significance of the whole proposal seems to lie in the latter alternative—the prospective abandonment and destruction of the work program within the various States.

The present method of Federal, State, and local collaboration on a public-works program, though doubtless capable of improvement, seems to me worth preserving and defending.

And this brings me to another matter, the question of how to increase W. P. A. efficiency. In comparing the efficiency of W. P. A. workers with those in private industry, it is customary for many of our critics to overlook several important aspects of the situations they are comparing. We are sometimes criticized for making less use of labor-saving machinery and equipment than does private industry. This criticism ignores the fact that the purchase or rental of machinery and equipment costs money, and that Federal work-relief funds have to be expended chiefly in the payment of wages to the project workers. I know that we in Washington have no objection to you in your localities providing all the labor-saving machinery you may wish on W. P. A. projects—the more the better. And if anyone should propose that special and separate Federal funds should be appropriated to provide W. P. A. workers with the most modern machine equipment on every project, I am sure that neither you in your localities nor we in Washington will have any objection to that.

In the meantime it is difficult to compare the efficiency of W. P. A. workers with those in private industry. In some instances that are directly comparable, W. P. A. projects have cost less money than contract work would have cost, with equally good results. But we all know that these projects are exceptional. We know the reasons why W. P. A. workers do not, by and large, produce as much results per man-hour as those in private industry. The weather is one of those reasons. Unemployment tends to be greatest in winter, the most unfavorable season for nearly every kind of outdoor work. Private construction can pick and choose its weather for working and the W. P. A. cannot.

Another reason is the fact that we cannot hold on to our best workers by offering them higher wages. We have to let them go—in fact, we make them go—when they have a chance to get a private job. And, contrary to what some people think, our workers do leave W. P. A. projects for private jobs, sometimes at the rate of several hundred thousand a month. Their places are taken by other needy unemployed workers, who have been waiting on your local relief rolls for a W. P. A. vacancy. No work organization can attain a maximum efficiency with a high labor turn-over. And our high turn-over is one of the things that we must put up with and welcome, as an essential part of the whole scheme of emergency work relief.

A third reason is the different number of hours of work put in by various W. P. A. workers as the result of our combining a limited security wage per month with prevailing rates of pay per hour. This compromise between two different types of wage system, which in some instances results in unskilled and semiskilled workers putting in more than twice as many hours as skilled workers on the same project, does not make for efficiency.

There are other difficulties, and I am not going to discuss them all. The point is that some of these matters can be improved, while others are part and parcel of emergency work relief. You on your part, in your localities, have been very patient and have learned how to get valuable results out of W. P. A. projects in spite of all these difficulties. And we on our part owe it to you to minimize these difficulties as far as possible.

The W. P. A. is often judged by isolated projects, and often these criticisms turn out to be ill-founded. Sometimes they are based on complete misrepresentation of the project. The famous "marble dog pound" at Memphis is a good example of what might be called mythological criticism. A more recent example is the so-called "$100,000 beauty-parlor project" in Cleveland.

Let me say a few words about this particular project. It was initiated by the Cleveland Hospital for the Insane. It involved the employment of 130 persons, all but 2 of whom were on the relief rolls. The opinion of the sponsor of this project was expressed in the following telegram, which appears in the CONGRESSIONAL RECORD of March 31, 1939. I quote: "Recent allegations referring to unwise use of Federal funds in Cleveland State hospital project absolutely false. Actual expenditure for beauty operators less than $2,000 a year. Newspaper reports erroneous. The therapeutic projects in welfare institutions are much needed and show a wise and careful expenditure of money.—J. Fremont Bateman, commissioner of mental diseases, Department of Public Welfare, State of Ohio." The whole story, as it is now going the rounds of unfriendly newspapers, is a $100,000 fairy story.

Another W. P. A. project recently criticized is the North Beach Airport project in New York City. This project is being attacked on two grounds—first, that the Federal Government is spending too much money; and second, that W. P. A. workers are receiving too much of the money spent.

It is true that the W. P. A. is spending a great deal of money on this project. It is, in fact, the largest project the W. P. A. has so far undertaken. Some $14,000,000 of Federal funds already have been spent by the W. P. A. on this project. But—and this is a fact seldom included—the city of New York has spent almost as much of its own money to date.

This is not a new type of W. P. A. project. The W. P. A., as you know, has been working on airport projects for years. Hundreds of airports and landing fields were completed before the North Beach Airport was begun. North Beach is simply the latest, the largest, and the most costly. It is a necessary addition to our network of airports and airways, not only commercially but also as a part of our system of national defense.

We are accused of paying high rates to skilled workers on this project. The fact is we pay merely the prevailing rates in New York City, as required by Congress. We also are accused of working W. P. A. workers full time, 5 days a week, every week.

Gentlemen, I wish it were possible for me to admit the truth of this charge, not only for the North Beach Airport but for every other W. P. A. project in the whole country. But the truth is that those regular 5-day-a-week workers at North Beach are not W. P. A. workers, but contract workers, whose wages are paid entirely by the city of New York.

And, finally, as to the number of W. P. A. workers on this project, if they were not working here they would be working on some other project. They have been certified to the W. P. A. by the relief agency of the city of New York as in need and capable of work. The W. P. A. puts them on one project or another project. Why not on this airport project? The quota for New York remains the same.

In short what is the point of these criticisms? In part they are not true, and as a whole they are irrelevant. The North Beach Airport project is 1 of about 35,000 W. P. A. projects scattered all over the United States. It should be judged in the light of the purpose of the whole program. This purpose, I repeat, is to set the needy unemployed at suitable public work for the benefit of the communities in which they live. Undoubtedly these projects are of varying degrees of social value, and certainly they are conducted with varying degrees of efficiency. Criticism along these lines would be useful. But our current critics do not seem concerned with whether we do our job well or badly. Their grievance appears to be that we are doing our job at all—that we actually are providing public work for the unemployed, and actually are helping to

create civic improvements and services. If that is a crime, we are certainly guilty of it.

I have been frankly disappointed at the apparent motivation of the investigators who have been sent out by the congressional committee now investigating the W. P. A. These investigators seem entirely absorbed in hunting things to criticize. So far as I can learn, not one of them has yet told the committee anything about the accomplishments of this program or the good it has done the unemployed. Small faults have been magnified and great virtues entirely omitted.

The true and the fair story of the W. P. A. is to be had from thousands of sources, merely for the asking. Several of your own membership gave very effective parts of it to the congressional committee on May 8 and 9—testimony in strange contrast to that the investigators are bringing in.

Your conference, also, is 1 of 11 national organizations which have just completed a Nation-wide survey of the W. P. A., gathering independent testimony from 8,000 local officials in 42 States. Your president was chairman of a committee which took this report to the White House about a week ago.

This survey contains knocks as well as boosts, and plenty of frank talk. I do not wish to go into great detail about it, but the overwhelming endorsement of the W. P. A. which came from these thousands of mayors and county officials and educators and engineers ought, somehow, to be made known to the American people.

More than 90 percent of these reports stated that their W. P. A. projects were badly needed, of benefit to the communities, and of permanent value. Over 80 percent of them said W. P. A. workmanship has been good, and that the work has maintained the skill and the employability of the workers.

I want to express our gratitude to your conference and the other agencies which helped carry out this appraisal. You have erected an enduring monument upon which the actual public opinion of the Nation's communities is inscribed, to inform those who are uninformed and to confute those who misrepresent.

I should like to say a word about the white-collar projects of the W. P. A. Here are the four questions and answers concerning them in the Appraisal:

"Have the education activities of the W. P. A. been worth while?" Over 95 percent of the answers were "Yes."

"Have the public-health activities of the W. P. A. been worth while?" Over 95 percent of the answers were "Yes."

"Have the public recreation activities of the W. P. A. been worth while?" Over 91 percent of the answers were "Yes."

"Have the other non-construction activities of the W. P. A. been worth while?" Over 95 percent of the answers were "Yes."

It is hardly necessary to say that all these white-collar, the nonconstruction projects of the W. P. A., stand upon the same footing as our construction projects. Unemployment is not confined to manual workers, nor is it confined to men. Employment on public works should include work for white-collar workers and women workers. These account for at least 20 percent of the Nation's total unemployment, and it is only just that they should receive about 20 percent of the jobs in our work program.

This has been the policy of the work program from the beginning, and nothing has occurred to change our view as to the justice and practical necessity of providing work for needy unemployed white-collar workers and women.

In this matter we have the reassurance given by the President in his recent message, when he said:

"I wish to state with emphasis, since the opposite view is frequently expressed, that the Works Progress Administration should, as at present, include some projects of the nonconstruction type to meet the needs of those unemployed workers whose training is such that they are not adapted to employment on construction projects. This provision of work for those people at occupations that will conserve their skills is of prime importance, and the emphasis placed on construction projects should not obscure the necessity for this portion of the program."

Many white-collar projects are concerned with the preservation of important cultural values of our civilization—whether they are education projects, music projects, art projects, or historical record survey projects. If we really respect civilization and really believe in it, we will welcome and encourage the projects which use the special training and preserve the special values that represent the flowering of long ages of cultural effort in the past.

If we care nothing for either the past or the future, we will set our artists to digging ditches and think nothing of it. But I am deeply convinced that we do care culturally for the world's past and for our American future.

If there were time, I should like to discuss the problems of community planning. We in America, with our vast resources, have done too little planning in the past. We are only just beginning as a nation to realize the necessity for planning. You have made a beginning in the communities that you represent. I am glad to know that the W. P. A. has been of assistance to you in carrying out your plans. I know, however, that we have not been of as much help as we might have been, because of the emergency character of our own work, and the impossibility of counting upon us for longer than the end of any current fiscal year. Both your special interest in providing community improvements, and our special interest in meeting the unemployment situation in a constructive way, have been severely hampered by the lack of any long-term basis for our joint efforts. As to the future, that will depend on a fuller recognition by the American people of the fact that unemployment is a long-term problem. I know of no better brief statement of the need for facing the facts than that made by the President in his recent message.

I wish to quote that passage from his message, and with it I will conclude my remarks, except for answers to any questions which those here may wish to ask me.

Said the President: "In any consideration of the problem of unemployment relief, it must be borne in mind that the program adopted to meet it must be envisioned to extend over a considerable period of time. The reason for this is that this Nation, in common with the entire world, is undergoing a process of readjustment, particularly in connection with the production and distribution of goods. Until our American machinery can be realined to meet present-day conditions, the problem of unemployment will persist, and the measures adopted to deal with it must, therefore, be carefully thought out and their operation planned to extend well into the future."

I thank you for your attention.

Crux of the Recovery Problem

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Saturday, May 27 (legislative day of Friday, May 19), 1939

ARTICLE BY WALTER LIPPMANN

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Walter Lippmann entitled "Crux of the Recovery Problem," printed in the Washington Post of Saturday, May 20, 1939.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 20, 1939]

TODAY AND TOMORROW—CRUX OF THE RECOVERY PROBLEM

(By Walter Lippmann)

The great achievement of Senator O'MAHONEY's committee is that it has succeeded in defining the problem of recovery. If the country, if Congress, and if the President would only fix in mind the elementary and fundamental proposition that has now been demonstrated by the testimony of Professor Hansen and Dr. Currie, there would be a lot more light and very much less heat in the current controversies.

In fact, a full understanding of the proposition would go far to resolve the deadlock between Congress and the administration, and between Washington and the business community. The underlying truth, on which competent men are now agreed, would, if it were sufficiently realized, dispel a large part of the confusion, the suspicion, and the destructive divisions that are paralyzing this country at home and impairing its influence abroad.

I know this is a large assertion, and it may seem rather simple-minded these days to believe that there is such a thing as truth which can prevail over prejudice and partisanship. But, nevertheless, I believe that violent and irreconcilable controversy would give way to constructive debate among men, be they economists, Republican businessmen, or new dealers, who have studied and digested the Hansen and Currie testimony.

CAPITAL INVESTMENT DETERMINES PROSPERITY

The fundamental proposition that has been demonstrated in their testimony is, as Prof. Hansen put it, that "the margin of income which is created by the capital-goods industries * * * fills the gap between prosperity and depression." It is, in other words, the money spent on machinery and on all kinds of construction which determines whether times are good or bad, whether there is full employment or unemployment.

We have, of course, heard this before. We have heard it a thousand times from Wall Street bankers, from corporation managers, from Republican orators, from conservative editors. But we are now hearing it also from the President, from this committee which has in charge the laying of the basis for New Deal policy, and from economists who are among the most trusted technical advisers of the administration.

So at least on this proposition, that recovery depends on capital investment, there exists complete agreement in all quarters. We can go further. We can now say in fairly specific figures what is the problem of recovery. According to disinterested calculations which are not, I think, disputed, the annual capital investment in the United States needs to be about eighteen billions a year. This was the average for 1923 to 1929, and with that much capital investment the Nation will be prosperous, its income will be between seventy-five and eighty billions.

FLOW OF EIGHTEEN BILLIONS NEEDED EVERY YEAR

The figure that the layman needs to keep in mind is this eighteen billions of capital investment needed for prosperity. He can realize

how crucial it is when he sees that in 1931 capital investment fell to less than nine billions, in 1932 to about three billions. This fall in capital investment at the depth of the depression brought the whole national income down from well over seventy billions to a little more than forty billions. So it is clear that to be worried about the amount of capital investment is to be worried about the fundamental difference between national riches and national poverty, between bad times, fairly bad times, and really good times.

Broadly speaking, the problem of recovery is therefore the problem of getting eighteen billions invested each year. That is what is worrying Wall Street, and that is what is worrying the new dealers who are putting their minds on the subject.

Now, we can get further light on the problem by comparing national investments in 1925, which was a good year, with 1937, which started out to be the best year the country has known since the crash. In 1925 the Nation made capital investments, that can be accounted for, of nearly seventeen billions. In 1937, with a considerably larger population, the Nation managed to invest fifteen billions.

Almost certainly that explains why in 1925 there was no serious unemployment, whereas in 1937 there was, along with much prosperity, a great mass of unemployment. To have had as full employment in 1937 as we had in 1925, we should have invested more capital because there were more people to be employed. But actually we invested somewhat less capital.

We can get still more light on the problem by comparing the main items of capital investment in 1925 and in 1937.

The first thing we must observe is that contrary to the general belief there was no spectacular change in the amount of capital invested by Government. The real difference between Government spending, financed by the sale of bonds, between the best year of Coolidge and the best year of Roosevelt is that under Coolidge it was the States and cities that did the investing, whereas under Roosevelt it was the Federal Government.

Politically this is an important and serious difference. But economically total Government investment in 1937 was only about $800,000,000 as compared with $527,000,000 in 1925. Between Coolidge and Roosevelt, Government power became greatly centralized, but Government investment increased only a little.

The next thing we observe is that the capital investment in mining and manufacturing was substantially larger in 1937 than in 1925, about $3,000,000,000 as against $2,600,000,000. So we may say that, taken together, Government, manufacturing, and mining were investing rather more in 1937 than in 1925. The origin of the unemployment is, therefore, not there.

It is perfectly clear where the unemployment originates. In 1937 railroads and utilities invested nearly $800,000,000 less than they did in 1925. But what is even more important, housing in 1937 employed nearly $4,000,000,000 less than in 1925. On the other hand, in 1937 over $4,000,000,000 were invested in inventories, in stocks of goods that had not been sold. But in 1925 only $1,500,000,000 were invested in inventories.

Thus the fundamental difference between the prosperity of 1925 and of 1937 was, first, that with a larger population less capital was invested, and, second, that whereas in 1925 a large proportion of capital was invested in railroads, utilities, and housing in 1937, it was invested in inventories. These two things explain why with prosperity there was still unemployment in 1937 and why the prosperity of 1937, since so much of it depended on inventories, was so feeble and so temporary.

It may also explain why the prosperity of 1925 developed into a boom that ended in a crash, whereas the prosperity of 1937 turned into a recession which has become the present stagnation. That is a cardinal point which needs to be studied much more thoroughly.

In any event, we know at least what our problem is. The problem is how to induce the investment of about 18 billions annually in such a way that we do not get the excessive construction of the late 20's and the excessive inventories of 1937.

The real differences of opinion among competent men begin here. For there are some who think that railroads, utilities, and housing could now invest enough capital to restore employment if only the Government would encourage profits and remove various restrictions. There are others who do not believe that private enterprise, even if liberated, could take sufficient capital to provide full employment. They argue, therefore, that Government investment must not only continue but that it should be expanded.

The difference between these two schools of thought, the one that of most businessmen, the other that of the leading economists and of the reformers in the New Deal, is the area of true debate. The question to be debated is how much capital private enterprise could invest under favorable conditions and how much Government investment is needed to supplement it.

PRIVATE ENTERPRISE NEEDS ENCOURAGING

This debate is confused, however, by the intervention of two groups of extremists. There are the very reactionary who are dogmatically opposed to the whole idea of expenditures for social services. There is the radical group inside the New Deal who do not want private enterprise to invest what it can because their objective is not social reform or recovery but the substitution of political for private control of the industrial system.

Were the confusion wrought by these reactionaries and radicals clarified and dispelled, we should soon see that actually the choice is not between private and public investment. We should see that our real task is to encourage private enterprise to invest what it can and then to supplement it by public investment.

Conference of One Hundred at Washington, D. C.

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Saturday, May 27 (legislative day of Friday, May 19), 1939

ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA, APRIL 16, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Senator from Florida [Mr. PEPPER] before the Conference of One Hundred at Washington, D. C., April 16, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the conference, ladies, and gentlemen, you deserve a great deal of commendation for having come together to put your thoughts and your aspirations together at a crucial time like this.

In spite of the fact that not long ago we were all immigrants and that we have had a good many contests, even wars, with other nations of the world, I have been somewhat impressed by what I have observed to be the general confusion in American thought about what our foreign policy is or what it should be. I have tried on innumerous instances and with varied audiences a number of suggestions, more or less, to provoke the thoughtful response of typical American audiences. I have surmised, for example, that America's course in world affairs should be one of absolute indifference to all political and moral action that seems to be current in the world; that we should primarily be interested only in our own security and our own trade; that so long as our geographical integrity was not threatened, so long as our ships plied the lanes of the world's commerce and trade, and so long as we had economic and commercial access to the various markets and peoples of the world, we were not disturbed about world moral issues. Therefore, we traded equally with the dictatorships and the democracies and it was only a question of a practical adjustment of mediums of exchange or methods of trade, because we didn't mix our scruples and our pecuniary rewards. There are a good many people that think that that is the high destiny to which America should come in world affairs.

Then I would provoke further reaction by surmising perhaps that the people of the United States had been screened and protected for generations past behind the stabilizing influences of the British Empire. Therefore that what we should do is to preserve that primary line of America's defense and simply violate forthrightly Washington's admonitions against the making of permanent entangling alliances and say that the Empire of Great Britain, allied to us in permanent alliance, can give us a force physically, economically, and spiritually that the world cannot down because of the fact that we do not have an appreciable economic conflict, that our economies more or less complement each the other; that we have a tradition and a background, literally a common one, that would be the proper course for America to follow and that disaster would go in the wake of a policy to the contrary. I find a great many people who are considerably impressed by the supposed wisdom of such an appeal.

Then I have ventured to surmise the third possibility; that is to say, once upon a time Great Britain was able to play the game of the balance of power in Europe with geographical security assured by the English Channel, with a mobile empire politically, with great strength and vast economic power, but that the time has come when the English Channel has in the nature of scientific improvement become practically obliterated; that Great Britain or the British Isles were no longer isolated from Europe. They were in the world's eyes a part of Europe and literally a European power, and they no longer had the political mobility that they once enjoyed, because their far-flung dominions were no longer subject to the mere beck and call of the mother country. Many times, no doubt, they had to be coddled, persuaded, or induced into an accord with the mother country in the crises of war. Wherefore the home government couldn't declare war overnight by the mere agency of the home government itself, but these appeasements with the dominions had to be made and finally the strength of the vast Empire had to be mobilized. This couldn't be done as quickly as it formerly could be, and the great British Empire that for so long had been the stabilizing influence in world affairs, based also on its economic strength, was no longer so superior to the other nations of the world; that it could not continue the role of the world's policeman and protector, as it were. Furthermore, the roar of the old British lion has diminished in intensity until sometimes hostile critics call it merely the barking of an old, sick bulldog. So, if what they said, or I ventured to surmise, were true, did it mean that the world had been deprived of a nation and a political power that actually could be the chief stabilizing influence of the world and the conservator of the world's security and peace?

Then I ventured to suggest that the Atlantic Ocean had succeeded to the place that the English Channel formerly occupied; that it was hardly farther across the Atlantic Ocean for the modern airplane than it was across the English Channel for the ancient ships; and that we relatively had the geographical security now which England formerly enjoyed. We still do have political mobility. If our President and our Congress act, it is the action of the people of the United States, and we don't have to bring into that accord people segregated by thousands of miles of ocean and diverse interests from the home government and its sentiments and opinions. [Applause.] And so the American Nation, therefore, has succeeded to that role that the British Empire formerly enjoyed.

No one ventured to deny that as far as sheer economic strength and power were involved the people of the United States stood alone among the economies of the world. The same might be said of its physical strength because the Navy, the skeleton of an Army that we have preserved, the recent experiences that we have had in mobilization, and the plans and formulae that are at present in contemplation and in existence by the Government of the United States with this vast reservoir of intelligent and morally indignant manpower make the force of the United States an agency in the world not to be tampered with. And so I ventured to provoke the reaction of a great many people that the time when England could carry the moral burden of the world had physically passed and either that burden or that cross had to be laid down or there had to rise up one capable of filling its honorable place.

I have been gratified to observe the number of people that have become aware of the fact that we can't be a part of this world, we can't be a member of this generation, we can't be the world's greatest economic and physical power, we can't be this unique thing that all history has never before presented to the mind of man and avoid all moral responsibility for the state of our world. [Applause.]

So, therefore, I think your fellow Americans join with you in the sentiments that you expressed yesterday in commendation of the message of your President, my President, and the American people's President. [Applause.]

I thought there were four significant things about that message that the President sent to Mr. Hitler and Mr. Mussolini abroad. The first one was the recognition of the indisputable fact that a war cannot come to reality in Europe without grievous detriment to the people of the United States. Already more than $5,000,000,000 have been taken from the pocketbooks of American owners of securities by the sheer threat of war, let alone war actually coming. Every businessman and economist knows that if a war were to occur in Europe now that every security and probably every commodity exchange in America would be certainly closed for an indefinite period of time; that the whole economic structure of this Nation would be disorganized and thrown into a state of chaotic disorder, and that the people of this country would be torn into bitter, contending factions and partisanships about the issue of the cause in Europe. Not only that, but the whole stream of world, spiritual, cultural, health, and economic progress would be either downed or dried up by such a catastrophe that might come to smite the peoples of the world.

The President merely lifted the scales from the eyes of those who didn't want to see, and by that courageous message indicated the recognition of the fact that the greatest tragedy that could occur to the people of the United States, not only in the possible involvement but in the detriment that would be certain to ensue, would be a European war.

In the second place, the President laid it down as a condition of world peace that there be a free interchange of world-needed goods and services in the unobstructed channels of world commerce and trade. We should honor that as we do the herculean efforts of our Secretary of State and his staff. [Applause.] We have tried to impress that fact upon the peoples of the world. So the President reemphasized very clearly and directly in that message the fact that there had to be as a condition of world peace a free and an untrammeled and uninterfered with by artificial methods world trade, and more than that he indicated that we would be willing to help to bring about the two things that would make that condition possible; a world recognized medium of exchange and the removal of artificial barriers to the free flow of world commerce and trade.

In the third place, the President courageously recognized that there can be no effective world peace that is based upon world wrong; that world justice is a necessary condition precedent to world peace, and that no peace is safe that depends upon the perpetuation of wrong as a basic condition of its existence. In other words, he applied to world affairs the principle that we find expressed in the maxim that is used in our courts of equity, "He who comes into equity must come in with clean hands." Therefore he does not absolve even our friends from the obligation to do right if they expect to achieve right before the peoples of the world. [Applause.]

In the fourth place, and to me more satisfying than anything else, was the unequivocal recognition of the fact that the people of this country had a share in the moral responsibility for the condition of this world while we are integral parts of it. You know, the America of the 1920's I never thought was the genuine America. The coin of America sounded, it seemed to me, counterfeit when it dropped on the telltale conscience of the world in that year of our history. But day before yesterday it wasn't the America of the materialistic, the money-mad, the world responsibility-shirking America of the 1920's. It was the America that was established when the Pilgrims were here and when they went to church with their guns across their bended arms, and when they fought for the things they believed in. [Applause.] America was preaching to the world a sermon day before yesterday and the world knew that that sermon came from America's heart, and that it came from the conscience of America's people. The world knew that that sermon was right. And it knew that the people of America by that message evidenced the fact that since God had established them here upon the firm foundation of a spiritual inspiration, the people of 1939 had not forgotten their fathers. [Prolonged applause.]

The National Debt

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Saturday, May 27 (legislative day of Friday, May 19), 1939

ARTICLE BY RAYMOND CLAPPER

Mr. MINTON. Mr. President, Mr. Raymond Clapper is recognized as one of the most brilliant and thoughtful of newspapermen, and as this is Debt Week, I should like to have inserted in the Appendix of the RECORD his article on the national debt that appeared in the Washington Daily News on May 25.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of May 25, 1939]

THE NATIONAL DEBT

(By Raymond Clapper)

On the gloomy subject of the national debt, it isn't possible to disagree with the Republican National Committee which is devoting this week to telling the world that $40,000,000,000 is a lot of money. That seems an enormous sum, particularly when it is described as the Roosevelt New Deal debt (which it isn't by half of that).

It might also be pointed out that $31,844,396,000 is a lot of money, too—and that is exactly the sum which national banks of the country reported on hand in assets and deposits on March 29, an all-time high. And $69,000,000,000 is a lot more money than $40,000,000,000, being the amount of cash savings of individual citizens now as estimated by Dr. Ronald Davenport, of the Harvard Graduate School of Business Administration, in his testimony before the O'Mahoney Temporary National Economic Committee. That enormous sum, which is more than half again as large as the national debt, represents the total savings of millions of people who are depositors in savings accounts and building and loan associations, policyholders in life-insurance companies and contributors to old-age retirement or pension systems.

This is a big country, with big savings, big capital, and big debts. So much toward suggesting a sense of proportion.

Now for the figures in the war against depression as prepared by the National Resources Board for the O'Mahoney committee. They cover Federal receipts and expenditures for the years 1931–38. Receipts total fifty and seven-tenths billion dollars. Of these receipts, taxes brought in twenty-nine and seven-tenths billions and borrowings (representing the increase in the national debt) brought in twenty-one billions. Remember that when Mr. Roosevelt took over in 1933 the national debt was $22,500,000,000.

Now for expenditures for 1931–38. Running expenses, including defense, veterans' payments, interest, and A. A. A., totaled twenty-nine and six-tenths billion dollars—almost exactly equal to the twenty-nine and seven-tenths billion collected in taxes. So in these running operations the expense and income were even.

The borrowings of twenty-one billion almost exactly equal the items classified as emergency relief (six and six-tenths billions), net plant (eleven and seven-tenths billions, covering public works), and estimated amortization on the net plant (two and nine-tenths billions). You will take out of that the eleven and seven-tenths billions of net plant structures from which we shall draw either monetary or social dividends over a long period; it leaves some $9,000,000,000 as the real deficit indicated for the 1931–38 period.

That's trick bookkeeping, of course. It serves only to suggest roughly that we have over the last 8 years of depression paid our running expenses with taxes and used a little more than half of the borrowings for useful public construction while scattering a little less than half in nonproductive relief as the price of saving depression victims from starvation. That last item can be viewed

either as humanitarian generosity or as insurance against social disorders, whichever way you like to think of those things.

But let's say that the $20,000,000,000 increase in the national debt which has occurred in the last 8 years was all devoted to the war against depression, with no tangible public works or other values surviving from the expenditure. Put it all down as money that has gone up the chimney in a struggle against the depression. The war against Germany ran up the public debt about $24,000,000,000. Every man will have to figure out for himself the relative merits of borrowing $20,000,000,000 to fight depression and $24,000,000,000 to fight Germany.

And it might be pointed out that in our present national debt of $40,000,000,000 there still remains some $14,000,000,000 of deadweight unpaid debt from the war—or "dead horse debt," as Leon Henderson called it during the committee hearing. We have nothing left to show for it except veterans' expenses and rearmament bills.

International Affairs

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Saturday, May 27 (legislative day of Friday, May 19), 1939

RADIO ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA, APRIL 16, 1939

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address on international affairs delivered by the Senator from Florida [Mr. PEPPER] on April 16, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

There are four respects in which the message of the President of yesterday's disclosure has momentous significance:

First. It indicated the consciousness of the United States that war in Europe is of certain and immeasurable harm to this country. Already more than $5,000,000,000 have been taken from the value of listed securities here by the mere threat of war in Europe. It is known that such a war would close every security and probably every commodity exchange in the Nation for an indefinite period; that our whole economy would be thoroughly disorganized; the passions of our people aroused and the country torn into bitter factions and partisanships. The whole current of world economic, cultural, and spiritual progress of necessity would be dammed and dried up and all the passions and baser sentiments which for 2,000 years we have been trying to subdue would spring up again with almost jungle intensity.

Second. The message affirmed that a free-flowing world trade and commerce—a free interchange among the peoples of the world of needed goods and services—was a basic condition of world well-being and, therefore, of world peace. These conditions could prevail, the President pointed out, only through modern commercial methods; that is to say, where there existed a world recognized medium of exchange and where the channels of free trade were not blocked by artificial obstacles and unfriendly interference.

Third. World peace must depend upon world justice. No peace is permanent which depends upon the perpetuation of wrong. From time to time the state of the world must be reexamined. Frictions and boiling controversies must be brought to the consciousness and to the conscience of the world community. Peace cannot come from a few only. There must be a universal disposition toward peace, and therefore a universal effort for peace. At the council table (with the guns checked outside) the world community must become introspective and self-critical. Who would expect to achieve right must be willing to do right, or, stated in the language of a maxim in our courts of equity, "He who comes into equity must come with clean hands."

Fourth. The message, more than anything else by its very existence recognized that we could not shirk a share of moral responsibility for the state of the world and of the generation of which we are an integral part. It was a stimulating example of how the force of moral leadership may assert itself in the affairs of the world. This was not the materialistic, cold, money-mad, pleasure-seeking America of the twenties when the moral values of our country were in eclipse; this was the heart of real America speaking again. America was aroused to its old fervor. America was preaching a sermon; and the whole world knew that that sermon was from America's heart. More than that, the world knew that a great nation which God had built upon a spiritual aspiration, had not forgotten its fathers.

Some Problems of Today

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, May 29 (legislative day of Friday, May 19), 1939

ADDRESS BY HON. CORDELL HULL, SECRETARY OF STATE

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Secretary of State before the Chicago Sunday Evening Club, in Orchestra Hall, Chicago, Ill., on the 28th day of May, on the subject Some Problems of Today.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

These are perilous times in the lives of individuals and of nations. Violence and threat of violence haunt the world. Again, as, unfortunately, on so many occasions in the past, one of the most exalted aims of civilization and progress—the banishment of brute force as the arbiter of relations among nations—is being subjected to a strident and powerful challenge. Within nations many long-established institutions and concepts of political and social organization are also being subjected to challenge, while economic difficulties, some of them of unprecedented character, continue to press for solution. Tonight I should like to discuss with you the bearing of the important phases of our international relations upon some of the fundamental problems which we face at home.

Only two decades have passed since guns were stilled in the greatest armed conflict of history. At the conclusion of that cruel ordeal, with its incalculable human, material, and moral devastation, it was the passionate hope and desire of men and women everywhere that such tragedy should never again be reenacted. It is appalling to contemplate how quickly and how widely the lessons of so recent a past seem to have been forgotten; how soon again the voices of national leaders are raised in several parts of the world in glorification of war and in deprecation of the blessings of enduring peace.

Overwhelmingly men and women in every country of the world yearn today for a peaceful existence devoted to promotion of human welfare through increasing mastery of man over the forces of Nature, uninterrupted and unretarded by recurrent catastrophes of armed strife. War is today an incomparably greater menace to progress than it has ever been in the past. Responsibility without parallel rests, therefore, upon those national leaders who proclaim their readiness to employ the instrument of armed force for the attainment of their aims, and who thereby compel nations which are threatened by their actions to face the tragic choice of surrender or armed defense.

The situation thus created contains the monstrous possibility that millions of human lives, as well as the substance and creative genius of the nations involved, may again be sacrificed on the altar of military conquest. Even if the supreme disaster of war should be avoided, the gigantic waste of human energies and material resources involved in the widespread construction of armaments on the present scale must inevitably exact a fearful toll in general economic and social deterioration throughout the world. The result can only be to put many nations on drastically reduced rations of civilized existence for a long time to come.

We cannot accept the argument that because in the past many controversies among nations resulted in a clash of armed forces, the scourge of war must forever be an inescapable reality of international relations. In the face of difficulties, scarcely less discouraging, men have successfully grappled with many of the great scourges by which they have been beset. Why should war—the greatest of these—be regarded as incapable of eradication?

This is the season of the year when we, in this country, decorate the graves and monuments of our heroic dead. We honor those who fell in the various wars in which our Nation has been engaged for the supreme personal sacrifice they made. But we shall be untrue to their memory if, in honoring them, we fail to make two all-important resolutions: to be as loyal as they were to our country, and to spare no effort within our power to create conditions under which there will no longer be place on this earth for the kind of purgatory through which they had to pass.

The sacrifice made throughout history in countless armed conflicts will have been wasted, indeed, if it does not serve as a constant reminder to all of us, everywhere, of the tragic cost of war for vanquished and victor alike, and of the desperate need, if civilization and progress are to continue, to find other and more constructive means of adjusting differences and grievances among nations. Such means of pacific settlement, tested both by reason and by experience, exist; their ultimate success is inevitable unless

outworn doctrines of bygone ages are permitted to supplant concern for the welfare of human beings as the aim of statesmanship.

Against this background of troubled world conditions, problems of the utmost gravity confront us in this country. Some of these arise out of our own domestic conditions; others grow out of our relations with other nations. The two sets of problems are, in many vital respects, interdependent. Their solution, as I have indicated on many occasions, requires the fullest practicable development of our domestic economy combined with appropriate policies in the field of foreign relations.

I can, perhaps, best illustrate this interdependence by reference to some of the problems involved in the preservation and advancement of those things which we Americans prize as the bases of our way of life. Among those things there are two which, in my opinion, are fundamental and vital to all the rest.

The first is that every citizen is entitled to a fair chance to earn a decent living for himself and his family, to give his children a good start in life, and to face his declining years free from the specter of poverty and want. In view of the resources with which this country is endowed and of the great forward strides that have already been made, it is within our power to build a nation in which every citizen, willing to work, will be able to enjoy a rising standard of living and an adequate measure of economic security.

Second, the true ends of social justice can be achieved only in conditions of individual freedom under law, through the operation of institutions of popular government. It is true that a measure of economic security is possible without freedom of the individual. But that is the security of serfdom. Even aside from its moral and spiritual degradation, this type of security is subject to enormous limitations in the degree of individual well-being which it provides. It leaves too little scope for the human spirit, for individual initiative, free enterprise, willingness to face risks, readiness to engage in voluntary cooperation for the common good. These are the most powerful motive forces of progress; they are attributes of free men, banded together in voluntarily accepted and self-imposed social discipline—not of men held by fear of brute force.

This ideal is a distinctive part of our national heritage. Our country was reclaimed from the wilderness by men and women who sought to establish on its vast expanses conditions of life under which new pathways of progress would be blazed. The long American experience represents the fullest demonstration yet available that the welfare and security of the individual—and, therefore, the progress and well-being of the Nation of which he is a part—are indissolubly bound up with the enjoyment by every citizen of the greatest practicable measure of personal freedom under law and of true equality of economic opportunity.

The process of attaining these objectives is long and arduous. In the course of our national existence we have made marked advances in that direction. But each step forward brings with it new needs and new problems, which must be met successfully if we are to advance. The manner in which a nation fulfills these needs is the true measure of its physical, intellectual, and spiritual virility.

Our great tasks in the past were in the spheres of physical settlement and of a search for means of multiplying our powers of physical production. These tasks we have largely accomplished. The initiative and labor of the pioneer have brought the arts of civilization to every corner of the land. The ingenuity of the inventor and the technician, the enterprise of the businessman, the industry of the worker, and the farmer have created in this country a productive equipment thoroughly adequate to supply the present needs of our people and thoroughly capable of further expansion to supply our future needs.

But these very developments have brought with them new complexities and new problems. Our economic structure under present conditions functions as a complicated and intricate mechanism. Our great task today is to perfect our social and economic organization to meet the increasingly complex conditions of modern life. For this, new types of cooperation and accommodation are required between region and region, between group and group, between individual and individual, for the greater benefit of all. New duties and new responsibilities are imposed upon government.

We are determined that all these purposes shall be carried out by using to the full our traditional processes of popular government. As I have already stated, it is my firm conviction that all this cannot be accomplished except under conditions in which the individual will enjoy the greatest practicable measure of freedom under law.

At a time when pressing problems confront us at home it is sometimes thought that preoccupation with our country's international relations and with developments outside our frontiers is an unnecessary dissipation of national energy. From this plausible error, as much as from any other source, springs the advocacy of national isolation, which is frequently heard in this country.

There is no more disastrous illusion than the thought that a policy of national isolation would make it easier for us to solve our great domestic problems. The exact reverse is true.

Great as are the material resources with which our country is endowed, they are not sufficient to enable us as a nation to meet the needs of our people on the level of well-being to which we aspire. Today we supplement our own resources by imports from abroad. Some of which, like rubber, tin, manganese, though small in relative volume, are essentials to the functioning of our greatest national industries. Some of the things we now purchase in other countries we can, perhaps, produce domestically, but at a much higher cost in terms of economic effort than is required for the production of exports with which we now buy these foreign products. For others, we can develop substitutes, of inferior quality and, again, at a relatively higher cost. Still others we cannot produce at all, and, if we did not import them, we would have to do without them altogether. In each case the net result would be a decline of our national efficiency and consequently an inexorable lowering in the level of satisfaction of our people's wants.

By dispensing with imports we would necessarily lose foreign markets for our exportable surpluses. Those branches of our production—in farming, mining, and manufacturing industry—which are now geared to an output in excess of what can be absorbed in the domestic market, would be forced into a drastic curtailment of their productive capacity. The resulting impairment of their capital investment would be a net loss to our national economy. Millions of workers would be deprived of their means of livelihood through the loss of foreign markets; they would have to be shifted into other fields of activity or else be supported by public relief. Reduction of surplus-producing branches of our national economic activity to the dimensions of the domestic market requirements would necessitate a long, painful, and costly process of readjustment. All these burdens would fall upon the entire national economy. The result of the whole process would be to lower still further our standards of living.

Readjustment would be an undertaking of such magnitude that it could not possibly be accomplished without far-reaching intervention on the part of government, with dangerous social effects. Regimentation in practically every phase of national life would be the inevitable consequence. One needs only to look at the experience of the few countries which have attempted to reorganize themselves on a basis of even partial self-sufficiency to realize what the character, scope, and results of such regimentation would probably be.

These would be some of the consequences of a policy of national isolation carried to its ultimate conclusion. Any move in the direction of isolation must necessarily have the same results in varying degrees. Far from facilitating the solution of our domestic problems, a policy of national isolation, or even a movement toward such a policy, would aggravate the very difficulties with which we are now confronted. It would, moreover, put into jeopardy precisely those institutions of free enterprise and individual freedom the maintenance of which alone holds a promise of success in solving our great problems.

Some argue in favor of national isolation from another point of view, namely, that by withdrawing from normal relations with other nations we can insure for ourselves freedom from risk of embroilment in war. Here again the exact reverse is true.

No country can insure peace for itself by merely proclaiming its desire for peace, when there are in the world nations willing to challenge and fight other nations to gain by force what they covet. When such is the case, peace can be assured only at the price of abject surrender to the challenger. One would have to be blind to obvious facts to indulge in the belief that the existence of such potential international challengers is not today a stark reality.

The possibility that such a challenge might one day be directed against us would be enhanced by the fact that a policy of national isolation on our part would hurt not only ourselves, but other countries as well. Deprived by our action of the opportunity to trade with us, they would be faced, in varying degrees, with the need for painful adjustment of their own economic structures. The resulting ill-will would not be an aid to our national security.

A policy of national isolation would not relieve us of the need of maintaining the means of armed defense. Rather, it would necessitate an intensification of our efforts in that direction, which might become increasingly difficult in proportion as the effects of isolation impaired our national efficiency, our economic strength, and—with them—our power of defense.

It is not through a policy of isolation, but rather through supplementing our domestic efforts by playing our appropriate role as a member of the family of nations, that we can hope to solve the problems which confront us today within our own frontiers. That role has two essential aspects.

The first is concerned with the maintenance of world order under law as the sole effective instrumentality for the preservation of enduring peace. Such world order calls for acceptance and application by nations of certain basic principles of justice and fair-dealing in civilized international relations: respect for national independence and sovereignty; scrupulous observance of international obligations; willingness to adjust all international disputes solely by pacific means. To the establishment of such world order we can contribute by our own firm adherence to these principles; by using our moral influence to induce other nations to give them their adherence; by cooperating in all peaceful efforts to give practical reality to the application of these principles; by maintaining our strength and our courage, to the end that no nation will be tempted to challenge anywhere our vital national interests.

The second aspect of our role in foreign affairs is concerned with the promotion of sound and healthy international economic relations as an indispensable foundation of world order under law and, therefore, of enduring peace. Today the well-being of every nation increases in proportion as its citizens have peaceful access to the resources of the world rather than merely to those within its own frontiers. Such access is possible only through mutually beneficial trade and through all those other innumerable international

relationships which have already enriched so magnificently the lives of individuals and of nations. Without such access, all nations would be compelled to dissipate their efforts and substance in a hopeless struggle for shrinking economic opportunity.

To the promotion of such international economic relations we can contribute by facing squarely the fact that they are indispensable to the well-being of our own country and of every country; by ourselves giving them practical application through policies such as those embodied in our reciprocal trade agreements program, which has already demonstrated its effectiveness as a powerful instrument of action in that direction; by being ready to extend our policy and action along every practicable line that holds a promise of strengthening the foundations of peace through mutually advantageous economic relationships among nations.

The goal of an America such as I have envisaged—a country at peace within and without, in which all citizens will enjoy economic security under conditions of orderly freedom for the individual—may best be reached by a twofold program, covering both domestic and international problems. Concentration on one to the exclusion of the other—whichever of the two we might choose—could not by itself bring the desired results. Action on both fronts is essential. The means of action on both fronts are at our disposal. Our task is to use them with vigor and determination, with clear thought, with faith in our ability to win through to our desired objectives.

The Political Mill

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Monday, May 29 (legislative day of Friday, May 19), 1939

ARTICLE FROM THE WASHINGTON EVENING STAR

Mr. ELLENDER. Mr. President, I ask leave to have printed in the RECORD an article by G. Gould Lincoln appearing in the Washington Evening Star, issue of the 27th instant, headed "The Political Mill, 1,500 Families' Livelihood Seen Imperiled in Florida by Sugarcane Quota Order."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Star of May 27, 1939]

THE POLITICAL MILL—1,500 FAMILIES' LIVELIHOOD SEEN IMPERILED IN FLORIDA BY SUGARCANE QUOTA ORDER

(By G. Gould Lincoln)

Under the leadership of Senator ANDREWS and Representative PETERSON of Florida, legislation by Congress is sought to permit sugar growers in this country to choose whether they shall be subject to restrictions under the existing Sugar Act and receive benefit payments from the Federal Government or shall be free of these restrictions and accept no benefits. Florida sugar growers, they have made it clear, are willing to take on the world catch as catch can.

They have said in the past that they are willing to operate without the benefit of a tariff. Now they are willing to operate without the benefit of Government benefit payments—and still continue to pay the processing tax under the law, just as do any sugar producers in this country who receive these benefit payments. All they want is to be allowed to plant and grow sugar and sell it.

It seems strange that American farmers—Florida sugar farmers—should be restricted to the point they are in the matter of production, when they can make money without the restrictions and "benefits" and can sell to the American consumers at low prices.

FUTURE CROPS DESTROYED

The more recent orders of the Department of Agriculture, acting under the so-called Sugar Allotment Act of 1937, as they affect Florida, call for plowing under approximately 6,000 acres of fine sugarcane. By destroying this sugarcane, not only is the current crop destroyed but the crop for 4 or 5 years on this acreage goes by the board. From four to nine crops result in Florida from one planting.

Sugar, including both beet and cane sugar, is not a surplus crop in the United States. Indeed, it is quite the other way. Although Americans use nearly 7,000,000 tons of sugar annually, sugar producers in this country are permitted—permitted, be it understood—to supply only about 2,000,000 tons. It does not really make sense when it is understood that sugar producers like those in Florida can do without a tariff and without Government benefits to offset a processing tax, and still provide the American people with sugar at prices as low as any others.

It is quite true that the American people have been accustomed to draw their major supplies of sugar from Cuba, Hawaii, and Puerto Rico, and that if American continental production is increased the markets for sugar from the outlying countries will necessarily be decreased. In fact, the sugar problem is and has been a tough one. But the Floridians argue that their people are entitled to just as much consideration as anyone else, and that if they can produce good sugar at cheap rates they should be allowed to do so.

QUOTA 50,000 TONS

In Florida, under the Sugar Restriction Act, the farmers have been allowed to produce and sell approximately 50,000 tons a year. This is not even enough sugar to feed the people of Florida, not to mention the rest of the country. Yet it has been estimated that Florida could produce 500,000 tons of cane sugar if given the chance, and produce it well and cheaply.

Senator ANDREWS and Representative PETERSON have introduced identical bills in their respective Houses which would amend the Sugar Act by giving the growers of sugar anywhere in continental United States the right to decide for themselves whether they wish to continue under the restricted and benefited program, or whether they wish to go it on their own. This legislation would not take away from the sugar producers who wish to keep on with the Government benefit payments, and to agree to restrict their acreage, it is explained. For them the act would operate without change.

Under the law, the Government pays as benefits to sugar growers 60 cents per hundred pounds, with the scale graduated down to 35 cents for the larger producers, provided they live within the allotments and restrictions set by the Department of Agriculture. The penalties are so heavy that they have no other course. If the producers go beyond their quotas, the sugar is subject to confiscation and the growers open to a fine three times the value of the sugar. There are similar market-allotment penalties. The Government collects a processing tax on sugar in this country amounting to 50 cents a hundred pounds.

SEES MANY FAMILIES IMPERILED

The plowing under of 6,000 acres of sugarcane in Florida, now ordered by the Secretary of Agriculture, will result, Senator ANDREWS says, in the discharge of about 1,500 heads of families now employed in the Florida sugar industry. He insists that these workers are among the highest paid on any agricultural project in the United States. They will no longer be needed for sugar cultivation and harvesting if the acreage curtailment stands. Out they will go, and no one seems to know what they will do.

The sugar producers of Florida are not alone in the matter of crop curtailment under the orders of the Department this year. Further restriction of crops in Louisiana and for the beet-sugar producers in other parts of the country have gone or are going into effect.

Supporters of the Andrews-Peterson bills insist that it will not interfere with the administration of the Sugar Act of 1937, and they point out that the proposed legislation does not become effective until 1940. The Secretary of Agriculture, they say, has not yet made his estimates for 1940, and before he begins his calculations he will know the producers in this country who will not apply for benefits and how much sugar they will produce. The administration of the act, they argue, would be simplified.

For Victory in 1940

EXTENSION OF REMARKS

OF

HON. JOHN A. DANAHER

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, May 29 (legislative day of Friday, May 19), 1939

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. DANAHER. Mr. President, on Saturday, May 27, my colleague from New Hampshire, the senior Senator from that State [Mr. BRIDGES], delivered an address at the Seventh Annual Convention of the Association of the New York State Young Republican Clubs, in New York City. I ask unanimous consent that a copy of the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, Congressman BARTON, delegates, and guests of the convention, it gives me great pleasure to have the opportunity to address once more a New York State Young Republican Convention. This is your seventh annual convention. Our country is also going into the seventh year of New Deal administration of our National Government. Perhaps seven is a lucky number, for the country and for the Republican Party. You know, it is related in the Bible that in the ancient lands 7 lean years are followed by 7 years of plenty. We have had 7 lean years; 7 years of idle workers, idle capital, and economic planning that has included too many plans and no economies. Next year this Nation will rid itself of the 7-year plague called the New Deal. Nineteen hundred and forty will see the end of 7 lean years—years of

drought and economic scarcity. The handwriting on the wall says a Republican victory.

In 1932, the Republican Party went down for the count of 10 and in 1936 the corpse was supposed to be decently buried. But it got up from the coffin, walked away from the funeral, and now it has begun to scare the undertaker. And the Young Republicans had a great part in that rejuvenation. They have done as much as any other group to keep alive in the party the will to fight.

They have had the idealism to believe in the integrity and courage of the men and women of this country—to know that neither the false promises of crackpots nor the disguised bribery of the most monstrous bureaucracy in our history could permanently debauch the American people. For the vitality of the party today, the Young Republicans deserve the thanks of the Nation. As one who holds national office under the Republican banner, I welcome this opportunity to express my own gratitude.

The reviving power of the Republican Party means growing influence for you. How are you going to use that influence? It puts upon you the responsibility of clear and thoroughly honest thinking. The country has lived on hokum and hooey for 7 years. We've got to find some way out of the mess. That influence puts upon you also the responsibility of the far vision. When we plan for the 1940 convention we've got to be looking not only beyond June but even beyond November. We've got to win the election, of course; but we've got to win it for the purpose of entrusting the welfare of the Nation to the men we elect. That is your responsibility for the far vision.

In the third place, you have the responsibility of helping to form and direct public opinion. It is particularly for that reason that I want to talk to you for a moment about our foreign policy, which, with recovery, is one of our most critical problems and one of the most pressing.

The Republican Party is the party of peace. There is no question but that peace is the most ardent desire of the American people. There are several schools of thought, however, on the methods through which peace can be best maintained. In all schools are people who think loosely; people who are prejudiced; people who think of war profits; people who think perhaps that a war might bring revolution to this country; and people who even think perhaps that the danger of war and the keeping of the public in a constant state of war jitters might promote their own political fortunes. We Republicans wholeheartedly condemn any and all activities on the part of the present administration which might tend to involve this country in a European war.

But condemnation of the policies of the Roosevelt administration are not enough. What ought to be the Republican policy? You have no more urgent question to decide; and the decision is—it must be—yours to make. For my own part, I believe that the legitimate aims of the United States in its dealings with other nations can be briefly stated under three main headings. They are: Friendly intercourse with all, a secure defense, adherence to the Monroe Doctrine.

First. Friendly intercourse with all means promotion of healthy trade relations—reciprocal-trade agreements, for example, which take into consideration the American producer, the American farmer, and the American worker.

It means also the encouragement of arbitration as a means of settling international disputes.

It means strict neutrality in our dealings with any nations between which any dispute has arisen, and a very carefully prepared scheme of formal neutrality when such a dispute reaches the point of armed conflict.

It means a respect for the will of other people as expressed by their form of government. Such an attitude is only consistent with our own principles of democracy.

Friendly intercourse with all does not mean sanctions or threats or insults against the governments of nations with which we are at peace. Loud-mouth blusterings in foreign newspapers lend no dignity, no propriety, no justification to similar conduct on the part of members of our Cabinet.

Second, secure defense, this means armed might, of course—strength of Army, Navy, and air force, adequate to our territory and the performance of our obligations. But it means more than that. It means the protection, by diplomatic means or otherwise, of our national rights and of our citizens in their legitimate pursuits in all parts of the world.

The American people have always been devoted to the ideal of disarmament. We have indicated repeatedly that our judgment of what constitutes armed protection for us is always subject to revision by treaties for the limitation of production of armament. We stand today ready to undertake and to be a party to any conference looking toward these ends. But it is not the policy of the Republican Party nor the will of the American people that this Nation be defenseless in the face of present world conditions. Therefore, we must subscribe to such an Army, Navy, and air force as will protect the Western Hemisphere from invasion or political or economic aggression.

Third, adherence to the Monroe Doctrine. This means two things—two lines of policy that are separate but mutually dependent. First, we will stay out of European affairs; second, European powers must stay out of the affairs of the Western Hemisphere. That is the substance of our policy given by President Monroe in his famous message to Congress. One part of the doctrine without the other is like a violin without a bow; it cannot function to the purpose for which it was designed and the only use you can make of it is to hit somebody on the head with it. America has no more interest in European power politics now than she had in the days of Washington and Monroe. America has no reason whatever for entering an alliance with any European power, whether nominally in the interests of "collective security," or for any other end. The essential fallacy of the "collective security" idea is the fact that some of the poker players of Europe regard any such alliance as binding only so long as they themselves do the collecting. We want friendships with Europe, yes; alliances, no.

As to the second part of the doctrine, the words of Monroe are as necessary today as they were a hundred years ago: "We construe any attempt on the part of European powers to extend their system to any portion of this hemisphere as dangerous to our peace and safety."

If we fulfill the obligations placed upon us by a truly hemispheric policy, we shall have our hands full without trying to police Europe.

For victory in 1940, then, the Republican Party must present a sane and understandable program for the conduct of foreign affairs. The American people are looking to the Republican Party for leadership. We can give it to them. A sane foreign policy is a vital part of our program. So far as our foreign relations are concerned, the Republican Party and the American people want the opportunity to develop our industry and our trade, our arts and our culture, in fellowship with all mankind. We want peace and we want leaders who will follow the paths of peace. God grant that we may soon have them.

On the home front the Republican Party will present a clear and concise program which will bring about social and economic recovery in the United States. Such a program is vital for victory in 1940. Given the greatest nation in the world, given the most fertile soil, given a people who possess the greatest initiative in the world, given the most widely diversified natural resources, there is no excuse whatsoever for the present condition of domestic insecurity in our country.

For victory in 1940 the Republican Party must present such a program as will release the forces of recovery. What are these forces? They are the expansion of private industry and the encouragement of private initiative; the repeal of all laws which tend to curtail production; the development of new methods of distribution in the fields of industry and agriculture; the development of a sane agriculture program which will mean the return of the American market to the American farmer and new uses for agricultural products, crop insurance, and soil conservation. They are the amendment of the Social Security Act to put it on a pay-as-you-go basis; the revision of such tax laws as hamper, curtail, and strangle American industry; the repeal of all laws which permit the Chief Executive to tinker and experiment with the people's money; and abolition of the vast duplication of bureaucracies, boards, and commissions. They include the amendment of the Wagner Act to make employees equally responsible with employers for the maintenance of industrial peace—to provide for arbitration in place of inquisition and thus insure, so far as possible, steady employment under democratic conditions and fair standard of hours and wages.

In short, for victory in 1940, we Republicans propose to put the Government of the United States into the business of running the Government of the United States and take it out of the business of running the private life of every citizen in the land.

For victory in 1940 the Republican Party must offer work—jobs—the encouragement of thrift and the security which a free people under a free government should enjoy. For our philosophy of government is based upon the proposition that the American state is made up of 130,000,000 individuals, who have guaranteed rights under our Constitution. This is not the philosophy of the Roosevelt administration. Our philosophy is dedicated to the proposition that our citizens are still willing and competent to manage their own affairs. We realize no party can legislate the golden streets of Paradise into existence, but we know that the American people in our generation are not licked. They have inherent in them that same capacity for progress and achievement in their time which enabled their fathers to carve from the wilderness the greatest nation in the world.

It is possible to undertake a program which will make for happiness, for an ordered existence, for the necessities of life and some of the luxuries, for a savings-bank account, and for hope that individual initiative will be rewarded and not chastised. That is the American way of life.

The people are the masters of the state; they may be led, but they must not be dictated to; they must not be bribed; and they must not be robbed of their birthright by an administration whose domestic program is composed for the most part of economic fallacies.

For victory in 1940 the Republican Party must offer a candidate and a program which will give the country temperate and trustworthy government based upon the traditions of private liberty and justice to all men. Our candidate in 1940 must be a man who will not pussyfoot and will not straddle. He must be a man who will not promise all things to all people, who has too much strength of principle to use a talent for oratory to varnish nonsense with the charms of sound. Neither do we need a man who continually stirs up strife in order to convince the people that he is their leader. We want no man who will ride a whirlwind in order to direct the storm of his own creation.

For victory in 1940 we will offer to the American people a man of hard, common sense, of experience, and of a fundamental knowledge of the wants, the hopes, the desires of the American people; and, above all, a true respect for the American form of government.

The Cabinet of the Republican President in 1941 must not be overlooked. For victory in 1940 we can promise that the Cabinet of

the Republican President will have no Harold Ickes and no Madam Perkins and no Tommy Corcoran doing a Charlie McCarthy act.

More and more it is necessary for the Cabinet of a Chief Executive to be composed of men who have proven character and ability, for the men who operate the executive branch of our Government must have the trust of the American people. They may be sure that the Republican Party will offer no "crackpot" theorists or political racketeers.

For victory in 1940 the Republican Party must promise, above all things, that this Government shall not be run by communistically inclined backstairs "brain trusters." Nowhere have I seen a more apt description of the "brain trust" of Franklin D. Roosevelt than that given by an up-State New York apple farmer who said, "They know a lot, but what they know just ain't so."

For victory in 1940 the Republican Party must offer a program which will repair the wounds of our economic machinery and restore the morale of our people. This will mean hard work for all of us. I see the campaign of the Republican Party for 1940 as a holy crusade for the return of economic sanity. The American people are turning to the Republican Party in their hour of need. They seek leadership and in their search they turn to the one party whose promises they can believe and whose program will mean peace and plenty.

In the New York World's Fair we see the scientific marvels the "world of tomorrow" will bring to us. If that "world of tomorrow" is to come to us in the American way, free of persecutions and of the destructions wrought by the New Deal, we must carry out the ideals of the Republican Party. We must provide a leadership worthy of the trust of the people. Uniting behind that leadership, with a deep sense of consecration to a great task, we must reestablish honest and progressive Government that will enable the American people to attain in that "world of tomorrow" the high destiny that is their birthright.

National Debt Week

EXTENSION OF REMARKS
OF
HON. SHERMAN MINTON
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, May 29 (legislative day of Friday, May 19), 1939

RADIO ADDRESS BY HON. THEODORE F. GREEN, OF RHODE ISLAND

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD an address over the radio by the junior Senator from Rhode Island [Mr. GREEN] on Saturday, May 27, 1939, the subject being National Debt Week.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow citizens, here is good news for you! National debt week is over. For a week opponents of the administration have been trying to scare you out of your wits by weird pictures of all the terrible things which are going to happen to you and your children and grandchildren because of the national debt. They have been acting like a lot of small boys on Halloween ringing doorbells, tapping on windows, dressing up in sheets, and carrying jack-o'-lanterns. Just as the King's birthday seems to have been moved ahead half a year, so Halloween has been moved for partisan purposes from the end of October to the end of May and stretched out for a whole week in addition. You not only have heard a lot of talks over the radio by well-advertised headliners, but you have had amateur nights as well. Not only have our ears suffered, but our eyes also have been subjected to attack. Walking through the streets of Washington this week, I passed a window decorated with a nice model of the Empire State Building in New York City with a large label stating that if the administration had only spent its credit on Empire State buildings like that, instead of on other things, we would have 940 Empire State buildings by now.

Do you think it would have been better, regardless of whether the Government or private enterprise paid for them, to have built 940 Empire State buildings rather than all the conservation projects that the Government has built, the new schools in every State and practically every county in the Nation, the new playgrounds for old and young, the camps for young men, or in fact all the fine assets that the unemployed have built with the aid of our Federal Government? At any rate, if their jack-o'-lantern was supposed to scare me, my bones did not chill with horror at all. In fact, I think I would have done much better if I had gone to the movies.

But, my fellow citizens, was it what those opponents of the administration said about debt in National Debt Week, or was it what they did about the debt which really carries weight with you? Only a week before, as you will remember, in spite of their long speeches for economy, the United States Senators voted, without winking an eyelash, $1,218,000,000 for parity payments to our farmers, thereby increasing our next year's deficit by about 10 percent. I am not criticizing their vote; I am drawing attention to the curious inconsistency between preaching economy and voting huge appropriations.

At the very beginning of this National Debt Week, these critics in the National House of Representatives, lined up and voted for this bill, too. This was followed by one of the Senators introducing a bill calling for an extra appropriation of $22,000,000 for a project near his home town. As the President has pointed out, in general, these advocates of economy are all for economy except in their own home towns. They are also all for economy except at the present time, even if the present time is National Debt Week. All of them while speaking against debt and preaching economy seem to be repeating the prayer of St. Augustine "Make me pure—but not yet."

Day before yesterday, as a part of this week's celebration, the President signed the naval appropriation bill amounting to over $773,000,000, being an all peacetime record for naval appropriations, this bill having passed the Senate and House by huge majorities.

Do not these official acts of these Senators and Representatives in Congress speak louder than their radio speeches, no matter how greatly their voices may be magnified? One Senator issued a statement saying that the increase in the national debt would be disastrous because the vast majority of our people have to pay increased taxes to pay interest to a small number of bondholders. He failed to point out that this situation, so horrible from his point of view, could be avoided by increased taxation, not on the mass of our people but on the small group to whom the interest would be paid. Such a thought was perhaps too dreadful to contemplate.

Another Senator attacked Government spending, and presumably our program of relief to the unemployed, because it demoralized our Nation. He did not mention how he proposed to care for our unemployed. Perhaps he longed for a dole which in his opinion may not be demoralizing.

And a Representative whom I admire gave a moving account of an unemployed lad in New York looking for a job. This was part of his attack on Government spending. But this very spending included the C. C. C. and the N. Y. A., which have given young men like the one he described a better chance to make life worth living.

In view of all these inconsistent contributions to National Debt Week, can you blame me for wanting to add my bit at its very close? I believe in economy as these critics do. Coming from New England as I do, where fortunes have been built up by economy and thrift and where these virtues have been extolled higher than anywhere else in the country, I share the desire to balance the Budget as soon as possible. I cannot, however, bring myself to believe that thrift and economy are to be practiced regardless of circumstances or that balancing the Budget is the principal aim of government. Suppose in your family you carefully worked out a budget system which would carry you along in a reasonable way and even provide something for the future. And then suppose an unexpected catastrophe like an automobile accident overtook you, and your only son was brought home on a stretcher and his little sister lay a bit of human wreckage by his side, would you patiently listen to a well-meaning theorist who said, "You can't afford a doctor or a nurse to look after your children; it will unbalance your budget. You must realize how serious it is to unbalance a budget. What will your children do if you run into debt?" Wouldn't you answer, "If I don't look after my son and daughter now, I won't have any children. What is the use of balancing the budget if I lose all that I value in my life?" And so it is with our national economy. Without ascribing any fault to anyone, even our critics must admit that the catastrophe of unemployment has overcome a large portion of our citizenry. They admit that it is through no fault of the unemployed that this has come about and that they cannot be allowed to starve. This is shown by the almost unanimous votes for huge appropriations for relief. Yet these critics seize this opportunity of criticizing the size of the debt without regard to the purposes for which the debt was incurred and give up a whole week to this childish appeal to you.

Now that this pathetic exhibition of National Debt Week has come to a conclusion I suggest that these critics undertake the celebration of another week devoted to two topics. The first topic should be the reconciliation of their speeches in debt week with their votes for appropriations far exceeding what President Roosevelt has recommended. The second topic should be the way to balance the Budget at the present time without subjecting our country to even greater evils than an unbalanced Budget.

Government spending and Government debt increases have been treated by our critics as much the same thing, but they are quite different. Government spending is now necessary, and will be necessary for some time, and perhaps indefinitely, to supplement private spending. If the private owners of hoarded funds will not spend them or invest them, the Government must and will supplement private investment with public investment. We cannot waste either capital or manpower by letting them lie idle while lasting improvements need to be made and human and natural resources need to be employed.

We tried the tragic experiment of letting private business alone and keeping the Government out of business in the years which ended with President Hoover. That experiment ended with long bread lines, millions of jobless workers, manufacturers and businessmen in bankruptcy, with their savings accumulated within a lifetime lost within a few years.

When the Roosevelt administration came into power it tackled the banking situation and launched its recovery program; but because

purchasing power failed to keep up with increased production, unemployment remained. The spending program was launched, and under its stimulus the business index rose until in 1937 the expenditures on durable producers' goods had risen to almost exactly the 1928 level. Then businessmen urged the Government to stop spending and balance the Budget. The Government accepted these views. What happened? Again a depression and again widespread unemployment. Critics argue that this was owing to the New Deal. They overlook other facts contributing to the result. Our population, which increased fifteenfold in the last century, has become almost stationary. The frontiers which we pushed out farther and farther during that century have reached their limit. Machinery has taken the place of manpower to an unprecedented extent. So, until some other solution can be found, spending is necessary and the debt must increase.

But need we be alarmed at an increase in the public debt? As the President has pointed out, the aggregate public and private debt of this country is no greater now than it was in 1929. And the assets against which the public debt is held are for the most part as sound as the assets against which the private debt is held. Our public assets are not only the calculable assets of the new wealth we have created, they are the great incalculable assets of a happy nation and a nation at work.

Any private firm when it draws up its budget does not think of how little it can spend. It thinks of how much it should wisely spend within the limits of its credit. In the same way the home owner when he buys his house does not think only of how much cash he has in hand; he thinks also of his expenditure in terms of his ability to pay the interest and amortization charges upon it in contrast to his past expenditure for rent, etc.

Our Government in caring for our natural and human resources should think in exactly the same way. Then it is surely clear to us that so long as our national income rises by more than the interest burden upon the debt it is easier and not harder for us to carry that burden.

Finally, we must remember that, as the President pointed out, our debt is not owed to a foreign power. From a national standpoint, we owe it to ourselves and we can raise the funds to pay ourselves in any way we like.

In their bewilderment our critics hark back to England, who they say, achieved recovery without spending. They forget that England now is maintaining its level of business activity by spending an amount nearly twice as great in proportion to its size as the greatest amount spent by our Treasury in any of the last 6 years.

Does anyone think that England or any other country can revert now or in the future to the old order in which government investment was barely known? Millions would be left without work if this should happen. It cannot happen.

And so let us throw what is left of National Debt Week, jack-o'-lanterns, spending inconsistencies, and all into the ashcan.

Now let us look forward. We must understand this new world in which we are living. Then we can reach the happy position in which our national income is determined by the limitation of our resources rather than the limitation of our ideas. Then, as a Frenchman once said, we can "Put money in the service of production, production in the service of humanity, and humanity itself in the service of an ideal which gives meaning to life."

Neutrality

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, May 29 (legislative day of Friday, May 19), 1939

LETTER FROM THE SECRETARY OF STATE

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of a letter addressed to the chairman of the Committee on Foreign Relations of the Senate by the Secretary of State, dated the 27th day of May, on the subject of neutrality legislation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAY 27, 1939.

The Honorable KEY PITTMAN,
Chairman, Committee on Foreign Relations,
United States Senate.

MY DEAR SENATOR PITTMAN: In harmony with the conversations I have had during recent weeks with you and other members of the appropriate committees of the two Houses of Congress with regard to pending legislative proposals for modifying existing peace and neutrality legislation, I wish to offer the following comments.

These proposals are intended to aid in keeping the United States from becoming involved in war. They contemplate, primarily, a state of affairs in which relations in the world have ceased to be peaceful.

Our purpose must be at all times to endeavor to foster that state of relations among nations which will maintain the fabric of world peace. In pursuance of that aim we have done and must do everything possible within the limits of our traditional policy of noninvolvement in overseas affairs.

In considering the present proposals for legislation we must keep in mind that, no matter how much we may wish or may try to disassociate ourselves from world events, we cannot achieve disassociation. The simple fact of our existence as a great nation in a world of nations cannot be denied, and the substance of the legislation adopted in this country inevitably influences not only this country but also other countries. The problem for us is not whether we shall help any foreign country or any group of foreign countries. Nor is it that of passing judgment upon or interfering in other people's controversies. Rather, it is that of so conducting our affairs and our relations with other peoples, both before and after the outbreak of war elsewhere, that we shall be more and not less secure, so that we shall not become parties to controversies, and so that our attitude and actions will encourage other people to avoid rather than to become engaged in controversy.

Because of troubled conditions with which we are all familiar, the Congress rightly is now considering the situation which might obtain were a state of war to develop between other nations. In such case the first concern of the United States is its own safety as well as the desire and intent, which all of us resolutely follow, to remain at peace.

In the event of a foreign war we would be immediately faced with the problem of maintaining our neutrality.

When a war begins that body of rules for the regulation of international relations which applies in time of peace becomes impaired. Under international law the belligerent states then acquire certain rights which do not appertain to states at peace, and at the same time states which remain at peace become affected by a body of rules under which they have the rights and obligations of neutrals.

In considering whether legislative restrictions upon our freedom of action can advantageously be maintained or adopted to insure against our being drawn into war, we should, in my opinion, avoid the error of assuming that provisions which are at the same time rigid and of universal application will serve our interests satisfactorily in every situation which may arise. The course of world affairs is unpredictable. What we should try to do for the purpose of keeping this country out of war is to enact measures adapted to the safeguarding of our interests in all situations of which we can conceive and at the same time imposing a minimum of abnormal and unnecessary burdens upon our nationals and a minimum of disruption of our peaceful economic life.

I believe it is important that the legislation which may be enacted should conform, so far as possible, to traditional concepts of international law adhered to by this Government. International law requires that the domestic measures adopted by a neutral shall be impartially applied to the contending parties in conflict. It does not require that a neutral nation shall embargo any articles destined for belligerents.

If we go in for embargoes on exports for the purpose of keeping ourselves out of war, the logical thing to do would be to make our embargo all-inclusive. Modern warfare is no longer warfare between armed forces only; it is warfare between nations in every phase of their national life. Lists of contraband are no longer limited to arms and ammunition and closely related commodities. They include not only those items which contribute toward making warfare possible but almost every item useful in the life of the enemy nation. A nation at war is no less anxious to keep cotton or petroleum, or, indeed, any useful product, from reaching an enemy nation than it is to keep guns and airplanes from reaching the enemy's armed forces. I doubt whether we can help ourselves to keep out of war by an attempt on our part to distinguish between categories of exports. Yet a complete embargo upon all exports would obviously be ruinous to our economic life. It, therefore, seems clear that we should have no general and automatic embargo inflexibly and rigidly imposed on any class or group of exports.

Our conclusion that embargo on export of arms is undesirable is not new, and experience has confirmed our belief.

On August 31, 1935, on the occasion of his signing the Neutrality Act of 1935, the President made the following statement:

"The latter section (providing for an embargo of export of arms) terminates at the end of February 1936. This section requires further and more complete consideration between now and that date. Here again the objective is wholly good. It is the policy of this Government to avoid being drawn into wars between other nations, but it is a fact that no Congress and no Executive can foresee all possible future situations. History is filled with unforeseeable situations that call for some flexibility of action. It is conceivable that situations may arise in which the wholly inflexible provisions of section I of this act might have exactly the opposite effect from that which was intended. In other words, the inflexible provisions might drag us into war instead of keeping us out. The policy of the Government is definitely committed to the maintenance of peace and the avoidance of any entanglements which would lead us into conflict. At the same time it is the policy of the Government by every peaceful means and without entanglement to cooperate with other similarly minded governments to promote peace."

On November 6, 1935, I made the following statement with respect to neutrality legislation:

"Any discussion of the avoidance of war, or of the observance of neutrality in the event of war, would be wholly incomplete if too much stress were laid on the part played in the one or the other by the shipment, or the embargoing of the shipment of arms, ammunition, and implements of war. * * * To assume that by placing an embargo on arms we are making ourselves secure from dangers of conflict with belligerent countries is to close our eyes to manifold dangers in other directions. * * * We cannot assume that when provision has been made to stop the shipment of arms, which as absolute contraband have always been regarded as subject to seizure by a belligerent, we may complacently sit back with the feeling that we are secure from all danger."

Our involvement in controversies is more likely to arise from destruction of American lives. In this regard we can effectively diminish our risks by keeping our nationals and ships out of areas in which there is special danger. The rights of our nationals under international law may properly be restricted by our own legislation along certain lines for the purpose of avoiding incidents which might involve us in a conflict. In indicating certain restrictions upon the exercise of our rights as a neutral I do not wish to be considered as advocating the abandonment of these, or indeed of any, neutral rights; but there is reasonable ground for restricting at this time the exercise of these rights.

For the reasons heretofore stated, it is my firm conviction that the arms-embargo provision of the existing law should be eliminated. I furthermore believe that the most effective legislative contribution at this time toward keeping this country out of war, if war occurs, would be made by enacting or reenacting provisions on lines as follows:

To prohibit American ships, irrespective of what they may be carrying, from entering combat areas;

To restrict travel by American citizens in combat areas;

To provide that the export of goods destined for belligerents shall be preceded by transfer of title to the foreign purchaser;

To continue the existing legislation respecting loans and credits to nations at war;

To regulate the solicitation and collection in this country of funds for belligerents;

To continue the National Munitions Control Board and the system of arms export and import licenses.

Provisions on the suggested lines would, I think, help to keep this country out of war and facilitate our adherence to a position of neutrality. They would make easier our twofold task of keeping this country at peace and avoiding imposition of unnecessary and abnormal burdens upon our citizens.

Sincerely yours,

CORDELL HULL.

Rt. Rev. Msgr. John A. Ryan, D. D.

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, May 29 (legislative day of Friday, May 19), 1939

TRIBUTES AT THE SEVENTEENTH BIRTHDAY ANNIVERSARY TESTIMONIAL DINNER

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD tributes to the Right Reverend Monsignor John A. Ryan, D. D., at the testimonial dinner tendered to him on the seventieth anniversary of his birth.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

REMARKS OF THE TOASTMASTER, RT. REV. MSGR. MICHAEL J. READY, GENERAL SECRETARY OF THE NATIONAL CATHOLIC WELFARE CONFERENCE

Tonight I serve you, the constituents of District Number One of the Sovereign State of Congratulation, in presenting distinguished witnesses to the worth and virtue of a great American citizen.

In the past decades true liberals had to stand and fight and conquer the doctrine of laissez faire taught in the system of nineteenth-century liberalism. The battle goes on under different systems today. Modern ideologies have added new methods, crueler and more efficient techniques, but the fight is the same—the defense of human liberty and human dignity versus the vicious, grasping selfishness of an individual, a group, or a government.

Throughout all these years the church and churchmen very often have been labeled reactionary and unprogressive and unreal. The same cry is heard today with modern variations of epithet.

And what was true in the lengthening decades of the past 70 years marked by our own jubilarian is true today. Catholic leaders would more heartily join with even the most vocal—which usually are the least discriminating—social reformers in driving out the devil of social abuse if these same reformers were less interested in injuring and destroying the rights of the church.

REMARKS OF MR. JUSTICE FELIX FRANKFURTER

Several things contribute to my pleasure in coming here in honor of a man who, despite all appearances to the contrary, is regarded as venerable, since he has attained the high mark of biblical expectancy. Monsignor Ryan's contribution to human welfare none can gainsay. Happily, his work as a Christian teacher has been recommended by a personality in which social zeal, aggressive integrity, and homely simplicity have been enhanced by an almost coercive charm.

He belongs to a church which has had a varied experience in human history. It has survived both poverty and prosperity, outlived alien and hostile philosophies, and throughout has shown that adaptability to changing conditions which is the index of an extraordinary vitality. It has been the distinction of Monsignor Ryan as a teacher of theology to apply dogmas avowedly conservative to the solution of problems affecting the welfare of the masses in ways that have gained him general recognition as a foremost liberal. Central to his thought have been the moral dignity of the individual and man's effort toward enhancing social security. It has not been his lot to enjoy the detachment and serenity which we associate with the life of a scholar. But perhaps it will be permitted one outside his faith to suggest that the practical pursuit of Monsignor Ryan's convictions has been strengthened by the thought that in promoting his conception of social justice he was faithfully carrying out the commission his church gave him to preach.

Many are here tonight who do not subscribe to the authority of those dogmatic principles which have supported and energized John Ryan in his teachings. Perhaps they salute him with more conscious gladness because, from different starting points than theirs, Dr. Ryan has reached conclusions of whose wisdom and fruitfulness this is a celebration. The members of his own church must find an additional satisfaction in feeling that he is an illustration of a cherished Catholic principle that the ancient church is ever new. And so we find that those high in the authority of his church, his colleagues, and his disciples take special pride in him at a time when he has been steadfast in his active devotion to those universal claims of humanity which has been so flagrantly denied by great temporal powers.

We confidently wish that Monsignor Ryan will carry on, unmindful of the clock, for many years, and that on the troubled and uncharted seas which the world now sails, his wisdom may point out stars for the course and his kindness may bring comfort to the weary mariners. And may the tribute of this dinner be remembered by him as testimony of our gratitude and as proof of a life greatly lived.

REMARKS OF SENATOR JAMES M. MEAD, OF NEW YORK

No force serves humanity more powerfully than truth. Seekers after truth and the teachers of mankind—in spiritual or in temporal life—have provided the pillars of wisdom upon which the destiny and progress of civilization rest. Tonight we honor a distinguished contemporary thinker. Monsignor Ryan has for a period of years been a searcher of truth—devout, conscientious, and untiring—his life has been devoted to the service of the church and to the service of his fellow men. His scholarly attainments in widely ramified religious, social, and economic endeavors mark him as an outstanding national authority on many subjects.

I leave to those better qualified than myself to review his theological contributions. Neither can I adequately describe the scope of his work as an educator. However, I can, and I take great joy in the opportunity to do so, refer to his leadership in the field of government.

Dr. Ryan's biography reveals a man who has steadfastly advocated liberal measures in government to bring a more full and happy existence to all the people. Persons have said that I was a new dealer a generation ago, and I am not embarrassed by such a charge. Dr. Ryan, however, has been thinking not one generation ahead but many generations ahead in his constant and unrelenting plea for an improved society. Here is a man who has obtained all of the instruction and education that schools could offer him and that books could reveal to prepare himself for a lifetime of humanitarian service. His whole career has been devoted to a study of mankind's problems and he has employed all of his wisdom and skill and zeal in efforts through teaching, through writing, through speaking, to bring a little more hope and promise to those who are less fortunate. He has written laws, delivered countless addresses, written several volumes, all designed to improve the lot of the masses of our people. His name is held in respect in every Christian nation and his works are familiar to scholars the world over.

As far back as 1906, Father Ryan was writing with fervor and appeal about the need for a living wage for workingmen. He said then—in that day of rugged individualism—that every man, of right, was entitled to a fair day's work and a fair day's pay to support his family under decent conditions, and to live in wholesome, healthful surroundings. He has stressed for 30 years the need for maximum wages and minimum hours for labor. He has pleaded the cause of social and economic victims of this modern age. He

has stressed the affinity between wholesome living and wholesome thinking. He has borne the label of "reformer" with dignity and he has been impervious to ridicule. His emulation of the example of the Divine Teacher has fortified him against unjust, unthinking, and destructive criticism. Always with restraint and tolerance and reason he has clung to his ideals. Today he can see the materialization of many of his hopes and there is tangible evidence of the fruits of his labors.

But with all these years of application to what he considered his duty and what certainly constituted his supreme ambition in life, he has not lost one iota of his humanness, his pleasant nature, and his indefatigable progressiveness.

To the legislator who is concerned with social problems, Dr. Ryan's influence and logic are indispensable. It is easy to measure in a concrete way the force that he has created in the legislative field. His authorship of the Minnesota State minimum-wage law and his definite recommendations to many congressional committees form but a very minor chapter in his long career of service. Dr. Ryan is a pioneer today in the field of liberalism just as he was a pioneer in liberalism 30 or more years ago. But it is not to his books nor to his professorships at the highest institutions of learning, great and scholarly as they are, but to his innate progressiveness and his ceaseless struggle for the betterment of mankind that I pay tribute. He may yield to none in the mastery of clear thinking, conscientious service, indomitable will, and long-ranged vision. He inspires the Nation's leaders of liberal thought; he advances the well-being of the common man; with exemplary dignity and Christlike humility, he gives his intellectual talents and his physical strength to the service of his church and his country.

ADDRESS OF HON. FRANCES PERKINS, SECRETARY OF LABOR

In Monsignor Ryan the rights of the working people of the world have had a profound interpreter and a devoted defender. While those of us who know him appreciate the high estate to which he has risen, as economist, teacher, and churchman, and the many titles bestowed upon him in evidence of this, we prefer to address him by that simple, more personal title of "Father."

To Father Ryan belongs the distinction of being among the first in this country to apply to the field of labor the principles of Christianity. These ideas found some expression in Pope Leo XIII's encyclical On the Condition of Labor. Father Ryan, at the time of the issuance of this encyclical in 1891, was a young man attending a seminary in St. Paul, but he has made great contribution to the development and practical application of some of the ideas there expressed. In any event, he has been consistently an advocate of the application of moral principles to the modern problems of the social and economic relation between capital and labor. His writings have given to those principles specific and concrete form. Nowhere has he done so more significantly than in a little book written 33 years ago when he was a relatively unknown professor of moral theology and economics. In this, entitled A Living Wage, Father Ryan presents a Christian theory of wages based on the dignity and worth of human personality and its duty to perfect itself. The individual, Father Ryan holds, is an end in himself. Man does not exist for society, but rather does society exist for him. He has a moral and natural right to a living wage. Natural moral law requires that he should be able to earn by his labor sufficient wages to satisfy more than mere animal needs and to insure him his share of modern society's resources, security for the present and future, and self-respect. When the industrial system for whatever cause cannot function adequately to provide this decent livelihood to its workers then, said Father Ryan, it becomes the duty of society to provide it. This is not charity but social justice which is the purpose of all government and which our own Constitution recognizes when it promises to "promote the general welfare."

This book was one of the first publications in any language to advocate the establishment of a minimum living wage by law. In a day when any attempt of the wage earner to gain better working conditions and wages by uniting was still regarded with distrust, Father Ryan was scored as a radical or dismissed as a dreamer. Yet he has lived to see his dream of a minimum wage come true and to find his own specific teachings of 33 years ago hailed as the new philosophy of industrial relations. As he sits here tonight he will undoubtedly hear those of us who have come to do him honor repeat, without knowing it, some phrases of his own rich humanitarianism.

His influence has been very great through his students, his books, his friends, and his generous and liberal association of himself with organizations of men and women everywhere who have worked for various social reforms.

But Father Ryan did not leave it there 33 years ago. He went on to point out that his conception of a living wage and a decent livelihood for labor was not only good ethics but good business as well. If it were established, the wage earners of the country who need so much more in the way of food, textiles, furniture than they are able to buy, would then have all the purchasing power necessary to keep industries running and men employed. Here, he said, social justice is identical with the general good and with economic expediency. And remember he wrote in 1906, when no threat of 1929 disturbed the complacency of business, no hint of unemployment or depression troubled the then universal American dream of prosperity.

We have still not caught up with Father Ryan's thinking, 33 years later, but we are coming closer to it. Only lately has business begun to realize that economic policies are subject to ethics, and that a moral obligation to pay a good wage falls on the employer of labor as a consequence of his position of power over the fruits of the earth. Only recently has the world recognized the wage earner's status of human dignity on the statute books and in practice.

In further application of the Christian doctrine for the improvement of the condition of the wage earner for the sake of his own development, Father Ryan long has recommended many other measures. Perhaps the more important of these are the following:

1. Insurance of wage earners against the hazards of accidents, industrial disease, sickness, unemployment, and old age.

2. Organization of wage earners into trade-unions for the purposes of collective bargaining.

3. Participation of wage earners in management, profit, and ownership.

To the field of labor problems Father Ryan's contribution and influence have been broad and deep and practical. There is no greater tribute I can give his persistent influence on American thought and action than to quote his own words. "Never before in our history," he says, "have Government policies been so deliberately and consciously based on the conception of moral right and social justice."

ADDRESS OF RT. REV. JOSEPH M. CORRIGAN, RECTOR OF THE CATHOLIC UNIVERSITY OF AMERICA

Monsignor Corrigan said, in part: Every man lives two lives—one in his proper person and the other through the pulsings of his thought and work in the other lives with which he comes in contact. Every man in his daily contacts begins an influence which spreads in an ever-widening circle to other lives which the life he has touched in turn reaches. There is no way of estimating, therefore, in any human accuracy the results of a long life. When, however, one has the happy consciousness that such an influence, issuing from his diligent pursuit of a high motive, has resulted in a nobler patience, a better hope, a more exalted courage in untold lives, that worker is already reaping a reward exceeding great.

It is part of Monsignor Ryan's great joy tonight that he, who, as a priest, has spent his life sowing the good seed of the Word of God, has lived to witness the glory of a great harvest. The priest is always the sower but has no promise that he shall see the reaping of what he has sown. To witness a bountiful fruit in the seed he has planted is to win very signally the Biblical promise of a hundredfold reward in this life.

When it has come to anyone, as it has come to Monsignor Ryan, to find he has sown blessed seed in the fertile soil of the hearts of a people, then we can understand why the glory of his years of service must be to him tonight a matter both of proper pride and of happy consolation. We can rejoice with him that through it all he has kept the simple heart of a priest; that he has never been swayed out of the balance required to keep him constantly in the footsteps of his Master, conscious that, like his Master, his steps were taking him among the beloved of the Master—the poor.

It is for this reason that we are most happy to share the splendor of this scene with him, and that I bring him here, in the name of the university, in the name of the chancellor of the university, Archbishop Curley, who could not be present, and in my own name this expression of our profound gratitude for the work that he has done. It would be difficult indeed to vision the Catholic University in the past quarter of a century without the pioneering work and untiring ability of Father John Ryan. That his own peace and happiness be the best measure of his success in the many years we hope are before him, is the wish of his colleagues at the Catholic University of America.

THE WHITE HOUSE,
Washington, May 10, 1939.

Rt. Rev. Msgr. JOHN A. RYAN, D. D.,
The Catholic University of America, Washington, D. C.

MY DEAR MONSIGNOR RYAN: Because of your perennially youthful spirit and your zest for service in behalf of your fellow men—particularly the underprivileged—it is difficult to realize that you have attained the scriptural age of three score and ten.

But your birthday gives your friends a welcome opportunity to break through the reserve which your modesty has built up and to tell you of their appreciation of the good works which you have wrought through all the years of your active career. With voice and pen you have pleaded the cause of social justice and the right of the individual to happiness through economic security, a living wage, and an opportunity to share in the things that enrich and ennoble human life.

Happily, at 70 you are unwearied in your labors. In extending congratulations may I express the hope that for long years to come you may continue to labor for those causes of which you have been such an earnest advocate and unselfish champion.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

DETROIT, MICH., *May 25, 1939.*

Rt. Rev. Msgr. JOHN A. RYAN, D. D.,
Catholic University, Washington, D. C.:

With keen regret that I am unable to attend your seventieth anniversary dinner tonight I send in the name of the administrative board of bishops heartiest felicitations and the fervent prayer for continued devoted service in the church and Nation.

EDWARD MOONEY,
Archbishop of Detroit,
Chairman of the Administrative Board of Bishops,
National Catholic Welfare Conference.

ST. PAUL, MINN., *May 25, 1939.*

Rt. Rev. Msgr. JOHN A. RYAN, D. D.,
Catholic University, Washington, D. C.:

Heartiest felicitations on your distinguished observance of your seventieth birthday with best wishes for health and happiness. Consecration of St. Mary's Church keeps me here.

JOHN G. MURRAY.

APOSTOLIC DELEGATION, UNITED STATES OF AMERICA,
Washington, D. C., May 22, 1939.

Rt. Rev. Msgr. JOHN A. RYAN, S. T. D.,
Catholic University of America, Brookland, Washington, D. C.

RIGHT REVEREND AND DEAR MONSIGNOR: With pleasure have I learned of the testimonial dinner that is being offered in your honor on the occasion of your seventieth birthday, and it is my desire to extend heartfelt felicitations and sincere wishes to you who have labored so many years for the betterment of general social conditions.

With this anniversary you also mark 25 years of teaching in the Catholic University of America, whence you have brought thousands to a realization and better understanding of the problems that confront society. Permit me, therefore, my dear Monsignor, to congratulate you most sincerely, and to voice my ardent wishes that the Lord may grant you many more years in His service.

With sentiments of deep esteem, and most cordial regards, I beg to remain

Sincerely yours in Christ,

A. G. CICOGNANI,
Archbishop of Laodicea, Apostolic Delegate.

T. V. A Power in Mississippi

EXTENSION OF REMARKS
OF
HON. GEORGE W. NORRIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, May 29 (legislative day of Friday, May 19), 1939

LETTER FROM ALCORN (MISS.) ELECTRIC POWER ASSOCIATION TO TENNESSEE VALLEY AUTHORITY

Mr. NORRIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by the Alcorn (Miss.) Electric Power Association to the Board of Directors of the Tennessee Valley Authority.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MAY 26, 1939.

The BOARD OF DIRECTORS, TENNESSEE VALLEY AUTHORITY,
Knoxville, Tenn.

GENTLEMEN: Early this month the Alcorn Electric Power Association sent to your electricity operations department at Chattanooga two checks totaling $5,839.32 in final payment of its long-term debt. The association is now free of debt.

This is an important milestone in the experience of our organization, and we know that it will be a source of gratification to you and your staff as well as to us. For one thing, it bears out your predictions of 5 years ago. You may recall that in April 1934 Directors H. A. Morgan and David E. Lilienthal came to Corinth for a conference to present a plan which was later adopted and resulted in the organization of this association. In connection with this conference Mr. Lilienthal made a representation in which he said:

"It will be proposed that the electric cooperative enter into a power-and-purchase contract with the Authority, by which it is expected that the cooperative will have completed purchase payments for the city and rural system within a period ranging from 5 to 7 years."

This prediction has been more than borne out. In slightly less than 5 years this association has not only repaid the original purchase price but has repaid additional debt to the Authority for rural-line construction and has expanded and bettered the electric facilities so that it now owns a system with a net value more than double the original price and completely free of long-term indebtedness.

We believe it will be of interest to sketch our experience briefly.

You will recall that on June 1, 1934, the association took over from the Authority the electric properties in Corinth and about 12 miles of rural distribution line, the total amount of farm lines operated by the private power company which we succeeded. We assumed a debt to the Authority of $114,632. This was subsequently increased to a total of $236,317, largely through purchase of additional miles of rural line constructed by the Authority. Of this amount $48,000, representing rural lines in Tennessee, was sold to the Pickwick Electric Membership Corporation, leaving a debt of $188,317.

The financial success of the operations of the association was such that we have been able to make payments on the debt almost from the very start. Annual payments have been as follows: $6,468 in 1934, $42,957 in 1935, $18,607 in 1936, $21,584 in 1937, $37,899 in 1938, and $60,802 in 1939.

Through this period, with the exception of 1939, the association paid all taxes required from a private power company and carried all the forms of insurance essential in protection of our public, our employees, and our business.

However, this is not the entire story. The association has been able to expand over this period of years. As of April 30 of this year, its books show an investment in plant and equipment of $345,930. Against this there is a depreciation reserve of $75,916, so that the net value of the plant and equipment at this date is more than $270,000.

There has also been an improvement in the working capital, so that at April 30, 1939, the current assets were $46,740 against current liabilities of $16,262. These results have been accomplished by the use of earnings amounting to $185,406 and investment of the members amounting to $112,400.

We are proud, justly proud, of this record, especially since 5 years ago we knew that we were embarking on an experiment in distribution of power at low rates. I know that you recall, more vividly than we do, the assertions that the resale rates which we contracted with you to charge were altogether too low for successful financial operation. And as a matter of fact we took notice of this possibility by placing surcharges of 10 percent on the bills of industrial and commercial customers.

Whatever fears we had, however, proved unjustified. In August 1936 we found that the surcharge was not needed and removed it.

As you and your staff predicted, the introduction of drastically reduced rate schedules brought about an immediate increase in the consumption of electric power and consequent growth in revenues. A few figures will show graphically the growth which this association's electric business has experienced.

On June 1, 1934, this association had 1,542 customers; on May 1, 1939, the number was 2,641. It now has 70 miles of rural line in Alcorn county, compared to 12 at the beginning.

During June 1934, the association purchased 268,000 kilowatt-hours of wholesale power from the Authority; during the month of April this year, it bought 966,000 kilowatt-hours. During the first 12 months of operation, it purchased 3,815,000 kilowatt-hours; during the last 12 months, ending April 30, it bought 11,074,000 kilowatt-hours.

The record of residential consumption is most striking. You will remember that members of your staff in 1934 compiled figures showing that during May 1934, the last month in which the rates charged by the private company were in effect, the average residential customer used only 49 kilowatt-hours for which he paid an average of 5.37 cents per kilowatt-hour. During this last April, the average use per customer was 174 kilowatt-hours, or more than three times as much, and the average price paid was 1.6 cents per kilowatt-hour. The number of residential customers has grown from 1,180 to 2,103. During this last April 365,000 kilowatt-hours were used by this class of customer, compared to 58,300 kilowatt-hours in May 1934.

We are convinced from our operations during the past 5 years that we have attained a place in the national movement for cheap electricity, and invite the closest examination of the association's record, firmly believing that it merits the approval of all, even its closest critics.

Most respectfully yours,

C. E. MCGEE,
Secretary, Board of Managers.
B. F. LIDDON,
President, Board of Managers.

German Refugees

EXTENSION OF REMARKS
OF
HON. ROBERT F. WAGNER
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, May 29 (legislative day of Friday, May 19), 1939

ARTICLE BY DR. HENRY SMITH LEIPER

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article by Dr. Henry Smith Leiper, secretary of the Federal Council of Churches, on the subject of German refugees.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Current History for May 1939]

THOSE GERMAN REFUGEES—FACTS DO NOT JUSTIFY THE PROPAGANDA ABOUT REFUGEES DISPLACING AMERICAN JOB HOLDERS

(By Dr. Henry Smith Leiper, secretary, Federal Council of Churches)

A great hue and cry is current these days about the number of German refugees reputedly displacing American workers. In New

York, department stores are accused of firing native Americans to hire refugees; in New England, according to oft-repeated rumors, entire mills are being manned by refugees; throughout the country the same story continually crops up in one or another manifestation, despite categorical denials by employers.

What is the truth? Americans have a right to know. Are we being flooded with refugees? Do they displace American labor? Are refugees a liability or are they, as their friends contend, a vast potential and already partially achieved economic asset? Fortunately, there are facts and figures to which we can turn.

To appreciate the problem presented by refugee immigration to the United States we must understand the extent of that immigration. What, then, are the official figures of the United States Immigration and Naturalization Service?

In the 6-year period, July 1, 1932, through June 30, 1938 (the official Government statistical periods most closely approximating the present era of national socialism in Germany), there has been an immigration to this country of 45,952 Germans. In the current fiscal year, which ends June 30, 1939, we may expect an immigration from Germany (including Austria) equal to the total allowable by our quota regulations—27,370. Thus as of July 1 fewer than 75,000 emigrants from Germany will have come to this country in the 7 years since July 1, 1932.

This figure of 75,000, which is the "roof" of all possible estimates of the number of German refugees in this country, must be lowered if one takes into consideration the number of aliens who returned to Germany.

For the 6-year period, July 1, 1932, through June 30, 1938 (the last year for which there are official Government figures), 18,445 aliens legally permanent residents of the United States returned to Germany.

Subtract this figure from the total number of immigrants for the 6-year period—45,952—and you get a 6-year net German immigration of 27,507, or 4,584 persons a year. If you ignore the emigration to Germany and concern yourself only with the German immigration to this country, the average immigration per annum for the 6-year period is 7,659.

It is interesting, in this connection, to compare the total German immigration per annum for the past 6 years with that of the 6 years immediately preceding the advent of nazi-ism. The German immigration for the 6-year period, July 1, 1926, through June 30, 1932, was 187,014, an average of 31,169. In other words, more than four times as many immigrants came here from Germany during the 6 years immediately preceding Hitler as came during the 6 years since his rise to power.

But what of the future? Is this only the beginning of a huge refugee immigration? Under the quota laws of 1924, still rigorously enforced, immigration to the United States from all countries is limited to 153,774 persons a year. The quota for Germany (including Austria) is 27,370. To this may be added the Czechoslovak quota of 2,874. Should this occur the German quota will be slightly over 30,000.

Carry these figures one step further. Be completely pessimistic. Assume that Hitler successfully continues his expansion program in the East; assume that he adds Poland, Rumania, Hungary, Danzig, Lithuania, and Latvia to his domain. Make all these unlikely assumptions, and you still would have a German quota of less than 40,000.

Now, for the moment, forget the refugees. Consider the total immigration to this country. You will recall that quota immigration is limited to 153,774. But remember that although 153,000 people may come here, it does not mean that they do come or that there is any likelihood that they will.

In 1938 only 67,895 persons came to this country for permanent residence, including those who came under various exemptions from the quotas. This year, the total quota immigration is expected to be about 75,000, a figure which is likely to remain the peak. The reason is that of the 153,774 annual quota allowance, 83,754 places are set aside for Great Britain and Ireland, countries which are no longer nor soon likely to be lands of emigration. Last year emigration to this country from them totaled 4,551.

To recapitulate: As of this coming July 1, only 75,000 German refugees will have come to this country in the preceding 7 years. Future German refugee immigration is limited to 30,000 a year. Total immigration to this country is limited by law to 153,000 and by practice to approximately 75,000 a year.

The next question is: Have these 75,000 German refugees who came in during the past 7 years displaced American labor; have they thrown out of gear the economy of a nation of 130,000,000 souls?

On the face of it, it is ridiculous to believe that 75,000 refugees could seriously complicate an unemployment problem that affects 10,000,000 wage earners. It also must be remembered that a large number of the 75,000 German refugees are women and children, as well as men too old to be competitors in the labor market.

On the basis of figures for the fiscal year ending June 30, 1938, there is reason to assume that at least half of the 75,000 are females. Of the 17,199 immigrants admitted during the year who gave Germany as their last permanent residence, 8,682, or 50.4 percent, were females. Furthermore, more than 16 percent of the German immigrants were under 16 years of age, another 12 percent were between 16 and 21, and 18 percent were over 45. On the basis of these figures, it is fair to estimate that between 37,500 and 50,000 of the 75,000 German immigrants are not wage earners.

But have the refugees taken American jobs? No one can categorically state that no refugee has taken a job from an American. But neither is there any sound ground for generalizations as to thousands of Americans being displaced by refugee workmen.

Individual rumors can be run down, and as a result of these experiences a basic general truth evolved. Examine, for instance, the story that New York department stores were hiring refugees and firing Americans. This rumor, spread by a whispering campaign, became so prevalent last November that a group of large New York stores issued a forthright denial. Among those issuing statements printed in the New York press were Delos Walker, vice president of R. H. Macy & Co.; Walter Hoving, president of Lord & Taylor; Samuel W. Reyburn, chairman of the board of directors of the Associated Dry Goods Corporation; and executives of Hearns, Gimbel's, Stern Bros., and Bloomingdale's.

Since then some of the stores have issued sworn affidavits as to the number of refugees employed. Richard H. Brown, vice president of Abraham & Straus, Inc., Brooklyn, a store with 2,719 employees, on March 28, 1939, said: "To my knowledge no employee has been discharged and replaced by a refugee from any foreign country."

Miss Elizabeth Westgate, director of personnel for Bloomingdale Bros., Inc., a store employing 2,563 people, declared: "The total number of people in our employ who might be classified as refugees is 11. Of these, 2 were employed in 1936, 7 in 1937, 1 in 1938, and 1 in 1939. Of the 11, only 1 is employed in selling. Of the others, 1 was employed as an executive in our Berlin office, 1 was employed in our Vienna office. Not a single person has at any time been discharged from our employ in order to make room for a refugee."

Take another case, a rumor that Americans were being displaced from factory jobs in Shelton, Conn. Following investigation by the Connecticut Department of Labor, John C. Ready, deputy commissioner, said:

"An investigation was made by this department in six or more plants in Shelton. Investigation discloses that one refugee has been employed in one of the plants as an elevator operator. This job was created for him and no one was displaced."

These instances do not prove that no American has been displaced by a refugee; they do indicate, however, that when these rumors are run down they are usually found to be baseless. Certainly no one can object to the job made for a lone refugee in that single Shelton factory; nor does Bloomingdale's detailed affidavit substantiate the charge that department stores are firing Americans to give refugees employment. On the other hand, anyone acquainted with the strange word-of-mouth process by which a rumor grows into a widespread whispering campaign will understand how the employment of one refugee in a job created for him can be magnified into a trend that threatens the security of American workmen.

Rumors about the competition exerted against American professional men by refugees are almost as far-fetched. The most common story deals with the German refugee doctor. But one also hears of the dentist, the lawyer, and other professionals. In the case of the doctors, there is a small measure of truth in prevalent rumors, although they, too, have been exaggerated out of all resemblance to the facts. But there is no valid basis for complaint against German dentists or lawyers. In the United States lawyers, being officers of the court, must be citizens before they can practice. Since one must live in this country for 5 years to qualify for citizenship, obviously there can be no truth in the story that refugee lawyers are competing with Americans. As for dentists: American dentistry is much further advanced than dentistry anywhere else in the world. Hence few, if any, foreign dentists can practice without at least 2 years' additional training here.

The facts in the case of the refugee doctors are not so black or so bleak as they are sometimes painted. The number of refugee doctors in the United States in no way approaches the figures popularly assumed. According to information compiled by the United States Department of Labor, 1,528 alien physicians came to this country during the 4½-year period, July 1, 1934, through December 1, 1938. This figure is considerably smaller than that of the 5,000 young doctors annually graduated in this country by our medical schools and, in a country which has more than 180,000 physicians, it is not overwhelming.

But once again the question may be asked: Is this only the beginning? And the answer is: No. The problem of the refugee doctor has already been largely solved. It must be remembered that the early Nazi anti-Jewish legislation was directed largely against doctors; they were, thus, among the first groups to emigrate. According to official Berlin statistics, published in the September 17, 1938, issue of the Journal of the American Medical Association, there were fewer than 2,500 Jewish doctors left in Germany on July 1, 1938.

As at least 600 refugee doctors came to the United States between July 1 and December 30, 1938, it is fair to assume that there are no more than 1,900 Jewish doctors remaining in Germany.

Of this number, 700, according to official German Government reports, have permits to practice among the Jews still remaining in Germany. A large number must consist of older men to whom migration holds no attraction, men who probably never will practice in this country even if they should come here. With no new Jewish medical replacements in Germany, it is fair to assume that there are not more than 1,000 potential medical emigrants left in Germany, and of this number many will go to countries other than the United States.

The problem, then, is the adjustment of some 2,500 physicians who have come here from Germany or who may later come. This

task has been taken over by a nonsectarian physicians' committee that includes distinguished American doctors. Among those who have taken an active leadership in this work are: Dr. Currier McEwen, dean of the Bellevue Medical School; Drs. Tracey Jackson Putnam and Stanley Cobb, of the Harvard Medical School; Dean Joseph Patt, of Tufts Medical School; Drs. J. M. Finney and Warfield Longcope, of the Johns Hopkins Medical School; Dr. Harvey Cushing, professor emeritus, Yale Medical School; Dr. Walter W. Palmer, of Columbia Medical School; and Drs. N. Chandler Foote and Foster Kennedy, of Cornell.

The physicians' committees in New York, Boston, and elsewhere first evaluate the training of the refugee doctors and weed out such persons as they deem unfit. Next they attempt to resettle the remainder where they will not compete with American doctors. The problem, as viewed through the eyes of the Boston committee on medical emigrés, of which Dr. David I. Edsall is chairman, is summed up as follows:

"It appears likely that, if a thoroughgoing search of this country's unfilled medical needs were made, all of these men who have arrived or may arrive here and whom we consider competent would be absorbed without difficulty and to the distinct advantage of institutions and communities which otherwise go without the services they can provide."

Which brings us to an important point: There is another side to the refugee question besides the negative one of refuting misconceptions as to the number of refugees and their alleged displacement of Americans. Many experts, among them noted economists, believe that refugee immigration can be an important factor in the return of prosperity.

These people point out that the refugees bring new skills, additional capital, and even new jobs to the countries in which they settle. This has been the experience of England, of Holland, of Australia, and now of America. This has been the experience of history, of the Walloons and Flemings in Elizabethan England; of the Irish, the Scandinavians, the Jews in the United States; the Spanish, the Portuguese, the Germans, the English in South America.

Only recently, Sir Thomas Hoare, British Home Secretary, told the House of Commons that 11,000 refugees in England had given employment to 15,000 Britons. It has been estimated that refugees will bring four and a half million pounds (approximately $22,000,000) to Australia within the next 3 years, a fact that prompted Lord Nuffield, British motor magnate, to declare that "Australia will be better off when Jews settle here."

A Dutch commission for economic advice to German emigrants reported that the number of workers in Holland who had been brought into employment by the direct economic activity of the refugees was approximately the same as the number of refugees who had come into Holland. The report also pointed out that, for the most part, new industries established by Germany industrialists produced articles hitherto imported.

Mr. R. F. Harrod, Oxford University lecturer in economics and president last year of the economic section of the British Association, has declared, in the Manchester Guardian, that "the notion that existence of unemployment is a good reason for discouraging immigration appears wholly fallacious. The notion that a bare reduction of the number of residents would serve to reduce the number of unemployed, and an increase would increase unemployment, has always been regarded as crude in the extreme. There is much to be said for the proposition that an expansion of numbers is good for employment and contraction bad. This accords with a broad comparison of the situation in the nineteenth century, both here and in other countries, with that in the twentieth century."

Americans who agree with Professor Harrod point out that typical small-town "booster" societies operate on this theory. They seek to attract new industries to their communities in the belief that prosperity comes with an increase in population.

These local chambers of commerce bemoan the loss of a local industry and try to bring new businesses to their community. Following this line of reasoning, many now ask: Is it not equally important to watch major international shifts in the location of important industries? Is there not an important national gain in the relocation here of industries which will employ American workmen and American capital? Should we not make every effort to bring to this country Germany's noted tool and die makers, their skilled optical and fine steel workers? Should not the glass workers of Czechoslovakia be brought here to establish an industry which we have long lacked?

A committee of the Bead, Stone, and Glass Importers Association of New York plans to bring 500 Czech experts here to teach between 50,000 and 75,000 American workers the secrets of making glass and bead trimmings, a Czech specialty.

Already the United States has harvested fruits of the refugee immigration. A survey just begun by the National Coordinating Committee for Aid to Refugees and Emigrants Coming from Germany reveals that thousands of Americans have been given employment in industrial projects started by refugee capital.

One German refugee who managed to bring a good deal of his capital to this country in 1935 now employs 200 American workers in a real-estate development in suburban New York.

A woolen-hosiery mill has been started in Lawrence, Mass., by three refugees who formerly exported these stockings to the United States. Already, 38 American workers have been employed.

Seventy-five American workers are now employed in a dress factory established in New York by a refugee who came here in 1936.

One hundred and forty-seven Americans are employed in a Chicago factory making shoes for women. This business, established by three refugees, has an annual production of $400,000. A brand new industry, the manufacture of a flexible synthetic resin for tubing, sheet material, gaskets, and such, was started in this country by a refugee who brought the patent for it from Germany. Forty-three Americans have been given employment by this New Jersey company.

Dentists used to import tiny gold screws from Germany because no American could make them. Good harmonicas used to be imported from Germany. Now these products, as well as others, are being made here.

The cultural contribution of the refugees to American life is by now too well known to need repetition. Germany's loss of Albert Einstein, Thomas Mann, Heinrich Bruening, Arnold Schoenberg, Stefan Zweig, Max Reinhardt, Emil Lederer—to name only a few of the great—has been America's gain. Some few hundred scholars, men of the first rank in academic circles, have been absorbed by American institutions, mainly with funds specially subscribed for the purpose.

But, needless to say, all refugees do not come to this country with large sums of capital or with especial technical or professional skills that can be readily utilized. There are lawyers who have to be retrained, businessmen who must be recrientated, clerks and salesmen who must be readjusted to a new life. This work is carried on by the resettlement divisions of Catholic, Protestant, and Jewish refugee organizations devoted to refugees. Because of the activities of these organizations not a single refugee has appeared on the public charity rolls. Under the direction of these groups, refugees are being spread throughout the country where they can best be assimilated, where they can best fit into the social and economic patterns of American life.

This retraining and resettlement of refugees, one of the most challenging problems in American sociological history, was started in 1937 under the auspices of the National Coordinating Committee. At the outset it was recognized that many of the refugees had a better chance of adapting themselves to American life as skilled workers and agriculturists than as traders, lawyers, or accountants.

The work has proceeded slowly but effectively. Three hundred committees now have local groups working with the national office of the coordinating committee. During 1937, 226 families, totaling 400 men, women, and children, were resettled. During 1938 the number was more than trebled, 797 families, comprising 1,256 men, women, and children, were resettled. Figures for the last 5 months for which figures are available, September 1938 through January 1939, reveal still greater progress. The number of persons resettled during this 5-month period was 1,011—nearly three times as many as were resettled in all of 1937 and almost as many as were resettled for the whole year 1938. Many other refugees have resettled without the help of the coordinating committee.

The most heartening aspect of the entire refugee situation has been the high degree of intelligence and sense of responsibility displayed by the friends of the refugees in this country. Of this, the work of resettlement is one good example.

Refugee immigration has been conducted within the framework of the 1924 immigration regulations; there has been no attempt to revise these laws so as to allow a larger immigration. On the other hand, the friends of the refugees feel that the present laws provide ample protection for this country against an overlarge influx that could not readily be assimilated. They point to the fact that the present quota system was inaugurated at a time when feeling against immigration was high, that the present laws satisfied the most fervent restrictionists then, and that there is no reason now to curtail further the traditional American hospitality to refugees.

Various immigration laws, however, have been proposed in Congress. Two polar opposites are a bill which would stop immigration completely and another which would double present quotas. The widely circulated New York Daily News has urged that we take in all the refugees who want to come here. Another suggested plan would allow the refugee countries to utilize the unfilled quotas of countries from which there is no present emigration. Still another plan would allow immigration authorities to mortgage the quotas of the refugee countries, that is, allow immigrants to come in now under the quotas for their countries for the next 10 years.

Washington observers report that none of these bills, either for increase or decrease of immigration, has any prospect of passage, with the exception of the Wagner-Rogers bill, which would allow 10,000 refugee children to come to this country outside the quota for each of the next 2 years. This bill has prominent bipartisan sponsorship and the endorsement of the Federal Council of Churches of Christ, the Society of Friends (Quakers), and other large groups.

The chances are that the status of the refugee in America will remain unchanged. He will continue to be treated as are all other immigrants with no special provisions or bars to his entry into the United States. Approximately 30,000 a year will be admitted. They will be assimilated into American life without unduly disturbing the economic or social pattern of the country.

They are definitely not a threat to the American workman in that their numbers are relatively small, many have especial skills new to this country, and already a large number of American

workers have been given employment in projects started by refugees or with refugee capital. Ignoring completely the inhumane and un-American aspects that would be involved in complete immigration stoppage, it would also, from a strictly utilitarian point of view, be bad business for America not to avail itself of the refugee talents now available. America has already gained much and stands to gain more from Germany's ill-advised and self-imposed loss.

Politics in Washington

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, May 29 (legislative day of Friday, May 19), 1939

ARTICLE BY CHARLES BROOKS SMITH

Mr. HOLT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an article written by Charles Brooks Smith, Washington correspondent for a number of West Virginia newspapers. Mr. Smith is one of the most competent writers of our State, and has a large reading public who watch the Washington scene through his daily column.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Wheeling Intelligencer of Saturday, May 27, 1939]

POLITICS IN WASHINGTON

SUBMARINE SERVICE OF NAVY DEMANDS EXPERTS—PLUCKING BOARD WORKS ON UNITED STATES ARMY—UNMATCHED STORY OF THE "SQUALUS"

(By Charles Brooks Smith)

WASHINGTON, May 26.—The submarine service of the Navy is as highly a developed selective service as there is in the Federal establishment. There isn't a member of a sub's crew, from lowest rank to skipper, who isn't an expert. The number of tests he must pass before he makes his post would amaze a layman: from mentality to psychoanalysis, and a score of things between. Lowly in rank, but high in regard of the crew if he knows his business—and he knows it or you can bet he wouldn't be there—is the undisputed monarch of the cook's galley. As a sideline, he has to have a working knowledge of the entire mechanical gamut of the complicated ship which goes to sea—and sometimes doesn't come back or up. And he must be able to apply it in a crisis. Submarine is the most hazardous of the hazardous services of Uncle Sam. More hazardous than aviation. It is so recognized in the pay roll; officers and men in subs receive a little more than average pay; not as much as they should receive, but a little more. Two bills were introduced in the House on Wednesday providing pensions at war rates for dependents of the men who lost their lives in the *Squalus*.

We come now to recalling for you what Congress did last month in the way of a bit of misapplied cheese-paring economy to the poorest-paid, hardest-worked, and largest-efficient group of men in the Navy—enlisted men. For many years, or up until Congress legislated it out last month, a cash bonus was offered men if and when they reenlisted. It was an inducement to retain the services of experienced, trained men. Looked at strictly from the standpoint of their low pay, it was a just and a decent thing to do. Looked at in the tragic light of the *Squalus* disaster, the action of Congress cannot be justified, as this writer sees it.

The debate in the House featured two arguments, principally:

(1) Abolishing the cash bonus for reenlistment would be economy. (The total "saving" isn't a drop in the bucket.)

(2) It would operate to separate older men from the service and supplant them with younger men, needing jobs.

It was brought out that the reenlistment bonus was approximately $285 and that it cost the Government $210 to train a "gob" for the crew of a surface ship (subs exempt from this estimate). Net economy per man, $75.

This tiny piece of penny pinching caused no notice outside of Congress and very little inside of it, for at the time Congress was voting away thousands of millions for subsidies, parties, national-defense pump priming, and for an almost endless list of other things for which hundreds of millions of itching palms were reaching.

THAT AGE QUESTION

The Government, through many of its human loud speakers, broadcasts preachment condemning, in the strongest terms, the cruel practice alleged against industry and all other lines of business which would close the door of work opportunity to men of 40 and over. And yet—as in the case described above—the Government is one of the worst offenders. There is practically no end to the instances which can be cited to support the charge against it. There is no greater hypocrite in the human family than one who preaches what he doesn't practice. And it applies as aptly to governments, big and little.

The Government retires men from the Navy and Army who are still in their late 30's, not yet in their prime, upon whose training huge sums in the aggregate are annually expended—retires them by the wholesale, on one questionable pretense or another. But the real reason is to make promotion for the younger men below, less trained, less experienced, less mature. "To straighten out the hump above," as it is called. After a war there is always this "hump," because men are given commissions in the Navy as officers whose experience scarcely qualified them to tell the difference between a poopdeck and a boobyhatch (in our landlubber jargon); and in the Army who didn't know one from another in drill, if they hadn't a wisp of straw in one foot and a wisp of hay in the other to tell them. If the reader is old enough to remember the World War, we do not have to pursue this line of argument further.

During the last few months—their work is done now, we understand—"plucking boards" have been sitting in Washington "passing over" officers in the Navy and Army, which means slating them for retirement. By and large, these trained men are below 40. They have given the best years of their lives to the Government. Only the flimsiest excuses are given why they are to be retired to try to start all over again in a life for which their training has unfitted them—they, the very pick and flower of American manhood.

As you circulate socially among these men, the more fortunate officers who survived the "plucking," you can't help overhearing them wondering why this comrade or that one was "passed over," as they praised his worth without restraint or stint.

FACING THE FACTS

The story of the *Squalus* is, of course, unmatched in the history of the sea. That genius who is to tell it to the ages is yet to appear. There is one phase, with a personal professional bearing, which we feel qualified to mention. It is the way the Navy Department handled the "public relations" aspect of the tragedy, by no means as unimportant as it might look at first casual thought. It marked a new policy and set a new precedent. There was no secrecy, no mystery made of it. Every channel of communications to the public was thrown wide open. Reporters for press and radio were on rescue ships; on land at every spot they should be to disseminate correct information, authentic and dependable.

Every assistance was given them, nothing was put in their way. Everything opposite to what it was when the *S–4* was down off Provincetown, Mass., with 44 men, who perished, in 1927, and for days the United States was a country afflicted with hysteria in its most acute form. There was no such thing as this this time. "Here are the facts" (at once horrible and glorious), the Navy seemed to say to the American people. "Face them." And the American people did—and they could. And there we have the model and pattern for the future—"Let the people face the facts, and the facts will make them free."

A couple of years ago when Commander L. P. Lovett was assigned to press relations at the Navy Department, following personal contact with him about a story in which we were interested, we mentioned in this column that it seemed that the Navy was embarking on a new and entirely different policy in its press relations with the public. If prior thereto it had any press relation with the public, worthy to be called such without laughing, they were pretty bad and hardly visible. We welcomed Commander Lovett to his new assignment as head of the press section with a few sincere compliments. We'd heap a lot on him now, if we had the space, for the way he handled his job during the *Squalus* tragedy. He's the son of an old Tennessee editor-printer, which explains it. He is a successful writer himself. One book by him, written for Navy people exclusively, was bought and read by practically every officer, including noncoms, in the service—a navy best seller.

A Report on the Opposition

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, May 29 (legislative day of Friday, May 19), 1939

ARTICLE BY WALTER LIPPMANN

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Walter Lippmann, published in the Washington Post of May 27, 1939, entitled "A Report on the Opposition."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post of May 27, 1939]

TODAY AND TOMORROW

(By Walter Lippmann)

A REPORT ON THE OPPOSITION

It begins to look as if May 8 to May 12 will turn out to have been the turning point in the politics of this session of Congress. On the 8th the Senate added almost $400,000,000 to the agricultural appropriation for the fiscal year beginning on July 1 next. The total was made up of nearly 100 items which were adopted without a roll call.

On May 12 the Senate adopted the bill as a whole with only 14 Senators recorded as opposing. Among the opponents was Senator VANDENBERG. But Senator MCNARY, the Republican leader, and Senator TAFT, the outstanding Republican Presidential candidate in the Senate, were not among those who went on record as opposed to a spending measure which has increased by 45 percent the appropriation asked for by the New Deal.

This was more than a spectacle. It was an event which marked not only the moral collapse of the so-called economy bloc, but very probably it marked also the disintegration of the organized political opposition in this Congress to the President and the New Deal. At the polls last November public sentiment expressed itself by a vote which, on the face of the statistics, indicated that there was a popular majority against the New Deal. This sentiment has been represented in Congress by a loose coalition of conservative Republicans and conservative Democrats. Between May 8 and May 12 this coalition fell to pieces.

OPPOSITION COLLAPSES AND ROOSEVELT ACTS

Mr. Roosevelt has not been slow in recognizing that the political opposition was demoralized, nor did he fail at once to take advantage of the opening. With the collapse of the opposition in Congress, the opposition from the Treasury within the administration lost its effectiveness. Then the President, with a few face-saving concessions to Mr. Morgenthau and Mr. Hanes, plumped for the policy of continued and enlarged spending. He took the New Deal into its fourth—or is it its fifth—phase. For the ideal of a Budget in which income and outgo would balance, an ideal to which he had always hitherto paid lip service, he substituted the conception of large-scale public investment as a permanent national policy. This newest phase of the New Deal will probably be signalized and confirmed by a new system of Treasury bookkeeping so as to separate the ordinary Budget for current expenses from the Budget for capital outlays.

The political position in Washington has very suddenly been transformed in that the President and the New Deal have regained the initiative which they lost in November, and the opposition is disorganized and demoralized. If the administration succeeds, as it may, in forcing Congress to take a record vote on the Townsend plan, the plight of the opposition will be pitiable.

NO CONCRETE ISSUE FOR A PARTY FIGHT

This reversal of the political position during the past 2 weeks is almost certain to have very far-reaching consequences in the elections of next year. For with the collapse of organized resistance to public spending, with the demonstration that the Republicans, with few exceptions, will in fact vote to spend when they are put to the test, there is no very important concrete issue on which a factional or a party fight can be waged. Since it is axiomatic in politics that you cannot beat a horse with no horse, Mr. Roosevelt's political position is very greatly strengthened. Barring events that are now unforeseeable, he will dominate the next Democratic convention and he can create a discord in the Republican convention by confronting it with issues, measures, and acts on which the Republican politicians are greatly divided.

That the Republicans in Congress were headed for trouble has been increasingly evident to anyone who has observed them since they arrived in Washington last January. To those who realized the tremendous need of effective opposition, the spectacle of the Republicans as a body, certain individuals excepted, has been thoroughly depressing. They have misjudged the real situation just about completely, and their policy, such as it is, has been based on amateurish illusions.

Thus, they have based their oratorical attack against the spending policy on at least three illusions. The first was that national bankruptcy was near enough to frighten the voters. It is not. European experience shows that governments can spend a much larger proportion of the national income than we do, and carry on more or less indefinitely. The second was that the spending policy does not induce recovery. The fact is that enough spending does induce some recovery, and while morally and politically it is an exceedingly dangerous method, it does work. The third illusion was that the Republicans could declaim against spending in general without having to face particular issues with the pressure groups.

G. O. P. HAS SHOWN INCOMPETENT ACTS

These three illusions put the Republicans in a position where they first prophesied disasters that were not happening and then failed to take a stand to prevent the disasters they were prophesying. This is not very competent politics.

They then misinterpreted altogether the discontent which exists over the New Deal reforms. They imagined that this discontent signified the existence of strong opposition to the reforms themselves, whereas, in fact, it arises principally out of discontent with the administration of the reforms, as in the case of W. P. A., or with the failure of the reforms, as in the case of agriculture, to achieve what was promised.

This has caused the Republicans to get themselves into a position where they seem to be opposed to the reforms, where they can be charged with being opposed to them, though they have not and will not propose the repeal or even the radical amendment of any of them. That is not competent politics.

UNTENABLE POSITION IN FOREIGN RELATIONS

In the field of foreign relations they have made their position equally untenable. Their cardinal mistake here has been to misjudge altogether the real gravity of the world situation and to act, therefore, as if foreign policy were a domestic factional and partisan question. They have accused the President of magnifying the dangers of world war when, as a matter of fact, the danger has been and still is very, very real. They have represented his efforts, which have been by no means ineffective, to prevent a world war as an intrigue to entangle the United States in a world war.

The net result has been to diminish somewhat the influence of the United States, but politically the personal position of the President has been greatly strengthened. For as long as war is averted, a great mass of the people will recognize that he has played a part in averting it. If war comes, those who hampered his efforts to avert it will be in a very uncomfortable position, whereas Mr. Roosevelt will be recognized as the man who foresaw the danger and prepared, as far as he was able, to meet it.

With the peace of the whole world teetering in the balance, it is not competent politics to say that the danger is imaginary and to tie the hands of a man who is trying to avert the danger.

NEW DEAL FOES ARE DISORGANIZED

I do not know what conclusions are to be drawn from all this. This is a report of the facts as I see them. And the main fact is that the opposition to Mr. Roosevelt and the New Deal is disorganized, which is regrettable, since effective opposition is indispensable under our form of government.

Out of the Depths

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

EDITORIAL FROM THE NEW YORK TIMES OF MAY 25, 1939

Mr. MARTIN J. KENNEDY. Mr. Speaker, my position on the subject of war has previously been stated, particularly that the United States never again become embroiled in a foreign conflict. The horrors of war leave me cold every time I think of them. Even in this Chamber, we see the terrible effects of war. In 81 hospitals maintained throughout the United States by the Veterans' Administration and in thousands of homes we see the terrible toll taken.

My colleagues, I am not a specialist nor a tactical expert. All war is ruthless to my mind. Gunshot wounds are terrible. Poison gas is abhorrent. But nothing can be more terrible to the young individual who wears a service uniform than the dangers of the submarine. Nothing more horrible can rule the imagination than the thought of a submarine attack.

It was a submarine, you will recall—or, say, submarines—that sent us into the raging war in 1917. I might even venture the assertion that the simple thought of submarine danger caused a greater number of casualties to young Americans during those months than did actual engagements on the front. The number of mental cases now in hospitals upholds this belief.

Now, again, we have tragedy undersea. Again young Americans carried on in the traditional courage of our fighting men. I would that this awful thing that happened to the *Squalis* serve to strengthen your determination toward the adoption of the resolution (H. Con. Res. 21) which I introduced on May 3, and which would inform the world that the United States will go to war only when our borders are invaded.

I do not know the identity of the writer of an editorial appearing in the New York Times last Thursday, but I wholeheartedly agree with his expression that "when the last submarine rusts at her moorings mankind may have cause to rejoice."

When all war is outlawed by popular sentiment throughout the world the Almighty will have cause to rejoice. I thank you for the privilege of appending the following editorial from the New York Times:

[From the New York Times of May 25, 1939]

OUT OF THE DEPTHS

When the first of the rescued crew of the *Squalus* came out into daylight yesterday afternoon on the deck of the *Falcon*, a little of the horror lifted from what might have been our worst submarine disaster. A little; not all. There were dead men in the black depths. What had been avoided by the remarkable success of the diving bell was the long agony of live men waiting for help that could not come, lying helpless in a living tomb, tapping out last weak messages, hearts pumping more and more heavily, and death playing cat and mouse in the torturing darkness.

Every man who signs in submarine service knows what may be in store for him. In time of peace he is in constant battle with the most remorseless of foes. He is trained to be ready for disaster and to behave with coolness when it comes. These men did so. Their commander, Lieutenant Naquin, asked that efforts be made to raise the ship before members of the crew were taken out. He tapped out a message: "Conditions satisfactory, but cold." That message ought to stand in naval annals beside some famous ones, no more heroic, sent in the heat of battle.

There was not only heroism in the submarine and in the men who saved the survivors. There were also coordinated action and precision. The rescue appliances worked. There is a heroic quality in the quiet resolution that takes men far below the surface of the sea, as it did take those who manned the diving bell, and enables them in that perilous position to work as accurately as a garage mechanic safe ashore. They were not only valiant. They knew their jobs.

Men whose home addressess covered 28 States, the Canal Zone, Hawaii, and the Philippines were in the sunken submarine. Most of them were not born to the sea. Some may never have seen it before they joined the Navy. But the great captains and the great sailors, not Farragut, nor John Paul Jones, nor Nelson, nor Drake, nor any of the nameless thousands of brave souls who have lived and died before the mast—none could have faced death more composedly than these men from the Kansas prairies, from Iowa, from Michigan, from the Tennessee mountains, from Arkansas, and Minnesota.

When the last submarine rusts at her moorings mankind may have cause to rejoice. We could not rejoice if the qualities that send men into dreadful danger in line of duty and that hold them firm in the face of death were likewise to rust away. They will not. And when they manifest themselves off the Isle of Shoals, as on many a sinking ship, on many a flooded river, in times of storm, whenever there is a call for courage, we salute them reverently.

New Deal Debt Dunking

EXTENSION OF REMARKS

OF

HON. DUDLEY A. WHITE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1939

Mr. WHITE of Ohio. Mr. Speaker, it is a long way between Ohio and Washington, D. C. The intervening distance and layers of Government red tape make it difficult for Ohio citizens to see how directly and how heavily the burden of continuous Government spending and borrowing rests upon their own shoulders.

In the fiscal year of 1938 the Federal Government took $335,417,098 in tax money out of the State of Ohio. Compare this with the $165,072,954 which the Federal Government returned to the State in direct payments and you find a shrinkage or difference of more than $170,000,000.

A prominent member of the majority party recently described this as the process by which a State is required to hand its shirt over to the Federal Government, then gets back only the shirt tail, and is supposed to cheer about the bargain. There you have the shirt-tail financing policy of the New Deal.

During the same period Alabama was putting $16,929,203 into the Federal Treasury and taking out $37,680,821; North Dakota was putting in $1,579,263 and taking out $39,900,148; Arkansas paid $8,046,468 and received $43,202,611.

That part of the story deals with receipts and expenditures. On top of that the burden of borrowing must be considered. This brings us to the national debt. Too many people have thought of it in times past as a debt that someone else pays. Now there is an awakening. It rapidly gains in force. The American people realize more and more each day the significance and direct effect of the incessant debt dunking to which the New Deal is subjecting them.

While every family in Ohio and other States is getting hit over the head with the New Deal tax club which now consumes so much of the Nation's purchasing power and thereby adds to unemployment, they glance out the window in a frantic search for help. Instead they find an even bigger and more menacing plug-ugly parked right there on their own doorstep, waiting for a chance to enter, barring their pathway, encumbering their property and what security they have left. It is the national debt—or, at least their share of it.

On the step closest to the doorway is the local debt. On the middle step is the State debt. On the first step is the national debt—not quite so close, but right there just the same.

What does it amount to?

The share of the national debt alone, on a per capita basis, which is chargeable against the citizens of Ohio amounts to $2,095,460,000.

The total tax value of all farms and property outside of municipalities in the entire Buckeye State is $1,572,639,000. This gives you a vivid picture of the extent to which the National Government has mortgaged Ohio taxpayers. Another $4,000,000,000 deficit for the current year will add about $203,723,000 more to Ohio's share of this Federal debt burden.

In other words, right this minute Ohio's part of the national debt burden is $522,821,000 greater than the tax value of every piece of farm land and other real estate from one end of the State to the other outside of cities and incorporated villages.

The same thing is true of every State in somewhat similar fashion. In recognition of National Debt Week I wish to present the following figures in order to drive home the facts to Congress and to the Government-mortgaged citizens in the various States, particularly Ohio:

States' share of the national debt, as of May 17, 1939

	Population [1]	Share of national debt [2]
United States	129,257,000	$40,227,673,187.61
New England	8,597,000	2,675,578,922.08
Maine	856,000	266,406,269.35
New Hampshire	510,000	158,723,420.99
Vermont	383,000	119,198,176.94
Massachusetts	4,426,000	1,377,470,316.29
Rhode Island	681,000	211,942,450.38
Connecticut	1,741,000	541,838,188.13
Middle Atlantic	27,478,000	8,551,768,945.08
New York	12,959,000	4,033,131,005.14
New Jersey	4,343,000	1,351,638,857.58
Pennsylvania	10,176,000	3,166,999,082.36
East North Central	25,841,000	8,042,297,885.94
Ohio	6,733,000	2,095,460,379.48
Indiana	3,474,000	1,081,186,597.10
Illinois	7,878,000	2,451,810,020.72
Michigan	4,830,000	1,503,204,163.50
Wisconsin	2,926,000	910,636,725.14

[1] Midyear estimate for 1937 (Statistical Abstract, 1938, p. 9; Daily Statement of the U. S. Treasury, May 17, 1939).

[2] Calculated by multiplying the per capita debt for the United States ($311.22) by the number of persons in each State.

States' share of the national debt, as of May 17, 1939—Continued

	Population	Share of national debt
West North Central	13,819,000	$4,300,782,264.07
Minnesota	2,652,000	825,361,789.15
Iowa	2,552,000	794,239,549.74
Missouri	3,999,000	1,241,466,130.06
North Dakota	706,000	219,723,010.23
South Dakota	692,000	215,365,396.72
Nebraska	1,364,000	424,507,345.55
Kansas	1,864,000	580,118,542.60
South Atlantic	17,260,000	5,371,698,522.17
Delaware	261,000	81,229,044.86
Maryland	1,679,000	522,542,309.69
District of Columbia	627,000	195,136,441.10
Virginia	2,705,000	842,167,798.43
West Virginia	1,865,000	580,429,765.00
North Carolina	3,402,000	1,086,788,600.20
South Carolina	1,875,000	583,541,988.94
Georgia	3,085,000	960,121,085.80
Florida	1,670,000	519,741,398.15
East South Central	10,731,000	3,339,727,511.09
Kentucky	2,920,000	908,769,390.77
Tennessee	2,893,000	900,366,386.13
Alabama	2,895,000	900,988,830.92
Mississippi	2,023,000	629,602,903.26
West South Central	12,900,000	4,014,768,883.89
Arkansas	2,048,000	637,383,463.12
Louisiana	2,132,000	663,526,144.22
Oklahoma	2,548,000	792,994,660.17
Texas	6,172,000	1,920,864,616.39
Mountain	3,792,000	1,180,155,318.43
Montana	539,000	167,748,870.42
Idaho	493,000	153,432,640.29
Wyoming	235,000	73,137,262.61
Colorado	1,071,000	333,319,184.08
New Mexico	422,000	131,335,850.31
Arizona	412,000	128,223,626.37
Utah	519,000	161,524,422.54
Nevada	101,000	31,433,461.80
Pacific	8,839,000	2,750,894,741.45
Washington	1,658,000	516,006,729.42
Oregon	1,027,000	319,625,398.74
California	6,154,000	1,915,262,613.29

Hon. James Hamilton Lewis

MEMORIAL ADDRESS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, May 29, 1939

On the life, character, and public services of Hon. JAMES HAMILTON LEWIS, late a Senator from the State of Illinois

Mr. SMITH of Washington. Mr. Speaker, when the history of the United States for the period commencing in the late nineties and down to the present time is written, the name of Senator JAMES HAMILTON LEWIS, of Illinois, will receive prominent mention. His will be one of the few names of Members of the United States Senate for this period which will live in history.

I was living in Chicago when Senator LEWIS established his residence there in 1903. Several years later, although a mere youth in my teens at the time, I first met Senator LEWIS during the heated campaign for the mayoralty between Judge Edward F. Dunne, afterward Governor and United States Senator, and John Maynard Harlan, son of Justice Harlan, of the United States Supreme Court, involving the issue of municipal ownership of the street-railway system of Chicago. Senator LEWIS campaigned actively for Judge Dunne and was an important factor in bringing about his election and was rewarded by being appointed corporation counsel of the city of Chicago. My father became quite well acquainted with Senator LEWIS, and some years later, when I was preparing for a career at the bar, Senator LEWIS suggested that I consider the advisability of going out to the State of Washington, from whence he had come to Chicago after serving as a Representative in Congress from that State, and there practice law and enter politics. I later followed his advice and have never regretted that I did so. When I was elected to the House and came to the Capital in 1933, Senator LEWIS extended me a cordial welcome when I called upon him, and still remembered our former associations in Chicago.

Senator LEWIS was a man of brilliant parts and one of the most eloquent orators of his generation. I have heard him speak upon almost every kind of an occasion and he never failed to captivate his audience. He possessed one of the most exact and copious vocabularies of any of our political leaders and his language was chaste and beautiful. He was widely read in history and literature and was familiar with the classics, particularly Shakespeare, whom he often quoted. He was also witty and a most entertaining raconteur and story teller. He was urbane and courteous and excelled in politeness and consideration for others. He was very kind and tender-hearted and was always trying to render others a personal service and make them happy. I shall always prize as one of my most treasured possessions a most kindly letter which he wrote me commending my efforts when the legislation for restoration of the pensions to the veterans of the Spanish-American War, which I had the honor to sponsor in the House, was passed, and became law in 1935. It was a generous act on his part and naturally touched me deeply. He was never too busy to perform similar acts of kindness, for he was truly one of Nature's noblemen, and personified the truth of Tennyson's line:

Kind hearts are more than coronets.

Senator LEWIS wrote the Two Great Republics, Rome and the United States, which I have read several times, a work which showed erudition and profound historical knowledge, and also contains comments of a lighter vein. I quote:

It is not only in great but also in smaller things that we see the ever-recurring resemblances between Roman and American conditions. Cicero's complaint, "Let me tell you that there is no class of people so harassed by every kind of unreasonable difficulty as candidates for office" finds a responsive chord in every modern American politician. His account of his campaign for the consulship at Rome, as well as the historical record of other Roman political contests, shows many points of similarity between the details of the problems and methods of ancient and modern political battles.

In the concluding paragraphs of this thought-provoking volume, Senator LEWIS, although by nature an optimist with an abiding faith in the perpetuity of our institutions, expresses words of warning which we would do well to heed. I quote:

It is plainly to be seen that conditions in the United States of America have tended toward those of Rome which preceded the latter's downfall. Particularly true is this of latter-day conditions in the United States. The monopoly of Crassus in town lots in Rome and the exclusive right to dictate the price of farm products by the Fabii and their successors, which produced riots in the country and uprisings in the cities, have their parallel in the "corners" of the stock exchanges and grain houses of America, and in the monopoly in oil and its elements. These methods and the domination of legislative bodies by these massive interests, the corrupting of the assemblies of the people, and the defiling of the courts have created a revolt in the hearts of the Americans and awakened an insurrection among the citizenship. These, if not abated by the Government's action in controlling these agencies or restraining with plenary punishment the perpetrators of the wrong, will surely reproduce a parallel in the results which befell the Roman Republic. Cicero has well said, "Governments, like all organized creations, have their time to perish and to fade. The same conduct of persecution or protection work on each alike in the final results"—a sure continuance of life or a sure result of certain death.

Let it be remembered that man is ever himself and mankind ever human. No ill will be borne that can be overthrown. It will all return to the first principle of force—Byron puts it well—as the moral of all human tales:

First freedom, then glory;
With that past—avarice—corruption—
Barbarism at last—
And all of history's volumes vast
Hath writ but one page.

It has been the dream of those who in war fought for, and in peace strove for, a just republic in the United States, that the awakened conscience of a people educated anew under a Christian era would be a guaranty against the repetition of those evils which harassed government and injured men in the days of the Roman Republic. It is now seen that this dream is being to a most

encouraging extent gratified. In America wrong is at last condemned because it is not right. Right is approved—for that it is right. Justice is praised and sustained because it is just to do so, and the oppression of man resisted and despised because it is unworthy civilized men and in violation of the dictates of conscience speaking the voice of God.

In this new era America is working out her destiny of equality of man and equity of mankind, and this by the methods of peaceful persuasion, dictated from the heart. War is abhorred and brotherhood of man cherished as a coming state of modern citizenship proving in all its effect the justice and right of the theory of the American Republic founded on the assertion that "just governments derive their power from the consent of the governed." Education, bringing enlightenment in all avenues of life's pursuits, is rapidly giving to the American man the assurance and security that his Government will be perpetuated by its citizens, not destroyed, will be glorified as an ideal after which other nations and people may pattern.

Our fathers' God, from out whose hand
The centuries fall like grains of sand,
* * * * * * *
Oh, make Thou us, through centuries long,
In peace secure, in justice strong:
Around our gift of freedom draw
The safeguards of Thy righteous law;
And, cast in some diviner mold,
Let the new cycle shame the old.

LECTURE—"THE ACQUISITION AND RETENTION OF CLIENTS"

Senator LEWIS was an able and successful lawyer and achieved a solid reputation as a trial lawyer. He had a retentive memory and could readily cite ad infinitum rules of evidence and precedents and decisions of the courts especially the great landmark cases of the United States Supreme Court. He lectured before the Illinois College of Law, and I just happened to run across a lecture which I heard him deliver on the subject The Acquisition and Retention of Clients, which contains much of his own philosophy of life and so many suggestions which would be invaluable even to veterans as well as neophytes at the bar, that I deem it worthy of inclusion.

It reads as follows:

The subject, how to get clients, is a practical one. It is not often mentioned by your teachers. Yet in the great battle of life it is constantly brought to your attention each day. A failure to understand the merits of this discussion means failure to the young lawyer. While an appreciate of its art oftentimes crowns those with success whom we least expect. How a lawyer gets his first client is a mystery. It might well be classed among the three great mysteries of life. Who are clients? Some one in difficulty. What caused the difficulty? Well to answer that would be to explain life. An illustration from a personal experience might be pardonable. As a young lawyer I was once approached by a man who had endorsed a note and had been sued. After listening to his story, I remarked: "If you had not endorsed that note, you would not have been liable." "Yes," replied the client, "if I had not signed that note, I would not be here." In other words, it is those difficult situations that give us our opportunities. It is up to us to be able to master them, and as we learn to do so our success is assured.

The person in difficulty is going to turn first to someone he knows, in whom he has confidence, and who will take an interest in his case. As a basic principle it behooves young lawyers to make friends. And in doing this your manner of treating people will be an important element. If you are not naturally sociable and approachable, break yourself into the habit of being easily approached. Take an interest in your first client's story. Treat his wrong as if it were your own. Inspire him with the confidence that you are not only loyal to him, but also not afraid to speak for him. Confidence in expression is a valuable requirement. Speak to the court as if you meant what you said. Even if you are defeated your client will give you credit if you fight earnestly and honorably his cause, which he desires vindicated. The first client comes from someone whom you know, and who has been treated pleasantly by you.

It might be suggested in connection with this idea, what is your object in entering the bar as a profession? To make money? If so you may be disappointed, as many of the highest rewards of this life do not go to the lawyer. In fact, the opportunity to make money is less than in many another business. Why? First, because all questionable methods must be avoided by honest lawyers. In fact, his living, his sustenance, are mere incidents to the fulfillment of that highest desire of all good lawyers. The development of the spirit of reason is one's own mind. The vindication of the principles of justice, form ever new and changing condition. To do this work requires the highest order of ability and the scorning of sordid things in life.

It might be said in this connection that technicality so misunderstood by laymen is but the vindication of some well-established principle of law; made for the good of human kind. Yet because that principle should come in conflict with some selfish interest of the human heart, it is condemned. An example might be in point. The principle in criminal law, that a venue must be proven in all cases, is sometimes overlooked in a $10 petty larceny charge. The criminal is set free because of failure to prove venue, and no one notices it. It is too small a matter to notice. Yet here is a case of a bank failure. A man is tried on the charge of embezzlement—amount, $100,000. The whole city is stirred to the highest point of excitement. A failure to prove venue liberates the criminal. The whole press of the city condemns the law and its technicality. When in truth the error is not due to the law but on account of its inferior servants who are supposed to administer it correctly.

This brings to us the point of distinguishing between attorneys at law and lawyers. The people can no more be fooled. The time has come in the history of the world where knowledge is so generally distributed that a lawyer must know his business if he expects to succeed. In the past too much confidence was given to the advocate, who with flights of oratory, was expected to blind juries to the true principles of right. To the advocate who, it was thought, had a stock of tricks which would stifle justice. Today the ordinary man would have been the extraordinary educated man of yesterday. This fact makes the advocate of today logical, and careful not to mistake facts; as false conclusions are too easily discovered and ridiculed. A natural reaction has resulted. The business lawyer, who is intensely practical, has come to the front. Today you can name on one hand the noted orators of the bar. Yesterday they could not have been counted.

It might be suggested in this connection that the capacity to illumine a subject will never grow stale.

Even the business lawyer needs this art. In fact, this requirement is a necessity in all lines of business. How many times have you gone into a store and purchased an article that you had no intention of doing, just because the young lady clerk impressed you with the fact that she knew just what you wanted? It is well to learn how to express your views forcibly and accurately. This art will stand you in stead all through life. Many a lawyer has lost his case because he was not able to think quickly and state plainly to the court his ideas. What good does it do you to express your ideas when it is too late? You will never get credit for what you know unless you are able to express yourself correctly on all occasions. It might be said in this connection that the work of the literary society is more important than ever. What has all this to do with making a client? Do you not realize that people make your clients?

Then all things that tend to impress people with your ability and reliability are essentials. You know many people, yet you deal with each man separately. It is the manner then that you treat each person that is important. In fact, the A, B, C lesson to learn is the manner in which you treat people. Cultivate the acquaintance of men. How many good lawyers are unable to make a living because they are unapproachable? Learn men. Be among men. Go where men are. Speak upon all occasions. If you are against an assessment, say so at the meeting of those interested. Those who believe as you do are your friends. Therefore, rule I of my address is to get friends, because they are your first clients, and are the stepping stones of success.

The natural result of having friends is that friends will bring to you their friends. In other words, the second class of clients are brought to you by your friends. Do not be small then in dealing with your clients, as much of your success depends in being able to have your clients go away pleased. Regulate your fee by the size of the results—not always by the amount of work done, as people are not always able to understand that feature of the case. Oftentimes it pays to be liberal. When it comes time to settle say, "Well, my friend, how much do you think I ought to charge?" He will often say more than you would yourself. Say, "Well, you say so much; I feel that it ought to be so much. Now, let us split the difference." This will leave a good taste in the mouth of your client and do much to encourage him to bring others to your office.

The third class of clients are those who watch your work in the courtroom. It is not strange that people should watch you while you are doing your work in the courtroom. It is more or less of an advertisement, and as such should be used legitimately. Are we supposed to live like beetles and hide our existence from others? Far from it. Assert yourself. Be not afraid to let others see you. Let your work show that you are qualified to call yourself a lawyer, and the fruit of your toil is sure to come.

The fourth class of clients come from the men you beat. It is often true that the man you beat is your next client, as all desire to succeed.

Success then brings success. This is more often illustrated in personal-injury litigation—a branch of the law that is a very good field for young lawyers, as education upon a good many different subjects is always needed. The directors of large corporations give very little attention to the trials of young lawyers until judgments, one by one, are entered against their corporation. Then they ask the question, Who is he? Then the question, Where is he?

In conclusion permit me to say, take part in politics. Do not heed the cry of many concerning the debasement of our politics. There can be no debasement of politics; but there can be a debasement of politicians. For this reason it is all the more necessary for you to do your part to upbuild the State which has done so much for us.

Again, do not permit success to blind us. Many a prominent young lawyer has had his career cut short because success swelled his head. He forgot the means by which he attained success and scorned the ladder that bore him up. If you tear away the foundation, the building must fall. So be diligent and mindful of all your deeds, and never forget the people, who are the foundation of your success as lawyers.

Senator LEWIS was beloved and honored by his colleagues in the Senate, and I am glad that he was 1 of the 15 Members of the Senate during our entire history of 150 years whose funeral services have been held in the Senate Chamber, the only other Senators who have been thus honored during the past quarter of a century being his own colleagues and friends with whom he served, Senator Thomas J. Walsh, of Montana, and Senator Joseph T. Robinson, of Arkansas.

Mr. Speaker, men in public life are often misjudged and unjustly condemned; they are made the object of ridicule and contumely, sometimes even of libel and slander; and it is open to question whether public service is worth the price it costs. However, when the career has ended and the book of life has been closed, and knowing and understanding men and women render their meed of praise and appraisal and the people themselves give expression to their love and gratitude and join in loving tribute with the colleagues of the public servant who has departed, we conclude that after all, "public service, if faithfully performed, is worth all that it costs."

Senator LEWIS was a great man, lawyer, orator, statesman, scholar, author, and friend.

Alike are life and death
When life in death survives
And the uninterrupted breath
Inspires a thousand lives.

Were a star quenched on high
For ages would its light
Still traveling downward from the sky
Shine on our mortal sight.

So when a great man dies,
For years beyond our ken,
The light he leaves behind him lies
Upon the paths of men.

The National Debt

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

RADIO ADDRESS BY HON. T. V. SMITH, OF ILLINOIS

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address by the gentleman from Illinois, Hon. T. V. SMITH:

My fellow countrymen, I am only an ignorant man and a politician, but I listen to the radio and I read the Book of Job.

Patience, the people is thy name! Patience, we politicians are thy beneficiaries. Gallant today is the patience of the people with us politicians, their servants. Discouraged over one group of us the people turn to another group of us, and this they do over and over again. Let it be said on our side that our intentions are worthy of this patience, even when our actions are disappointing. There are few of us politicians in any party who would not do all in our power to give aid to the distressed and to increase the prosperity of all the people. We would if we could, and if we don't, it's because we can't. The chief reason we can't do more is that we are ignorant of the causes and so of the cures of the greatest evils distressing our people.

The mounting national debt—celebrated by Republicans throughout this ceremonial week—is such an evil. Since this debt is as much ours as it is the Republicans, I think that we ought to help them celebrate it properly. They presided over arrangements that necessitated the debt; we contracted the debt under the lash of the necessity inherited from them. On any proper understanding, therefore, of the foundations of democracy, we are yoked together, brothers whether in debt or out of debt. But now we're in debt, and we ought not to make the people suffer the more because of any family quarrels between us.

Like brothers, indeed, we have much in common. We have this in common that neither of us can lessen the debt by talking about it. We have this in common, that neither of us supposes that the Budget can be or should be balanced immediately. Senator VANDENBERG allows 2 years plus. Senator TAFT gestures indefinitely toward the future. Congressman BARTON thinks that we must bring taxes down before we can raise up the prosperity to balance the Budget. And Prosecutor Dewey—well that deponent sayeth not; he only saweth political wood silently. But we have this also in common, that both parties and all of us politicians want to and mean to balance the National Budget as soon as possible.

I

Let us Democrats and Republicans celebrate debt week with one another, therefore, and with the patient people of these United States. The people, like Job of old, Job personified for our age, are afflicted and bear it patiently. Unlike the patient people, however, the professional friends of the people complain bitterly and cry nightly aloud over every open airway, "Debt, debt, debt!" They cry aloud as "comforters" of the patient people, but their "comforting" calls for even more patience from the people.

Job's first friend, Eliphaz the Temanite, alias Senator VANDENBERG, friend of the people from Michigan, brought in his report last Sunday night in a forum over whose panel I was privileged to preside. He told the radio in a voice of deep but well modulated emotion that the people's stock was low, was indeed in danger of being wiped out altogether by the debt—but from this deluge of debt he himself had been spared to tell the tale.

Then Job's second friend, Bildad the Shuhite, alias Senator TAFT, friend of the people from Ohio, came Monday night to mourn for another radio hour the dolorous debt. He reported, did Bildad the Shuhite, that the people's debt is "immoral," he reported that it is "dangerous," he reported that it is all "in vain." All this, Bildad TAFT, the Shuhite from Ohio, reported—but from this deluge of debt he himself has been spared to tell the tale.

Then came last night Job's third friend, Zophar the Naamathite, alias Congressman BRUCE BARTON, of Wall Street, the man whom nobody knows save as a friend of the people, indeed as public relations counsel for the patient people. He confided to the microphone this "new thing," that businessmen do not like taxes. He revealed that he had at least 20 friends, "presidents and chairmen of boards of directors," to whom he could write and who would write back to him "Dear Bruce." He reported that with all these friends and with all his pull he couldn't get a job for Johnny O'Hearn. Since businessmen don't like to pay taxes, he let the people in on the open secret that unless the Republicans are allowed to rule the country, there might not be any country left for anybody to rule. All this Zophar, the Naamathite from Wall Street, reported to the people—but from this deluge of taxes and debt he himself had been spared to tell the tale.

II

All these things spake Job's three friends mournfully over the radio, friends all three of the patient people.

"And Job answered and said [I'm quoting now from the Scriptures]:

"No doubt but ye are the people, and wisdom shall die with you. But I have understanding as well as you; I am not inferior to you. * * *

"I am as one mocked of his neighbors. * * * He that is ready to slip with his feet is as a lamp despised in the thought of him that is at ease.

"The tabernacles of robbers prosper, and they that provoke God are secure. * * *

"But ask now the beasts, and they shall teach thee; and the fowls of the air, and they shall tell thee.

"Or speak to the earth, and it shall teach thee."

III

Yes, let us "speak to the earth," and to the people who are the salt of the earth. They will teach us of the debt and show us another side of it to celebrate. Here comes a homeowner, not a friend of but a plain man of the people. He reports that his home was saved for him and for his family by a Federal loan upon it. He says that that part of the national debt is to him an investment; an investment in him. Rising up behind him are a cloud of witnesses to what Bildad the Shuhite calls "waste," calls "immoral," calls "dangerous," calls "in vain." Count these witnesses. One, two, three * * * No; we cannot count them: they're too many. I have the exact number of them here: 1,021,818 whose homes have been saved by what these grieving friends of Job and the people call waste and dismiss as that nuisance "the public debt."

Of this million and more, 81,230 are in the home State of Eliphaz VANDENBERG, the Temanite of Michigan; 98,557 are in the home State of Bildad TAFT, the Shuhite of Ohio; and 60,154 are in the home State of Zophar BARTON, the Naamathite of New York.

Let us "speak to the earth," and let its people speak back to us of the debt. Here comes a farmer who was losing his farm for want of credit to stay the mortgage. He reports that his part of the national debt he is paying back while living still upon the land he loves. Behind him stretch a cloud of witnesses, 869,642 strong; 30,401 of them are in Michigan with Eliphaz, 30,061 in Ohio with Bildad, and 16,098 are in New York State with Zophar.

Let us "speak to the earth," and let its people tell us of the debt. Here rises a mother to report that she has a stake in the debt, a stake not merely for herself but for all dependent children and for crippled children everywhere. Behind her rise a national throng, 264,774 mothers and 650,369 helpless children. They have survived to tell their tale about the debt, a tale of gratitude for this chance to live and to grow.

Let us "speak to the earth," and still others will speak back to us of the debt. We must ask to stand aside for this hour the businessmen aided by the R. F. C., the railroads kept running, the banks

saved. They can speak at any time. For the moment we must hear those not so easily heard when professional friends of the people monopolize the microphone to cry down the debt for the people, the debt of the patient people.

Here comes, finally, a man on relief. We must hear him and his on the debt, for the friends of Job have overlooked this man, this very brother of Job himself. He reports that the public debt has been his stake in government and in life during these trying years. He says that it is impossible to lessen public spending until private spending provides him a job. He says that spending ought to be increased rather than lessened. He says he doesn't understand the whys and wherefores of unemployment, but he means to work, he says, or to eat without working. But he much prefers, he says, to work for what he eats. He says that none will hire him, none save the Government alone. He says that he speaks for many, many more. Indeed, see rising yonder behind him to witness to his words, a mighty multitude of men. There of these men, 2,976,140; of Job's brothers, forgotten by Eliphaz in Michigan, we count 139,000; of Job's brothers forgotten by Bildad in Ohio we count 248,000; of Job's brothers forgotten by Zophar in New York we count 237,000.

IV

Yes, from the shadows of Debt Week let us "speak to the earth," and the earth will speak back to us. We owe it to the people to hear what they say of the debt. They say that bad as the debt is, there are debits worse than debt. They say that if the country has to see bad days, we ought to stand together and see them through peacefully and fruitfully. They do not say, with Bildad the Shuhite of Ohio, that public spending is "immoral"; they do not say with him that the efforts to save them have been "in vain." They think contrariwise. It is through those very efforts, they say, that they have been spared to tell their tale of the debt. They say that they are mocked of their neighbors. They repeat uneasily, in the language of the older Job, that "He that is ready to slip * * * is * * * despised in the thought of him that is ease."

And back of these millions of weary witnesses to the courage, the humanity, and the prudence of the policy that dared the debt for the sake of the debtors, I hear the poet of the people, "The People, Yes"—or is it the very voice of Job himself?—saying:

Who can make a poem of the depths of weariness
Bringing meaning to those never in the depths?
Those who order what they please
When they choose to have it—
Can they understand the many down under
Who come home to their wives and children at night and night after night as yet too brave and unbroken to say, "I ache all over?"
How can a poem deal with production costs and leave out definite misery paying a permanent price in shattered health and early old age?
When will the efficency engineers and the poets get together on a program?
Will that be a cold day? Will that be a special hour?
Will somebody be cuckoo then?
And if so, who?
And what does the Christian Bible say?
And the Mohammedan Koran and Confucius and the Shintoists
And the encyclicals of the Popes?
Will somebody be cuckoo then?
And if so, who?

V

CARL SANDBURG, The People, Yes.

The friends of Job, the patient people, talk of a debt that can be measured in money. They have measured it, weighed it, counted it, and many of them have even helped vote it in Congress. Of the service this debt has been to debtors they do not speak. Senator TAFT, the Shuhite of Ohio, does indeed speak of it, but this is what he says: "* * * balancing the human budget * * * this is merely a juggling with words, and doesn't mean anything."

But the debtors themselves speak of a debt that's different. To them the human side of the budget is themselves. This debt of which they speak is reflected in the living gratitude of the helpless who have been helped. This is the debt born of sore necessity, a debt measured in hours of anxiety, a debt tinged with the pathetic hope of better days to come. The debt of which the debtors speak is a debt to our national destiny. Not to contract that debt would have been revolutionary recklessness. To drum up hysteria against it now is to forfeit our common faith in the liberty, in the fraternity, and, above all, in the equality of our American way of life.

Democrats must speak respectfully of this debt of the debtors, a debt vastly different from that which Republicans lament so lustily throughout this ceremonial week, the week of their self-appointed Lent. Professional friends of the people can afford from the vantage of their own security to ask that spending be stopped so that men may go back to private work, thus restoring prosperity and beginning to pay off the debt. The people themselves, insecure and helpless, must demand work first so that spending can then be safely stopped, thus restoring prosperity and beginning to pay off the debt. Democrats must speak up for the people, asking firmly that the secure shall take their share of the risk involved.

That's what it means to be a Democrat. To ask the helpless to assume the risk of a premature policy of retrenchment, that's what Debt Week is rapidly making it mean to be a Republican. The issue between our parties is simply this: Who shall take the major risks for prosperity—those comfortable in their ease or those helpless in their poverty? Shall we quit spending in the hope that men will get private jobs, or shall we give men private jobs so that the Government may quit spending? We Democrats say that "friends of the people" should be friends to the people.

It is fitting that we Republicans and Democrats, brothers in both our ignorance and our hope, should celebrate Debt Week together. Celebrate it first by rereading the Book of Job. Reach there for your Bible and see who really proved friendly to the man with boils. Be encouraged by the fact that Job himself got well, recovered his prosperity, and lived happily ever afterward. Be warned by what happened to his friends—Eliphaz the Temanite, Bildad the Shuhite, and Zophar the Naamathite. Read there what happened to these three friends, friends all three of the patient Job.

Preserve the American Market for the American Farmer

EXTENSION OF REMARKS

OF

HON. GERALD W. LANDIS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

Mr. LANDIS. Mr. Speaker, the greatest contribution which we can make toward stabilizing our economic life would be to preserve the American market for the American farmer. The hope of our farmer is an enlarged domestic market against low-cost foreign producers. The American farmer has seen his foreign market disappear and his home market gradually surrendered to the foreign producer. The farmers of America do not believe in free trade such as we are approaching under the reciprocal-trade treaties, and they are not going to permit this to go on much longer. They do not believe in trading the best markets in the world to increase the standard of living abroad.

Under these trade treaties this administration has been improving the buying power of foreign countries. They have been exporting jobs and creating prosperity in other countries. What we need is the development of some buying power and prosperity in the United States.

FOREIGN BEEF

The purchase of foreign beef is a direct blow to the cattle industry of the West. This industry employs American labor and pays taxes. Western beef is far superior to any similar produced in any part of the world.

These trade treaties have destroyed the cotton and dairy industries. They will eventually ruin all of our farmers. The competitive farm imports for 1937, valued at almost $1,000,000,000, brought a glutted market with falling prices and distress to the American farmer.

Millions of bushels of agricultural products are being imported into our country from foreign lands every year. Let us take the American corn-refining industry for an example. It is an industry which grinds from sixty-five to eighty millions of bushels of corn annually to provide a variety of starches. It is a dependable industrial outlet for American farm produce. This industry also furnishes employment to the heads of several thousand American families. This industry is threatened by the importation of low-grade foreign starches. Importations in 1936 were 306,000,000 pounds and in 1937 over 450,000,000 pounds.

In addition to the loss of the home markets and billions of dollars to our farmers, several millions of our unemployed would have had work on the farm if our own home markets had received the proper protection.

We should not sacrifice the birthright of the American farmer. The welfare of our own farmers should be considered before the welfare of foreign farmers.

Feeding our fellow citizens has always been and always will be the main job. We must insist on a consistent agricultural policy that will enable us to grow in America the things we need and to guarantee for American farmers the

right price for his products and the fullest advantage of the American markets.

We need a protectionist policy that would save the markets of the United States for our own farmers except for those few raw materials that must be imported, such as rubber, tin, coffee, and silk.

Look at the agriculture situation in Indiana, March 1939:

Corn 0.37 below parity on 1,000 bushels, the farmer is losing	$370
Wheat 0.55 below parity on 200 bushels, the farmer is losing	110
Hogs 1.89 below parity on 10,000 pounds, the farmer is losing	189
Butterfat 0.08 below parity on 1,000 pounds, the farmer is losing	80
Eggs 0.11 below parity on 100 dozen, the farmer is losing	11
Total	760

Seven hundred and sixty dollars is the loss to the average $5,000 Indiana farm. How long can we maintain our homes, churches, and schools with this income?

I for one am opposed to these trade treaties. I voted against appropriating the sum of $225,000 to carry out the reciprocal trade agreements program. I do not wish to further the importations of competitive foreign products which displace the products of our farms and factories and thereby add to the ranks of our unemployed.

The very least to which the American farmer is entitled is the American market. There will be no prosperity in America until the American market is restored to the American farmer.

The Salmon Industry in Oregon and Washington

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

ARTICLE FROM THE PACIFIC FISHERMAN FOR APRIL 1939

Mr. ANGELL. Mr. Speaker, one of the great industries of the States of Oregon and Washington is the salmon industry. No effort has been spared to protect and develop it. In considering the Bonneville project the protection of this important industry was of primary consideration.

The construction of the Bonneville project in the Columbia River between Oregon and Washington involved a serious problem as to the procedure necessary to protect migrant fish which must pass through the dam. A careful scientific and technical study was given to the problem, and as a result there was constructed as a part of the project an extensive system of fish ladders, elevators, and bypasses for taking care of fish life passing both up the river and down. These provisions have not as yet been fully completed, but the major portions, however, have been completed and have been in operation since the dam was finished.

The Government has made a careful study of the operation of these facilities for the passing of fish up and down the river for the full period from May 7, 1938, to January 31, 1939. During this period approximately a half million salmon and steel-head trout were counted going up the river over the dam. This study was made by Mr. Harlan B. Holmes, aquatic biologist, and Mr. Frederick G. Morton, inspector of fishways operations, both of whom were formerly members of the staff of the Bureau of Fisheries and who were loaned to the United States Army engineers in order that their expert services might be available in connection with the operation of the Bonneville Dam. These experts have recently written an article which appeared in the Pacific Fisherman in the April issue, detailing the results that have been achieved by the operation of these facilities. It is of such importance in connection with this project and the fishing industry of the Pacific northwest as well as for study in other projects of a similar nature where fish life is involved that I desire to extend it in the CONGRESSIONAL RECORD so that it may be available for study by all who are interested in this problem.

The article is as follows:

[From the Pacific Fisherman of April 1939]

BONNEVILLE'S FIRST YEAR

(By Harlan B. Holmes, aquatic biologist, and Frederick G. Morton, inspector, fishways operations)

On February 14, 1938, the river level above Bonneville Dam was raised to the point that water started flowing through the permanent fish ladders. Since that time the runs of fish for a full year have passed the dam, thus permitting an appraisal of the success of the fishways.

Due to the magnitude of the fish runs involved and the publicity that the problem of fish protection has received during the 4 years of construction, everyone who is interested in fish conservation has looked with keen interest to the results of this first year of operation. Those who have been required to rely upon newspapers and magazine comments have found decidedly conflicting reports. Among the thousands of people who visited Bonneville Dam during the summer, probably the majority saw few, if any, fish, and many of these visitors went away with a feeling of doubt regarding the success of the fishways. To the experienced observer, especially to those who have been responsible for the design and operation of the fishways, this failure to observe great numbers of fish has been one of the greatest sources of satisfaction. The continuous absence of any accumulation of fish below the dam gave assurance that the fish were passing as rapidly as they reached the obstruction. The experienced observer, further, is not disturbed by failure to observe significant numbers of fish in the ladders. The individual pools of the ladders, each having a surface area of 40 feet by 16 feet and a depth of 6 feet, give ample space for the fish to rest and to maneuver for the climb of only 1 foot to the next higher pool. It is decidedly the exception, rather than the rule, for a fish to jump clear of the water. A large proportion of the fish swim through the 2-foot-square submerged opening that is provided in each of the partitions between pools. The fish that pass over the partitions usually swim through the sheet of water which overflows this partition, seldom breaking the surface.

FISH COUNTING

Fortunately, it has not been necessary to base conclusions as to the success of the fishways upon this negative type of circumstantial evidence. Each fish is identified, counted, and recorded as it passed the upper end of the ladder. The counting stations consist of picketed barriers which block the passage of fish. In each barrier are three gate-controlled openings 2 feet wide through which fish may be permitted to pass. To facilitate the identification of the species of fish, there is a submerged, white platform over which the fish must pass as they leave the counting gate. The gates are opened only while an observer is on duty to tally the number of each species of fish on mechanical recording machines.

The counting stations were installed on May 7, 1938, since which time a complete record has been maintained of all species. No doubt there have been minor errors in identification of species, especially among the so-called scrap fish, such as suckers, chubs, and squawfish. Otherwise, the counts are substantially exact except in the case of the lamprey (eels), whose slender form permits many of them to pass through the 1-inch picket openings adjacent to the counting gates. The count of lampreys, however, is unimportant.

Throughout the greater part of the season one counting gate in each ladder was operated for 16 hours a day. The counter usually observed continuously for about three-quarters of each hour, taking the remander of the hour off to record the counts and rest his eyes from the confining task of looking continuously into the water. The procedure of counting for only 16 hours a day and leaving the gates closed at night was based upon a general knowledge of reduced activity of salmon at night. This condition was verified by counting 2 nights a week.

It was found that an average of about 4 percent of the salmon would pass during the 8 hours at night, and it was observed that no unfavorable condition was created by forcing this small proportion of the fish to wait until daylight to continue its migration. Some of the scrap fish react quite differently. Suckers, for example, are less active during the middle of the day and more active at night. Night counts represented about 14 percent of that species. In the case of lamprey, about a half of the run passed during the 8-hour period at night.

For a period of about 2 weeks in September, at the peak of the run, when the daily counts of salmon and trout ranged from ten to twenty thousand fish, a second gate at each counting station was operated through the middle of the day and counting was continued through the night. As the runs dropped off and the days became shorter, counting time was reduced until finally fish passage was permitted through only one gate at a time, one man making all the observations, by alternating between the two counting stations. In order to secure a complete record, counting has been continued regularly on this basis although the runs have decreased to as low as 45 salmon and trout for the entire month of January.

As the daily fish count for the preceding month usually has been published in each issue of the Pacific Fisherman and a summary by months was published in the February issue, the details will not be repeated here. The totals of the principal species for the period of May 7, 1938, to January 31, 1939, are as follows: 271,805 Chinook salmon, 107,026 Steelhead trout, 75,040 Blueback salmon, 15,168

Silver salmon, 2,119 Chum salmon, 2,227 miscellaneous trout, 5,274 shad, 44 sturgeon, 281,873 suckers, 57,542 squawfish, 19,465 chubs, 15,189 carp, 3,122 whitefish, and 227,627 lamprey (eels).

CONTINUOUS PASSAGE OF FISH

The daily count of fish varied tremendously. At the crest of the spring freshet, on May 31, the count dropped to 15 salmon and trout. The opposite extreme of 20,322 of these species was reached on September 9. Such fluctuations in the number of fish were known to be a normal feature of the Columbia River salmon runs. A general knowledge of the grosser fluctuations in the runs was available from accumulated commercial fishery catch statistics, but this information was not sufficient to indicate the exact time or magnitude of the fluctuations, nor to form the basis of reliable estimates of the actual number of fish that should pass Bonneville at corresponding periods. It appeared that it should be possible to utilize commercial catch statistics to observe individual fluctuations in the abundance of fish as they approached Bonneville. The presence or absence immediately thereafter of similar fluctuations in the counts of fish passing through the fishways then should indicate how readily the fish passed the dam and thus serve as a check on the efficiency of the fishways at the dam.

An opportunity to test this hypothesis occurred during the first week of counting. The commercial catch of Chinook salmon in the 40-mile stretch of the river between Vancouver, Wash., and Bonneville showed a distinct peak on the night of May 9–10. The count of fish passing Bonneville reached a peak the following day. Graphs of the two sets of data show essentially the same trend toward the peak and toward the decline as the run dropped off again. Similar examples were observed later and in other species, all indicating that fish passed through the Bonneville fishways within 1 or 2 days after passing the commercial fishery 10 to 40 miles below the dam.

PASSAGE THROUGH BACKWATER AREA

There has been a general tendency on the part of those who were not familiar with details of the project to anticipate that raising the water level at Bonneville would create a typical lake in which the velocity might not be sufficient to direct the salmon in their upstream migration. The natural depth of the river between Bonneville and The Dalles was in many sections as much as 30 feet at low water. Raising the water surface by the construction of the Bonneville Dam approximately doubles the sectional area in the pool at low flow. The velocity is therefore only reduced by about 50 percent, and still remains materially higher than at some places below the dam.

The fact that changes in the river above Bonneville did not disturb the passage of fish through the pool was determined by a reverse of the procedure used to trace the fish through the fishways from below the dam. In this case the fish counts were compared with the commercial catches at Celilo Falls, 50 miles above the dam. The peak of abundance of Chinook salmon described above appeared at Celilo 2 or 3 days after passing Bonneville.

A most convincing case for comparison was obtained in July, when the lowering of the water level above the dam for construction reasons impaired the operation of fishways for a period of 5 days. At this time the run of blueback salmon was at its peak; and while it is estimated that during these 5 days about 12,000 Bluebacks reached the dam, only 4,343 passed through the fishways. This accumulation of fish then passed through during the next 2 days at normal operation, 8,407 being counted the first day and 4,523 the second day. Nearly identical fluctuations were observed in the commercial catches at Celilo. A correspondingly abrupt drop occurred in the catch at Celilo 2 days after the interruption in passage at Bonneville, and after the resumption of normal passage at the dam, a corresponding increase appeared in the catch at Celilo during the succeeding second and third day. The trends of the runs of Steelheads and Chinooks on this occasion were not as distinct as in the case of the Bluebacks, but it appears that they may have taken from 5 days to a week to reach Celilo. At no time was there any indication of extensive delay, and surely no failure of the fish to continue their migration.

Further evidence of the unhampered movement of the fish through the backwater area is found in the season's operations at the salmon egg-taking stations located on Wind River, Little White Salmon River, Spring Creek, and Big White Salmon River, all of which are located along the backwater area. These stations collectively obtained about 42,000,000 Chinook salmon eggs, which is more than 10 percent above their average.

FISHWAY OPERATION

In the design of the fishways for Bonneville Dam a great deal of attention was given to means of attracting the fish to the fishway entrances. It was believed that in the absence of an attraction greater than that provided by the simple flow from the ladders, the fish might become injured or seriously delayed while searching for a route of passage. There accordingly was developed a combination of features known as a collecting system, which consists essentially of extensive auxiliary water supply and enlarged fishway entrances. In the collecting systems as installed at Bonneville the flow through the ladders can be augmented about twentyfold, to give a total of at least 8,000 cubic feet of water per second to attract the fish to the fishways. As a matter of comparison, the flow of the Willamette River is less than this amount for an average of 3 months a year.

The most elaborate collecting system is located at the powerhouse in the south channel of the river. The only flow in this channel is that which passes through the turbines and fishways. As very little power so far has been generated, few fish have been attracted into the south channel, and this collecting system, therefore, has not received a real test.

The collecting systems at each end of the spillway dam in the north channel have received a thorough trial. The dispatch with which the fish passed the dam is evidence of their success. Experiments conducted to determine the merit of the auxiliary water supply clearly demonstrated its advantages. At times of high river flow the fish seemed to follow closely along the shore lines, where they readily found the fishway entrances. Later in the season, when the peak of the run of Chinook salmon coincided with reduced river flow, the fish spread more widely and a few were observed each day in the rough water immediately below the dam. It is believed that a few fish were fatally injured in this area, but the number was insignificant.

Each collecting system is designed to direct the fish to the dual fishways in the form of a fish ladder and a pair of fish locks. The ladders were the first to be available for use, and their complete success immediately was demonstrated. The fish locks have been used only experimentally; but from the tests made it appeared that the fish entered the ladders more readily than they did the locks. It also was found that a fish trap to prevent the fish from leaving the lock after having entered is a feature essential to their success. Traps were included in the design but were omitted in construction until their need has been demonstrated. In the course of the experiments 4,637 salmon and trout passed through the fish locks.

An additional fishway known as the Tanner Creek bypass, which receives water from above the dam at the extreme south shore and has its entrance at the mouth of Tanner Creek, about 2,500 feet below the powerhouse, was temporarily deferred; but work recently has been resumed on a schedule calling for completion in August of this year.

PASSAGE OF DOWNSTREAM MIGRANTS

Throughout the consideration of fish protection at Bonneville Dam, it has been recognized that the passage of downstream migrants presents more uncertainty than that of upstream migrants. This is due mainly to the difficulty of observing small fish in large bodies of water. Little was known of the habits of the small migrants or of the hazards to them of different water courses. It obviously was impracticable to screen a major part of the flow of the Columbia River with mesh small enough to prevent passage of small fish and thus to divert the downstream migrants away from the routes that might be considered hazardous. The program adopted for downstream migrants accordingly was one of providing as many definitely safe routes as practicable and attracting as many of the fish as possible to these routes.

The definitely safe routes that were provided include the three fish ladders, five special bypasses, and the ice sluice at the powerhouse. Extensive laboratory and field tests seem to justify inclusion of the turbines among the safe routes, leaving the spillway as the only questionable route. Upon observing the turbulence of the water immediately below the spillway, one may justly become uneasy regarding the safety of the little fish. This anxiety is relieved, however, when it is recalled that extensive runs of fish are required to pass through equally rough water at points such as Oregon City Falls, Celilo Falls, and Rock Island Dam.

If the downstream migrants are distributed evenly across the river, all but an insignificant portion of them surely pass through the spillway. On the other hand, if it is correct, as generally contended, that the little fish remain near the shore, a large portion should find their way to the bypasses. The bypasses themselves carry only a small volume of water, but they are accompanied by screened auxiliary water intakes, forming a combination that may be compared with the collecting systems for upstream migrants. A large volume of water flowing into the structure serves to attract the fish and to direct them to the bypasses.

Various observations have been made to determine the success of passage of fingerlings. The shore lines of the river below the dam have been observed at frequent intervals for evidence of injured fish that might be washed ashore, but none has been found. The men who count upstream migrants also record the number of fingerlings that pass downstream through their counting gates. A trap operated in one of the bypasses gives a record of the number of fish following that route, and trap nets have been used at several points to check the activity of the fish. Upon the basis of these findings, minor changes have been made in the structures to better direct the fish to the bypasses.

It was anticipated that there would be numerous adult steelheads migrating downstream after spawning. While it was recognized that a large proportion of these fish might pass through the spillway without being observed, it seemed they would be in evidence at other points, such as in the ladders and the screened auxiliary water intakes. In the course of the year's observations, however, only six were seen. In the case of adult shad, a larger proportion was observed going downstream. Out of 5,274 counted on their way upstream, 40 were observed in the ladders on their way down again.

It is of interest to note that nearly 400,000 scrap fish, including suckers, chubs, squawfish, and carp were counted as they passed upstream through the ladders, and that only 55 adults of these species have been observed on their way downstream.

PROBLEM IS CONTINUING

Summarizing the year of experience with the fishways at Bonneville Dam, it is believed that a record has been established in the successful passage of upstream migrants by means of artificial facilities. Surely no runs of fish even approaching the magnitude of those at Bonneville ever before have passed through fishways.

All classes of fish have passed without apparent delay. The writers know of no other instance in which major runs of fish pass through fishways without first accumulating below the obstruction to the extent that their presence is conspicuous.

The situation relating to downstream migrants remains more of an uncertainty, due to the inability to make direct observations. There is no evidence, however, that the young fish are being injured.

In conclusion, it is recognized that the success of the first year's experience cannot be taken as evidence that the problem of fish migration at Bonneville is completely solved, leaving only routine operations of the fishways to follow. Conditions will be constantly changing. As more power is generated and a greater proportion of the flow is diverted from the north to the south channel, the fishways at the powerhouse, which have been little used as yet, must carry a large proportion of the fish. At the same time, the reduced flow through the spillway will present problems of attracting fish to the fishway entrances in the north channel. Such changes fortunately will be gradual, giving opportunity for adjustment to meet conditions as they arise. The Army engineers, being fully aware of these problems, have spared no effort in the construction and operation of the fishways, and continuance of this policy is assured.

Some Republican Chickens Coming Home to Roost

EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

ARTICLE BY ARTHUR KROCK

Mr. BUCK. Mr. Speaker, in view of the forthcoming vote on the so-called Townsend plan, I believe it would be of interest to the Members on both sides of the House to see how one of the foremost political commentators in America, Mr. Arthur Krock, writing for the New York Times, regards the situation.

Under leave granted me, therefore, I insert an article by him, appearing in the issue of May 25, 1939, in the New York Times:

[From the New York Times of May 25, 1939]

IN THE NATION—SOME REPUBLICAN CHICKENS COMING HOME TO ROOST

(By Arthur Krock)

WASHINGTON, May 24.—A discouraging and confusing circumstance in the 1938 elections was the alliance between many successful Republican candidates for Congress and Dr. Townsend. Discouraging, because it aroused doubt that the New Deal's political opposition was concerned with much more than getting office by out-promising Treasury drafts. Confusing, because it gave point to the argument that the antiadministration trend apparently revealed by the voters was local and not national—an argument the President has steadily made.

After the election Democratic statisticians estimated that more than 60 new House Republicans and three new Senators had either embraced or flirted with the Townsend scheme, and thus defeated Democratic candidates who had declined to attempt what has been called "this cruel hoax" of elderly citizens. Majority Leader RAYBURN of the House said about this time he was determined to compel the new Representatives concerned to vote on Dr. Townsend's proposal through the public process of a roll-call. Today the Ways and Means Committee reported, without recommendation, the latest version of the $200-a-month pension plan for the elderly, to be financed by a transactions tax. Now those who promised or hinted in the 1938 campaign will have to go on record, as Mr. RAYBURN vowed they should.

If the expected happens in the House the display will be one of those which expose an unpleasant aspect of politics in a democracy. There will probably be examples given of retreating, dodging, and scared redeeming of reckless campaign pledges. The defeat of the bill is uniformly predicted. The news will be in the names on the roll call and the names missing therefrom. When it is remembered that the successful 1938 Republican campaigns in Ohio and Massachusetts were among those in which the New Deal critics encouraged the Townsendites, the political newsworthiness of the roll call can be anticipated.

COMFORT FOR THE DEMOCRATS

On this vote, unless many Republicans repudiate the intimations they gave during their campaigns, the Democrats will make a much better showing of responsible stewardship of the money of the taxpayers. In many instances this will require courage, for in certain sections of the country the Townsendites are well organized and Republicans aspiring to Congress are their spokesmen. But the Democratic leaders have assured Members in this position of a stay and comfort soon to come. They have promised to exert every effort to move up to 1940 from 1942 the first old-age payments under the Social Security Act and to resist every attempt to lower the benefits.

Only lately, and especially after the unworthy Republican display in 1938, have the Democratic leaders in Congress and the political managers of the administration realized the bad politics inherent in the 1942 payment plan. Their decision to protect themselves by advancing the date to the next general election year is comprehensible. In contrast to certain successful Republican congressional campaigns it assumes almost respectability.

As the Social Security Act was written the first benefit checks would go out January 1, 1942, nearly 14 months after the next election in which President Roosevelt and his policies will be the issue. Hardly a voice, even those belonging to sincere and courageous members of the Democratic economy bloc, has been raised against the amendments advancing the date. The President and the Cabinet are understood to support the plan informally, and both moderates and new dealers among the Democrats are said to be generally in line.

IN THE SAME PARTY BOAT

Though the moderates and the new dealers will probably engage in bitter primary and convention struggles next year, all are gathered under the Democratic label, and they have in this respect a common interest. Having been confronted by Republican tactics that were as reckless and demagogic as any in recent times, they have prepared to protect themselves with nothing like as much damage to the Treasury.

The first old-age pensions under the existing plan average about $25 a month, and they are not likely to be reduced by the amendments. A citizen who earned a total of $2,000 in the 5 years before the payments begin would get $10 a month from Washington, and $25 would go to the citizen who has earned $15,000 in those 5 years. This is no match for the luxurious Townsend scale of $200 a month which in 1938 was endorsed or encouraged by many Republicans now in Congress or in control of State capitols. No monthly spending commitment goes with it, and no transactions tax. But it constitutes a responsible acceptance of the theory of old-age benefits, and politically it is expected to prevent mass desertion of the Democrats by the elderly in 1940.

It might be pointed out that only a rich nation, in a period of secure and growing prosperity, should attempt to extend these benefits in any sum. But that is another discussion: the point of this account is politics, and for once the Democrats—New Dealers and moderates—are pursuing a far safer and more honest program than their partisan opponents.

Conservation—T. V. A. Model

EXTENSION OF REMARKS

OF

HON. FRED J. DOUGLAS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

EDITORIAL BY OSCAR D. LEWIS, SECRETARY, LAUDERDALE COUNTY (ALA.) CONSERVATION COUNCIL, IN FIELD AND STREAM

Mr. DOUGLAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial written by Oscar D. Lewis, secretary, Lauderdale County (Ala.) Conservation Council, that appeared in the current issue of the magazine Field and Stream.

The editorial is as follows:

[From Field and Stream]

A lot of fish are being caught down in the Tennessee Valley these days—big fish, prize winners. The vast series of inland seas resulting from T. V. A.'s system of power dams is producing results, and fishermen are beaming. So are the T. V. A. officials. It's going to be a great place to live if you like hunting and fishing.

And, the authorities point out, there is more to come. Years hence the Tennessee Valley will have forests abounding in game, lakes teeming with bigger and better fish, myriads of wildfowl, and the world's biggest fish hatchery. In short, T. V. A.—to quote T. V. A.—is building a sportsmen's paradise.

But is it? Will the pretty picture they paint ever materialize? Or will it develop into nothing more than a mirage?

Well, a little female mosquito by the name of Anopheles—carrier of malaria—seems to hold the answer to that question. Or, more correctly, the answer rests with the T. V. A. and the Alabama Health Department, and the methods they will use henceforth in controlling Mrs. Anopheles and her brood.

As it is now, the conservation phase of the T. V. A. plan is being paid off in checks that bounce all over the lot, and malaria control is writing them. For T. V. A. is talking conservation and building conservation with one hand, and destroying fish and game and tearing down conservation with the other—a quaint bit of legerdemain not unheard of in Government activities where conservation is concerned.

For the past 5 years, in a relentless and almost fanatical war on Anopheles, T. V. A. airplanes have been roaring along the shore lines of the valley lakes, scattering clouds of paris green and soapstone dust in an effort to kill mosquito wigglers. Scores of motorboat crews spray the waters with tons of crude oil. Elaborate drainage systems rob marsh reservoirs of their water, sucking moisture from the land. Periodic fluctuations of lake levels and destruction of aquatic plant life may help in the campaign against the mosquito, but they also make the waters unsuitable for fish life.

Of course, malaria control is an essential part of the health program in the South. Don't get me wrong on that point. But there can be such a thing as "controlled" malaria control; and by their own admission, health authorities reveal that the present system isn't producing the desired results. There must be other and better ways to do the job without wrecking the earth and the waters around us.

I say "earth," because T. V. A.'s war on the mosquito is not confined to the waters. Even the marginal lands have been invaded. Nature's cover for birds and game has been cut and burned by the thousands of acres along the lakes in a program oddly suggestive of the "scorched earth" policy which China has been using against the Japs. Stumps of century-old cypress trees, willows, and oaks stand in grim ranks along the shores. Except in certain designated areas, not even aquatic plants, including duck foods, are allowed to exist within the T. V. A. "zones of fluctuation."

And what of the economic factor? Eventually such a program, if carried far enough, will mean soil erosion, and control of soil erosion is one of the vitally important features of the valley rehabilitation project. This is the only way to insure the future usefulness of the dams and lakes for power and navigation purposes.

It isn't malaria control that we Alabama sportsmen are objecting to, but the system being used. We believe that a coordinated health program, aimed first at the reduction of mosquito-breeding grounds in populated areas—in cities, towns, and around farm buildings—is of primary importance. Until malaria is controlled in these spots, we cannot see the wisdom behind the deliberate destruction of fishing waters.

At a recent meeting held in Huntsville, Ala., for discussion of the problems involved in malaria control, the T. V. A. and the Alabama Health Department completely ignored the suggestions made by the Alabama Wildlife Federation. Officials denied that the mosquito-control project was detrimental to fish life, despite the mass of evidence to the contrary. Dr. Walter B. Jones, president of the federation, pointed out that all the top minnows—among the best of Nature's own malaria-control agents—were destroyed by oil sprays on Lake Wilson almost as soon as they had been planted, and that 17 head of cattle were killed on the shores of this same lake by T. V. A. mosquito "dope."

The T. V. A.'s new hatchery on the Elk River in Alabama will have an annual capacity of some 6,000,000 fish. But where is the reasoning behind a plan to spend thousands of dollars to produce fish for waters where fish cannot live—where plant growth necessary to fish life has been so thoroughly decimated that even the willow bushes along the shores were killed by arsenic? There is no question about T. V. A.'s good intentions, yet it is certain that the development of a program of conservation—leading to that sportsmen's paradise which has been painted for us—can never succeed as long as the functions of one department are so obviously nullified by another.

Malaria should and must be controlled, but I repeat that—as far as T. V. A is concerned—it can be controlled without laying waste the land. Fish and game cannot survive in an area of sterile lakes and denuded forests, nor would any man want to live in such a spot. It will be shameful, indeed, if either the T. V. A. officials or the conservationists ever have to admit that they have been beaten by a female mosquito.

The Plight of Farm Families

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

Mr. BURDICK. Mr. Speaker, how many times have we heard the statement from some misinformed person that we have done enough for the farmers; that the farmers are better off than anyone else; "why keep spending taxpayers' money on a bunch of no-good farmers?" Businessmen of high standing have made such statements to me during the past few months. That sentiment is evidently widespread in the business section of the United States. Mr. Speaker, I cannot permit such statements to go unchallenged.

First, let me say that there is absolutely no doubt that millions of farm people are in distress. I desire to quote from a letter received from one of the good farm families of North Dakota. I submit that if businessmen will read this letter and take the pains to inquire about this good family, that no more wild statements will be given out about the worthless farmers. I quote from the letter:

WILLISTON, N. DAK., *May 22, 1939.*

HON. USHER L. BURDICK.

DEAR SIR: We children have spent all our lives on these prairies, and dad and mother have spent the most of their 50 years here. Life for us has meant the exchange of ease and pleasure for heat, poverty, hardship, and lack of thanks from an unappreciative world.

We had always paid our way in this world by doing our share in the production of wheat, potatoes, beef, and mutton until the present panic and drought. Celebrations, shows, ice cream, shade, and luxuries were almost unknown to us. Since the drought our cattle and horses have died on every hand, in spite of the fact that there was an abundance of feed. The inefficient and criminal handling of that feed was a monument of shame, not only in the public eye, but also the observation of the feed administration itself, unless it was absolutely blind.

That not being enough, we also were left many times without relief, having only potatoes and milk for months at a time. Once we had to go into the winter without coal.

We see, however, these relief clerks clad in brightest and latest colors, happy, well fed, and protected from the bitter cold by warm offices where the Arctic winds cannot touch them, riding in the best new automobiles with good tires, etc. Yet they do not walk a few blocks to and from work, and pleasure.

We do not expect a corporation to have a soul and a conscience. Indeed, the F. S. A. has many times demonstrated that. In confirmation of that, the care of the women and children are made secondary, and the special advantages of the F. S. A. are made first.

Specifically we mean that our recommendation for May, June, and July grant checks are being held up in the Williston office because our father cannot agree with such practices in the F. S. A. offices as are such a burning disgrace to the emergency feed administration a few years ago.

We therefore appeal to you in the name of a clear conscience before God that nothing be allowed to come between us and our sustenance at this time, that our care once more be placed first, and that our father and mother still be allowed to follow the dictates of their conscience in their business relations to the F. S. A. or any other individual or corporation.

These corporations have not only subjugated the conscience of their workers to their very will, but have also added greatly to the mental anxiety as well as physical suffering of those innocent and unoffending women and children who have been denied the luxuries and pleasures of town life. Is it not, indeed, pitiful that city workers and all others whose sustenance comes from toil of rural people should feel a certain hostility and indifference to our condition of want and isolation from those who are situated more comfortably than ourselves? Give us a square deal before God and conscience.

Yours sincerely,

MCGILL FAMILY,
Mr. D. L. MCGILL,
Mrs. D. L. MCGILL,
LEONA MCGILL (age 18),
WARD MCGILL (age 14),
JEAN MCGILL (age 10),
ELAINE MCGILL (age 12).

What has brought about this condition, Mr. Speaker? Many things have contributed. The unprecedented drought, of course, has been the immediate cause. Even with fair crops the price received from grain has not been enough to cover the high costs which a farmer must bear. The interest load is unbearable. One of the peculiar things about interest is that it is not concerned with droughts, frosts, hail, grasshoppers, or any other scourge. The interest goes right along working night and day through all the scourges until it becomes itself the greatest scourge of all.

We tax to keep up a government to protect our lives and our property, but few realize that we tax for another item which renders us no service at all, and this item takes fully one-third of the Nation's taxes—interest. We pay interest on the public debt. On Government obligations alone we must now raise $1,500,000,000 annually. State, city, county,

township, and school district interest takes another annual toll of interest; private interest takes another toll—in all annually the people of this country must raise $15,500,000,000 to pay interest. When our national income is running from forty-eight to sixty billion, we can at once see that approximately one-third of the national income is devoured by interest.

While this process is in operation and the price of farm products is low, what do we find on the other side of the ledger? A binder used to cost $135, and now the same binder is $375 and all farm machinery follows in regular order. If a farmer once gets into debt, he is lost under the interest system, punctuated by droughts, grasshoppers, hail, and poor prices.

As a Congress, could we do anything to stop this interest racket? Mr. Speaker, we could change the whole situation in one week if we could stay united long enough to do the job. Declare by a simple resolution of Congress our absolute control over the Nation's money and credit; stop issuing bonds and issue greenbacks instead; stop farming out our credit to private interests to be sold to the people in interest charges. This simple method would revolutionize the entire interest system. Any class of people would be able to secure credit for a nominal charge. Today see what the situation is. Every bank loaded down with money and no money to be obtained. Even businessmen have appeared here and testified that in order to get credit they have been required in many instances to seek credit from interest grafters and money racketeers and have been compelled to pay at rates as high as 35 percent. No such situation should be tolerated in this country.

Mr. Speaker, the farmers are victims of this system. The McGill family, whose letter appears here, are victims of that system. The Federal land banks foreclose when interest payments are not met. They have foreclosed and foreclosed and have so much land on hand that the President was required to set up an organization to handle this land. When a foreclosure takes place, the farmer and his family are ousted. If they do not vacate the premises they are ejected. They still have the instinct to live—they actually believe they have a right to live. How do they do it? They go to the nearest town, the nearest city, and apply for help. We appropriate millions for relief and they secure a little of it, not a living standard, but a starvation standard. But, however small that aid is, in the aggregate it amounts to annually hundreds of millions of dollars. When we appropriate these huge sums for relief, the businessmen of the country put up a howl that can be heard from coast to coast. Not once have they offered to pitch in and change the interest system that is the cause of all this disturbance of our society. And now, Mr. Speaker, they are falling victims of the same system. They cannot even get credit without paying tribute to a band of Shylocks who demand 35 percent interest on their pound of flesh.

It cannot be said that no move has been made in this Congress to change this system. I have had a resolution pending here (H. J. Res. 217) for 4 years, which reads:

Resolved, etc., That said national banks and said Federal Reserve Board, and the member banks of the Federal Reserve System, be, and they are hereby, declared to be operating without any constitutional authority; be it further

Resolved, That said institutions and each of them shall not, after the passage of this resolution, be permitted to issue any money or have any control over any of the money and credits of the United States.

How long will this Congress and the people allow the great mass of the people of this country to stagger along under this stupendous interest burden, when we have the power to remove it? How long will we shut our eyes to the evils for which we ourselves are responsible? In my judgment, we will continue in our course of supporting the lords of interest until that system has destroyed the Republic itself. If we actually believe in our country and want to defend it, we will take the first step that will protect it—take control of the Nation's money and credit and use it for all the people.

Letter From the American Indian Federation

EXTENSION OF REMARKS

OF

HON. USHER L. BURDICK

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

LETTER FROM AMERICAN INDIAN FEDERATION

Mr. BURDICK. Mr. Speaker, the attitude and the operation of the American Indian Federation has been called in question in the proceedings in which I withdrew H. R. 5921, and very grave charges were made against this organization by the Department of the Interior. In this controversy, I believe it only just that the American Indian Federation be heard, and I therefore submit herewith a letter received from this organization dated May 15, 1939:

THE AMERICAN INDIAN FEDERATION,
Claremore, Okla., May 15, 1939.

Hon. USHER L. BURDICK,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN BURDICK: In his letter of April 28, 1939, inserted in the RECORD of May 1, 1939, page 4934, Mr. Secretary Ickes attacked H. R. 5921, the American Indian Federation, some of its officers, and reflected upon the character, integrity, and intelligence of its members.

In view of the embarrassing situation in which we or the Secretary have placed you, we believe it becomes our plain duty to acquaint you with the facts and to state clearly what is the attitude of some 15,000 Indians who are opposed to the present policies of the Indian Bureau and why, and to assure you that we are not the ignorant, misled "dupes" whom the Secretary would have you believe.

H. R. 5921, sponsored by the American Indian Federation, prepared by the undersigned as a committee, and introduced by you at our request, offers a plan under which we think the perplexing problem of Indian claims may have just and early disposition. It is in direct opposition to the policy of the Indian Bureau, which insists upon indefinite delay in order to perpetuate itself. We simply propose that the United States pay to those individual Indians who are willing to accept their share of the promised sums now and relinquish all rights to tribal equities therein, just as an alien in becoming a citizen of the United States renounces his former citizenship and surrenders his rights thereunder. In this manner each payment to an individual reduces the total amount due the tribe, leaving those Indians who prefer to remain members of the tribes at the mercy of the Indian Bureau. Universal acceptance would end forever the troublesome jurisdictional bills, actions in the Court of Claims, and silences immediately the bureaucratic suggestion that a "claims commission" be added to the long list of expensive Government agencies.

The Secretary and many good citizens have bitterly criticized certain foreign nations which have diverted funds owed to the United States to preparations for war. In like manner we criticize the Interior Department for its misrepresentations to Congress in order to divert funds owed to our people to pay salaries and expenses of a social experiment station whose record is one of ignominious failure.

The Indian Bureau has represented to Congress that there are 350,000 Indians in the United States. This exaggerated estimate was given to strengthen the plea for appropriations to teach these "ignorant" people to earn a living "and for other purposes." Mr. Commissioner Collier has told a committee of Congress that the total amount of Indian claims against the Government, apparently just and legal, amounts to more than a billion dollars, and that about another half billion is "morally" right. But if there were really that many Indians and each were to be paid $3,000, it would require $1,050,000,000 to settle all claims. A staggering sum, indeed. And yet an increase of less than 2.5 percent of the national debt. Even so, the written word of the United States would be made good to a people who are victims of the same policy of "aggression" and "expansion" which is so righteously deplored when it is pursued in Europe or Asia or Africa.

However, the Secretary failed to remind you that Congress has authorized the expenditure of approximately $60,000,000 annually at his request. Even if there should be no increase in these expenditures the United States will have spent $1,200,000,000 in 20 years. That would be $150,000,000 more in 20 years than we are suggesting for all time to come. But there is this difference: We propose that the money shall go to those to whom it is due, not to any army of Government employees. And with the added reminder that at the end of 20 years under the Ickes-Collier plan the United States would not be one step nearer a final settlement with the Indians.

Please bear in mind that the millions now being poured into the "Indian service" do not reach Indian purses; that Mr. Commissioner Collier placed in the record that there was 1 Indian Bureau employee for every 25 Indians; also, that it was costing the Government $209.90 per capita to administer the affairs of Indians.

Indian Commissioner Collier intimated to a committee of the Seventy-fifth Congress that it will require at least a hundred years at proportionately increased expense for his Bureau to complete its work. In the light of this confession of incompetency, the drain on the Treasury necessary to dispose of the whole matter and have the Indian problem justly and definitely solved pales into insignificance.

We resent, and most vehemently deny, the statement that there is any relation between the American Indian Federation and any group objectionable to a loyal patriotic citizen. We are proud of the fact, however, that we are associated with the American coalition.

The American Indian Federation was organized in 1934 in Washington, D. C. Its membership includes representatives of 33 tribes of Indians, residents of 38 States of the Union. The first shaft of criticism hurled against it from any official source followed our complaint that objectionable Indian legislation originated in a committee of the American Civil Liberties Union and smacked of communism, in opposition to which principles we are definitely committed. Later we complained that certain influential officials in the Interior Department were foreign-born, one with an Americanized name; and that they did not have sufficient knowledge of or interest in Indian matters to competently administer our affairs—if, indeed, our affairs are essentially different from those of other citizens. We complained that communism was being taught in Government schools for Indian children; that religious freedom was being arrested at established Indian schools.

The purposes of the American Indian Federation are clearly set out in its constitution, bylaws, and articles of incorporation. These are, generally, to promote the interest of the American Indian by education, industry, and thrift; to encourage Christian virtue and loyal citizenship. The membership fee was originally fixed at $1 and has not been changed. This fee has been paid voluntarily and without coercion on the part of this organization or any of its officers or authorized agents. No salary or compensation is paid to any officer or authorized representative. We contend that the Indians have the same right to organize for their own welfare as any other group of American citizens and that they have the constitutional right to petition the Congress and officers of the Federal Government for redress of any wrong or legitimate claim they may wish to present. They have the same right and privilege to contribute to the program of our organization as Secretary Ickes or Commissioner Collier have to advance the interests of the American Civil Liberties Union, which these Indians condemn as bitterly as the two public officers condemn our organization. Indians of the State of Oklahoma have stood for progress in every respect, and many of our members are now holding responsible public positions in the government of the State of Oklahoma and Indians will be found in every line of industry and useful endeavor throughout the Nation.

The Secretary told you in his letter that the federation is engaged in a "racket," etc., and that we promise prospective members or "victims" $3,000 from the Government if they will pay us $1. It may be merely a coincidence, but we have referred to the Indian Bureau as a "racket"; but its victims are Congress, the Indians, and the taxpayers of the United States. We have profound respect for the high office of Secretary of the Interior, but we resent the misstatement that we have promised $3,000 for $1, coming from any source. We have made no such silly promises. We have made no such impossible contracts. We have held out no false promises. There are open doors to all our meetings, many of which have been attended by Interior Department employees (at Government expense) to keep the Secretary informed of our activities. If, indeed, we are practicing fraud upon Indians to the knowledge of the Secretary or any of his subordinates, then they are derelict in their duty to their wards and to the Government by not bringing charges in the courts rather than in press releases and letters to Congressmen. If what he says is true, we have used the United States mail for purpose of fraud and he should have had us thrown into jail.

Our plan for final settlement was not finally developed until our annual convention in 1938—4 years after the Secretary first launched his abuse against us for opposing his policies. He hated us before H. R. 5921 was conceived and for other reasons.

We thank you again for the interest you have shown in the Indian citizen and the use of your influence in his behalf.

Assuring you of our continued confidence and esteem, we are

Very respectfully yours,

THE AMERICAN INDIAN FEDERATION,
JOSEPH ERUNER, *President.*
O. K. CHANDLER,
34 G Street NE., Miami, Okla.
W. E. MCINTOSH,
N. B. JOHNSON,
Legislative Committee.

THE AMERICAN INDIAN FEDERATION, UNIT NO. 4,
Elbowoods, N. Dak., May 23, 1939.

Hon. USHER L. BURDICK,
Washington, D. C.

HONORED FRIEND: Pursuant to first amendment to the Constitution of the United States, American Indians should have the same right to petition Congress as other citizens. When organized labor of the American Legion sponsors a bill in Congress no Cabinet officers write to any Congressman asking him to withdraw the bill and charge the members of these organizations with being crooks because they charge their members a membership fee of $3 to $12.50 a year.

The entire membership of American Indian Federation, Unit No. 4, respectfully request that the attached resolution with this note and letter from Joseph Bruner and others, written to you from Claremore, Okla., May 15, 1939, be included in the record of hearings before the United States Senate Committee on Indian Affairs.

Very sincerely yours,

FLOYD MONTCLAIR.

RESOLUTION

Be it resolved by the members of the American Indian Federation, Unit No. 4, convened in special session May 23, 1939, at Elbowoods, N. Dak., That we unanimously endorse the letter of President Bruner, N. B. Johnson, W. E. McIntosh, and O. K. Chandler, of the American Indian Federation, dated May 15, 1939, at Claremore, Okla., and addressed to Hon. USHER L. BURDICK, Member of Congress, Washington, D. C.

We are not "dupes"; have not been "duped"; have not attempted and will not attempt to dupe our people. We are American citizens and have the same right as other Americans to petition Congress. We are capable of understanding our problem, which is social and not racial, and we are capable of petitioning Congress in our own behalf. The bill now pending in the Senate and introduced in the House is the Indians' bill; the first, in our judgment, ever to be offered in Congress applicable to all Indians and with the distinct objective of ending "Indian affairs" as between the Indian citizen and the Federal Government: Be it further

Resolved, That a copy of this resolution be immediately mailed to Hon. USHER L. BURDICK with a letter requesting that he immediately introduce into the CONGRESSIONAL RECORD the letter of President Bruner and other members of the federation's delegation referred to herein, and that a copy of this resolution be mailed to Hon. LYNN J. FRAZIER, Hon. GERALD P. NYE, our United States Senators, and Hon. WILLIAM LEMKE, our other Member of Congress.

Unanimously adopted May 23, 1939.

VICTOR YOUNG BEAR, *President.*

Attest:

FLOYD MONTCLAIR, *Secretary.*

Reapportionment of the Legislature of Hawaii

EXTENSION OF REMARKS

OF

HON. SAMUEL W. KING

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

Mr. KING. Mr. Speaker, under leave to extend my own remarks in the RECORD, I wish to discuss a bill which I have introduced, H. R. 6453, to amend the Hawaiian Organic Act so as to provide for reapportionment of the membership of the House of Representatives of the Legislature of the Territory of Hawaii and to create districts from which said representatives shall be elected, and to provide for reapportionment within each county of the membership of the Senate of said Legislature.

The basic law of Hawaii is an act to provide a government for the Territory of Hawaii, approved April 30, 1900, and known as the Hawaiian Organic Act. This is the Constitution of Hawaii, adopted by Congress when incorporating the recently annexed Republic of Hawaii as a Territory of the United States. It can be amended only by Congress, and it, together with the Constitution of the United States, limit and restrict the degree of local self-government extended to Hawaii. It is a matter of pride with the people of Hawaii that the many amendments adopted to the Hawaiian Organic Act since it was originally enacted have always been proposed by our local legislature. Congress has never had occasion to initiate legislation for the government of the Territory, nor has Congress ever had occasion to veto any action of the Hawaiian Legislature.

Section 55 of the Hawaiian Organic Act defines the legislative power of the Territorial government. It also prescribes the manner in which the legislature shall be reapportioned.

as changes in population make such action desirable to obtain better representation. The precise language is:

The legislature, at its first regular session after the census enumeration shall be ascertained, and from time to time thereafter, shall reapportion the membership in the senate and house of representatives among the senatorial and representative districts on the basis of the population in each of said districts who are citizens of the Territory.

During nearly 40 years of existence as a Territory the mandate contained in the Hawaiian Organic Act has not been carried out. The figures for "the population in each of said districts who are citizens of the Territory" have never been available to our legislature. When the organic act was inaugurated in 1900, Hawaii had a population of slightly over 150,000 people, and there were only 11,216 registered voters. Only 1 in 15 of our population were voters, and probably not 50 percent of the total population—adults and minors—were citizens. Today the total population has increased to 411,485 people, of whom 328,185 are citizens. The number of registered voters in the election of 1938 was 83,433—approximately 1 in 5 of our total population and 1 in 4 of our citizen population.

This increase in population and in the electorate has thrown our present basis of representation in the legislature entirely out of proportion. Urban communities have increased faster than rural areas. The city of Honolulu, in particular, has grown to almost metropolitan size. Reapportionment has become a live issue with the people of Hawaii.

Both the local Democratic and Republican Party organizations have in recent years contained planks on the subject in their platforms pledging their candidates to work for reapportionment if elected to office. The subcommittee of the Committee on the Territories of the House of Representatives, which held hearings in Hawaii from October 7 to October 18, 1935, had this question presented to it. The Joint Congressional Committee on Hawaii, which held hearings in Hawaii between October 6 and October 22, 1937, also went into the matter quite thoroughly.

Its report, submitted to Congress on February 15, 1938, included the following statement and suggestions:

Subject of much local discussion has been the need for a reapportionment of the members of the Territorial legislature. As originally provided in the organic act, the membership of the legislature was probably in fair proportion with the population figures for the respective election districts. This gave the islands other than Oahu, where Honolulu is located, a majority in both houses of the Territorial legislature. Anticipating the need for future changes, the organic act further provided that the "legislature, at its first regular session after the census enumeration (referring to the United States decennial census) shall be ascertained, and from time to time thereafter shall reapportion the members of the senate and house of representatives among the senatorial and representative districts on the basis of the population in each of said districts who are citizens of the Territory." In the changes in population since 1900 the urban population has increased faster than the rural population. The rapid growth of the city of Honolulu has brought the population of the island of Oahu up to a clear majority of the entire population. The issue has become the old battle of the country districts against the power of the metropolitan district. Efforts to reapportion in accordance with the organic act have been consistently opposed by country representatives, whose justification has been that at no time since 1900 has the census enumeration tabulated the required figures of the number "who are citizens of the Territory."

To comply with the present requirements of the organic act would give Oahu, comprising two representative districts and one senatorial district, a majority in both houses. Several members to each house are elected at large from the respective districts rather than from individual senatorial or representative districts. Under this arrangement reapportionment might well give the party carrying the island of Oahu, even if by a narrow majority, complete control of the legislature. In effect, this would disenfranchise the minority on Oahu and deliver the destinies of the Territory to a group or party representing a majority on only one island on the assumption that the members from the districts on the other islands would be of the same party affiliation as the Oahu minority. A more equitable plan would seem to be to redistrict the Territory throughout and provide for single senatorial and representative districts based on the number of votes cast for Delegate to Congress at any specified election. Particularly does this appear desirable since there is now as great a disproportion between the several districts as between Oahu and the other islands.

The first representative district, for instance, elects the same number of representatives to the legislature as the second district, but casts more than twice the number of votes as the latter district. Other disproportions exist between both the different senatorial and representative districts.

An alternative suggestion of some merit has been advanced—that the senate be left unchanged and only the house of representatives be reapportioned among the existing representative districts. In any case the local legislature should study this matter and propose adequate legislation to provide better proportionate representation in accordance with the spirit of the organic act.

The Legislature of Hawaii has just completed its twentieth biennial session. Among other suggestions contained in the report of the Joint Congressional Committee on Hawaii, the legislature considered the subject of reapportionment. There were wide differences of opinion as to the best means of obtaining an equitable reapportionment between the various counties and districts of the Territory, and the legislature adjourned without having given complete approval to any one plan. However, the Senate of Hawaii unanimously adopted a resolution embodying a memorial to Congress requesting amendments to the organic act that would provide reapportionment. This resolution has been presented to both Houses of Congress. In compliance with the request of our Territorial senate, I have introduced a bill to carry out its provisions. Individual members of the Territorial house of representatives have expressed their approval of this plan for reapportionment. Insofar as can be determined without formal action by the legislature itself, the proposed method for reapportioning expresses the will of the people of Hawaii. It carries out the spirit of the recommendations and suggestions of the Joint Congressional Committee on Hawaii. It gives effect to the pledges of both party platforms. For these reasons I shall request the Committee on the Territories to grant me a hearing on my bill and to report it out favorably in order to obtain congressional action on the proposed legislation at this session of Congress.

The Legislature of Hawaii at present consists of 15 senators elected from four senatorial districts. The first district elects 4 senators at large; the second district elects 3 senators at large; the third district, 6 senators at large; and the fourth district, 2 senators at large. Our Territorial senators serve for a term of 4 years, with half the number to be elected each 2 years.

The proposed amendments to the organic act would retain the present number of senators and preserve their allocation by counties. It would, however, subdivide the election districts so that each district would elect two senators, only one of whom would be elected at each biennial election. As one senatorial district is represented by only one senator, this district would be an exception to the rule.

The present house of representatives consists of 30 members, elected every 2 years from 6 representative districts. The first representative district elects 4 representatives at large; the second district also elects 4 representatives at large; the third elects 6 representatives at large; the fourth elects 6 representatives at large; the fifth elects 6 representatives at large; and the sixth elects 4 representatives at large.

The new plan would increase the membership of the house of representatives from 30 to 42. The additional 12 members would be allocated to the island of Oahu in order to provide that community with better proportionate representation in the Territorial house of representatives. The election districts would be subdivided so as to keep to a minimum the number of representatives running at large from each such district. The number of representative districts would be increased from 6 to 14. In some of these districts two members would run at large and in others, four. If this were not done, the increased membership of the house allocated to the present fourth and fifth districts would provide for 12 members running at large from each of those districts.

The system of representative government instituted by the Hawaiian Organic Act provided for several members of the legislature to be elected from one election district. I know of no other community where the voter is called upon to vote for so many candidates to office as he is in Hawaii. Perhaps in 1900, and for several years after that date, when Hawaii was a much smaller community than it is today, this method was satisfactory. The people of the islands were

generally acquainted with each other, and candidates for office were well known to the voters in their respective districts. With an almost threefold increase in population and an eightfold increase in the electorate, this condition no longer prevails to such an extent. It has seemed highly desirable that, together with reapportionment, the Territory be redistricted throughout. From the smaller election districts a smaller number of candidates for the legislature will appeal to the voters for their support. The probabilities of these candidates being known to their neighbors in the specific districts from which they are running will be greater. It is also believed that the resubdivision of the Territory into smaller election districts will provide a better cross section of the electorate than the present system. The true purpose of representative government would thus be better served.

If Congress does not adopt any amendments to the organic act to change the manner of reapportioning, the Legislature of Hawaii will, in 1941, be required by the existing provisions of the organic act to reallocate the present membership of the senate and the house of representatives between the existing election districts in accordance with the figures that the Bureau of the Census proposes to tabulate at the decennial census to be held in April of next year. Reapportionment thus accomplished would be greatly against the wishes of the citizens of the islands other than Oahu. The rapid growth of Honolulu would give the island of Oahu, on which it is located, a dominant representation in both the senate and the house. The population of Oahu is nearly 60 percent of the whole, and the present provisions of the organic act would give it approximately that proportion in both houses of the legislature. The amendments to the Hawaiian Organic Act embodied in my bill propose a compromise in recognition of the objections raised by the other counties of the Territory. Spokesmen for the electorate of Oahu have accepted the compromise as fair both to Oahu and the other islands.

Reapportionment has always been a controversial problem to work out to the satisfaction of all concerned. Congress has found it difficult to reapportion in accordance with the Constitution of the United States. Many States have faced the same dilemma. There has usually been considerable delay in obeying the provisions of existing law. Hawaii is no exception to the rule, but the issue has been more sharply raised in recent years. The Joint Congressional Committee on Hawaii has in effect suggested that Hawaii present to Congress amendments to the organic act to accomplish reapportionment or to proceed to carry out the existing law. The language used is:

> In any case, the local legislature should study this matter and propose adequate legislation to provide better proportionate representation in accordance with the spirit of the organic act.

This recommendation, I feel, has been carried out by the resolution of the Senate of Hawaii, and the program it asks Congress to authorize, incorporated in H. R. 6453, complies with the spirit of the organic act and with the wishes of the people of Hawaii.

Why America Should Keep Out of Foreign Wars

EXTENSION OF REMARKS

OF

HON. HAMILTON FISH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

RADIO ADDRESS BY HON. HAMILTON FISH, OF NEW YORK, MAY 26, 1939

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I include the following radio speech I delievered over the Mutual Broadcasting System on Friday evening, May 26:

Neutrality legislation in the House of Representatives has come to a sudden and startling stalemate. The Committee on Foreign Affairs, after holding hearings for 6 weeks, is unable to persuade Secretary of State Hull to appear before them in executive session and present his views on neutrality. For more than 2 weeks the committee has been trying in vain to obtain the cooperation of Secretary Hull and the benefit of his views in shaping neutrality legislation.

I have the highest personal regard for Mr. Hull, but doubt in the entire history of our country that a Secretary of State has deliberately refused the unanimous request of the Committee on Foreign Affairs to appear before them in executive session and present his views on such an important subject as neutrality, affecting the peace of America. I regard the refusal of Secretary Hull to comply with the request of the committee to be a reflection on the dignity and reputation of the committee and of the House of Representatives.

President Roosevelt, in his message to Congress, stated that the Neutrality Act was unsatisfactory and unworkable. It must be self-evident that the House Committee on Foreign Affairs has a right and a duty to ascertain from Secretary of State Hull what changes he proposes in the neutrality law to make it satisfactory and workable, as the spokesman of the President on international issues.

The extraordinary attitude assumed by Secretary Hull has made neutrality legislation more confused and confounded than ever. Unless the State Department is willing to cooperate, our committee, out of self-respect, should close the hearings and stop all further consideration of neutrality legislation at this session of Congress.

I have been informed that Secretary Hull held a secret and mysterious conclave with some members of the Foreign Affairs Committee at his apartment at the Carlton Hotel this morning. We have recently had far too much secret diplomacy in our foreign affairs, and if Secretary Hull has any suggestions to make, let him come before the entire committee in the orderly and accustomed manner. If not, let us have an end to the New Deal internationalism, collective security, punishing the aggressor nation, economic sanctions "short of war," quarantining the world with American blood and treasure, and beating the war drums of hate, propaganda, and hysteria.

President Roosevelt is always talking about his foreign policies and "my determination" and "my intentions." If the President would stop his efforts to involve us in foreign entanglements, sticking his nose into ancient European blood fueds and boundary disputes, there would be an immediate end to the war hysteria in America. He should remember that the Congress has the sole power to declare war and formulate the foreign policies of the United States. The President has no such constitutional power. He is merely the official organ to carry out the policies determined by the Congress.

The American people, through their representatives in Congress, in spite of any and all attempts by the President to quarantine the world or provoke war situations, can keep America out of war by notifying their Members of Congress that they are against any foreign entanglements or war commitments unless we are attacked or South America is invaded.

The result of Secretary Hull's cavalier treatment in ignoring the committees of Congress cannot help but have an unfortunate repercussion in this country and abroad. This undemocratic and un-American policy is typical of the procedure in dictatorial nations, where there are no free institutions and representative forms of government.

I know of no reason why the United States should participate in another world war unless attacked or unless the Monroe Doctrine is violated by an invasion of South or Central America by the armed forces of some European or Asiatic nation. The American people are unwilling to go to war over Danzig—59-percent German—which belongs as much to Germany as Calais does to France and Dover to England.

The American people do not propose to be hoodwinked, through propaganda and secret diplomacy, into going to war again to make the world safe for democracy or to end all wars. They are unwilling to fight over British and French colonies, power politics, or quarrels between imperialistic nations.

They refuse to sacrifice American lives over the control of the Mediterranean, which is none of our concern. They will not police and quarantine the world with American blood and treasure over ideologies and forms of government, and particularly in defense of Soviet Russia.

The American people know that 1 month of war would cost us more than our profits on European trade for 10 years. They also know that we would become a dictatorship in 24 hours if we joined in another world war, and would lose our own free institutions and come out a Communist or a Fascist state.

Without knowing even who the combatants will be, we are informed almost daily by the internationalists and interventionists in America that we must participate in the next world war. Strange as it may seem, President Roosevelt, members of his Cabinet, the New York Times, Baltimore Sun, and Washington Post are urging that our participation in the eternal wars of Europe is necessary and inevitable. They seem to have forgotten that the only alternative to belligerency is neutrality. However, our traditional foreign policies of neutrality, nonintervention, peace, and no entangling alliances are just some more "horse and buggy" delusions to those internationalists and devotees of the League of Nations.

The American people are beginning to wonder why we have no Ambassador in Germany to look after American interests and to use our moral influence for the promotion of peace. The peace of the world hangs in the balance, and yet we have no Ambassador

in Berlin, the nerve center of the entire war situation and the most important post in Europe. President Roosevelt recalled Ambassador Hugh Wilson to consult on German affairs 6 months ago; it would seem that he ought to have been able to ascertain the facts during that time.

Today fear and threats of war cover Europe. The British and French Ambassadors, who were withdrawn for about a month after the seizure of Czechoslovakia, have returned to Berlin. What right has the State Department to keep paying Ambassador Wilson his salary of $17,500 while he cools his heels in Washington, 4,000 miles from his accredited post? When will this childish and stupid type of diplomacy cease? It is none of our business what form of government exists in Nazi Germany any more than it is their business what form of government exists in America. I deplore the lack of statesmanship for peace by a continuation of such inane and inept policy of having no ambassadorial representation in Germany during these critical times. No wonder our trade with Germany is dwindling rapidly in spite of the fact that the Nazis want our surplus wheat, cotton, meat, and dairy products.

I urge all Americans to read the main editorial in last week's Saturday Evening Post, entitled "If We Don't Have War," and if anyone is unable to get a copy I have inserted it in the CONGRESSIONAL RECORD and will gladly furnish copies free upon request. This nonpartisan editorial presents the record of President Roosevelt and holds him accountable for stirring up hatred abroad and war propaganda and hysteria at home. If I were to make similar charges, I would be accused of being a bitter partisan and playing politics with foreign affairs.

An article in this week's Liberty, by General Hagood, is in the same tone and likewise places the blame for the war neurosis on the President.

I propose to take this opportunity to state what the National Committee to Keep America Out of Foreign Wars, of which I am chairman, is doing and to ask the radio audience to cooperate with us.

The committee, composed of Members and former Members of Congress, is nonpartisan, nonprofit, and nonsectarian, and invites the American people to join with them in voluntarily setting aside the week beginning Sunday, June 11, to Sunday, June 18, inclusive, for the purpose of conducting a Nation-wide campaign to keep America out of foreign wars.

The clergy of all creeds and denominations are urged to make special appeals from the pulpit to stop the war propaganda and hysteria that has been spreading like wildfire throughout our Nation, leading the American people into believing that if a war breaks out in Europe it is inevitable that our youth must again fight on foreign soil.

We appeal to all elements of our population to join with us in counteracting this vicious and false propaganda and in exposing the attempts to inflame the passions and hatreds of our people against foreign nations which have not the faintest intention or capacity of attacking us.

All religious, labor, farm, business, fraternal, civic, social, women's, veterans', educational, and other organizations are invited to hold meetings during the Keep America Out of Foreign Wars Week, to discuss and stress this vital issue. It is hoped that this program will be adopted as the theme for commencement exercises throughout the Nation.

The peace and safety of our country and our people are being threatened by foreign and Communist propaganda and by provocative acts by those in places of great authority in our midst. We believe in adequate national defense, upholding the Monroe Doctrine, and the maintenance of our traditional foreign policies of neutrality, nonintervention, no entangling alliances, and peace.

We call upon all those Americans who believe in these principles and established policies to participate in regular or special meetings in the Keep America Out of Foreign Wars Week, June 11–18, 1939, which includes Flag Day, June 14. All persons or organizations desiring information and data should communicate with the National Committee to Keep America Out of Foreign Wars, House Office Building, Washington, D. C.

In connection with our Keep Out of War Week, the committee is holding a Nation-wide contest, open to all American citizens regardless of age, race, color, creed, or politics, on the subject, Why America Should Keep Out of Foreign Wars. All compositions submitted in this contest must be clearly written (typewritten preferred) and must not exceed 200 words, and shall not include any quotation to exceed 10 words. They should be sent direct to the National Committee to Keep America Out of Foreign Wars, House Office Building, Washington, D. C., not later than Flag Day, June 14, 1939, when the contest closes.

The committee is offering as first award the sum of $100 in cash and a trip to Washington, D. C.; to be received by the committee; and a trip to the New York World's Fair, with all expenses paid. Second award will be $50 in cash; third, $25 in cash; fourth, $10 in cash; and three additional awards of $5 each for fifth, sixth, and seventh. A committee was appointed to have charge of the contest, composed of Hon. JOHN C. SCHAFER, of Wisconsin, chairman; Hon. DEWEY SHORT, of Missouri; and Hon. FRANCIS H. CASE, of South Dakota. It is expected that the essays submitted in this contest will be judged and awards made on or before July 4, 1939.

I appeal to all individuals, groups, and organizations to cooperate with the aims and purposes of the committee. Funds are needed to make them effective. The treasurer, Walter L. Reynolds, House Office Building, Washington, D. C., has been authorized to accept contributions to carry out the keep-out-of-war program.

If sufficient contributions are received, they will be used to put on a radio and press campaign, to send out speeches, and to provide for enlarging the office staff in order to efficiently handle the mail that has already reached huge proportions.

Plans are now under way to set up organizations in all the States. The extent and effectiveness of the activities of the National Committee to Keep America Out of Foreign Wars will depend largely on the support of the American people. From the support already received from all sections of the country, our committee is assured that the people are in sympathy with and want such an organization on a Nation-wide scale.

The main purpose of the committee is to present the facts to the people, to act as a medium for them to express their views and sentiments against being eased into war by the internationalists and interventionists at Washington without their consent.

Ambassador Joseph P. Kennedy

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

Mr. McCORMACK. Mr. Speaker, in a recent speech, a former Governor of a State, in the course of his remarks, made certain references to the Honorable Joseph P. Kennedy, United States Ambassador to London, England, which statements were uncalled for and which were without foundation. In the course of his remarks the former Governor said that "President Roosevelt should recall Ambassador Kennedy." Such a statement or demand is reckless in its character and is entirely unwarranted.

Ambassador Kennedy is one of the ablest, most courageous, and progressive men in the public life of today. His frankness is refreshing. In his present trying and responsible position he is carrying on and rendering the same kind of constructive service that he did when he was Chairman of the Securities and Exchange Commission and Chairman of the United States Maritime Commission. An unnecessary and unwarranted attack such as was recently directed to Ambassador Kennedy in no way injures his standing and reputation in the eyes of the people of America, but, to the contrary, enhances his standing and reputation. The overwhelming majority of our people are completely satisfied with the character of service that is being rendered by Ambassador Kennedy. They have confidence in him.

Recently in a speech before the Washington Chapter of the National Federation of Catholic Alumni of Washington, D. C., Rev. Dr. Joseph F. Thorning, Ph. D., Litt. D., professor of sociology and social history, Mount St. Mary's College, Emmitsburg, Md., in "a tribute to Ambassador Joseph P. Kennedy," and in challenging the suggestion that Ambassador Kennedy be "recalled by President Roosevelt," in part said:

> Any candid study of the record will establish Hon. Joseph P. Kennedy as one of the most fearless, outspoken, intelligent spokesmen for democracy in the world. His whole life has been a testimonial to the American Bill of Rights. Here is one of our fellow citizens who has risen from the ranks by sheer merit. He is still one of the people. He speaks the language of the people. His family life has been most attractive in the eyes of ordinary, home-loving folk. Those who have met him in the United States Embassy at London know that he is essentially democratic, approachable, and eager to promote the legitimate interest of America and Americans abroad.
>
> According to some critics "eloquent tributes to democracy here in America can be largely nullified if our representatives abroad by daily, public conduct support those forces in Europe least concerned about democracy."
>
> Everybody is aware that Ambassador Kennedy throughout the epidemic of European crises has worked in closest collaboration with President Roosevelt and Secretary of State Cordell Hull. The trans-Atlantic telephone has been the daily, if not the hourly, link between London and Washington.
>
> Joseph P. Kennedy has carried out the foreign policy of the United States Government. Anyone who denies that fact is either intolerant-minded or uninformed. Critics have an obligation to study the documentary history of American diplomacy and then to retract what is in effect an untruth as well as an injustice.
>
> This is also the explanation of some critics preoccupation with Nazi penetration of South America. It is most emphatically true that the American people "will not tolerate nazi-ism in any form in any part of this hemisphere." Why does not the critic make exactly the same declaration about communism? Why are they

silent about the menace of Marxism in Spanish America? Do they not know that the United States exports more paid Communist propagandists to our good neighbors than any other country? Why do the critics not denounce the use of American passports in the leftist campaign to preach the gospel of Karl Marx south of the Rio Grande? Why are these critics silent about atheistic, socialistic education in Mexico?

If the critics are dissatisfied with Ambassador Kennedy for attempting an interpretation of the mind of Prime Minister Neville Chamberlain to President Roosevelt, why do these critics fail to utter the same pungent criticism of Ambassador William Bullitt for explaining the policy of Premier Eduard Daladier to the President and to Secretary Hull and his staff? Everybody who knows anything about foreign affairs is aware that the role of the two Ambassadors has been very similar and that their counsel from London and Paris has been along parallel lines.

Why should our United States representative in London be criticized, and, if possible, as some would want, punished or penalized because his record has been consistently liberal, democratic, and American?

The record of the Honorable Joseph P. Kennedy is one of high-minded, patriotic service. Everything in his words and deeds exemplifies love of political and religious liberty and his country. He has always opposed nazi-ism, fascism, or Marxism. He has vigorously opposed all. He stands for the great ideals of democratic processes of government. His achievements as Chairman of the Securities and Exchange Commission, as Chairman of the United States Maritime Commission, and as United States Ambassador to the Court of St. James's stamp him as one of the most helpful architects of much that is sound, permanent, constructive in the New Deal.

There are millions of American citizens who want no traffic with Moscow or Berlin, nor with the spokesmen and agents of Moscow or Berlin. They are satisfied that Ambassador Joseph P. Kennedy is a good citizen, an able diplomat, and a consistent Democrat.

The New Deal Harvest

EXTENSION OF REMARKS

OF

HON. JAMES C. OLIVER

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

RADIO ADDRESS BY HON. JAMES C. OLIVER, OF MAINE, ON MAY 20, 1939

Mr. OLIVER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast made by me at Portland, Maine, on May 20, 1939:

Citizens of the First District, during these past 2 weeks the legislative accomplishments of Congress have been utterly devoid of any significance with reference to the basic and fundamental causes of the long-continuing depression with its devastating and demoralizing unemployment, and for this reason I shall limit myself to some general observations concerning our present economic and political status as a people.

On several occasions—during my talks to you—I have invited your attention to certain perilous conditions prevailing in our Nation, conditions which affect each and every one of you. As is my duty as your Representative in the Congress of the United States, I invited your attention to the state of the Nation, with its idle factories, its ever-growing army of unemployed, with 43,000,000 of its citizens being supported by the public purse, and its ever-mounting debt—National, State, and local—already in excess of $60,000,000,000.

In particular I invited your attention to the fact that because of these debts incurred by National, State, and local governments, every man, woman, and child of this Nation's 130,215,000 inhabitants is in debt to the tune of $460. You, each and every one of you, your wives, your children, down to the babe born this very hour, your every relative and neighbor and friend, your fellow Americans everywhere in this great land—130,215,000 of them—each and every one, aged and new born, idle and employed, rich and destitute alike, because of debts incurred by National, State, and local governments, you owe to the money lenders $460 and more.

Moreover, my friends, that debt forever grows greater, grows more insufferable, sinks each and every one of you deeper into perilous quicksands from which none may hope to escape, quicksands destined to engulf our very democracy unless reason be restored and intelligent direction speedily rescue our economic system from the chaos into which it has been cast, rescue it and remold it to fit the demands of today, the demands for work for all the willing and the end of a folly seeking to lift itself by its boot straps.

Do not delude yourselves, my friends, that this debt, this $460 each and every one of you owes, is but a figment of the imagination and need never be paid. Do not delude yourselves that you and your own loved ones are exempt from this indebtedness. Day in and day out you are paying, not the debt itself but the penalty, the interest, the pound of flesh of the money changers to whom your governments have put you and your children in hock. You pay in every tax, in every purchase of the very necessities of life, in every transaction involving money. You pay, not to escape from debt but because the Government of the United States, the only power in this Nation constitutionally permitted to create money, prefers, for some inexplicable reason, to borrow its life-blood from a few of its citizens and sell into economic bondage and eternal debt the many of its citizens.

Of course, it is an indefensible proposition. It is rank folly. But it is the course and the folly our present administration prefers to follow, wholly forgetful of a man who once falsely buoyed the hope of a poverty-stricken and desperate America by crying his determination to drive the money changers from the temple. Has he not, instead, surrendered the temple to the money changers, selling America and its people into a bondage from which there is no slightest hope of salvation short of outright repudiation of the public debt? How many among you, how many in all America could, if need be, now pay his share of this debt, his $460, and the shares of his dependents, each owing $460? Could you?

And why are we in this mess, my friends? Why should any intelligent human being believe it possible for any nation to long exist by following a system designed to load its citizens with debt they can never pay, to perpetuate an economic system which provides work for the few and none for the many, to attempt the impossible task of feeding its citizens from the public purse which it hopes forever to refill from the coffers of the money lenders, giving as security the I O U of the destitute it borrows to feed? Could anything be more fantastic, more irrational, more certain of inevitably leading to chaos? Can we wonder that the enemies of a stable America, the would-be destroyers of our form of government, wax gleeful as they watch the growth of our public debt, that they wax bold in their predictions of what must follow the inevitable day of reckoning, that they compare our status today to that of the German people in that day when a flimsy postage stamp cost millions of marks?

It amuses the new dealers to claim that once upon a time one of President Hoover's committees recommended the placing of special garbage cans where restaurants might deposit others' leftovers for distribution to the unemployed. It is their pleasure to remark that this was a "feed 'em garbage" idea and to claim it wholly in keeping with the prevailing philosophy of the Hoover administration. With the new dealers this is quite a jest. But, my friends, shocking and utterly indefensible as any such feeding of garbage to the jobless would be, has the new dealers' system of feeding the unfortunate from the palms of politicians proven any less repugnant to right-thinking Americans? Are there not today a great many decent folk wondering if, after all, the garbage cans would not have been preferable, easier to keep free of adhering accumulations and wholly disinterested in the vote value of their contents?

Upon the pretext of a never-ending emergency the present administration has increased the national debt from twenty to more than forty billions of dollars. By the close of this calendar year—possibly long before—that national debt may be expected to reach the limit of forty-five billions set by the Congress. Today, after more than 6 years of trial and error, of blind guess and hopeful experiment and the spending of twenty-odd billions of dollars, there are many, many more millions of Americans utterly dependent upon public funds for existence—many, many more millions than so depended in 1929, or, for that matter, in 1938. Undoubtedly there are, likewise, many more politicians who are richer and more influential and vastly more relieved of worriment concerning their own personal security than they were in 1929 or in 1933. But for the hapless millions exist neither riches nor personal influence nor the slightest assurance of emerging ever from the slough of poverty nor the status of puppets dancing at the tug of strings jerked by whimsical bureaucrats and political opportunists. For these unfortunate millions tomorrow's bread depends not, as we so like to pretend upon the generosity of us, the people, but upon the outcome of the conflict of opinions, of personal and political animosities, of whims and fancies of us mortals blown by the winds of chance into the role of lawmakers upon the stage of Congress.

Today no living man knows how many millions are being fed from the public purse. Today no living man knows how many more millions must be so fed, nor how many more billions of dollars must be borrowed from the money changers for the feeding if we go on blindly following the Pied Pipers of the New Deal. Today no living man knows when—knows if ever—the millions of the hapless will decrease. But any man possessed of a modicum of common sense knows we cannot go on forever deluding ourselves that the salve of so-called "relief" some day, some-

how is going to cure the cancer of work for the few and none for the many. Any intelligent American knows, sooner or later, we must face the truth and either steel ourselves to brave whatever operation is necessary to remove that cancer or resign ourselves and our economic system to being devoured by it.

What percentage of the American people is living off the public purse? Let me repeat that no man knows. So many and so diversified the devices employed to pump public moneys into the bloodstream of the Nation—so many and so diversified the channels these infusions follow through the economic maze—so chaotically overlapping the payments and gratuities, no statistician, no magician, may hope ever to catch up with the truth nor accurately record the numbers of the taxation-supported. He may but approximate, which is to say guess. And we in turn must accept such guess as the only available base from which to pursue our quest. Here then are such facts as we may unearth.

According to the latest official estimates, of the 130,215,000 men, women, and children in the United States, the net total number receiving relief and employment on Federal work and construction programs during March 1939 was 22,582,000, or about 17.5 percent of the entire population.

But this 17.5 percent, my friends, is but a fraction of the total of the feeders-off-the-public-purse; but the victims of destitution, the aged, the blind, dependent children, the relief workers, and those they support in such fashion as permits an existence wage, deemed sufficient to maintain life until something better comes along. Sad as is this picture of nearly 23,000,000 of the citizens of the richest Nation on the face of the earth dependent upon existence wages drawn from the Public Treasury, of 17½ percent of the population of America condemned to the national poorhouse—it is but part of a far sadder whole.

These 22,582,000 public charges are but the poorest paid—the cheapest kept—the gatherers of crumbs at the public board. But what of the thousands upon thousands of highly paid administrative employees engaged in dispensing relief—of whom the W. P. A. alone employed 29,648 during December 1938? What of the recipients of unemployment benefits—numbering more than 1,000,000—of recipients of institutional care, of surplus commodities, of rehabilitation loans? What of the recipients or purely local and State relief? What of the recipients of loans and assistance from the F. H. A. or the R. F. C. or the Home Owners' Loan Corporation? What of the comparatively royally paid administrative thousands guiding the C. C. C.? What of the hundreds of thousands in the armed services? What of some 2,000,000 State, county, and local employees and their dependents—6,000,000 or so strong? What of the 861,914 civil employees of the executive branch of the Federal Government and their dependents—all no less dependent upon the public purse than is the lowliest W. P. A. ditch digger or writer, leaf raker or actress?

What of the relatives and retainers of politicians feeding at the public trough? Is the burden less to the taxpayer when his tax dollar goes into the lotion-softened hand of the public-pay-roll-adorning wife of a United States Senator or that of some Governor's wife briefly basking in the wan glory of momentary possession of a senatorial toga—is that dollar any less publicly paid than the one clutched by the toil-gnarled hand of a W. P. A. seamstress? In the final analysis, then, be their duties what they may, are not all of these livers-off-the-public-purse no less the wards of the public—no less on "relief" than the W. P. A. laborer toiling his required hours for his existence wage? Are they any less hazardous to a dangerously tilted balance between supported and supporting, any less a menace to an imperiled economic structure or to the very foundations of our present form of government?

How many of these are there estimated to be? No less than 20,000,000, swelling our total of the publicly supported to 43,000,000. Forty-three millions out of a population of 130,000,000. One-third of all! One of every three!

This then is the harvest—the still growing harvest—of the sale into bondage; the folly of turning the temple over to the money changers; the salve of a relief policy that has relieved nothing, that has let the cancer eat on until today, you, and each and every one of you, are governmentally in debt to the tune of $460 and more and are constantly being sunk deeper and deeper into debt.

For relief? Relief of what? Not relief of unemployment constantly increasing. Not relief of the inability of employers to employ help they do not need. Not relief of the financial burden of States and local governments compelled to make work and to go into debt to do things unneeded. Certainly not relief of the distress of a nation one-third of whose people must be fed from the public purse.

Isn't it time, my friends, to admit it isn't relief at all, that it's nothing more than floundering, craven evasion? Isn't it time to drop the salve tin and reach for the scalpel?

Sometime, again, I shall bring to your attention more facts and figures concerning this vital matter of Government debt and relief. For this, ladies and gentlemen, affects every one of you—every one of your dependents. You have the right to know where your tax dollars are going, what debt is being run up for you to pay. And it is my duty to serve you and to bring you these facts.

Until 2 weeks from tonight, when I sincerely hope you will be listening, good wishes, friends, and good night.

Administration of the Wage-Hour Law

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

STATEMENT AND RESOLUTION BY THE SOUTHERN GOVERNORS' CONFERENCE

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement and resolution by the Southern Governors Conference, Peabody Hotel, Memphis, Tenn., May 20, 1939:

The Conference of Southern Governors calls attention to the following facts:

The National Tariff Commission was born out of a conception that tariffs would protect and encourage the development of infant American industry. The Interstate Commerce Commission was born out of an equally high conception of public duty for the purpose of guaranteeing that railroad investments would receive a fair return, while at the same time the shipper was to be protected against the payment of more than a fair freight rate. Monopolistic interests have succeeded in defeating the high purpose of both of these measures to the economic disadvantage of all the vast population of our Nation west of the Mississippi and south of the Ohio River, while at the same time the consuming public within the territory east of the Mississippi and north of the Ohio pay penalties that augment concentrated wealth.

By virtue of the maladministration of these measures the per capita wealth of the citizens in the vast expanses of the southern and western parts of the United States is substantially below the national average. This condition is such that correction, if not impossible, can be accomplished only after most strenuous and expensive effort.

However, as progress is becoming apparent in the effort to correct this maladministration, particularly of the Interstate Commerce Commission Act, we find ourselves confronted with the impending, if not presently accomplished, maladministration of another measure born of equally worthy motives. The wage and hour law is recognized by the Southern Governors Conference as a measure intended to accomplish social justice. Its fine purpose to put a floor under wages and a ceiling over hours was approved by this conference on January 7, 1938, prior to the enactment of the law.

The legislation had as its main objective the escape from a combination of intolerable hours and wages. There is no question but that benefits have been derived from the passage of this legislation. These benefits have accrued because of the law, however, and in spite of inefficient and incompetent administration of the act, which maladministration, unless corrected, will cause the present gains to be lost and will indeed finally destroy the very objective of the act itself.

An analysis of the background of training, experience, viewpoint, and present conduct and attitude of the personnel charged with the administration of this act brings the Southern Governors' Conference to the inescapable conclusion that it is the purpose of the present personnel to pervert the purposes of this act from the accomplishment of social justice to the nullification of gains recently made in efforts to modify discriminatory freight differentials It is therefore the conclusion of the Southern Governors' Conference that the merest sense of duty and responsibility to national welfare demands of the Congress that it make an investigation of the personnel charged with administration of the wage and hour law for the purpose of guaranteeing that the legislative intent will be the motivating force in the administration of the law; that following such investigation proper steps be taken to compel the selection of such personnel as can and will properly carry out the intent and purposes of the act.

The wage and hour law specifically contemplates that the actual basic facts surrounding a given enterprise, its location, and its handicaps, be reckoned with in effecting differentials to the enterprise so that the actual source of employment of labor will not be destroyed. We point as an illustration of the maladministration of this law, that no such factors have been taken into consideration, and that as a result of that maladministration workers in various sections of the country are facing unemployment and may have actually become unemployed and placed on relief rolls because of the forced shutting down of small business enterprises. While not expressing approval or disapproval, we point to the significant fact that when these workers are thrown out of employment as a result of such maladministration and are forced upon work projects of the Federal Government, they immediately encounter a wage differential despite the fact that such

differential is not recognized in the present administration of the wage and hour law.

We again affirm that we want to get as high wages for the workers in all sections of the country, including our own, as can possibly be paid, but a failure to recognize the existing discriminatory differentials will inevitably destroy the source of employment.

In view of the above facts the conference resolves:

(1) That we urge upon the Members of Congress an immediate public congressional investigation of the personnel and policies of those administering the wage and hour law. That such investigation disclose the name; home address; place of birth and voting residence; organizations with which affiliated, past and present, other than religious; and the background of training, experience, viewpoint, conduct, and attitude of each.

(2) That following the completion of such investigation such reorganization of the personnel and policies of the administration of the wage and hour law be effected as will guarantee a proper administration of the wage and hour law in terms of the legislative intent and the true objective of the act.

(3) That the secretary of the conference is hereby instructed to forward a copy of this action of the conference to the President of the United States, the Wages and Hours Administrator, the President of the United States Senate, and the Speaker of the United States House of Representatives, with the request that the President of the Senate and the Speaker of the House cause same to be read in open session of their respective Houses of Congress, and that it be placed in the CONGRESSIONAL RECORD. That a copy be mailed to each Member of Congress and each Senator from the States within this conference; that copies be released to the press.

SOUTHERN GOVERNORS CONFERENCE,
E. D. RIVERS, *Chairman.*
CARL E. BAILEY, *Vice Chairman.*
L. THOS. GILLEN,
Secretary to Conference.

Senator Arthur H. Vandenberg and the Presidency

EXTENSION OF REMARKS
OF
HON. CARL E. MAPES
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

Mr. MAPES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement addressed to the Republicans of the United States, signed by the Governor and other elective Republican State officials of Michigan and the Republican members of the Senate and House of Representatives of the State of Michigan, a letter to the senior Senator from Michigan, Hon. ARTHUR H. VANDENBERG, from the Republican Members of Congress from the State, and his reply thereto, all relating to drafting Senator ARTHUR H. VANDENBERG as the Republican candidate for the Presidency in the next campaign, which follow:

To the Republicans of the United States:

We, the undersigned, representing official Republicanism in Michigan, present our greetings to Republicans in other States and commend to their 1940 attention our united and unanimous belief that Michigan's senior Senator, ARTHUR H. VANDENBERG, should be drafted for the next Republican Presidential nomination.

With great regard for other available Republican leaders, we submit that the next Republican Presidential nominee should combine long and effective national experience with a proven capacity for effective political leadership. The outstanding Republican statesman in Washington during the last 6 years—so recognized from coast to coast—has been the senior Senator from Michigan. He manned the trenches when there were few others on the firing line. He has been the focus of opposition to the present administration. Yet he has constructively cooperated in the development of progressive legislation. He knows national problems as do few others. He has the substantial confidence of his colleagues and the country. He is comparatively young in years yet old in wisdom and experience. He is a rugged constitutionalist who believes in the American system of government and economics. He is known throughout the land as a rational Republican liberal. He personifies in his long record and his attitudes the fundamental issue which the Republican Party must present to the American people in the next campaign.

The senior Senator from Michigan has declined to be a candidate for the 1940 Presidential nomination. We who are his neighbors know that he means what he says. We shall not ask him to change his high-minded attitude, which rates this next Presidential nomination above all ordinary political pursuit. But we also know that he puts his country ahead of every other consideration—whether political or personal—and that he would never decline any assignment to patriotic service.

Therefore, without his knowledge or consent we assert our faith in him. We express our belief that Michigan will ask his nomination. We take this means of commending him to the good opinions of our fellow Republicans throughout the Nation.

L. D. Dickinson, Harry F. Kelly, Thomas Read, Miller Dunckel, Vernon J. Brown, Eugene B. Elliott, Felix H. H. Flynn, Howard Nugent.

Michigan State senators (Republican): Earl W. Munshaw, sixteenth district; D. Hale Brake, twenty-fifth district; Miles M. Callaghan, twenty-eighth district; Chester M. Howell, twenty-second district; Otto W. Bishop, twenty-ninth district; Leonard J. Paterson, twentieth district; Clyde V. Fenner, eighteenth district; Don Vanderwerp, twenty-sixth district; George P. McCallum, twelfth district; C. Jay Town, tenth district; Joseph A. Baldwin, ninth district; Earl L. Burhans, eighth district; Allen G. Ludington, fourth district; Carl F. DeLano, sixth district; John Vander Werp, twenty-third district; M. Harold Saur, seventeenth district; J. T. Hammond, seventh district; Elmer R. Porter, nineteenth district; Harry F. Hittle, fourteenth district; Felix H. Flynn, twenty-seventh district; Jerry T. Logie, twenty-fourth district.

Michigan State representatives (Republican): Audley Rawson, Cass City, Mich.; John P. Espie, Eagle, Mich.; Floyd E. Town, Route 1, Jackson, Mich.; Victor A. Knox, Sault Ste. Marie, Mich.; Mark Jenema, Falmouth, Mich.; Charles H. Nixon, Cadillac, Mich.; Paul Begick, Bay City, Mich.; Lewis W. Zimmerman, Traverse City, Mich.; William J. McIntosh, Port Huron, Mich.; Charles R. Feenstra, Grand Rapids, Mich.; Bernie F. Hampton, Osceola, Mich.; Wilbur J. Harris, Bay City, Mich.; William C. Bird, Hesperia, Mich.; Worgen Jesperson, Petoskey, Mich.; Oscar E. Kilstrom, Grand Rapids, Mich.; Dewey W. Loomis, Wellston, Mich.; L. K. Preston, St. Joseph, Mich.; F. Jack Neller, Battle Creek, Mich.; James B. Stanley, Kalamazoo, Mich.; Edson V. Root, Sr., Pawpaw, Mich.; Alexander M. MacKay, West Branch, Mich.; John W. Thomson, Midland, Mich.; Nelson A. Miles, Holland, Mich.; H. L. Allard, Sturgis, Mich.; Arthur U. Odell, Allegan, Mich.; Ruth Thompson, Muskegon, Mich.; Robert N. Sawyer, Monroe, Mich.; Arthur H. Wickman, Carney, Mich.; Bert J. Storey, Belding, Mich.; Harry Hermann, Laurium, Mich.; Maurice E. Post, Rockford, Mich.; Ural S. Acker, Kalamazoo, Mich.; James Goulette, Iron Mountain, Mich.; John C. Guggisberg, Gaylord, Mich.; George N. Higgins, Ferndale, Mich.; Fred L. Kircher, Lansing, Mich.; Fred Rodesiler, Riga, Mich.; James Swain, Coldwater, Mich.; Rupert Stephens, Scottville, Mich.; Andrew Bolt, Grand Rapids, Mich.; Sherman L. Loupee, Dowagiac, Mich.; Richard H. Deadman, Alpena, Mich.; Ate Dykstra, Grand Rapids, Mich.; Alpheus P. Decker, Deckerville, Mich.; Byron Courter, Imlay City, Mich.; William Green, Hillman, Mich.; James I. Post, Hillsdale, Mich.; Charles P. Adams, Howell, Mich.; Elton R. Eaton, Plymouth, Mich.; James Graham, Freeland, Mich.; Palmer Landon, Mount Pleasant, Mich.; Walter J. James, Flint, Mich.; Charles B. Cumings, Flint, Mich.; Joseph E. Warner, Ypsilanti, Mich.; Henry J. P. Graebner, Saginaw, Mich.; Roy T. Gilbert, Algonac, Mich.; Warren G. Hooper, Albion, Mich.; Walter G. Herrick, Hubbardston, Mich.; Ellis E. Faulkner, Delton, Mich.

MAY 25, 1939.

Hon. ARTHUR H. VANDENBERG,
Senior Senator From Michigan,
Washington, D. C.

DEAR SENATOR VANDENBERG: The Governor and other Republican State administrative officials of Michigan and the Republican members of the State legislature, senate and house, as representative of official Republicanism in Michigan, in statements addressed "to the Republicans of the United States," declare that it is their "united and unanimous belief" that you "should be drafted for the next Republican Presidential nomination."

In this belief the members of the Michigan Republican delegation in Congress heartily concur.

Our knowledge of you and of your work in the Senate convinces us that you are preeminently qualified, by character, ability, experience, industry, knowledge of public affairs, and sound and constructive leadership to meet the exacting duties of the Presidency in these critical times.

We are satisfied that the position taken and the sentiments expressed by the Republican State officials of Michigan represent the views not only of the Republicans of our State but of a constantly increasing number of Republicans throughout the country as well.

We are transmitting herewith the statements of the Michigan State officials referred to.

Sincerely yours,

Carl E. Mapes, Roy O. Woodruff, Jesse P. Wolcott, Earl C. Michener, George A. Dondero, Fred L. Crawford, Albert J. Engel, Clare E. Hoffman, Paul W. Shafer, Clarence J. McLeod, William W. Blackney, Fred Bradley.

MAY 26, 1939.

Hon. CARL E. MAPES,
Chairman, Michigan Congressional Delegation,
House of Representatives, Washington, D. C.

MY DEAR CONGRESSMAN MAPES: This will formally acknowledge the generous communication which you have handed me in behalf

of the Michigan Republican delegation in the House, also transmitting the original statement regarding the 1940 Presidential situation signed by Governor Dickinson, all of the Republican State officials, and by Republican members of the Michigan House and Senate.

Words fail to express my gratitude for this expression of confidence. I shall hope to proceed with whatever responsibilities lie ahead in a manner that may justify these generous opinions. At the moment, these responsibilities require me to announce that I shall be a candidate to succeed myself in the United States Senate. If there are subsequent responsibilities of a broader nature, I shall meet them to the best of my ability.

You are good enough to credit me with sincerity in asserting that the next Republican Presidential nomination transcends all ordinary quest. The next Republican National Convention must first set down clean-cut, constructive, courageous principles which dependably promise to save the American system of free enterprise under the renewed spirit of constitutional democracy, and to recapture prosperity for our whole people under a Government restored to solvency. Then it should fit its nominations to its principles.

In my view, it must strive to create common ground upon which all like thinkers may unite to produce an administration for all Americans in which a prepledged, one-term President is manifestly free of all incentive but the one job of saving America. In my view, the nominations should flow from the deliberative judgment of a convention wholly free to search out the wisest, surest answers to these critical problems.

Holding this deep conviction, it would be wholly out of character for me personally to pursue the nomination for myself. It is for the people themselves to speak. No man understanding its difficulties and responsibilities could covet the Presidency; and no American could decline it if chosen.

I conclude as I began, with the assurance to you of my deepest gratitude for this utterly generous attitude and action upon the part of my Michigan Republican colleagues in Congress.

With warm personal regards and best wishes,

Cordially and faithfully,

A. H. VANDENBERG.

Philosophies for Elevating and Uniting Democratic Nations

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 25, 1939

COMMENTS BY IVAN G. McDANIEL, A. B., J. D., AND OTHERS

Mr. SHEPPARD. Mr. Speaker and Members of the House, due to the philosophy of national conduct that is being evidenced by many editors of the press and periodicals, I wish to bring to the attention of the Congress the philosophy as evidenced in the following theories as expressed by Mr. Ivan G. McDaniel, of Los Angeles, Calif., which I found highly interesting:

There has just been accomplished a uniting into a confederation of several of the oldest authentic schools of Arcane knowledge in the world. An appraisal of the value, scope, and purpose of these arcane schools can best be had by viewing their great work. What they teach, the scope of their learning, the soundness of their doctrines, and what they seek to accomplish speaks for itself.

There is a certain fundamental design, plan, or purpose which furnishes the pattern for, and as first principles, govern the universe, nature, man, and society. These principles are all powerful and coextensive with all activity no matter how stupendous or how minute. The existence of such principles is demonstrated by the regular course of the stars and planets and by the orderly processes of the manifestations of nature. While conditions may vary from day to day, these principles underlie and control the ultimate condition of man and society. With an understanding of these principles, the innate cosmic purpose and ultimate destiny of man is disclosed. These principles are known to and are the fundamental basis for the work of the arcane schools. These esoteric orders have for their intent and purpose the making of a human being into a complete man, qualified to express his godly powers in all departments of his being.

Some of these underlying principles which will be referred to herein are:

(1) The primary purpose of man is to unfold and develop, through his own efforts, all his potentialities, including his soulal qualities or be ultimately eliminated. The nature of man is such that he can do this only through experience. This process may be referred to as one of involution and evolution, although these terms are here used in a somewhat different sense than ordinarily understood. Man's progress in this direction today is almost at a standstill.

(2) The means given man by which he may thus advance or retrograde if he so desires, may be called the law of cause and effect; of action and reaction; of natural justice. Under this law he may set into operation causes which bring about growth, strength of character, and unfoldment of constructive results, or he may inaugurate causes which result in weakness, lack of character, or other destructive tendencies. Each moment man lives he is formulating some cause the effect of which will be reaped in some future event. Under this law reaction is exact, certain, and of the same nature as the cause. Man may not avoid either the necessity for manifesting nor the results of his thoughts, desires, and actions. The manner and method of this unfoldment through the use of the law of cause and effect gives a well-defined, definite, scientific scope of action and when properly understood acts as a guide to show the extent to which the individual should be allowed to depend upon group action. It furnishes a guide post for the type and scope of laws man needs for his help. Advancement can be made only by educating men in the use of the law; in showing what a certain action will produce by its reaction, but the individual must be left free to choose for himself.

These principles are impersonal, just, and apply to all alike. They reward or punish with certainty, and no man may escape the reaction following their breach. The present almost universal chaos and lack of balance in man and society is the direct result of man's failure to manifest in accordance with his cosmic purpose and to assume individual responsibility for his actions and unfoldment. Underneath this chaos, however, is the orderly processes of these principles in operation.

This lack of balance exists in the United States, for example, not only with reference to material wants, where with an abundance of natural available wealth great numbers of our population have not developed sufficiently to rise above industrial serfdom, but it is also true of our intellectual and emotional life as evidenced by the ever-increasing numbers of persons filling to overflowing our prisons and asylums and by the spectacle of egomaniacs running amuck at the head of emotionally sick nations.

Civilizations as we now find them are a conglomeration of negative, weak, and destructive forces vying with stronger, positive, and constructive good. This is due to the universal acceptance of a negative philosophy—the easiest way rather than a striving for, a dependence upon, and a realization of those potentialities giving strength, courage, tolerance, and understanding which come with the unfoldment of the inner power or soul. Unless the construction forces predominate, the negative forces are apt to reach their culmination and, as they spend themselves, carry to ruin the civilization founded upon them. Clear evidence of this process is seen in the actions of certain nations today. Mankind is more dissatisfied, discontented, and fearful of oncoming events now than at any other time in many a generation. And he has reason to be.

Theoretically it is not difficult to conceive of a plan which would offer ample opportunity for mental and spiritual unfoldment and bring about proper economic opportunity. The problem comes in devising a society which fits into the limitations and emotional reactions of humans in their relation to one another and permits, encourages, and forces, if necessary, individual advancement. Men have applied themselves to the production of material needs and have, through concentrated effort and in the application of the laws of material advancement, produced an abundance of material things (demonstrating the existence of such laws), yet this has not created happiness, social stability, or even security for the man who has achieved. There is lacking something that will put a foundation under this achievement and give lasting strength.

Society, like man, is fourfold—material, mental, emotional, and spiritual. If man reaches a peak in one department of his being without a corresponding advance in all departments, the lack of balance leads to suffering and eventual failure. The same thing is true of society. Today our civilizations are suffering from a lack of balanced development—particularly along effective soulual or spiritual lines, in which aspect of being only is character permanently developed.

No matter what form of government, economic, or social system is superimposed upon the human, it will not survive unless the character of the people is raised to a state capable of governing and being governed. In the final test, the state of society but reflects the state of the mass of its people. We have an unbalanced society, because we have unbalanced beings making up the mass of our people. We must therefore look for that thing which will raise man into a fully developed state capable of laying hold of and constructively using those things which he has devised for his use.

History has shown that material intellectual progress alone will not accomplish such balance, because such progress is cold, lacks adhesive power, and tends toward divergence rather than unity. When we drive the intellect, as presently circumscribed in man, to its utmost capabilities, we cannot find an answer to our questions, because human nature escapes the grasp of intellection. Man wants to believe that he is a rational being controlled by logic and by reason. Actually there is something much stronger than ratiocination as evidenced in the expressions of men in the time of crises. What man desires to express, his intellect will find logic for. The greed, hate, lust, fear, or other nonconstructive tendencies so prevalent in man today are rationalized by the intellect.

A moment's thought on this subject will show, therefore, that some means must be found to change these inward tendencies

which underly thinking. Mere rationalizing will not do it. The nonconstructive tendencies are heavy and sluggish and when the intellect is caught in the mesh of such desires, it prevents the lighter, finer, constructive thoughts from coming through into expression. This means that the outer shells of being must be purified so that the innermost inherent good may manifest. The change in character must go to such an extent that there can be no return to the old. That which caused the old nonconstructive tendencies must be entirely burned out. The roots must be dug up and destroyed. When this is accomplished one is able to see into one's own essential nature. Then is the truth known.

Theological dogmas have demonstrated their inability to cope with our problems. They must depend for their power upon fear, superstition, or belief. Our mental enlightenment has demonstrated the folly of fear and superstition, and the subversive forces in operation appear much stronger than mere belief. We must lay hold of and neutralize these forces if we are to master them. The arcane schools know this can be done, only by developing leaders who will, through proper training, become sufficiently strong and qualified to master, control, and neutralize these forces; leaders, who will by example, inspire the average man through his own efforts to advance from darkness to light.

The adoption of new economic policies, or even the change in the form of government, have not and cannot remedy the fundamental lack of balance. When, through greed, hatred, or other nonconstructive action, such lack of balance reaches an acute stage, as it has at the present time, the masses of men, instead of looking within themselves to find the fault, try to solve it in new forms of government, and in taking by mass power, through taxation, regulation, pensions, or more direct means, that which they desire, whether or not they have earned it, only to destroy, in the end, that which has been achieved. The coming into power of the masses may result in social progress only if the individuals therein can be made to see the need for their further development; otherwise the whole structure will be reduced to a common level of animal existence. This problem must be squarely met in America today.

We are now in the beginning of a new cycle in which changes occurring will be of wide scope and when reactions in the lives of men and society will occur with great rapidity. Actually, it is a period when the effect of mass causes set into motion by former civilization are beginning to reassert themselves and disrupt the present systems in conflict with them or conversely intensify movements in harmony with their trend. These cyclic recurrences must be understood in order to meet and control the results of former mistakes and not repeat them.

The problems incident to the present lack of balance will not be met by passing laws which interfere with the operation of these natural laws or principles. This interference may postpone temporarily the consequences of previous negative causes set into operation by individuals or by society as a whole, but such interference only dams up the effects, to have them break out in increased volume eventually. It is not being met by passing laws which take from the individual the necessity for and the incentive to develop himself, nor that take from him his freedom of action, so long as that action does not unnecessarily interfere with the rights of others. It is not met by passing laws that take from man the necessity for determining for himself his proper course of action and assuming full responsibility therefor. Strength of character or a realization of the need for individual unfoldment cannot be inculcated by legislation. These things are acquired only by experience—perhaps only through hardship which brings suffering.

With the realization of responsibility for personal unfoldment as the basis for man's progress, it is evident that any laws which substitute group responsibility therefor are weakening to the individual, particularly when others are forced by law to pay for any such program.

A few examples of the operation of these principles demonstrates their scope and effectiveness. Space will not permit a complete analysis in these illustrations.

It is not a violation of these fundamental principles to defend self, family, or nation; in fact it is man's duty so to do in order to maintain his individual freedom. It does, however, violate the principles to wage war for profit, for subjugation of a race, or to gain territory. War is a violation of all fundamental principles except for self-protection. As human nature is manifesting today, nations must maintain adequate facilities for defense, otherwise they will be attacked. A nation, like an individual, can protect itself only by its own strength, and that strength lies in its people. No nation can maintain the weak indefinitely without becoming weak. The reactions against and the weakening effect upon a nation which wages a war of aggression are so varied and well-known as to need no repeating here; it is pointed out, however, that a law to prevent a war of aggression would be ineffectual, for once a population is convinced of the need of war, and that must be done to get them to fight, the law is valueless, and a law to prevent war altogether would be to invite attack. So-called international laws to prevent war are valueless, as there is no sovereign power to enforce them. War will be prevented only when men realize the terrible consequences thereof to themselves and their own nation.

It is not contrary to these fundamental principles for men to organize for their mutual aid, advancement, or protection, and to prevent abuses. But such organization is violating such principles when it attempts to create a monopoly of available work and compel others to become members before they may work. The organization of men into a group gives them no greater rights than they possessed as individuals to prevent others from working. The reaction to practices within such a group inimical to the class of persons they purport to represent, brings about the organization of opposition labor groups with the attendant conflict between the groups; these conflicts, together with the reaction of the public and of the workingmen themselves against the injustices arising in trying to maintain monopolistic control will in the end disrupt the organizations; particularly when the fundamental purposes are lost sight of through the ambitions of leaders for personal power and when such power is abused.

The reaction to demands of such groups for unreasonable wage levels is to dry up the source of the wages. If labor by its mass power compels the passage of laws which help to accomplish a violation of these fundamental principles, the attendant reaction will be the enactment of stringent laws against labor, or a change in governmental structure through which labor will lose many of its gains as is illustrated in certain countries today. This is particularly true where such laws in their fundamental concept or administration are biased or unfair. To contend that natural justice can be administered by placing the power to investigate, prosecute, and set in judgment, in the same persons shows either an entire lack of understanding or an insatiable desire to control at any cost.

It is not a violation of these principles to acquire, accumulate, and use capital or wealth. In fact only those nations throughout history which permitted men with inventive, organization, or business creative ability to develop, protect, and operate concerns for this purpose, have advanced. The reaction, however, to the improper use of capital to degrade men, corrupt justice, improperly influence governments, enslave labor, or engage in other destructive practices, is to develop and arouse the opposition of labor groups, to lose the respect of courts, and raise public resentment to such a pitch as to strip those in control of capital of their effective power. As in all cases where power is acquired either through wealth or mass organization, the abuse of the power brings with it a reaction which develops factors that force the correction of or destroys such evils.

Laws or regulations which prevent or hinder these reactions in economic affairs promptly taking place are in themselves errors. Regulation cannot be substituted for these reactions for three reasons: First, regulation is a negative and not a positive method of handling the problem. It seeks to suppress by force the error involved, but provides no factor which remedies or removes the evil, and at the same time builds up a structure which provides a foundation for further progress. Second, the suppression of business practices by force does not result in proper education of the individual, and the nonconstructive tendency will find expression in some other form of abuse. Third, the interplay of forces and the ramifications of factors involved in our modern complex society are so extensive that no man or group of men can comprehend their consequences in time to effectively regulate them. On the other hand, the operation of these principles encompasses the complete scope of human activity and the remedy arises through the interplay of natural vibrating forces which find lodgment in the minds of men attuned thereto, much as the radio picks up the vibrating message from the ether.

An example of the interference with the working of these underlying principles and an attempt of men to avoid responsibility for their actions is seen in our present economic situation. Prior to about 1923 there was, generally speaking, a scarcity of labor and goods in America. The increased production just prior to 1923 and the loss of many world markets, together with technological displacement of labor, soon produced a condition of abundant supplies in both goods and labor, and these growing surpluses became acute just prior to 1929 and thereafter.

The economic theories and practices which fitted into the previous period of scarcity did not fit into a period of the surplus conditions accompanied by artificial restraints which prevented wage and commodity levels seeking their optimum relationship to one another. It therefore became necessary for each to assume the responsibility for adjustment in accordance with the existing conditions. Instead of capital, labor, and agriculture assuming this responsibility, they sought to artificially hold up these prices and wage levels above that justified by conditions, considering the interplay of factors both here and abroad.

To do this they shifted responsibility to the Government, which necessitated numerous and sundry regulations, bureaucracies, and interferences, and time has clearly shown that agriculture involves so many factors beyond man's power to control, such as weather conditions, that effective regulation is impossible. The attempt to maintain these artificial levels has further increased the disparity between agriculture and the other major economic factors and has and will continue to prevent the proper flow of capital and freedom of individual effort, with a result that the surplus problems are not solved. Government burdens have been greatly increased, and still the process of adjustment will have to be gone through with. This present artificial status will reach its climax when it is realized that taxes have been raised to a point of diminishing returns and the Government is unable to further extend its credit.

Perhaps an effort will be made to meet this situation by monetary inflation which will but hasten the process. Then will the individual responsibility have to be assumed and prices and wages placed at their optimum relationship in view of the conditions. The attempt to remove surpluses artificially is unsuccessful because human nature under present conditions is such that any such effort in one direction is overcome by counter moves in another

direction. By paying farmers to control production, for example, the Government defeated its purpose by making it worth while for unregulated persons to increase their production. Also by increasing the fertility of the soil the persons who received payments to reduce production on one part of the farm were able to increase it on another. Had individuals been required to assume the responsibility for their actions in overstimulus of production and proper steps taken to protect the citizens caught in the liquidation process, through use of the surpluses in kind, the surpluses could have been eliminated, the individuals made to see the necessity for careful conduct and saving and a fundamentally sound economic condition brought about. Thereafter, through lessons thus learned, the dissemination of proper information, without extensive regulation, would have been all that was needed to keep a proper balance. With this attempt to maintain artificial price and wage levels has come a series of laws all designed to substitute group responsibility for that of individual liability, which always weaken and stultify the individual.

We have about prescribed and circumscribed the sustaining power from a commercial, industrial, economic, or social viewpoint of the present economic possibilities, and this has demonstrated this sustaining power, with human nature as it now is manifested, is not sufficiently broad to take in much more than a majority of our population under the present standards of living or to cover the relief load that arises through failure of individuals to strive to support themselves.

While we have great material wealth it cannot be mathematically dealt with, as certain theorists and economists advocate. The greatest of all factors to be dealt with is human nature as it is presently manifesting, and this circumscribes and limits the availability of this wealth for use. Those qualified for further unfoldment must so develop themselves as to bring out and make available new forces, new materials, and new ideas which will permit further expansion along new lines and turn the labor involved in carrying out the present mechanical operations over to those in such stage of development that such work is an incentive to progress.

The full significance of the teachings, practices, and requirements of the arcane schools, cannot be grasped and carried out by those who are weak willed, fearful, or indifferent. The great work in its fullness must be accomplished by the strong, the courageous, the just—by men who have earned the right to further growth. Therefore, the man who has, through perseverance, concentration, study, and application of sound underlying principles, honestly earned success in any aspect of his being, whether that success be manifested in business, in art, in music, in the professions, or in other lines of endeavor, is the person upon whom now rests the responsibility of himself developing a balanced life so as to help create a balanced state in which he may further continue his growth, and in which the masses of people may enjoy that freedom and opportunity permitting them to achieve and unfold. Part of the trouble today is occasioned by those who have the ability to express themselves in the fourfold aspect of being, limiting their manifestations to only a part of their capabilities.

The penalty for the failure of the qualified men and women to fully unfold and express themselves is likely to be the ultimate disintegration of the forces which are holding society up to its present standards and its consequent reduction to the level of the inertia of mass mind. What little advancement man has made has been achieved by those who through development and service have arisen above the average. It is blind folly to tear them and their constructive achievements down. Such action creates further disturbance and unbalance.

Literally thousands of books have been written attempting to explain esoteric subjects. The field of religion, psychology and kindred subjects is filled with imitators, counterfeiters, and downright frauds. Perhaps more so in these fields than in others, because it is less easy to distinguish the spurious from the genuine. The best of such books, unless they teach the fundamental philosophy of genuine esoteric schools, are mostly intellectual treatises covering speculative philosophies. The thoughts expressed in them are merely intellectual eggs that can't hatch. Whatever truth they contain is exhausted with its stating and fails to take root in the reader. They do not cause the reader to create thoughts which get down inside of him and cause him to unfold with them. They don't open him up and expose his weaknesses, inhibitions, cross-currents, limitations, nonconstructive tendencies, or release his strength and will. Most thinking of this type is superficial and touches only the fringe of his being. What we read or think is "about" truth when we unfold by inner perception we become truth. Until a man has himself achieved unfoldment, it is like the blind leading the blind, for him to attempt to instruct someone else. The difficulty with most men today is that they are existing only in the fringe of being, and are not living from the profound wisdom of the soul. One may read of God, brotherly love, cosmic purpose, or one may speculate on the character of the Divine for a thousand years, but unless one experiences and feels that love, unless he unfolds his own soul, unless he reaches the divine essence within, he accomplishes no lasting effects.

What is written here is ineffective unless the reader develops and experiences his own unfolding. However extensively the question of food may be discussed, eating of it by someone else will not satisfy the reader's hunger. What each one experiences is his own and can never be another's. Unless it grows out of himself, no knowledge is of any lasting value. "A borrowed plumage never grows."

There is one basic thing which distinguishes the teachings of these schools from ethical, philosophical, religious, moral, mental, or psychological teachings. It is the raison d'être, the heart of their teachings. It is the thing that will lend balance to man and to society. It is known as illumination of enlightenment—the coming into the light of the wisdom of the soul. It was described by Moses as the burning bush and is known to the initiates as the ineffable light.

It is found as the basic principle in the primary wisdom of all races which have reached any degree of development. All else is built around that principle, and without it any teaching, however profound, is incomplete. It is not something which can be acquired by intellection, conceptualism, epistemological analysis, logic, or reasoning, although when once experienced, its logic and reason are self-evident. It becomes the foundation of reason. It gives a new meaning to logic. Being the highest truth, it is unfathomably deep. It is emancipation and freedom. It is beyond the realm of letters, talk, discrimination, inquiry, and speculative reflection. It is an inner perception which takes place in the most interior part of conscienceness. It is the direct grasping through experience of the true facts of essential being. It is achieved only by determined, persistent, and constructive efforts properly directed. The science of this unfoldment has largely been lost, but it is preserved in the archives of certain of these arcane schools to be made available to the worthy.

It has many similacrum but the real thing once experienced is beyond doubt. It gives a new perspective from which events can be viewed; a new vista to the whole of existence. It gives a new meaning of life in its smallest and largest aspects. It creates a state of knowing in comparison with which our present consciousness assumes most limited proportions. It fills the innermost part of one's being to overflowing and opens a new life stream, limitless and all powerful. It provides an infinite core around which may be arranged a purposeful, balanced, constructive, peaceful, and joyous existence. It sounds the fundamental creative tone with which the lesser chords may be harmonized. It reaches the source of profoundest wisdom. By it is man's fundamental nature unfolded and is not something foreign to his being which is superimposed upon him. It unloosens and burns out the destructive desires and attachments, and transmits them into pure essence. It intensifies, extends, enlarges, and makes more efficient the previous mental and emotional powers. It brings an intuitive or noetic method of looking into nature in contradistinction to the analytical and logical method, although it furnishes the foundation for analysis and logic. It is a revolutionary change which takes place in the center of being; it may be referred to as an explosion, a cataclysm, the bursting of the mind gates; it is the fulfillment of man's innate essential purpose as the blooming of the rose fulfills its natural cycle.

The essence of being which is thus reached may be described objectively as a cosmic divine flame or fire. When considered as power, it is divine will; when thought of from its inherent plan, it is cosmic law; when considered from its blending capacity, it is love; when probed for knowledge, it unfolds absolute truth and wisdom: when realized in its relation to the whole, it gives unity and oneness; when united with it, the knower and the known become one and the underlying unity of existence is realized. From this unity flows full compassion for all beings.

Since this essence touches and affects all aspects of one's being from the innermost core to the outermost body, its influence is felt in all planes of existence. It cuts through the physical, the emotional, the mental to the center of being which to most persons, in their present state, is unreasonable. It changes the center of his being from the intellectual-emotional conscienceness with its birth-death cycle to the fundamental unchanging cosmic wisdom.

Present conscienceness is a product of opposing forces separated through intellection. Comprehension under these conditions is possible only by setting apart the thing known from the knower. Such conscienceness cannot transcend its own limitations. To achieve freedom the innermost center of being which is a part of the cosmic whole must be laid hold of, for by doing this another means of knowing is made possible.

By this process things are seen as they really are. It is essentially practical and normal. It is as natural as the breaking through of the sun's rays with the passing of the clouds. It is not a hypnotic or self-induced state. It is not an indulgence in emotional excitement. It is not acquired by the repeating of statements until by their repetition one believes them. It is not a predetermined forming of a picture in the mind which is made to materialize, for it transcends the mind. As self-reflection grows deeper and deeper, the moment will come when the spiritual flower will surely bloom, illuminating the entire universe. To establish a brotherhood of man before a larger degree of illumination has taken place among mankind is impossible. To expect to have peace when men's hearts are filled with greed and hatred is absurd; to expect to permanently remedy the situation by laws, economic changes, or new social systems is sheerest folly. Man, his government, and society are fooling themselves. To see man and conditions as they are now manifested, the hatred, greed, jealousy, lust, ignorance, credulity, discord, hypocrisy, lack of stability, and the misuse being made of the forces and properties entrusted to man and the reactions which follow such conduct is absolutely essential to an understanding of the problem. But

to stop here leaves man in complete bewilderment. He must also comprehend the new power and wisdom and the relation between this power and wisdom and present conditions. He must realize the futility of idealizing and relying upon conditions that are bound to change; he must return to the center of his own being from which will flow a new vision, a new wisdom, and a new life, which can be relied upon and which will in time permit the establishment of proper conditions under which man can live and move and have his being in mutual help, trust, and confidence and make him realize that he must govern himself rather than others.

The teachings of these schools are sometimes spoken of as arcane, secret, esoteric, or mystic. They are a mystery in that until illumination is experienced it cannot be known, but after once being experienced it is the most prosaic of all experiences, for it presents a wisdom which shows the working of its principles in the most trivial of everyday things. These teachings are kept secret because: (1) They deal with the strongest forces in the universe, and which if improperly handled may result in untold anguish, and (2) when the constructive forces are aroused, they may be directly opposed by the nonconstructive forces. Experience has taught that unnecessary trouble may be experienced unless secrecy is maintained. They are esoteric because they are understandable only by the inner nature.

Man must work to achieve this unfoldment because there has been a split in his being. For reasons which cannot be here explained, conscienceness is posited in only a minor portion of man's total capabilities. This fringe conscienceness leads man into activities not in harmony with the fundamental purpose of existence. This principle, being all powerful, controlling the cosmos in all its activities, slowly but surely causes a readjustment in line with those cosmic principles, and the continually pulling of man away from the cosmic pattern and the consequent readjustment results in the oft-repeated belief that the only thing that is certain is change.

Unless one's study is based upon a comprehension of the total scope of what must be accomplished, the results are not likely to be complete. Such a person is like an architect who starts to build a house with only the idea of the basement in mind. In these schools are taught the fundamental laws relating to material success and the full and balanced development of physical, emotional, mental, and soulal aspects of being. There is only one law—that of cause and effect—but its aspects are multitudinous. Here one is taught to see the causes which produce the desired effect and to put into effect causes to avoid undesirable results. Past causes previously put into operation by man or with which he was connected may not be set aside, but man may live above the results, so they will not now control him. When posited in the true center of being, he may live so fundamentally and be so sheltered by the inner power that the results will pass over or around him. Ultimately all men must learn this law.

During the course of his training he will be shown the means and methods of achieving illumination. The training is practical, efficient, and can be carried on as a part of his every-day activity. It will not interfere with any honest, constructive, duty, pleasure, practice, business or other normal relationship; on the contrary, it will revivify every department of man's nature and bring into manifestation his every faculty for his own advancement and edification. Until it is achieved, he must believe the witnesses who testify to its possibilities and live in the faith that it can be done. He will, however, ultimately know it for himself. The degree of his unfoldment will be in direct ratio to the intensity of his efforts and desire to achieve. If the desire be great and all-controlling the unfoldment will be equally as powerful. A period of study, unfoldment, purification, and preparing the instrumentality for the experience is gradual, but the illumination is abrupt, instantaneous—a breaking through from one strata of being to another.

The teachings of these arcane schools have not been, will not, and cannot be widely publicized or commercialized. The esoteric teachings cannot be grasped by the multitudes. Their ethical aspects furnish rules of conduct for those who do not have the courage or will to seek the ultimate, but what is needed now is recreated powerful human batteries through which positive forces may be released and blended together. While these schools have individually existed for centuries a universal confederation has been formed, reaching through the United States, France, Belgium, Switzerland, Holland, England, Poland, Mexico, and as far as Madagascar, for that purpose. It is believed that the work already being done by such schools will be strengthened by this unity and there will be established a much stronger current of constructive force which will outflow in sufficient volume to offset the tremendous nonconstructive tendencies being released throughout many parts of earth. It will be the quiet acceptation and studied practice of these principles and the releasing of the fires from the center of being that will save this civilization from the destruction that has befallen those preceding us.

A UNIVERSAL CONFEDERATION

La Federation Universelle des Ordres, Societes et Fraternites des Inities, or Universal Federation of Orders, Societies, and Fraternities of Initiates of Esoteric and Arcane Science, is essentially and fundamentally Rosicrucian in its nature.

Esoteric and arcane schools or fraternities have existed in one form or another since time immemorial, and their influence has been a powerful factor in the many great reforms of past ages. However, an international or universal confederation of these organizations was never attempted until early in the present century and was brought to a successful issue in 1934 through the help of C. Chevillon, of the European Fraternitas Rosae Crusis and the cooperation of the various other esoteric and arcane organizations of Europe, Central and South America, the articles of the final draft of the confederation being signed in Paris, France, on the 20th of March 1939.

The august fraternities with the esoteric and arcane schools have always had as their incentive the alleviation of the miseries to which humanity has thus far been subject to; the righting of the wrong so rampant throughout the world, and the inculcation of wisdom so that through understanding and spiritual enlightenment the correction of all evils might become an accomplished fact, and the individual man come into his inherent birthright, and nations and individuals be at peace one with another, so that humankind might attain that goal set for man by his Creator, and which is the fundamental doctrine of all sacred literature: Provided, of course, man believes in, accepts, and puts into practice the precepts inculcated.

In the past it has been the specific purpose of the individual schools, as it is now of the confederation of these schools, to encourage, aid, direct, guide, and instruct men in the development of their spiritual nature and higher faculties; to initiate their adherents into a broader state of conscious understanding; to help raise them to more exalted planes of being, and to help them gain the light of wisdom, all to the end that they may become advanced agents in the elimination of individual, national, and international misunderstanding and bring about peace, economic stability, and lastly, spiritual enlightenment.

We maintain that through the means of spiritual, or soul culture, the higher self of man is developed, that through such development of the higher self, and the inner faculties of individuals, we advance and promote the general well-being and uplifting of all mankind, which is the true and lofty aim of the confederation, looking forward to the eventual spiritualization and highest development of all races, and the ultimate universal brotherhood of man and the fatherhood of God, with peace and good will to all men.

We know, full well, that the races of men can be no better than the common denominator or the average of the individuals that compose them; that the evolution and progress of the human race is mirrored in the evolution and development of the individuals that compose it; that human progress is deterred and held in check by the backward and the ignorant; that governments are tyrannical, unjust, and imperfect because men are credulous, weak willed, selfish, and ignorant; and that civilization can advance upward to the mountain top of progress and toward the pinnacle of perfection only as fast as the average man advances from darkness to light, from ignorance to truth and from truth to freedom. It has been declared by that great Teacher, that Initiate of wisdom, "that man shall know the truth and that the truth shall make him free." Indeed, knowing the truth does make men free, but no man may be wholly free until all men shall know the truth and become free. Therefore, the advancement of society as a whole, the perfection of government, the peace of the world, and the progress of civilization depends upon the enlightenment and development of the individual; hence, the regeneration and redemption of man can be and is the only salvation or deliverance of the world.

Now, inasmuch as men and women can develop their higher selves and inner faculties through conscious efforts only when they are free moral agents, therefore, we declare that there should be given to every man and woman the greatest personal freedom and individual liberty consistent with the rights of others and their duties to their fellow men, organized society, and the State. The freedom and liberty so essential to the proper development of the complete man, as a condition, environment, and development agent, which we advocate, is not the license to abuse or misuse, but liberty with full responsibility for the right and proper use thereof.

In order that this great work may be carried on and advanced among all the people of the earth, we would eliminate the cause of war and heal the nations by removing, through enlightenment, selfishness, hatred, jealousy, and misunderstanding between men and through the harmonizing of religious concepts, political ideals, economic theories, personal rights, and social views with greater liberty and a new-born love for humanity, with a broader tolerance that teaches charity and due respect for all with ill-will and malice for none, and the demand that justice be granted all men.

Therefore, to the end that our purpose may be faithfully carried out and in no way hindered by discord among ourselves created by the jealousy of creed, the distinction of color, racial pride, or hatred, or political dissension, we proclaim our work to be strictly nonsectarian, nonpolitical, and without distinction of creed or color.

All the members of this organization are practical men and women who believe in progress, law and order, self-control and self-improvement—the improvement and development of the whole man—body, mind and soul. Our guiding star is the one word try. Our discipline is temperance, fortitude and perseverance.

We teach the charity that is broad and practical; that is considerate, sympathetic, encouraging and helpful, with an intellectual hospitality that is understanding, consistent, steadfast, and tolerant; we extend the helping hand of courteous patience to every human and spiritual need, help men to help themselves, to find themselves and save themselves.

We advocate freedom—physical, social, economical and intellectual and spiritual, for all mankind and individual liberty—not license—with full personal responsibility.

We maintain that all created things and attributes of Nature were made for man's enjoyment, attainment and advancement. All is good that is properly used and in nowise abused. We hold that the only sin that man commits is the act which injures himself, another or others.

We prescribe the highest standards of manhood and womanhood with profound respect for the noble estate of motherhood. We promote a culture of the physical, mental, and spiritual man that inspires and creates the highest respect for woman and a lasting and unfailing respect for the rights, privileges, and prerogatives of others. We demand honor, sterling nobility, personal integrity and fair dealing among men and believe this to be a universal panacea that will eliminate war and present day economic problems and establish a reign of good will, advancement, and economic recovery, with resultant human happiness.

We insist on individual responsibility in all affairs of life on the physical, spiritual, and moral plane; that salvation is individual and that man is his brother's keeper insofar only as he can aid, assist, and guide him along the path and show him the way. In the end each human creature must himself be his own savior by living the life as he has been taught by the Great Exemplar.

We seek to live without hate, suspicion, whim, jealousy, envy, or fear; to be simple, honest, honorable, frank, natural, courteous, and unaffected; to meet all men on an absolute equality; to have the strength of character and the force of will to face any and every obstacle and to meet every difficulty unabashed and unafraid; to radiate joy, cheer, happiness, and good will, and to live our lives as we deem best, always up to the highest, fullest, and best and without any infringements upon the rights and privileges of others.

To the end that others may live as they deem best or desire, we shall not meddle, interfere, suggest, dictate, or give advice that is unwanted, nor assist when our service is neither requested or needed. If it be our good fortune to help, uplift, or inspire others let it be by example, precept, inference, or suggestion rather than by injunction or dictation.

The salvation of man by compulsion is not possible; the Kingdom of Heaven cannot be taken by storm and peace on earth is not possible by legislative exactments, therefore the peace, happiness, and economic freedom of man must be won by him through the building of character, strength, and the fearlessness which prevents encroachment upon his individual rights and liberties.

The destiny of man is the progress of just men made perfect and the advancement of the race through the individual effort and achievement of each worker under the guidance and protection of the law which all honest men recognize as just—the law of action and reaction. It has been well said that he who sows wheat shall eat bread, but that he who sows tares shall starve. According to our actions so must be the reaction. Ill-will and hatred must of necessity return loss and misfortune, while kindliness and generosity will bring good will and the strength to achieve.

The great open field of humanity was never more ready and prepared for the sowing of those seeds which will bring harmony to the needs of humanity; therefore, to widen the effective range of our efforts, to bring the munificent and ineffable benefits to a greater number of grateful and happier men and women of all races, and to help improve the common lot of all humanity, we offer our experience and help in the solution of their problems, basing our efforts on the history of mankind, and the experience of ages.

Statement of the Secretary of the Treasury

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 29, 1939

STATEMENT OF SECRETARY MORGENTHAU BEFORE THE WAYS AND MEANS COMMITTEE

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Secretary Morgenthau before the Ways and Means Committee of the House of Representatives, May 27, 1939:

I appreciate this opportunity to appear before your committee to discuss with you certain broad fiscal problems and certain specific tax questions.

Tax proposals cannot be discussed comprehensively except in relationship to our whole national and fiscal position. We are now in the midst of a world situation which imposes on this Government a special responsibility. We must demonstrate that a democratic government has the power and the flexibility to survive a prolonged crisis and chaotic world conditions with the strength of its free institutions unimpaired. Preservation of our democratic form of government over a long period of years requires, in my opinion, a fiscal program which has a fourfold objective: (1) promotion of free enterprise and private investment; (2) attainment of full business recovery; (3) maintenance of our public finances in a sound and unassailable position; and (4) a just distribution of tax burdens and a more equitable distribution of national income.

Successful operation of democracy demands that all four objectives be solidly linked together. When we consider any specific change in our fiscal program we must satisfy ourselves that the change makes for a better and not a worse distribution of tax burdens and of national income, that the change promotes and does not retard business recovery, and that the change makes easier and not more difficult progress toward the establishment of a balanced relationship between revenues and expenditures.

Full attainment of these objectives is difficult at best. It is made more difficult by a new and ominous development in world affairs—the armament race now gripping the important nations of the world. Great Britain in the present fiscal year is spending $3,000,000,000 on military expenditures, or almost 50 percent of its national budget; France is devoting over 40 percent of its national governmental expenditures to the same purpose; Italy, 50 percent; Germany, probably 60 percent; Japan, over 70 percent; and it is reported that Russia has just authorized an increase of about 50 percent in budget allowances for armament. These huge expenditures are being financed largely by borrowing. The race is becoming more intense, and there is no end in sight.

In this connection it is interesting to note that in our Budget for this fiscal year expenditures for national defense are about 12 percent of total expenditures. For us these developments present the danger that they may involve us in increased cost for national defense here and that they may result in monetary instability abroad and disruption of our commerce, the consequences of which we cannot fully predict.

No proper solution of any major problem facing this Government today can be achieved without full consideration of the impact on our country of the present international crisis. The unmistakable implication of the international situation is that we should give serious attention to our future fiscal position and redouble our efforts to attain full recovery. High national income and a sound fiscal position are essential to adequate national defense. It is against this background that we reexamine our fiscal program.

A fundamental objective of sound finance clearly is a balanced budget. There is, of course, no good reason reason why taxes must exactly balance expenditures in each specific year any more than in each month, each week, or each day. There are periods during which sound fiscal policy calls for an excess of outgo over income, and others when it calls for an excess of income over outgo. In a depression it is inevitable that there will be deficits. Revenues decline at the same time that the Federal Government is called upon to assume inescapable social and economic burdens.

If, however, deficits are too long continued, the depressive effects of uncertainty tend to make recovery more difficult. The sequel to deficits in emergencies should be surpluses during years of prosperity. That was and is one of the broad purposes of seeking to raise the national income to a high level, thus assuring revenue great enough not only to end the deficits which began in 1931 but also to reduce the public debt.

In carrying out our fiscal policy it would be helpful to have machinery which would more fully coordinate our efforts. It is not the prerogative of any administrative department to make suggestions to the legislative branch of the Government for the conduct of its work, but I am sure that you would wish me to be frank in suggesting ways of surmounting difficulties which I believe now attend the joint efforts of the Ways and Means and Finance Committees and the Treasury Department.

If, for instance, the Ways and Means and Appropriations Committees of this House and the Finance and Appropriations Committees of the Senate could meet each session as one joint committee on fiscal policy, to consider the over-all aspects of the expenditure and revenue programs, simplification and greater effectiveness would result. The Budget Act of 1921 set up a procedure for the orderly formulation by the Executive of fiscal proposals and for their submission to the Congress as a unified budget. No comparable procedure has been set up in Congress for considering revenues and expenditures together as two interrelated aspects of a single problem. I hope this committee will agree with me that some such innovation would improve the efficiency of the Government. By providing for a preliminary legislative consideration of the over-all picture of appropriation and revenue measures, it would give Congress a broad perspective of the state of the Government's finances and permit a better ordered coordination between the executive and the legislative branches in this field. This joint committee would in effect be a lens through which all appropriation and revenue measures could be viewed in relationship both to what the Nation needs and to what the Nation can afford.

This committee should have continuous life for the purpose of actively studying fiscal problems between as well as during sessions of Congress. The Treasury Department would, of course, cooperate in this work to the full extent that the committee desired.

Thus far I have dealt with the financial problems of the Federal Government alone. We must remember, however, that with the

best conceivable Federal fiscal plan in operation, we still would have touched less than half of the tax problem which confronts the Nation. Almost 60 percent of the total tax revenues of the country are collected by State and local governments.

In the last 5 years we have given serious study to the problems created by Federal-State tax conflicts. The same problems had been recognized by our predecessors. It is my belief that we should take steps without delay to make these studies effective. I suggest that Congress create a small temporary national commission to report to Congress as soon as feasible on the various aspects of intergovernmental fiscal policy and propose a plan for the solution of the problems involved. Such a commisison should be made up of men of ability who command the highest possible public confidence, who are familiar with fiscal problems, but who will represent the public at large rather than particular governmental units.

Overlapping and competing taxes have grown in number and size as both Federal and State Governments have sought new revenue. Grants-in-aid are being demanded of the Federal Government in increasing amounts. The results of this fiscal situation are increasingly unsatisfactory to both State and municipal governments and to the Federal Government, and more and more burdensome to taxpayers. The recommendations of such a commission should assist us in achieving a more orderly relationship between the Federal, State, and local fiscal systems.

Thus far I have talked about two fiscal matters of great importance. Let me turn now to more specific questions of Federal taxation.

I desire first to reiterate two tax recommendations which the President has already made and a suggestion which the Treasury has presented:

1. In his Budget message of January 3, 1939, the President recommended that Congress extend the miscellaneous internal revenue taxes which under existing law will expire in June and July, and maintain the current rates of those taxes which otherwise would be reduced in June.

2. In his message of January 19, 1939, the President recommended legislation making all Government salaries hereafter earned and interest on all Government securities hereafter issued subject to Federal and State income-tax laws. That part of this recommendation dealing with Government salaries, I am pleased to note, has already been incorporated into law.

3. In my statement of March 24, 1939, I presented for your consideration four alternative rate plans for old-age insurance contributions during the next 3 years.

Even though a comprehensive revision of the tax structure probably will not be feasible at this time that fact, in my opinion, should not restrain your committee from giving serious attention to removing from the tax laws any manifest inequities or other defects.

Before specifying the tax provisions which I believe deserve your special attention at this time I wish to emphasize the importance of maintaining the present revenue in any tax revisions which may be made. We must not forget that one of the important objectives of our fiscal program is to approach a balance between revenues and expenditures. For this reason any tax reductions must be offset by tax increases. If tax revision were confined to tax reductions the resulting uncertainty as to our future fiscal position would injure and not help business. We should take no step which the public may interpret as moving away from the objective of a balanced Budget.

In discussing the elements or features of the tax system which you may wish to reexamine, I should like to classify them roughly into three groups.

The first group includes features which may have been characterized as likely to hinder business expansion and investment.

One such feature is the absence of provision in our income-tax laws for carrying over net business losses to be deducted from business profits of future years. The profits or losses of each year are considered without reference to those of any other year. In consequence a business with alternating profit and loss now pays higher taxes over a period of years than does a business with stable profits although the average income of the two firms may be equal. New enterprises and the capital goods industries are especially subject to wide fluctuations in earnings.

As a second example, I should also like to mention the questions of tax-exempt securities and surtax rates in the higher brackets. These two questions should be considered together. Tax exemption of securities is highly inequitable and tends to nullify our progressive surtax rates. Most persons subject to the high surtaxes have sizable holdings of governmental securities which yield them an income free from Federal income taxation, while other persons entirely escape the high surtaxes in this manner. Tax exemption also operates as a magnet which pulls persons subject to high income taxes away from investments in private business. We should by all means pass legislation to make it impossible in the future to issue any more tax-exempt securities.

This having been accomplished first, it would then be fair and logical to reexamine the question of whether the present surtax rates on very large incomes may not be so high that they discourage the limited number of individuals subject to them from taking normal business risks.

In a second group are features of our tax system which have been referred to as "tax irritants." As an example I would mention the undistributed profits tax. In its present form this tax is unimportant and does not accomplish the objectives of the original proposal. The tax produces little revenue and has little effect on business. It has acquired prominence as a psychological irritant largely because of the widespread and emotional criticism which has been directed against it. One of the objectives which the law sought to attain was to prevent the avoidance of the personal income tax through the retention and accumulation of earnings by corporations. This is still an important and, to my mind, a sound objective. The law in its present form does not attain it. Since the income tax on corporations, of which the undistributed profits tax is a minor segment, expires by its own terms at the end of this year, your committee should deal with this problem. The Treasury, of course, stands ready to work with you on it.

Another example is found in the capital-stock tax and the related excess-profits tax. Under the present law the capital stock tax is based upon a declared capital-stock value which the taxpayer may revise every 3 years. The declared value may be any figure that the taxpayer desires to submit regardless of the actual value of the stock. The excess-profits tax applies to profits in excess of 10 percent of such a declared value. The taxes are thus not really taxes on the value of capital stock or on excessive profits. Their major defect is that they operate very erratically. The tax liability they impose depends on the taxpayer's ability to forecast profits for the next 3 years as well as upon the amount of profits actually realized during each of the 3 years. Forecasts of earnings are particularly difficult to make in the case of new businesses and those with unstable incomes such as the capital-goods industries, with the result that taxes imposed on such businesses are at times inordinately high.

There is a third category of tax problems now being widely discussed which raises questions of tax equity. The Treasury has already worked on these problems and, if your committee desires, our staff could continue these studies in collaboration with the committee, possibly with a view to action at a later session.

An example is the limitation now placed on the deduction of corporation capital losses. Under the present law an excess of corporate capital losses over capital gains can be deducted from ordinary income only to the extent of $2,000.

In the consideration of possible changes in the parts of the tax structure just mentioned, it is essential to bear in mind that most of them would result in reductions in the revenue-producing capacity of the tax system. I have already emphasized the importance of not permitting the revenue-producing power of the tax system to be reduced at this time. Accordingly, with the adoption of any such changes involving loss of revenue there should be associated revenue-producing revisions. Although this problem is difficult, it is one that must be faced. The taxes resorted to for replacing any lost revenues should have the least harmful effects on business and should contribute to greater equity. They should not change the relative distribution of the tax burden between broad groups of taxpayers and especially should not place additional burdens upon consumers.

The subjects I have discussed are for the most part confined to a limited segment of the tax system. I do not consider them as constituting an adequate program of tax revision. Such a program can be developed only through long continued study, and it cannot be static but must be adapted to changing conditions. But the general lines along which Federal taxation should develop in the future appear to be quite clear. We ought to increase the part played by direct taxes that can be made to take account of differences in the abilities of individuals to support Government. This means that we should endeavor to minimize the use of manufacturers' exercises and other commodity taxes which tend to be shifted directly to consumers, putting the emphasis on taxes based on capacity to pay. Such revision would facilitate coordination of Federal with State and local taxation.

In conclusion, permit me to say that one of the major tasks we have before us is to do everything we can to promote lasting business recovery. With this still uppermost in my mind, I would like to repeat now with the same deep conviction what I said in November 1937: "The basic need today is to foster the full application of the driving force of private capital. We want to see capital go into the productive channels of private industry. We want to see private business expand."

Robert Low Bacon

MEMORIAL ADDRESS

OF

HON. WALTER G. ANDREWS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT LOW BACON, late a Representative from the State of New York

Mr. ANDREWS. Mr. Speaker, with the untimely death of ROBERT LOW BACON the House lost one of its best liked and most useful Members. Few men of his position in life gave so generously to the service of their country, and in so doing few have been rewarded in the friendships of all types of persons

such as those extended to BOB BACON; for thus he was known and thus will he be remembered.

Following an example set by his distinguished father, he volunteered early for service in the 1915 military training camps and served in 1916 on the Mexican border with the New York National Guard, subsequently in various assignments until the end of the war in the Artillery, receiving the Distinguished Service Medal, thereafter continuing his interest in the Reserve Corps until the time of his death.

Soon thereafter he was elected to the House of Representatives where his record of service was an outstanding one. With the ability to perform arduous tasks BOB BACON possessed a remarkable disposition for friendship, a charming manner, a generous heart, and a genial soul, all of which greatly endeared him to his colleagues, and his record of service for his district, his State, and his country in the House of Representatives was one of force and character, challenging the respect of his fellow Members.

Figuratively he died in the saddle at the end of eight terms of painstaking and conscientious public service for the citizens of the great First District of New York State, and we mourn his loss. In his going there passed from among us a soldier, a fine legislator, a gentleman, and a friend.

Stephen Warfield Gambrill

MEMORIAL ADDRESS
OF
HON. WILLIAM P. COLE, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. STEPHEN WARFIELD GAMBRILL, late a Representative from the State of Maryland

Mr. COLE of Maryland. Mr. Speaker, 10 years of service with a colleague in the House of Representatives affords the best available opportunity to really know a man. This is especially true in the case of Members of Congress from the same State.

As a young man, before entering public life, I knew, by reputation, our late colleague, Hon. STEPHEN WARFIELD GAMBRILL. His life and public service in the Legislature of Maryland was synonymous with all we like to identify with true statesmanship. A thorough student, a real gentleman, a strong and forceful debater, a fair and courteous gentleman were all attributes belonging to him.

With a foundation derived from attendance, as a young man, at the Maryland Agricultural College, from which he graduated and later from the law school of Columbian University in Washington, which is now known as George Washington University, he was admitted to the bar in 1897 and became a practicing attorney in the city of Baltimore, specializing in surety and insurance law. For years Mr. GAMBRILL was associated in a prominent way with the legal department of the Fidelity & Deposit Company of Baltimore. It was during his service as a member of the Maryland Legislature in 1920–22 and the Maryland Senate in 1924 that he became a State-wide figure. It was not surprising that his talents were called into service in a larger field when he was chosen Representative in Congress from the Fifth District of Maryland in November 1924, and thereafter to each succeeding Congress, to the time of his death on December 19, 1938.

As a member of the powerful and important Committee on Naval Affairs, Mr. GAMBRILL found his most interesting work. The zealousness he displayed caused many to feel at times that he looked upon the United States Naval Academy, situated in Annapolis, in the heart of the great district he represented, as peculiarly his individual problem. His devotion to this important activity of the Federal Government in his district was appreciated by all, especially the people of Annapolis where, as a candidate so often, he received ever increasing majorities.

My fondest recollections of STEVE GAMBRILL carry me into the many meetings of the Maryland delegation, held during the long term of service we enjoyed together. He was looked upon by our group as one possessing peculiar qualities of analysis and judgment which was helpful to us, especially during the trying depression period from 1929 to date. Representing, as he did, one of the most trying districts in the entire country, because of its close proximity to the Capitol, he became a virtual slave to his constituents. During the last few years of his life, when he could well have afforded, like many others, to preserve his energies and yet attend the sessions of the House and vote his convictions, he would, from early morning through the day, and often late into the night, continue the practice of seeing many people in order to solve the ever recurring problems of distress and need so prevalent in the office of a Congressman during the recent depression period.

STEVE GAMBRILL left a host of friends in the House and thousands of devoted admirers in the State. I have missed him greatly and shall not only never forget his jovial, happy personality but the counsel and advice he was able to give, and shall recall my association with him many, many times.

John J. Boylan

MEMORIAL ADDRESS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN J. BOYLAN, late a Representative from the State of New York

Mr. TABER. Mr. Speaker, JOHN J. BOYLAN was a member of the Committee on Appropriations for a long time. He gave his best to service on that committee and for many years took great interest in the fiscal affairs of the Government. He will be best known, however, for his interest in the unfortunate, for the work that he did on the Special Committee on Prisons (where he participated in the effort that that committee made successfully to modernize the system of Federal Government prisons), and for his work for the hospitals for the care of drug addicts.

JOHN BOYLAN probably did more than any other Member of Congress in his day to promote legislation designed to limit drug addiction and to provide some kind of cure for the unfortunates who were afflicted with it. That was his special interest in Congress and he performed a real service in that connection.

I served with him on both the Special Prison Committee and upon the Appropriations Committee and for a great many years on the same subcommittees on appropriations.

I shall miss his cheery greeting and his sincere approach to the problems of government.

Robert Low Bacon

MEMORIAL ADDRESS
OF
HON. CLARENCE E. HANCOCK
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT LOW BACON, late a Representative from the State of New York

Mr. HANCOCK. Mr. Speaker, when I sat at my desk to perform this last sad act of friendship for our late beloved colleague, ROBERT LOW BACON, I opened a volume of Emerson's Essays and glanced hurriedly through some of them for a new quotation, or rather an unhackneyed one, from that

greatest of American philosophers, to express my appreciation of him in language more clear and forceful than I can command. I looked at the Essays entitled "Self-Reliance", "Friendship", "Heroism", "Character", Manners", and "Politics." These titles suggested BOB BACON and his career to me. I found many appropriate paragraphs but this one describes him as I shall always remember him:

> The gentleman is a man of truth, lord of his own actions, and expressing that lordship in his behaviour, not in any manner dependent and servile either on persons, or opinions, or possessions. Beyond this fact of truth and real force, the word denotes good nature or benevolence: manhood first and then gentleness.

His circumstances were such that he could probably have settled down to a tranquil life of effortless ease, but BOB BACON was a strong man, and endowed with that New England conscience at which cynics scoff but which I believe has been the most valuable possession our ancestors brought from the Old World and the most precious inheritance handed down to us in preserving a sense of individual responsibility for public and private rectitude, misdirected though it may sometimes be.

He dedicated his life to public service. When war became imminent he was one of the first to volunteer for training at the Plattsburg camps; when the National Guard was ordered to the Mexican border he volunteered; when we entered the World War he was ready and was in the service within 3 weeks. He served throughout the war with great distinction and when it was over he accepted a commission in the Reserve Corps and was a colonel in the Field Artillery Reserve at the time of his death.

He entered actively into politics after the war. He was elected to Congress and had completed eight terms of useful and conscientious service when, at the age of 54, we were shocked to learn of his sudden death.

It was my privilege to know him in the days of his Mexican border service and to enjoy a relationship with him that became a warm friendship as I knew him better in the years to come.

The first time I ever entered the Chamber of the House of Representatives was when I was sworn in at the opening of the Seventieth Congress. I was a stranger in a strange land. It was characteristic of BOB BACON that he sought me out and did me innumerable kindnesses in the unostentatious manner that marks a gentleman. Kindliness and generosity were a part of his nature, as everyone who knew him, of high or low degree, can testify.

In this brief tribute I will not attempt to recount the many contributions he made to the legislative accomplishments of this body. Others will do that. From the many discussions I had with him on pending bills, I know the question in his mind was always, What is right? and never, What is selfishly expedient?

BOB BACON was an able and sincere Representative in Congress, he exemplified the thoughts and ideals of Americans who love their country, he honored his distinguished name and family. It should be comforting to his courageous widow and daughters to know in how great affection and esteem he was held by those of us who knew him best and how deeply we mourn his passing.

John J. Boylan

MEMORIAL ADDRESS
OF
HON. MICHAEL J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN J. BOYLAN, late a Representative from the State of New York

Mr. MICHAEL J. KENNEDY. Mr. Speaker, I humbly participate in this memorial out of debt to my great friendship with the late lamented Representative JOHN J. BOYLAN, my distinguished predecessor in this body from the Fifteenth Congressional District. Our friendship arose out of his friendship with my late father, which extended over a period of 40 years and continued to the day of his death; and so it was no ordinary one, bound as it was with ties of family affection and mutual understanding. While it was not my pleasure to have the privilege of serving with him in this great body, I cannot let this occasion pass without adding my tribute to JOHN BOYLAN, as I knew him. Others have defined his great contribution to the welfare of his State and country, but I can give myself the privilege of testifying to his great helpfulness to the people whom he represented and his generosity in all his human attitudes.

His was a distinguished career and he came to the Congress of the United States well equipped to serve the people of his district and his country. Prior to his 16 years of service here, he served in the Assembly of the State of New York from 1909 to 1913, subsequently in the State senate until 1922, at which time he was sent to the Halls of Congress. As a Member of this body he fought for betterment of Federal prisons, for executive intervention in coal strikes, and for aid to the Catholics in Mexico. He was first a member of the Committee on Military Affairs and later of the Committee on Appropriations; he also served as chairman of the Thomas Jefferson Memorial Committee. His aid and assistance to committee chairmen were valuable to a high degree.

I have had the honor of representing here in the House of Representatives the congressional district in which JOHN BOYLAN was born and died. His splendid career of public service has been a beckoning inspiration to me, as I have undertaken to perform my duties in public office. The good which JOHN BOYLAN did and tried to do will never die, whether it be recognized or unrecognized as such, for it lives and will live, since no truth or goodness attributable to man ever dies or can die. Loyal to his party, faithful to whatever cause he espoused, candor and a proper appreciation of his real worth and of the loss those of us who knew him sustained, leads me willingly to pay my humble tribute of appreciation and respect to his memory. And so today, those of us who were his friends and who are still standing on the "narrow isthmus betwixt two boundless seas"—the past, the future; two eternities—are living again those happy days of friendship, association, and fellowship in the land of the yesterday of memory, a paradise out of which fate cannot drive us.

I know of no epitaph, Mr. Speaker, to be applied to my departed colleague more appropriate than the words of Mark Antony as he looked down upon another who lay still in death—

> His life was gentle and the elements
> So mixed in him that Nature might stand up
> And say to all the world
> "This was a man!"

The guidance and example of JOHN BOYLAN live on for "death is but a rusty scabbard from which emerges a shining sword."

Robert Low Bacon

MEMORIAL ADDRESS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT LOW BACON, late a Representative from the State of New York

Mr. TABER. Mr. Speaker, ROBERT LOW BACON came to Congress in 1923 at the same time that I came. I had known him for several years before that and had been very closely associated with him in political conventions. Here, we had our offices near together and were accustomed to frequently consult with each other and to go over the mutual problems that come to new Members. For the last 10 years he had served with me on the Appropriations Committee.

He was a man of broad vision, of great force, and strong character. Service to the United States and the preservation of the best ideals of our people were close to his heart. He recognized keenly the very serious danger in which unlimited spending would result and was one of those who could uniformly be relied on to take a courageous, patriotic stand. The country can ill afford to lose men of his type in the prime of their strength and usefulness.

Our fullest sympathy goes out to his family.

Robert Low Bacon

MEMORIAL ADDRESS
OF
HON. FRED J. DOUGLAS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday May 30, 1939

On the life, character, and public service of Hon. ROBERT LOW BACON, late a Representative from the State of New York

Mr. DOUGLAS. Mr. Speaker, I wish to pay humble tribute to the memory of one of my dearest and best friends, ROBERT LOW BACON, who was taken from us on September 12, 1938.

It was my good fortune to enjoy his friendship for many years before I became a Member of this honorable body, where he served with distinction for some 15 years. As I knew him, he was a polished gentleman, open, frank, and direct at all times in all things. As a friend and associate, he was thoughtful, kind, and indulgent. He served on several important committees and made it his business to study every bill and to arrive at an intelligent conclusion supported by definite reasons as to its merits and demerits. No task was so large as to dismay him and none so small as to incur his neglect.

During these trying times when we are confronted with so many "isms," I cannot help but remember ROBERT LOW BACON by the fact he was first, last, and at all times an American. His every effort was devoted to the preservation of American ideals and institutions.

ROBERT LOW BACON looked after every interest in the district he represented, and his faithfulness and his fidelity to all of his constituents so impressed themselves upon the people that, notwithstanding the huge Democratic pluralities of the New Deal, he was reelected each succeeding term by increased majorities. When a man has continued to hold the confidence and support of such a constituency as ROBERT LOW BACON had, and if I had no other standard by which to test his life, I would know this was sterling worth in his character and substantial value in his services.

I cannot help but believe that because of such a life the world is better, and that our work here will be better performed by the inspiration of the memory of his virtues and his splendid services to his constituency, his State, and our great Nation.

John J. Boylan

MEMORIAL ADDRESS
OF
HON. MARTIN J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of JOHN J. BOYLAN, late a Representative from the State of New York.

Mr. MARTIN J. KENNEDY. Mr. Speaker, as we gather today to pay our respects to the memory of our former colleagues who have passed away during the past year, my heart is particularly heavy. I miss our beloved JOHN J. BOYLAN who passed on to a greater world last October 5.

No greater character ever occupied a seat in this House of distinguished characters. No greater friend ever lived; no keener wit nor a greater heart ever pulsed in the breast of a Member of this body than in that noble person.

He was born in New York City and the Fifteenth Congressional District sent him here to the Sixty-eighth Congress. Before that time, he had distinguished himself in the New York Assembly and in the Senate of the State of New York. His public service was continuous from 1910 until he died.

JOHN BOYLAN was a friend of the underprivileged. He was sympathetic to his very core. He was a true Jeffersonian Democrat, Mr. Speaker, and Thomas Jefferson was his model, his hero of all Americans of history.

Not only am I sad today because of his passing. I see scores of Members in the Chamber today who are also grieved, for they knew and loved him as I did.

Looking through the CONGRESSIONAL RECORD of a year ago—April 21, 1938—I find one of the last speeches that Mr. BOYLAN prepared. It was about Thomas Jefferson, and in that address he emphasized statements of the author of our Declaration of Independence that forcibly revealed his own personal religious and political philosophy. Mr. Speaker, I quote from that address by Mr. BOYLAN:

> Jefferson's birthday this year should be a day upon which we rededicate ourselves to the many great causes and the single great principle—human liberty—for which he fought over a period of 40 years. It may seem trite to recall his services to liberty, his struggling for the doctrine of universal emancipation, but it was not so in his day. His enemies at home and abroad sneered at his demands for the fullest form of freedom. They pointed at the excesses of the French Revolution and shuddered at the resulting wars which drenched Europe with blood from the North to the Red Sea. "This," they retorted, "is what liberty would give us in America."

Like Jefferson, Mr. Speaker, JOHN BOYLAN was rabid on the subject of religious freedom. He was also a sincere friend of the common people. And, like Jefferson, he was of the conviction that democracy was safe in the hands of Americans, because he knew his countrymen. No greater faith had any man.

Had JOHN BOYLAN lived in those trying Revolutionary days when the foundation of these United States was built, it is my honest belief that his name, like that of Jefferson, would be indelibly written in our history. As it is, only death will erase his memory of those who were privileged to have known him. He was a friend of man, he was a friend of all living creatures, and his aid was extended, spiritually and financially to all those who came for assistance.

Mr. Speaker, I believe that the greatest memorial to him is the universal respect and love held for him by those gentlemen of the press who sit in the little gallery above you. They are quick to detect sincerity and to spot the demagogue. They loved and respected that frail old fellow with the big eyes and keen wit and the heart of a lion.

Down in one of the larger hotels here in Washington there was a bus boy. He was a young Hercules. He attended a local high school, yet he worked until maybe 2 o'clock each morning in order to help support his family.

This lad wanted to finish his education, and through a mutual friend, Mr. BOYLAN had hoped to appoint him to the United States Military Academy. He would have had the boy change his residence to New York, and he was certain that a youngster of such indomitable courage was deserving of help. But Mr. BOYLAN died before he could appoint the boy.

That is the way JOHN BOYLAN lived. Helping those who deserved help.

May he now be enjoying the rewards that he so richly deserved.

Royal S. Copeland

MEMORIAL ADDRESS
OF
HON. MARTIN J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of ROYAL S. COPELAND, late a Senator from the State of New York

Mr. MARTIN J. KENNEDY. Mr. Speaker, as the Seventy-sixth Congress meets today to pay tribute to those former colleagues who have passed on to greater rewards during the past year, it is with deep sorrow that I take this opportunity to pay my own respects to the memory of one of the most able and unselfish men who ever served in the Chamber at the other end of the Capitol. I refer to the late ROYAL S. COPELAND of my own State, who died last June 17, after 20 years as a zealous guardian of public health and as a statesman.

Time dims the pangs of sorrow, of pain, and soothes the bereaved mind and heart. Nearly a year has passed and we of New York—and countless friends throughout the Nation—have come to accept the fact that Senator COPELAND has passed on; that the inevitable red carnation that symbolized his thoughts and his profession is buried near the township of Nyack with his mortal self. Yet he is missed and that fact is the measuring rod by which men are judged.

Doctor of medicine, doctor of laws, master of arts, a fellow of the American College of Surgeons, ROYAL COPELAND devoted his knowledge and skill to the improvement of the body. It is futile to reveal his entire career as a statesman, for above every other thing, he will be remembered as an adviser to the sick, a counselor for the prevention of human ailments.

In time other great personalities may adorn themselves with the familiar red flower that he made famous in the Senate Chamber; they may become great statesmen; but no more determined and devoted health advocate could ever replace the departed Dr. COPELAND.

He first came to national attention as health commissioner of New York City, and he continued his activities in that direction when he first came to the Senate in 1922. As arduous as his duties on the floor and in the committee and in his office, he daily sent health advice to millions of readers throughout the Nation through his daily health chats in the columns of a huge newspaper chain. He found time occasionally to broadcast additional facts to prevent disease and guard the health of his listeners.

All over the country today are persons who owe their life to him, some because of laws to guard foodstuffs, thousands of women because he fostered legislation to protect them against poisonous cosmetics and so-called "patent medicines."

Not only the State of New York, but the entire Nation lost a friend when Senator and Dr. COPELAND died. I think that he would like better to have been called "Doctor" instead of "Senator." That is my opinion and that is how he lives in my memory.

Mr. Speaker, his favorite hymn bears out that assertion. It was C. Austin Miles' In the Garden, a perfect companion piece, so to say, to his other constant companion, that red carnation.

It was with these beautiful words sung by my friend, Gerald E. Griffin, he went to his lasting resting place; God rest his soul:

I come to the garden alone, while the dew is still on the roses;
And the voice I hear, falling on my ear, The Song of God discloses.
He speaks, and the sound of His voice is so sweet that the birds hush their singing
And the melody that He gave to me, within my heart is ringing.
I'd stay in the garden with Him, tho' the night around me be falling,
But He bids me go; thru the voice of woe, His voice to me is calling.

Chorus

And He walks with me, and He talks with me, and He tells me I am his own,
And the joy we share as we tarry there, none other has ever known.

John Burrwood Daly

MEMORIAL ADDRESS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN BURRWOOD DALY, late a Representative from the State of Pennsylvania

Mr. TABER. Mr. Speaker, J. BURRWOOD DALY represented the Fourth District of Pennsylvania. He served upon the Appropriations Committee and upon the subcommittees on which I have been privileged to serve.

He was a man whose sincerity, industry, and character grew upon me until I came to have a very high regard for him.

I shall miss my connection with him very much.

Memorial Day Address

EXTENSION OF REMARKS
OF
HON. JOSH LEE
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 31, 1939

ADDRESS BY HON. ELMER THOMAS, OF OKLAHOMA

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the RECORD an able and eloquent address delivered yesterday by my colleague [Mr. THOMAS of Oklahoma] before the Second Division Association of the American Expeditionary Forces, at the Second Division Memorial on the Mall, Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today is Decoration Day.

Decoration Day is an American institution and a national holiday.

This institution, as we observe it, originated during the War between the States; hence, Decoration Day is the result of the development of some 75 years of patriotic American life.

May 30 is set aside for the special purpose of decorating the graves and recalling the deeds of our fallen soldiers.

At this very hour, throughout the length and breadth of the land, millions of patriotic people are paying living tribute to our heroic dead.

Today, in this and foreign lands, in cemeteries great and small, the tombs of our soldiers have been or will be covered with flags and flowers—eloquent evidences of the love and gratitude which a grateful people lavish upon the memory of those who have fought our country's battles.

The thousands of assemblies such as this, dotting the country today, constitute positive and visible testimonials that our people and our Government are not devoid of gratitude to those who have defended our people, our property, and our Government.

I thank God that our people have not—and I pray God that our people shall never forget—the part played in the development of our Nation by the soldier heroes of our country.

By heroes I mean citizens who leave their homes and loved ones; citizens who don their country's uniform and go forth to suffer and to die, if need be, in defense of the rights of man, the safety of society, and the honor of their country's flag.

It has been said that "the history of civilization is the history of the slow and painful enfranchisement of the human race." In every fight to make men free soldiers have played a major part.

This day, by custom and by law, is sacred to our heroic dead.

Today the United States, the richest, the strongest, and the mightiest nation of all time, pauses to pay tribute to the incom-

parable patriots who founded, preserved, and have defended this Republic.

Today we remember, praise, and honor the heroes of the Revolution. Had it not been for them we might be governed by a foreign power and we might be living under a different flag.

Today we remember, praise, and honor the heroes of 1812 and of 1845.

Today we remember, praise, and honor the heroes of North and South of the sixties. Through them a fundamental issue was settled and a nation was reunited.

Today we remember, praise, and honor the heroes of 1898. Through them downtrodden and depressed peoples were made free.

Today we remember, praise, and honor the heroes of 1917 and 1918. Through them the peoples of the world were given a chance to work out their own economic and political salvation. Only time will tell whether or not they will measure up to the opportunity afforded.

The World War is still fresh in the minds of most of those here assembled. In the main those here present took an important part in that war.

These services in the Nation's Capital, in the very shadow of the Flaming Sword, a part of this beautiful memorial, are under the auspices of the organized representatives of the survivors of the Second Division of that war.

The heroes, dead and living, of the Second Division of the American Army in the World War are justly entitled to and you and they have the gratitude of the Republic for the part you and they played in that contest.

The Second Division, organized in France in September 1917 had an historic background. It was made up of famous units—units of ancient lineage and units which had seen service throughout the world.

The history of the Second Division is, to a large degree, the history of America's part in that war.

From the States to France, thence to Toul, to Chaumont, to Chateau-Thierry, to Belleau Wood, to Vaux, to Soissons, to Marbache, to St. Mihiel, to Meuse, to the Argonne, and then the Rhine, your organization, because of feats performed and services rendered, was regarded by all as "second to none."

The activities of your famous organization, in its triumphal march from Toul to the Rhine, were attended by many casualties. The record is as follows:

Killed and died of wounds	5,077
Severely wounded	3,678
Slightly wounded	14,174
Gassed	2,732
Missing	328

Making a total casualty list of 25,989 officers and men.

In passing I should recount that your list of prisoners captured totaled more than 12,000 officers and men.

Today on every hand we see countless flags. American soldiers made possible our flag. American soldiers have defended and protected our flag until today it has the proud and glorious record of never having suffered defeat.

I hope we may never have another war, but if war shall come again, our boys will be converted into soldiers, and as soldiers they must take the risk of suffering sudden or lingering death.

I hold that the Nation's best insurance is the proper care of those who have fought our country's battles. A nation that cannot take care of its defenders is already bankrupt, and a nation that is able to take care of its soldiers and refuses to do so does not deserve to live, and such nation will not long survive.

We rejoice today that our Nation is amply able to protect our protectors and to take care of our defenders. Disregarding protests here and there, we are gradually developing a policy of fairness and justice toward our soldiers and their dependents. This policy is not yet fully developed, but our efforts must neither be stopped nor retarded.

In the future, as in the past, this Nation will be just what our soldiers make it. Young men defend the Nation and then in later life they own and rule the country.

On this patriotic day it is entirely proper that in addition to honoring our soldier dead, in addition to the consideration of the status of the veterans with us still, we should pause to view and consider developments at home and abroad.

The past, at least, is secure, but what about the future?

During recent months war clouds, real or threatening, have appeared upon the horizon, yet our 130,000,000 people rejoice today that we are at peace with all the world.

What are the clouds which might thicken into a storm?

In some parts of the world we see nations prepared for war, and in other parts we see nations preparing for war.

In recent years we observe that the rules and practices of war have changed. In former times nations prepared and promulgated formal declarations of war. Not so today. We have seen Italy conquer Ethiopia without a declaration of war. We have seen Japan absorb a part of China without a declaration of war. We have seen Germany conquer small defenseless nations without declarations of war.

This new policy of warfare makes mandatory upon nations a policy of constant preparedness.

If, in the future, international issues are to be settled by the sword without conferences, without notice and without warning, then in order to protect our interests and our rights we must not only procure the sword but we must keep it sharp and ready for instant use.

The United States as a nation, because of our natural resources and our wealth, is the prize of prizes.

Preparedness, as protection and insurance, should and must be the American policy.

Developments relative to domestic policies governing the Nation's attitude toward lives and property are taking place.

Today we see our nationals assembling their funds, abdicating our country, going abroad, establishing factories and going into business under foreign flags for the sole purpose of making profits.

This development makes necessary a new national policy, and, as a consequence, a new rule is crystallizing into definite form. This new rule is that when an American citizen takes his money, goes abroad, and makes investments for private profit he at the same time must assume the risks surrounding such a venture.

As a nation our best wishes may be with the citizen residing on foreign soil and under a foreign flag, but if disaster such as war should come to such foreign land, then such abdicating national must not expect his fatherland to go to war to protect either his property or even his life.

In the distance we see the shadow of another cloud. The nations are dividing into two major groups or forms of government. One form might be called the dictator state and the other might be called the democracy.

In the dictator state one man, or a few men, assume to rule, while in a democracy "the will of the majority is the supreme law of the land."

Should another armed contest come, it will be one group or form of government against the other—it will be dictator against democracy.

In such a contest no nation will be immune, and when the contest is over one group will dominate, if not rule, the world.

For reasons known to all America must be properly and constantly prepared.

The American policy should be plain, definite, and positive, and that policy should be that our preparedness is for defense and not for aggression.

We neither wish to rule alien peoples nor do we covet foreign lands. Yet we want the world to know that we propose to protect and defend the dignity and the honor of the Stars and Stripes upon land and sea. To do less would be treason to the memory of our countless dead who died that Americans might be free.

The Democratic Party

EXTENSION OF REMARKS

OF

HON. PAT HARRISON

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, May 31, 1939

ADDRESS BY GOV. CLYDE R. HOEY, OF NORTH CAROLINA, BEFORE THE REGIONAL CONFERENCE OF DEMOCRATIC WOMEN

Mr. HARRISON. Mr. President, at the Regional Conference of Democratic Women of the Southeastern States, held in Winston-Salem, N. C., on May 23, 1939, an address was delivered by Governor Hoey, of North Carolina. It is a very splendid address, and I ask unanimous consent to insert it in the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mme. President and members of the conference, I welcome you to North Carolina and to this conference. North Carolina is a Democratic State. We have no factional classifications—we are just plain Democrats—with absolute freedom of thought and expression. We have our party fights, but after the battle is over we bind up our wounds and go forward a united party. Our different views are welded into governmental policy in harmony with the best thought of the State, and we thus preserve an even keel between the extremes, which guarantees a sane approach to all public questions.

I love the Democratic Party, its glorious history and high tradition, and I am proud of its century of service. It represents the principles of equality before the law and equity in the administration of government. It stands for the right of every individual to think his own thoughts, express his own mind, and register his own will touching governmental policies and practices, and dares to defend the weak and the strong alike and to preserve the rights of the humble and the mighty. The Democratic Party neither fawns before wealth nor patronizes poverty. Through the years it has been the mouthpiece of the average man whose cause would have gone unheard in the forum of public thought but for its championship of men and measures representing the ideals of justice and righteousness in government. But it is not a class party. It must be just to every interest, great and small, and fair

to all people, offering full protection to every citizen and safeguarding both his rights of person and property, corporate and individual.

I am happy to greet you as representatives of this great historic party. You have a right to be proud of its high tradition of service over the years and its achievements in every period of national crisis. The party has had many outstanding leaders of many minds—Jefferson and Jackson of the pre-War between the States period, and Grover Cleveland, Woodrow Wilson, and Franklin Roosevelt of this generation. They differed widely in views, policies, and conduct, but they were all Democrats, and each made a rich contribution to the sum total of governmental service. It is well to remember that no one of them either made or preserved the Democratic Party. The party made them and the party is greater than any one or all of them combined. No one of them would ever have been President but for the Democratic Party and this great party of ours will continue to serve the Nation when all of our generation has passed from the stage of action.

The Democratic Party embraces within its membership persons of all shades of thought. It is a great tolerant party. It welcomes within its ranks all devotees of popular government who believe in the fundamentals of democratic principles and invites them to abide in its fold and share the responsibility of its service and leadership. Its members are not all of one mind—they never have been. Some are progressive, while others are conservative, but they are all Democrats and equally entitled to give utterance to their views and have respectful consideration from party authorities. These differences make for the strength of the party and insure wisdom and sanity in its policies and program. If all were progressives there would be a governmental runaway, whereas if all were conservatives progress would fall behind. There is room in the Democratic Party for all honest differences of opinion. We can never build a great party by magnifying our differences and seeking to construct a wall of partition between the different schools of thought in the party.

As the pivotal year of 1940 approaches the Democratic Party should be united. The responsible leadership of the party should seek harmonious action. Mutual respect and consideration should be manifest for the views of all Democrats and there should be no dissension or strife in the political household of our fathers. The party belongs to all of us. We have fought for it in sunshine and shadow, in victory and defeat, and it is still the great national party in sentiment, thought, ideals, and concept. In the coming contest we shall need the votes of all Democrats, without regard to any specific classifications. There should be but one test of political faith for a Democrat—the acceptance of the Democratic platform; and one test for his political conduct—support of all Democratic nominees. All other differences in views or prejudices should be submerged in the interest of party harmony.

The Democratic Party is the natural political home of women. It is the party of ideals, of courageous action, of forward-looking accomplishments and continuing public service. It was under a Democratic administration that the full rights of suffrage were conferred upon women and they came into their own with the blessings of Woodrow Wilson and the democracy in 1920. They have fully justified the faith of those who believed that women would make a real contribution to the political life of the Nation. Some supposed that they would be enamored with the thought of independentism in politics, but the women wisely realized that government in this country is administered by and through political parties and the independent is a lone wolf. The women have demonstrated their appreciation of the practical value of making their influence felt in the councils of the party in the selection of its candidates and the formation of its policies.

I am hopeful of another splendid victory for the Democratic Party next year. I covet for the party the privilege of continuing to serve all classes of our people in the complete restoration of prosperity and the peaceful relationships. You cannot build a great nation upon strife and disorder, jealousies or hatreds, class prejudice or punitive policies. The Democratic Party is broad enough to encompass all classes within the scope of its service and the range of its helpful ministrations. I commend the President and the Democratic Congress upon the outstanding accomplishments of the administration during the past 6 years, and I would have this party continue and remain the property of all Democrats, and the political home of all those who seek justice and equity for the whole Nation with malice toward none.

The Public Service Commission of Wisconsin

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, May 31, 1939

EDITORIAL FROM THE MILWAUKEE JOURNAL

Mr. LA FOLLETTE. Mr. President, I ask unanimous consent that there be printed in the RECORD an editorial appearing in the Milwaukee Journal on April 29, 1939, under the title "To Kill the Public Service Commission."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of April 29, 1939]

TO KILL THE PUBLIC SERVICE COMMISSION

What reason, other than the creation of jobs through a change in the law, can there be for abolishing the public service commission and creating instead a department of public service with a director at its head? Let's examine the possible arguments.

That the commission has failed? But it has not. In the last 8 years it has functioned better than at any other time in its history. By building up an adequate staff it really got down to effective regulation of utilities.

Everywhere it is recognized as one of the three best commissions in the United States, the other two being in New York and California. In the last 4 years important reductions in power rates have been effected through the commission's quiet way of gathering the facts. This commission has the confidence of the State.

That a better type of set-up has been discovered? Any such claim needs analysis. Bill 381–S, which embodies the new plan, would substitute a one-man directorship for the present three-man commission. In other words, duties that at times have proved almost too onerous for three men would then be performed by one. He would have to administer 10 chapters, or parts of chapters, of State law. The bill says so.

This one man would have to know all about railroads, truck companies, and utilities—the three important divisions of the present commission's work. He would have to be an administrator, an executive, and a judge, for the present commission has all three types of work. He would have to spend months of each year in hearings or else read thousands of pages of testimony. Otherwise he would be signing orders based on testimony he had not examined, and the courts will not stand for that.

It is true that the bill makes a stab at getting around these difficulties. It provides for the appointment of three deputy directors, who are to exercise "such authority of the director as he may delegate." In dealing with specific hearings he would no doubt delegate all the authority he had in order to make the case stand up in court.

Then what would we have? A commission just as we have now, except that it would be four members instead of three. This lends color, when we consider it in connection with all the division heads that are to be appointed, to the belief that the primary aim is to shake the plum tree.

Certainly there would be no money saved. The director would get $10,000 a year, or two-thirds as much as the three commissioners now get, they being $5,000 a year men. The three deputies would surely get half as much as the director, or $5,000 each. So the cost for the new set-up, so far as heads are concerned, would be $25,000 instead of the present $15,000. Is this an example of Heil economy?

Besides, the division heads and divisions would be limited only by what the new director thought there should be. The bill gives him carte blanche authority.

But the worst defect of all in the new plan lies in the fact that no adequate provision appears to take care of the judicial functions exercised by the present commission. These functions loom large in utility regulation.

A director could manage the administrative and executive work. He could supervise the investigations necessary. But for him to spend weeks or months on a hearing, another long period reviewing testimony, and finally reaching a decision on a complicated matter, is time consuming.

Again, we should come down to a delegation of this work to the deputies, or else the result would be merely perfunctory orders, based on fiat rather than the judicial process.

After which some other body, the board of review proposed in another bill, or the courts—certainly the courts, finally—would have to do the real work. What gain would there be in that?

If all this failed to function, or if it proved too cumbersome to work well, a body blow would be dealt utility regulation. Or is this one of the aims?

Plans for Future Highway Improvement

EXTENSION OF REMARKS

OF

HON. WILBURN CARTWRIGHT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

RADIO ADDRESS BY HON. WILBURN CARTWRIGHT, OF OKLAHOMA, MAY 29, 1939

Mr. CARTWRIGHT. Mr. Speaker, I ask unanimous consent to extend my own remarks in the RECORD and include therein an address which I made during the National Radio Forum arranged by the Washington Star and broadcast over a National Broadcasting Co. network Monday night, May 29, 1939, at 8:30 p. m. eastern standard time.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I appreciate this opportunity to talk to the National Radio Forum audience about our highway problems and plans for future road improvement.

On April 27 President Roosevelt transmitted to Congress and recommended for its consideration, a report entitled "Toll Roads and Free Roads." This report is the most complete assembly of facts on highway use and the most comprehensive discussion of the highway problems of the entire country that has ever been made available. Both rural and city problems are discussed.

The Hayden-Cartwright Act of 1938 directed the Chief of the Bureau of Public Roads to investigate and report "with respect to the feasibility of building, and cost of superhighways not exceeding three running east and west and three running north and south across the United States, including the feasibility of a toll system on such roads."

The Bureau, under the direction of its Chief, Thomas H. MacDonald, has made a thorough investigation of a system of toll roads as required. It finds that such a system would not be self-supporting through tolls and would not meet the most important highway needs of the country. It has prepared traffic maps and other data, showing for the first time, traffic conditions over the country as a whole, and based on these, it has prepared what may be called a master plan for future highway improvement. These plans and data the President has recommended for the consideration of Congress as a basis for needed action to solve our highway problems. And since Congress had requested this special report, it is sure to be given serious consideration as pointing the way to America's primary-road system of the future.

For several years there had been an increasing number of visionary proposals by advocates of elaborate coast-to-coast superhighway networks, with more and more agitation for congressional action, but there had been no thorough analysis of the actual and potential volume of transcontinental travel, and not much factual information was available by which to judge the feasibility of tolls and other factors. We now have the facts.

In studying the feasibility of a toll system the Bureau selected six routes, located in accordance with the terms of the Hayden-Cartwright Act, which amounted to 14,000 miles. The routes were placed closely paralleling the existing routes of heaviest travel. State highway departments cooperated in fixing the locations and in estimating costs. Four-lane, divided highways were planned where the traffic was estimated to average as much as 1,500 vehicles per day by 1960. On 77 percent of the system only two lanes were required.

The cost of constructing such a system would be about $3,000,000,000, which is about $200,000 per mile. The annual cost of financing and construction and of maintaining and operating the toll highways would be about $13,000 per mile.

A number of facts led to the conclusion that only a small portion of present traffic could be attracted to the toll system. Long-distance travel constitutes only a small fraction of the total travel. Counts made on east-west highways at stations established on a line extending from Canada to Mexico showed only 300 passenger cars crossing the line daily in transcontinental travel. The system could be expected to serve adequately only that portion of the traffic having origin and destination close to one of the six routes.

It is estimated that the total travel on the system by all vehicles would average 12,750,000 miles per day during the period 1945–60. Assuming toll charges of 1 cent per car-mile for passenger vehicles and an average of 3½ cents per vehicle-mile for trucks and busses, this travel would produce an average annual revenue of $72,000,000. This is not half the estimated average annual cost and leads the Bureau to conclude that the system studied could not be supported by toll collections.

The portion of the proposed system estimated to be most nearly self-supporting is the 172 miles from Philadelphia, Pa., to New Haven, Conn. With the increase in traffic expected by 1960, this portion of the system would earn slightly more than the estimated cost for that year.

The report states that if Congress wants an actual test of the feasibility of the construction of a highway of which there is any prospect of the recovery of the costs through tolls it recommends one extending from Washington, D. C., to Boston, Mass.

The data presented in the report, however, are conclusive that a toll system of the scope investigated will not be self-supporting and will not be a solution of our major traffic problems.

POLICIES AND ACTION RECOMMENDED

However, it must not be thought that the entire report is negative in character. Those who have examined it in detail find the greatest interest in the clear presentation of facts concerning the nature of our present traffic difficulties and the proposals for their solution. Surprising facts concerning traffic volumes on our highways, the places to and from which people travel, length of trip, and other information having important bearing on the kinds of improvements to be built are presented.

After discussing the most important highway problems confronting both the Federal and State Governments and their subdivisions, the Bureau recommended the following as joint undertakings of the Federal and State Governments:

(1) The construction of a special system of direct interregional highways, with all necessary connections through and around cities, designed to meet the requirements of national defense in time of war and the needs of a growing peacetime traffic of longer range.

(2) The modernization of the Federal-aid highway system.

(3) The elimination of hazards at railroad grade crossings.

(4) An improvement of secondary and feeder roads, properly integrated with land-use programs.

(5) The creation of a Federal land authority empowered to acquire, hold, sell, and lease lands needed for public purposes and to acquire and sell excess lands for the purpose of recoupment.

INTERREGIONAL HIGHWAYS

It is estimated that a system of interregional highways providing reasonably direct connection between the larger cities would include not more than 30,000 miles. This is about twice the mileage of the proposed toll system, but a lesser mileage would not include all routes that are of primary importance. Traffic-flow maps would be the most important guide in fixing the location of these routes. In large part the system could be created by modernizing existing highways.

If the Bureau plan is adopted, the interregional routes would enter and traverse all large cities by means of facilities adequately designed to promote free movement of traffic to and through the center of the city. Aiming these routes at the center of large cities may be a surprise to many people, but that is where most of the approaching traffic is bound. Limited-access belt routes would be provided wherever it is found that enough people wanted to pass around the city rather than go through.

NEEDS FOR NATIONAL DEFENSE

The proposed plan is in accord with the general needs for national defense, and the Secretary of War has concurred in recommending the report for the consideration of Congress. During the World War all transportation facilities between centers of population and between industrial areas were overburdened and congested with traffic. An interregional system of highways would be a necessity in turning our peacetime facilities to production of the materials for war and in moving men and materials to any front whenever and wherever needed. Our Army is now motorized, and any army without roads would be like a submarine without an ocean.

LOCATION NOT DETERMINED

Many people get all excited and write to Washington concerning the exact location of the proposed system. I want to emphasize that a location has not yet been fixed. The report merely shows in diagrammatic form the existing routes that carry the greatest volume of traffic. This is a guide of the greatest importance, since the system should be designed to accommodate the greatest possible number of users.

I wish also to emphasize that Congress has never yet determined the exact route of any highway, and probably never will.

MODERNIZATION OF FEDERAL-AID SYSTEM

The second major recommendation of the report is that the modernization of the Federal-aid highway system be continued.

Many of these roads were built for conditions as they existed 10, 15, and 20 years ago. Then the speed of cars was slower, funds for highways were limited, and there was insistent demand to get the traffic out of the mud and dust.

There is little need to linger upon the romance of the rise of the automobile, for many of you can remember when man's wealth and position was judged by his carriage horses. Out where I live in Oklahoma the strength of a man's mules was even more important in establishing his place in the community.

Today I get letters saying: "We read in the papers about proposed coast-to-coast superhighways. What about the 'soupy' highways? We want to get out of the mud—we want our regular roads built first."

No one foresaw conditions as they now exist. As a consequence we are now using many sections of road that are restricted in right-of-way and have narrow surfaces, sharp curves, steep grades, and in many places bad locations. Every one of you, at one time or another, has had reason to curse the lack of foresight which has forced you to drive a modern car over a road which would pain a self-respecting mule to travel. But, after all, we grew up pretty fast. We wanted to get out of the mud before it had time to dry.

RAILROAD GRADE CROSSINGS

The recommendation that the Federal policy provided in the Hayden-Cartwright legislation of eliminating hazardous grade crossings be continued is one with which few people will disagree. It has been an undertaking of outstanding success.

SECONDARY AND FEEDER ROADS

Another program provided in the Hayden-Cartwright legislation that has only recently gotten under way and is recommended to be continued as a part of the regular Federal-aid road program is the improvement of secondary, feeder, or farm-to-market roads. I hate traffic jams along with the other fellow. Superhighways would be swell, but we cannot allow ourselves to be blinded by the glitter of what we would like to have.

We must not, for instance, spend all of our available highway money on monumental roads, and forget the farmer who always will have to move his produce to the nearest market on the ground. The farm-to-market road will always be the life line of the farmer.

PROPOSED FEDERAL LAND AUTHORITY

The final recommendation made in the report is the most outstanding one. It relates to the serious problem of how to obtain the land that must be obtained if our highway problems are to be solved. A proper solution can be had only by widening many old rights-of-way and purchasing new ones through both urban and rural areas.

The most influential causes of the delay in effecting the needed changes in our highways have been the inadequacy of funds and

the overpowering legal obstacles and inhibitions that stand in the way of obtaining essential rights-of-way. These will continue to retard action and eventually build up a formidable burden of deferred expenditure unless early provision is made to deal adequately with this problem.

Heretofore the Federal Government has had no part in acquiring land for highway use. The laws of practically all States pertaining to such rights-of-way are archaic. They are based in almost all cases on provisions that were written into the statutes before the days of the automobile. Widths that may be acquired by condemnation are those prescribed in "horse and buggy" days. In most States the price demanded by the property owner must be paid or construction delayed by long litigation.

Data such as are presented in the Bureau's report and are being compiled in the highway planning surveys make it possible to foresee our road needs 10 and 20 years hence. We can tell now what roads will need to be widened, where they must be built on entirely new locations, and where broad and costly strips must be acquired if traffic is to flow smoothly through the center of cities.

Every year of delay in acquiring land greatly increases the cost. Growth is rapid along the sides of surfaced roads, particularly near cities, where improvements will be most needed. As homes, business houses, service stations, and industries are located, the way in which the highway may be improved becomes more restricted and rights-of-way more and more costly.

The Federal Bureau recommends definite remedies for these conditions. It urges a revision of existing right-of-way laws by the several States in the light of present-day conditions. The obtainment of right-of-way for needed facilities will involve a heavy present investment, but a virtually permanent one, and one that will pay large dividends in the avoidance of future expenditures in larger amounts. There is proposed the creation of a Federal Land Authority, having corporate status, with adequate capitalization and authority to issue obligations within prescribed limits, which would be empowered to acquire, hold, sell, and lease lands for stated purposes.

The land authority would acquire land with Federal funds at the request of a State highway department, hold it as Federal property, subject to later lease by the State on terms that would amortize the initial cost in 50 years.

With proper restrictions, it would be possible for the authority to acquire land at certain locations in excess of that needed for highways and, after the highway improvement has been made, sell it at a profit, as has been done in England and other countries. There is no thought of acquiring for such purpose broad strips of land over great distances. Acquirement of land in excess of highway needs should be limited to those locations where good business judgment indicates that new highway facilities will produce a substantial increase in value.

CONCLUSION

The report of the Bureau, and the message from the President transmitting it to Congress, are being printed as a House document and will soon be available for distribution.

The job of the Bureau, with respect to the "master plan," was simply to define the need for highways, and a fine job it has done. But it is simply a plan and no more.

I wish I had time to call the names of the faithful, loyal, and hard-working members of the House Roads Committee, of which I have the honor to be chairman. This committee has begun a careful study of the information and recommendations contained in the report. It is not contemplated, however, that there will be any hasty action by the Congress.

My friends, in the earliest days man's efforts to build trails and promote communication were important. Such developments have become increasingly important in modern times with complex living. People live in peace and plenty when they are permitted to exchange and communicate freely and roads and bridges eliminate barriers of misunderstanding.

In these days when modern Caesars are building new empires and carrying out great road-building programs in the older nations of the world, I think the course our Nation should take is fittingly expressed by a poem entitled "That's What old Caesar Did."

"When Caesar took a westward ride
And grabbed the Gauls for Rome,
What was the first thing he did
To make them feel at home?
Did he increase the people's loans,
No! he dug in and built good roads—
That's what old Caesar did.

He built good roads from hill to hill,
Good roads from vale to vale;
He ran a good-roads movement
Till Rome got all the kale.
He told the folks to buy a home,
Built roads their ruts to rid,
Until all the roads led to Rome.
That's what old Caesar did.

And, if our Nation wants to be
The center of the map,
Where folks will want to settle down
And live in plenty's lap;
If this broad land its own abodes
Of poverty would rid,
Then let us plan and build good roads,
Just like old Caesar did!"

New York's Portion of the National Debt by Counties

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

Mr. REED of New York. Mr. Speaker, the following statement shows what New York's share of the national debt and of New Deal debt will be on June 30, 1940, broken down by counties, according to Budget for which we are now appropriating—1930 United States Census figures were used; New Deal debt is that part of national debt incurred from March 4, 1933, to June 30, 1940:

	Population	1938 assessed valuation, taxable real property	Share of national debt on per capita basis	Percent of assessed valuation	Share of New Deal debt on per capita basis	Percent of assessed valuation
New York	12,588,066	$25,623,867,926	$4,556,879,892	17.4	$2,416,908,672	9.4
Counties						
Albany	211,953	320,227,464	76,626,986	24.0	40,694,976	12.7
Allegany	38,025	63,811,903	13,765,050	21.6	7,300,900	11.4
Bronx	1,265,258	1,938,546,942	458,023,396	23.6	242,929,536	12.5
Broome	147,022	179,937,066	53,221,964	29.0	28,228,224	15.6

A. Average rate of equalization for State, 85.1 plus.
B. Full valuation of taxable real property at rate of assessment for State is $30,107,418,526.
C. Assessed valuation taken from p. 118, table 10, of Annual Report of the New York State Tax Commission, Legislative Doc. No. 11, 1938.

Transaction Taxes

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1939

Mr ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from the testimony given before the Ways and Means Committee:

DR. HAROLD G. MOULTON, PRESIDENT, BROOKINGS INSTITUTION, WASHINGTON, D. C.

Two percent on transactions sounds like an innocent enough tax rate, but, if applied as intended, it would really mean a tax that would absorb from 25 to 30 percent of the total national income. * * *

I think the point I want to emphasize most in connection with this is the magnitude of the expectations held forth to old people. Even though the figure of $2,400 is not a provision of the act, that is the figure that is in the minds of the people. That is the way it has been sold to the country. The point is this: That $2,400 a year for each person, for 10,000,000 people, roughly speaking, means $24,000,000,000 of additional taxes.

Of course, that is absolutely fantastic on the face of it. The total revenues, with all of the tax machinery that we have—Federal, State, and local—is $12,000,000,000. This is double that total. It is an impossibility. * * * It would wreck the economic system if you undertook to collect such a tax.

PROF. PAUL HAENSEL, NORTHWESTERN UNIVERSITY, EVANSTON, ILL.

As a tax measure, the transactions tax is not based on any reasonable or sound principle of taxation. It is all-embracing, without discrimination, even more so than the gross-income tax. From the standpoint of the technique of collection it is simply a mockery and an insult to the average American citizen who is expected to file sworn-to returns every month, even when he has to pay $1.01 only each time. This is the best way to make the country a nation of wholesale perjurors and chiselers and to create tremendous opposition.

* * * * * * *

It is levied automatically, whereas collection by means of returns hardly pays the Treasury unless the tax is some twenty-five to thirty or more dollars each time; the overwhelming number of returns makes their supervision and audit impossible, and mass evasion and cheating become unavoidable, with great profit to the chiselers.

* * * * * * *

The chief danger of the transactions tax is, to my mind, that its promoters hope to collect by this means a revenue of some $10,000,000,000 a year. This is a serious threat, since no universal tax of such an enormous size can be collected without creating great inequalities, enormous evasion, and serious dislocation of national economy.

The tax must be shifted somehow on the consumers, or else it will deter from investment and cripple many industries. The prices may not always rise to effect full shifting, but this may often mean that losses will be incurred for a long time, or that other overhead costs will be affected adversely (lower rentals for shop premises, lower wages, etc.), or that stagnation will ensue (securities market). A ten-billion yearly levy on all economic transactions will require a tremendous redistribution of national income, particularly since the proceeds from it will go to a comparatively small group of citizens (old pensioners). Through this tax, which will be paid by the large body of all consumers, the consumption of some people (producers and earners) will be reduced very considerably.

MATTHEW WOLL, VICE PRESIDENT, AMERICAN FEDERATION OF LABOR

Mr. DUNCAN. I wonder whether you would care to give us an opinion about H. R. 2 and H. R. 11—the Townsend plan and the general-welfare plan?

Mr. WOLL. I thought I had made that very clear in my original presentation, where we said, of course, we do not believe in any system that would give benefits to all people regardless of need; and the Townsend bill, of course, is predicated entirely upon right and not on the matter of need. There is no question about it; we are opposed to the Townsend bill and the principles underlying it. * * *

Mr. DUNCAN. And any economic system that would take purchasing power from one group, which is spending all the money it earns, and give it to another group, would not likely increase the purchasing power of the public generally, would it?

Mr. WOLL. Nor would it be a sound economic system.

Mr. DUNCAN. And the transactions tax of 2 percent upon each transaction, as a commodity moves in commerce, would likely fall more heavily upon the group that you represent than upon any other group in the Nation?

Mr. WOLL. We realize that the wage-earning group, representing the great mass of our consumers, is the one ultimately to bear the burden of taxation, no matter what form it takes.

Mr. DUNCAN. And that is the group that, in the main, spends practically all it earns for the necessities of life?

Mr. WOLL. Yes. Oftentimes they spend more than they earn.

Mr. DUNCAN. And to take it away from them and give it to another group, particularly to give to that other group far in excess of amounts they have probably earned during the productive period of their lives, would not be fair to the people from whom it was taken?

Mr. WOLL. I mentioned that in the paper I presented to you; that we do not believe there should be a general grant of relief to all our citizens, because in many instances it would grant in old-age pensions more than they would have earned in their younger lives.

PROF. PAUL STUDENSKI, PROFESSOR OF ECONOMICS, NEW YORK UNIVERSITY, NEW YORK, N. Y.

Contrary to the impression given by the authors of these plans, their operation will not result in the creation of any new purchasing power. The plans would involve, in the main, merely a transfer of purchasing power from the producer groups to the aged nonproducing population. The transfer, involving, as it does, between seven and nine billion dollars of purchasing power during the first year, or approximately 13 percent of our total national income, is colossal in character. It is difficult to gage the full extent of the repercussions in our economic system which such a huge, immediate, and continuous transfer of income from one group of our population to another would produce.

The proposed taxes on transactions, or so-called gross income, despite their misleading low rate of 2 percent, if ever enacted, would prove to be the most burdensome taxes in the history of this country. The 2-percent tax under either plan, applicable, as it would be, to each successive turn-over in the production of goods, would make up a total burden of between 10 and 25 percent of the cost of the final product. It is obvious that industry will not be able to absorb such a burden and that the general level of prices would rise simultaneously with the imposition of the tax and commensurately with the rise in the cost of production. The rise in prices would be especially marked in the case of those goods which are the results of the efforts of many enterprises each of which handles the goods in a different stage of production, and where, consequently, the tax would be pyramided many times over.

* * * * * * *

The taxes would destroy thousands of small enterprises which handle a product only in a single stage of its production, while sparing large integrated undertakings producing a goods from the raw to the finished stage. The taxes would eliminate thousands of marginal enterprises. In some cases the taxes would be shifted to the employees in the form of reductions in wages and a speeding up of work, with the result that the wage earners affected would shoulder a double burden, since they would not only be receiving fewer dollars in their wages but each dollar would have a reduced purchasing power. The burdens on the poor, other than the aged themselves, would be crushing.

* * * * * * *

In my opinion, it is doubtful whether our economic system could withstand the severe shock which the imposition of the proposed taxes and the disbursement of the proposed benefits would inflict upon it.

DR. ALBERT GAILORD HART, UNIVERSITY OF CHICAGO, CHICAGO, ILL.

It would give a tremendous advantage to chain stores; it would give a tremendous advantage to manufacturers with their own retail establishments against manufacturers who use other channels.

* * * * * * *

These taxes proposed are sales taxes, along with other taxes. Retail sales would be taxed; so would wholesale sales; so would sales by manufacturers, by mines, by farmers; so would personal incomes be taxed, security sales, real-estate sales, every sort of sale.

Somewhere or other that burden would have to fall. I don't think it is possible to say just where. What you can say definitely is that it would open up a gap between what buyers pay and what is left for the personal income of the people who depend on the business.

You can imagine the whole cumulative tax being added to prices. If you do assume it all added to prices, it implies so many billion dollars added to the cost of goods at retail. If you imagine it coming out of the incomes of the people who are now employed, you imagine so many billion a year out of their income; but in either case it would mean a reduction of the real income of people now employed for the benefit of the aged. That is, this money is not coming out of the air; it is coming out of tax revenue. And tax revenue means it either falls on somebody's money income or the price somebody pays, or a mixture of the two. There is no miracle involved.

* * * * * * *

Mr. ROBERTSON. What will be the effect of this plan on agriculture?

Dr. HART. As I see it, it wouldn't hit farmers directly. The Indiana gross-income tax, for instance, is collected from such a small number of people that I think you can take it for granted that

farmers are not paying it. Farmers are liable in Indiana under the gross-income tax; but the number of taxpayers indicate they do not collect. I don't think such a tax on farmers can be administered.

There would be an indirect effect on agriculture through the tax on retail and wholesale trade; and it is my view that sales taxes on food are shifted back on to farm prices rather more than forward onto consumers' prices. The transactions tax would consequently have a depressing effect on farm products consumed within the country, which would work out at 5 or 6 percent, maybe more.

SAMUEL FRASER, REPRESENTING THE INTERNATIONAL APPLE ASSOCIATION

For the past 51 years I have worked on a farm or owned or operated one. I worked 6 years as a farm laborer, saved up $150 to go to an agricultural school. I had enough money to pay for a year; I taught and worked there the balance of the course.

* * * * * * *

I taught 8 years, 3 years at Cornell University. I had charge of the farm at every institution I have attended.

* * * * * * *

I am representing the Florida citrus industry, authorization being placed by Mr. Murle Page, of Orlando, Fla. The associations are the United Growers and Shippers' Association, at Orlando; the Florida Citrus Producers' Trade Association at Lakeland, which constitutes 80 percent of the citrus industry of Florida.

* * * * * * *

I also appear on behalf of the joint council, which is made up of the United Fresh Fruit and Vegetable Association, W. L. Wagner, secretary, 1425 South Racine Avenue, Chicago, Ill. This is a growers' and shippers' organization, and distributor, with membership chiefly west of the Mississippi Valley, heavily representing the California and Texas interests.

Also the National League of Wholesale Fresh Fruit Distributors, Horace H. Herr, secretary, 512 F Street, Washington, D. C.; the International Apple Association, R. G. Phillips, secretary, 1108 Mercantile Building, Rochester, N. Y., which is a membership organization, largely interested in fruits and vegetables, with almost every cooperative in apple production holding membership in it.

Mr. CULLEN. A membership corporation of how many?

Mr. FRASER. It is a nonprofit membership organization, and we represent some 20,000 apple growers in one part of the country and another, through the various cooperatives and others.

* * * * * * *

Mr. MCCORMACK. * * * Now, if this pay-roll tax would have the effect on the farmer that you say it will, what would you think of a transaction tax? What effect would that have on the farmer?

Mr. FRASER. I think it would be ghastly.

Mr. MCCORMACK. Ghastly. Do you think any man who represents a farming district or any district would be voting for the best interests of the farmer if he voted for a transactions tax?

Mr. FRASER. No.

Mr. MCCORMACK. What effect would it have on the farmer? You used the word "ghastly." I would like to have you put your opinion in the record.

Mr. FRASER. To my mind, it is like a devastating funnel-shaped cyclone moving across the land, sucking up and destroying everything it touches and leaving ruin in its wake. It would pyramid all the costs on an industry which is in no condition to pay; say, 20 percent of the consumers' dollar goes for food. Take the case of apples; in one transaction they might go through five hands, and instead of 2 percent you would have 10-percent tax before it got into the consumer's hands; or they may move through more hands, but the effect is the same; the tax might reach 20 percent. * * * I cannot see anything but a ghastly fiasco if you start a transactions tax.

DR. DAVID R. CRAIG, PRESIDENT, AMERICAN RETAIL FEDERATION, WASHINGTON, D. C.

Mr. Chairman, the American Retail Federation wishes to go on record as unanimously opposing the principle of the multiple-sales tax as proposed by H. R. 2 and H. R. 11.

The American Retail Federation is a federation of State and national associations of retail merchants. It includes in its membership 25 State-wide associations of retailers and 7 national retail trade associations.

The State member associations are California, Colorado, Florida, Georgia, Illinois, Indiana, Iowa, Kentucky, Maine, Maryland, Massachusetts, Missouri, Nevada, New Hampshire, New Jersey, New York, North Carolina, Ohio, Oklahoma, Pennsylvania, Rhode Island, Tennessee, Texas, Vermont, and Virginia.

The national retail trade associations are: American National Retail Jewelers Association, Cooperative Food Distributors of America, Mail Order Association of America, National Association of Chain Drug Stores, National Retail Dry Goods Association, National Retail Furniture Association, and National Shoe Retailers Association.

* * * * * * *

H. R. 2 (Hendricks bill) would impose a tax of 2 percent on all but a few isolated financial transactions. H. R. 11 (Sheppard bill) would levy a monthly tax of 2 percent on gross income, with practically the same effect as the Hendricks plan, although it would allow some deductions, including a deduction of the first $100 of gross income each month. With only these exceptions, each bill would impose a tax on every purchase, sale, or payment made in business.

* * * * * * *

The proponents of the bills claim that it would increase the velocity of the circulation of money and thus increase the rate of general business recovery, that it would increase purchasing power, and that it would increase employment. A realistic analysis, however, shows that none of the expected results can be hoped for, and, in addition, that the method of raising the pension money would produce exactly the opposite results.

Any scheme to speed up the circulation of money by taxation must take the money from those who spend it slowly, or not at all, and hand it to those who, by law or necessity, must spend it rapidly. In these plans, however, the multiple sales tax takes the money from those who already spend it as fast as they get it. The older people must spend it within the month, but the younger people from whom it would be taken would probably spend it within the week. * * * The Brookings Institution has estimated that even in 1929, almost three families out of four were unable to purchase food for an adequate diet. These groups are the ones on which the multiple sales tax would fall most heavily. They cannot be accused of hoarding. The velocity of the circulation of money is not likely to be increased by this method.

The same conclusion comes from an analysis of the effect on purchasing power. To take money from those who have hardly enough and transfer it to the same kind of people simply because they are a little older is not a plan for increasing the sum total of purchasing power. Moreover, the impounding of tax receipts during the first 4 months under either the Hendricks or the Sheppard plan would deal an initial blow at purchasing power by taking a substantial portion of it out of circulation immediately. * * *

The proposed multiple sales tax would be levied on every transaction in the field of production and distribution and on most financial transactions. Two percent would be collected at the time of the purchase of raw materials, and 2 percent more every time the goods changed hands and every time some service was performed on them. Sales to the wholesalers, sales to the jobber, sales to the retailer, sales to the consumer, as well as each item of transportation, warehousing, or other handling charge—each of these would be subject in turn to a fresh 2-percent tax.

Channels of distribution which contain relatively large numbers of transactions would accumulate a higher tax burden. Thus smaller retailers, who buy through wholesalers and jobbers rather than direct from manufacturers, would be placed at a disadvantage with their larger competitors. The accounting practices of both large and small retailers would necessarily result in pyramiding the taxes on the various transactions, so that the retailer would not only have to pay the tax at the time of buying from the wholesaler, but also the tax which the wholesaler paid to the manufacturer, the tax the manufacturer paid to the producer plus their mark-ups on those taxes which are included in the price of the goods.

So many taxes, each pyramided on its predecessor, could not help increasing the cost of goods to the ultimate consumer.

There are three sources from which the increased cost of goods could come: the sellers, the producers, and the ultimate consumer.

It is not likely to come from the sellers. Hardly any of them can absorb a 2-percent gross income tax and remain in business.

Possibly it can come from the producers. If sellers cannot raise their prices enough to pay the tax, and if they cannot pay the tax from profit, they must put pressure on their suppliers to reduce their charges in turn. Suppliers who cannot resist must reduce their own costs and may resort to wage reductions for that purpose. Suppliers who succeed in resisting may have to restrict the supply of their goods by various methods, but whatever method they use will be likely to reduce employment and purchasing power. If the suppliers are farmers, a still further decline in agricultural purchasing power is likely to result.

The most probable source is the ultimate consumer. All along the line each agent will try to pass the additional cost along to the consumer. As these efforts are successful the substantial increase in prices will have the effect of reducing the consumer's purchasing power by the amount of the tax and cannot help being reflected in a reduction of the consumer's purchase from retailers, retailers' purchases from wholesalers, wholesaler's purchases from manufacturers, and so on. At the end of the line is a general decline in production and employment. * * *

Mr. MCCORMACK. Dr. Craig, what effect upon our national economy would the imposition of such a tax have?

Dr. CRAIG. As I have said, sir, I think it would have the effect of slowing up recovery and increasing unemployment by increasing prices, and, to the extent of the tax, reducing purchasing power. * * *

Mr. MCCORMACK. Do you think the average businessman could compete against large corporations by being a part of such a plan?

Dr. CRAIG. Not for very long.

Mr. MCCORMACK. In other words, the man at the corner store, when he gets his goods, may find that they have been subject sometimes to as many as 15 transactions taxes?

Dr. CRAIG. Undoubtedly his goods would be subject to many transactions taxes. * * *

Mr. MCCORMACK. Of course, that has to be passed on to the consumer, in the main.

Dr. CRAIG. That will be the ultimate tendency or result.

* * * * * * *

Mr. McCORMACK. The ultimate result would be, so far as business is concerned, to squeeze out the small-business man and the middleman and many of the independent businesses; is that right?

Dr. CRAIG. That is right.

Mr. McCORMACK. They employ millions of help throughout the country.

Dr. CRAIG. That is right.

Mr. McCORMACK. What would become of this help?

Dr. CRAIG. They would swell the unemployment ranks, and many would undoubtedly seek Government relief.

* * * * * * *

Mr. WOODRUFF. Don't you think, Doctor, as a matter of fact, that all taxes, regardless of where they are applied, must necessarily come from the production and consumption of goods?

Dr. CRAIG. Yes, sir.

Mr. WOODRUFF. Because that is where all wealth comes from.

Dr. CRAIG. Yes, sir.

Mr. WOODRUFF. And inasmuch as it must come from those sources, isn't it necessary, and isn't it essentially true, that all the taxes are finally dumped into the laps of the ultimate consumer?

Dr. CRAIG. That is right.

Mr. WOODRUFF. And the attempt to apply taxes in the amount that is contemplated in H. R. 2 would crucify economically all the people of this country, including the old people themselves?

Dr. CRAIG. It seems so to me.

Mr. WOODRUFF. Well, in my opinion, it is utterly impossible, as I see it, and I have given it much thought. It occurs to me that if there is any one thing in the way of proposed legislation that would put this country into the economic junk heap without delay it is H. R. 2, because of the taxes it would impose on the poorer people, who are already taxed beyond reason.

Dr. CRAIG. I agree with you.

DR. JOHN LEE COULTER, WASHINGTON, D. C.

I have particularly before me H. R. 2., which deals especially with the so-called transactions tax, and I should like first, at least, to develop one or two phases in connection therewith. * * *

I might say at this point that I did spend some 15 years or more working in agricultural fields, especially supplementary to my farm operations; that is to say, as president of agricultural colleges and various other positions which brought me constantly in contact with agriculture and agricultural situations. And my special interests continue to be related to the relative prosperity of agriculture and the rest of the general society.

My feeling is that the methods proposed in H. R. 2 to raise revenue necessary to put such a program into effect would be a tremendous burden upon agriculture, far out of proportion to the burden on the rest of society; and that the benefits coming to agriculture, if any, would be disproportionately small.

I would like to develop that point just a little. Unless agriculture is able to secure for the products of the soil prices which are reasonably in harmony with other prices, farmers in turn are unable to purchase from the market and their position is disadvantageous.

The reason for that, fundamentally, is that farmers sell their labor in the form of prices received for goods rather than in the form of wages or salaries. * * * And the wages or salaries do not fluctuate daily or seasonally in the same way that prices for commodities do. * * *

This transactions tax begins at the very start to bear down on the prices of commodities. * * *

Now, the first effect of the transactions taxes, such as those provided for here, would seem to be to add to the cost at each transaction.

* * * * * * *

To raise $25,000,000,000 by a series of relatively small percentage transactions taxes amounting, before all goods and services come from the producer to the consumer, to $25,000,000,000, or one-third of the national income produced, would seem to mean that the accumulation of these little 2 percents must amount before it finally gets to the ultimate consumer to about one-third of the national income, or 33⅓ percent.

To absorb that merely because it comes in small amounts does not seem likely to take place. In fact, no student of this subject that I know of would acknowledge that any such thing were possible. * * *

Not only would it add the 2 percent at each point where imposed, but it would become part of the cost at that point, and then the new 2 percent would be imposed on that in turn, so that it would be cumulative and pyramided.

This would apparently gradually increase costs, and in turn prices, of commodities. But it would not add to the value or the price of farm products. The prices which the farmers would receive would not be directly affected and certainly not improved in level, but indirectly would be forced constantly lower and lower. * * * Whereas, on the other side, the commodities which farmers must buy would cumulatively be priced higher and higher. So that the disadvantage to the agricultural population would become cumulatively greater and greater. * * *

I said a moment ago that undoubtedly, in my judgment, the prices for farm products would become lower and lower rather than gain at any point. The reason for that is this: As rapidly as prices for the processed commodities advanced—let us take a concrete illustration. We will say that the cotton and the gin and the compressor and the spinner and the weaver and the designer and the dyer and the finisher and the clothing maker, the wholesaler, the jobber, and the retailer—as rapidly as the prices became higher and higher the American manufacturer and distributor would find himself exposed to new-found competitions, two or three in number. As his price advanced, imports from Canada or England or other countries would quickly pass over the tariff wall and be offered at lower prices. Thus the American manufacturer would constantly be forced to offer the farmer a lower and a lower price for the beginning raw material.

The same we will say with hogs. The farmer, the buyer, the packer, the wholesaler, the retailer, and so on, as the price of meat in any moving toward market, adding in price and cost because of transportation, refrigeration, processing, etc., by the time it reached, we will say, the ultimate consumer in New York, it would meet in competition meat which had been packed without a transactions tax in Poland or in the Argentine or some other place. So the imported product, passing over the present tariff structure, would take the market, leaving our farmers' products on the shelf and forcing our processors constantly to offer the farmers a lower and a lower price for the raw material. And, indeed, since the imported material would displace our own, the farmer, finding his own material accumulating in surplus, would be compelled to take lower and lower prices.

* * * * * * *

Now, then, this transactions tax, accumulated and compounded, would have the same effect; and without any question whatever, one of the very first results we would find would be the cumulative costs and prices, the inflow of equivalent or substitute goods and piling up of our own reserves, the unemployment of our own labor, the lowering of prices to our own farm population, so that our farm population would be hit both ways—by higher prices for that which they had to buy and lower prices for that which they had to sell.

DR. FRANK D. GRAHAM, PRINCETON UNIVERSITY, PRINCETON, N. J.

Obviously a tax on transactions is an unlikely method for increasing production and trade. The theory of the proponents of the bill must therefore be that the expenditure by the recipient of pensions, paid out of the proceeds of the tax, will stimulate production and trade more than the tax will retard them. This could be true only if the payers of the tax would have hoarded; that is, failed to spend either for consumption or investment, some part of the funds out of which the pensions are to be paid to persons under contract to disburse them in short order. * * * The payers of the tax are deprived of exactly the same amount of purchasing power as will accrue to the recipients of the pensions and the taxpayers will typically be the generality of citizens who are in the habit of spending their incomes as they receive them. The only exception will be certain wealthy citizens who may refrain from spending or investing their resources for more or less lengthy periods. These, however, are the very people who would find it easy to evade the tax, since they do not have to spend on consumption more than a small percentage of their income and can either refuse entirely to disburse the rest or may invest it but once, and thus reduce the rate of turn-over of their investments to zero.

The upshot is likely to be a reduction rather than an increase in the velocity of circulation of money and a consequent decline in production and trade. The tax would in any case be highly regressive in that it would fall with the greatest proportionate weight on people without property or savings, rather than on those who have resources under no necessity of being turned over, and therefore incapable of being brought within the scope of a transactions tax.

* * * * * * *

No one would deny the duty of supporting aged indigent, but to impose quite unnecessarily heavy burdens on the young in order to maintain in idleness many folk who are capable of taking care of themselves and most of the rest in a manner to which they have never been accustomed, can scarcely be thought of as wisdom. It would certainly take us a long way on the road to paternalistic stagnation and would remove all incentive to work hard when young to provide for an old age, since the lazy or profligate will, in most cases, fare just as well as the industrious and frugal.

* * * * * * *

The administration of the act would present extreme, if not insuperable, difficulties. If actual transactions only were taxed, it would be almost impossible to prevent a rapid vertical integration of industry, with monopolistic implications. That matter has been proven to you. It seems to me there would be a strong tendency for the big business to grow bigger and the small business to be eliminated.

DR. SUMNER H SLICHTER, HARVARD UNIVERSITY

I address myself now to H. R. 2, which I think would have a dangerously deflationary effect, particularly for the first 3 months, unless the bill were amended to avoid that. Why? Well, the taxes begin, under the bill, at the beginning of the third month, and the payments begin, as I recall, after the twentieth of the fifth month. You would have, roughly, 3 months when the Federal Government was acting as a hoarder of the receipts from this particular tax * * *.

That plainly would be deflationary and would, in and of itself, be a shock to business of at least appreciable proportions * * *.

But have you considered the curiosity, the oddity of the proposal that transactions will be stimulated by taxing? That is the essential argument behind the bill—people will spend money faster. Why? Because you tax them when they spend it. Does it make

sense? Why should people rush into spending money faster if every time they do it they meet a tax?

* * * * * * *

This bill is going to be particularly tough if the agricultural regions are taxed; and I think the farmer, next to the unemployed, will be the worst sufferer from it, because, as you know and everyone knows, the farmer is not in a position to restrict or curtail his production when he finds it necessary to take a lower price, and so if he continues to produce in the same quantities and the people who buy from him have got to pay a tax for the privilege of finding an ultimate consumer for his goods, and the demand of the ultimate consumers is not raised, the only alternative is for the farmer to accept less or produce less; and I don't think he will produce less.

So you will see, at least so far as food products are concerned, this tax pyramiding back upon the farmers * * *.

So I think the second group which would suffer from the proposed legislation is the unemployed, because their opportunity of being absorbed in business will encounter the obstacle imposed by the tax upon the businessman who is looking around constantly, searching for ventures on which he is willing to take a chance, and, of course, as you know better than I do, you have got to put dollars to work before you put men to work.

Somebody has got to be willing to foot the pay roll before anyone can be hired.

J. FREDERIC DEWHURST, ECONOMIST, THE TWENTIETH CENTURY FUND

Irrespective of the economic effects and questions of equity involved in paying pensions to aged persons as compensation for their giving up gainful work and agreeing to spend their money as rapidly as received, there can be no doubt that the effect of the taxes proposed in these bills would be definitely harmful to the general welfare, which these bills purport to promote.

* * * * * * *

To the extent that the gross income or transactions tax is actually paid by the seller, the effect will be to reduce or eliminate profits or increase losses, and thus to cause widespread bankruptcies and increased unemployment. The burden of the transactions tax would fall much more heavily on the small firms than the large, with the ultimate result that concentration of ownership and control would be greatly increased.

* * * * * * *

It is easy to see how the transactions or gross-income tax would destroy the business of the smallest corporations, to the advantage of the largest. The immediate result would undoubtedly be to add greatly to the already serious difficulties of the small establishments and their employees.

* * * * * * *

To the extent that business firms would be able to include this additional charge in their cost of production, the transactions tax pyramided many times would be passed on to the consumer in the form of higher prices, increased cost of living, and a decrease in real incomes. The effect of the tax would be different for different commodities, and on the average prices of consumers' goods would be increased from 5 to 10 percent or more.

* * * * * * *

In addition to the effect of the tax in causing the widespread failure of small establishments, the imposition of a tax on every transaction would promote the integration of industries supplying each other with semifinished products. This would have a further effect of concentrating ownership in large concerns and eliminating thousands of small, independently owned units.

* * * * * * *

INEQUITY OF TAX ON DIFFERENT INDUSTRIES

A transactions tax would fall in an arbitrary and inequitable way upon every business organization that could not escape its effects. Every business, whether operating on a small or on a large margin of profit, would pay a tax on gross volume.

A great many businesses, of course, operate on a very small margin of profit on total sales. * * * The result would be a drastic and arbitrary dislocation of the present industrial structure.

EFFECT ON WHOLESALE AND INTERMEDIARY TRADE

A very large proportion of the sales of goods by primary producers and manufacturers goes through the hands of wholesalers and intermediaries in reaching the consumers. To a large extent this trade involves a change of ownership, and therefore taxable transactions or gross income as defined in these bills. Most of this trade is carried on at a very small margin of profit. The imposition of a 2-percent tax would lead producers either to eliminate the wholesaler and sell direct to the retailer or to employ the wholesale dealer as a broker, paying him on a commission basis. The combined effect of these two tendencies would be to cause bankruptcies in wholesale trade with resultant unemployment, and would of course, reduce the taxable base from which revenues would be derived.

EFFECT ON SECURITY MARKETS

One of the most serious effects of a 2-percent transactions tax would be on trading in organized and over-the-counter security markets. A large proportion of security transactions are based on a very small margin of profit, often as little as half or a quarter of a point. A 2-percent tax would either drive this business to London or Montreal or eliminate most of it. The result, again, would be failures and unemployment and a grave disruption of security trading in the United States. In this connection it is important to recognize that active security markets are necessary to facilitate the floating of new securities and the establishment of new enterprises. A free flow of investment funds is essential if organized business is to thrive and prosper.

COST AND DIFFICULTY OF ADMINISTRATION

* * * this certainly is a field in which I do not pretend to any expertness, but it seems to me that the complexity of the problems of effective administration of either of these taxes almost baffles the imagination. With approximately 10,000,000 enterprises and self-employed persons in the United States about 10,000,000 monthly tax returns or about 120,000,000 annually would be required in addition to about the same number of pension checks which would have to be sent out each month. It seems probable that an army of investigators, possibly as many as 200,000 or 300,000, would have to be added to the Federal pay roll in order to check up on the payment of taxes by a multitude of small concerns, and under H. R. 2 on the expenditure of pensions by recipients.

Incidentally H. R. 2 also has this provision for a tax on the raw materials and semifinished goods, as well as actual dollar transactions, which would mean another army of technologists, I should think, who would have to determine just when a transaction took place and see that the tax was paid.

A few years ago I attempted to obtain from certain tax experts estimates of what the administration of the Townsend plan, so-called, or Townsend bill, in its form at that time, would cost, and the best estimate I could get was that it would be something between $500,000,000 and a billion dollars a year really to enforce the bill as it was drawn up at that time.

* * * * * * *

Even with relative efficient enforcement, however, it seems to me altogether probable that there would be widespread evasion of these taxes.

DAVID CUSHMAN COYLE, WRITER ON ECONOMICS AND A CONSULTING ENGINEER

In view of the fact that my name has been brought into these hearings, I respectfully request the privilege of submitting the following statement:

First. I am unalterably opposed to both the Townsend and the general welfare plans, because of the kind of taxation proposed in those plans. I believe that these tax plans, being of the nature of sales taxes, would depress business, lower the national income, and overcome any good effects that might flow from the old-age pension itself.

MARION B. FOLSOM, TREASURER, EASTMAN KODAK CO., ROCHESTER, N. Y.

If we consider any other method of taxation, such as the transactions tax or the gross-income tax, you get into an entirely different situation. In my opinion either one of these taxes would be disastrous to business, particularly in certain types of business, such as the milling industry, real estate, some retail businesses where the turn-over is high and the profit quite low, the securities business, meat packing. I could list a long number of industries that would be practically put out of business if a tax of that type were enacted, because it is not related in any way to ability to pay. Also it would eventually lead to barter. It is apt to lead to consolidations and mergers to avoid sales, which would also increase prices by pyramiding, and in my opinion any plan that would try to transfer purchasing power from one group of the community to another group of the community will not help business and will not increase prosperity. You simply cannot make wealth by that method.

* * * * * * *

Mr. TREADWAY. The argument that has been made before the committee for both those plans is that it will increase the circulation of money and therefore bring about prosperity. I would like to get a comment from you on that.

Mr. FOLSOM. I don't agree with that. I don't think you can really get prosperity by simply taking money from one group and giving it to another. The only way to get prosperity is by increased production. You have to increase production; you have to purchase more, distribute more, and have the consumer build up your production. I don't think this velocity itself is an answer to business recovery.

Mr. TREADWAY. In other words, perpetual motion would not produce increased prosperity, and that is, in a sense, the idea of this constant change, is it not?

Mr. FOLSOM. Of course, in the meantime it will destroy so many business concerns and so many industries that it will just have a terrific effect on business generally.

Mr. TREADWAY. Among the middle-sized ones, the moderate-sized businesses.

Mr. FOLSOM. It will depend on the nature of the business. If you have a business where you have a very large volume and a low rate of profit per dollar of sales, if you tack on a transactions tax or a gross-income tax they would have to increase their price per sale.

Mr. TREADWAY. And that would tend to increase the cost of living, in your opinion?

Mr. FOLSOM. And it would also have that effect on the great mass of people who did not happen to be over 60 years old, as the people in the low-income group will have to pay these prices, and the wages may not go up as fast as the price. They would be squeezed out.

FRANCIS D. TYSON, PROFESSOR OF ECONOMICS, UNIVERSITY OF PITTSBURGH

Mr. ROBERTSON. Now, to shift to some of the pending proposals, such as H. R. 2 and H. R. 11. I want to read you a statement by a British economist, and ask your opinion as to its soundness. Dr. Paul Studenski, of New York University, states that Lord Stamp, in a lecture delivered at Oxford University, said:

"Will you suppose that all the goods and services that are produced by us as a community in a year are all piled in the center of this room in a great miscellaneous heap. Everyone of you, in the work that you do, is putting that heap there. It includes the boots and the clothes that are made, the loaves that are baked * * * the songs that are sung, the physician's advice * * * the banker's knowledge, the businessman's services of organization * * * indeed, everything that can be given by us whereby we have a claim upon the work of our fellow men who are contributing to the heap, including the services of those who have helped to make the heap larger than it would or could be if we started afresh without the assistance of piled-up capital goods saved from the heaps of former years. Let it be supposed that we have no such thing as money, but that for each contribution we have made to the heap there is given to us a 'labor or services ticket' with a claim to draw something out of the heap in return—if you like, for the moment, equivalent in its labor or equivalent in its skill, or its sacrifice, to what we have put in. The people who have refrained from an earlier consumption on the faith of their title to later consumption somewhat larger in extent also have their title to the heap. Now, the total of tickets giving titles to the heap will exactly equal the mass in the heap, and when we have all drawn out what we want of other people's products and handed in our tickets, the heap will have vanished."

Is that a sound philosophy?

Mr. TYSON. Yes. I regard Sir Josiah Stamp as a very competent British economist, and my objections to the plans of the Townsendites are that they are distinctly unsound. I went so far once as to call them moonshine and silly from the standpoint of the economist, because they deal with tickets, with counters, and do not relate the use of money in this pyramided supersales tax they advocate to an enhanced or increased production of goods and services, which is the real life of our society and which we increase by exchanging effective goods and services and getting from the heap certain claims to property, which we then invest in expanding industries to increase the wealth of industry. * * *

Mr. ROBERTSON. Dr. Paul Haensel, of Northwestern University, formerly in Russia, in Austria, in England, and other nations as an economist, states Sir Josiah Stamp's philosophy in these words:

"What does it mean when pensioners receive $200 a month? It is asserted that this money will go to the support of somebody else. This is a fundmental mistake. The pensioners will buy food, clothing, shoes, toys for their grandchildren, etc., and this will almost immediately disappear in their consumption. After that is over, to pay the $200 pensions next month the Government must again take away the necessary funds from the younger working population. If I were the happy pensioner I would wear a new overcoat every year, but others who contributed to my pension will have to reduce all their purchases to the same amount. Imagine that all pensions would have been paid in goods (at the choice of the pensioners). They would at first have been taken away from the producers, and there would have been that much less left to them, and simply a redistribution of the national produce would have taken place. Money exchange does not alter the situation in the least degree; money that the Treasury will pay to the support of old people must be extracted from the rest of the population, and nothing is added to the total amount of national income on which only the whole population is living. There is no revolving fund. What old people will spend on buying commodities will be consumed in the form of raw materials, transportation, factory expenses, labor, etc., which constitute only the aggregate parts of the national income; nothing is added by buying and consuming by the pensioners themselves."

Now, is that sound?

Mr. TYSON. Yes, sir; I think that implements and supports Sir Josiah Stamp's statement.

Mr. ROBERTSON. Suppose you were a workingman and wanted and needed a new overcoat, costing $30. Would it make any material difference to you whether the Government took that $30 away from you to pay a 2-percent sales tax before you bought the overcoat or took the overcoat away from you after you bought it?

Mr. TYSON. Either would be immoral, dishonest, and rotten politics, in my opinion.

Mr. ROBERTSON. Suppose there are 4,000,000 workingmen like you who need new overcoats, and 4,000,000 old men, not working, who wanted and needed new overcoats. Do you produce any new overcoats by taking them away from the young workingman and giving them to the old nonproducers?

Mr. TYSON. You do not.

Foreign Policy and Neutrality

EXTENSION OF REMARKS

OF

HON. SHERMAN MINTON

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 31, 1939

RADIO ADDRESS BY HON. CLAUDE PEPPER, OF FLORIDA, APRIL 9, 1939

Mr. MINTON. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject of Foreign Policy and Neutrality, delivered in the American Forum of the Air program on April 9, 1939, by the junior Senator from Florida [Mr. PEPPER].

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to discuss with you the matter of American peace. The people of America hate war. Peace, justice, and fair play, not only for ourselves but for others, have always been characteristic of American foreign policy. Preeminently has that been so under Secretary of State Hull.

Yet the world totters on the brink of war. For months we have felt the stark fear of horrible war gripping the hearts of the people of the world. International law and order have broken down. Respect for the integrity of sovereign nations has turned to scorn in many places. Sacred treaties are by great nations disdained as scraps of paper.

Many of us are afraid that this may be the turning period of civilization. Former Secretary of State Stimson last week before a Senate committee said civilization now faces the greatest crisis it has faced in four centuries.

In this chaotic world, in this pitiable, almost hopeless state of affairs, what is the proper course for the Government and the people of the United States who want peace, and peace only, to take?

There are many people who upon first thought allow themselves to say, "Let us have nothing to do with a war in Europe, that is none of our business. Let Europe fight out its differences while we attend to our own affairs." Who is willing to say that a way in Europe will not adversely affect the United States? In the last few days American securities have shrunken hundreds of millions of dollars from the mere threat of war in Europe, and such a war would probably close every exchange in the Nation. This Congress has been, by troubled European affairs, forced to appropriate more hundreds of millions for our own safety and defense. Who doubts that a protracted war in Europe will not interrupt and disorganize our international trade which has a great bearing upon our prosperity and well-being, will not arouse our people to sharp differences of opinion and partisanship with the warring nations and may contain serious hazard of involving us directly? Indeed, the geography of no nation is now beyond the perimeter of the maelstrom of war and immune from being sucked into destruction in such open-mouthed destroyer.

Many think that if we had an adequate neutrality law that alone would safeguard us against involvement. We are just now having hearings before the Senate Foreign Relations Committee holding hearings on pending neutrality proposals.

These bills propose either a cash-and-carry plan by which we sell anything to those who will come and pay cash for and carry away our goods, or that we sell only to those who are neither aggressors nor treaty violators, or that we have no neutrality legislation at all.

Mr. Stimson prefers that we exercise discretion as to whom we shall sell our goods, while Mr. Bernard Baruch favors the "come and get it" plan. Mr. Baruch points out, however, that there is no such thing as absolute neutrality for any trade; any contact with a belligerent has some influence for good or bad upon one side or the other. Such legislation merely limits our otherwise free action. It neither prevents nor stops war. Such legislation is surely not the answer to the riddle of how to keep out of war. I do not favor so-called neutrality legislation which destroys all flexibility in our foreign policy, which makes us aid and abet the aggressor and the wrongdoer, no matter how foul his offense, and keeps our hospitable doors open to him who has inaugurated international brigandage and repudiated before us and the nations of the world his solemnly pledged word.

After all, the world is simply an enlarged community such as the one in which you live. If your community were infested with such violence that your residence there became dangerous or undesirable, as a last resort you can move out of that community and physically isolate yourself from those dangers. But a nation cannot move out of the world. We have to live in it where we are. Suppose violence existed in your community and you, being a good citizen, believed

in and tried to support and sustain lawfulness and order and decency in that community. What would you do? There were many instances when this country was growing up, and particularly in the West, when there were certain individuals in communities who had a contempt for all order and law and decency and followed a course that terrorized the whole community, making both life and property insecure. What would a good, conscientious citizen do in such a community, faced with such a situation? It seems to me that the usual choice was either to join the vigilantes and enforce law and decent respect for the rights of others by extra-legal methods, or if time permitted, see to it that there were established in the community agencies which represented law and order. There were many times, I am sure, when fathers didn't want to get into conflict with men of violence, yet who felt so strongly that violence could not forever be tolerated in a community that they associated themselves with their neighbors who were of the same determination, even at some risk to themselves. There were other instances, I am sure, when heads of families helped morally and physically to bring about the establishment of tribunals and agencies of law and order which would give every man his due and every home its just protection.

It seems to me, therefore, that we have come to a similar situation in world affairs. We as a Nation are a part of the world community. Violence, lawlessness, international brigandage, and piracy cannot go on forever in that world community without our being adversely affected, without our own security being jeopardized. We cannot, therefore, shirk, I venture to say, the responsibility that every responsible citizen bears to his own community, at least by moral suasion and by all reasonable means, to make the world community a lawful community. I wonder, therefore, if it is not a fact that we occupy a position in world affairs that makes it possible for us to be almost a judge in the determination of the justice of world causes. No nation can really afford to antagonize the United States so as to make even the vast economic strength of the United States available to its enemy in time of war. If the people of the United States can so search their own hearts and souls, can so disengage themselves from selfish interests that they can sit, as it were, in righteous judgment, there are many things that the United States can do in the world community, just as many things that an honorable citizen can do in a private community to bring about more wholesome conditions, less violence, more certain peace.

I am sure that the President saw this clearly when he intimated in his address in January to the Congress that there were many ways short of war by which a nation could make its mere purpose felt in the affairs of the world.

This month of April brings back to our minds the April of 1917, when this Nation, in spite of all that cynic and critic may say, cast its lot behind a moral principle and for a permanent peace among the peoples of the world. We took a position against aggression, against the domination of the world by any nation through force, against a doctrine of government which warred with the very essence of democracy. The American people are a moral people. No nation in the world I believe is so actuated by a sense of right and wrong, justice and fair play, as the people of the United States. We have not lost that moral sense. Whenever moral issues arise in the world as certain as the night follows the day that moral sense awakens and asserts itself just as it is now doing with regard to the situation in Europe.

I wonder if the memory of that war does not revive our recollection of the spirit of Woodrow Wilson and the vision of Woodrow Wilson who foresaw a world order, a world law, a world tribunal in which claims might be presented, heard, adjudged. I wonder if he did not see further than we have seen, that though it must come slowly just as law and order and security have come slowly in the communities of the world, yet eventually in the very nature of things out of the growing contraction of the world's size, the increase in the intimacy of its people, there must come about a world society, a world consciousness, a world forum, and a world judgment.

In the days preceding the adoption of the Federal Constitution and following the close of the Revolutionary War, for 6 long years the newly won independence of America seemed in jeopardy. The numerous colonies for one reason or another were falling apart and the Nation with such bright hope for the future was about to disintegrate into innumerable warring states. George Washington, more clearly than any other, saw there must be a United States of America, a united country. Such great patriots as Patrick Henry saw this new government looming upon the horizon like a monster ready to devour the liberties which he had proclaimed as better even than life itself. Many others shared Henry's fears. There was an element of freedom to be given up by each participating state, but in the crucible of many honest, conscious minds and hearts a way was found whereby there could be peace and unity without the destruction of the states. This is but a poor analogy, but I believe it has the germ of the idea that must eventually permeate the consciousness of the world. In the crucible of more honest minds and hearts there must be found a way whereby nations aggrieved will be able to present their claims at a bar which will respect justice and right. A nation will not have to resort to self-help as men in civil society once had to do before an adequate system of law was established to gain the recognition of their just rights.

This happy state I know is too far beyond the horizon to be expected with tomorrow's dawn. Meanwhile, we as citizens of the world community, by being devoted to peace, hating war, loving justice, supporting right, condemning wrong, setting always a good example, sharing always in the promotion of the lofty aspirations of the better men and nations of the world, can make no mean contribution to world sanity, world reasonableness, and world peace.

The Strait of Panama

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, May 31, 1939

ARTICLE BY PHILIPPE BUNAU-VARILLA

Mr. LODGE. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article by Col. Philippe Bunau-Varilla, who was the French engineer on the original Panama Canal project, which throws great light on the feasibility of a sea-level canal at Panama.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Europe for May 1938]

THE STRAIT OF PANAMA

(By Philippe Bunau-Varilla, former general director and chief engineer of the Panama Interoceanic Canal Co.; former Minister Plenipotentiary of the Republic of Panama)

In 1879 M. de Lesseps organized an international congress in Paris to determine which was the best method of joining the Caribbean Sea with the Pacific between North America and South America. A sea-level canal at Panama, with the Pacific end closed by a tidal lock, was the solution chosen by the congress and which M de Lesseps preferred because it made Panama a replica of his triumph of Suez. (Contrary to the general and erroneous belief there is no difference between the average mean level of the Pacific at Panama and the Atlantic at Colon. But at Colon there are small tides of 1 foot and at Panama large tides of 10 feet above and below the average level.)

Another solution was proposed: a lock canal with a lake 80 feet above sea level on each side of the central mountain range. It was proposed by a French engineer, M. Godin de Lépinay. It was discarded, for it seemed preposterous for this invaluable waterway controlling the trade between the Pacific and the Atlantic to be perpetually in danger of being destroyed, either by an explosion in a lock, an earthquake, or any other accident to the locks or dams.

Nobody then imagined the possibility of a lock canal being gradually modified into a canal at sea level without even a 5-minute interruption to traffic. Neither was it conceivable that rock could be excavated under water for a cost price inferior to 10 or 15 times that of rock excavation in the dry. Thus the construction of a temporary lock canal later to be transformed into a canal without locks was not even suggested. The Congress therefore favored the most perfect solution, not foreseeing the superhuman obstacle constituted by the huge and slippery cut across the central chain of mountains.

I joined the Panama Co. in 1884 as chief engineer of one of the three divisions of the Canal. I was determined to devote every effort in order to make a reality of the plan that had been adopted. In less than 1 year I had become the general director of the entire undertaking. I had become gradually convinced that it was physically impossible to carry out the project of the tide-locked, sea-level Canal then in course of construction. The enormous difficulties which could not be conquered were: First, the sliding nature of the Culebra soil, through which the deepest cut in the world was to be opened by excavation in the dry; second, the inevitably limited supply of labor (consisting of 40,000 Negroes, producing some 15,000 effective workers daily); and, third, the ravages of yellow fever among the white staff.

In order not to see this great enterprise of French genius condemned to the obloquy of a technical failure I sought fresh solutions. It seemed to me that, although the erection of a permanent lock canal was unjustifiable in view of the enormity of the American military and civilian interests it had to satisfy, the risk involved might be taken temporarily. But this was conceivable only if a system was discovered to transform a lock canal with an elevated central section into a canal entirely at sea level, without any interruption to traffic. It was furthermore indispensable to find how to excavate rock under water at a cost no greater than that of the same work in open air, instead of the cost then admitted which was 10 or 15 times higher.

As is always the case, the solution comes naturally when the problem is clearly formulated.

The method of gradually lowering the level of the summit section of a channel without any interruption to traffic soon took shape in my mind. I solved the problem by slightly modifying the usual

type of locks, and this by making the upper one of the two gates equal to the lower one instead of establishing it on the abutment wall ending the bottom of the summit channel as was the rule. Thus the lock became independent of the bottom of this channel It became possible to excavate the soil of the canal between the two upper locks of the summit without touching the locks themselves. The excavation of the bottom was naturally to be followed by an equivalent reduction of the water level without any change in the operation of the locks.

It was the complete elimination of one of the two difficulties which made people think it was impossible to transform a lock canal into a canal at sea level without interrupting navigation.

Let us now turn to the problem of excavating rock under water economically. I devised a method of dredging rock by breaking it up through a system of blasting which would leave no fragments of over 20 inches. I believed that the rock so broken could be easily dredged. To achieve this result I had dynamite distributed over a distance of 300 yards in holes drilled 30 inches apart into a horizontal ledge of rock covered by 10 feet of water existing between Colon and Gatun. After the explosion a dredge was brought up the next day which excavated the rock as though it were mere sand.

The two problems involved by the transformation were thus solved. I then tried to persuade MM. Ferdinand and Charles de Lesseps that they should change their program and build a temporary lock canal that could later be changed to a sea-level canal, with all the requisities of dimension observed, as time for prompt completion would not any more urge the constructors. Finally, after a fight that lasted over a year and a half, my ideas were adopted and on January 1, 1888, the execution of a temporary lock canal was begun. The plan, perfectly adapted to circumstances, was to be completed within 4 years, and the temporary lock canal opened to traffic by the beginning of 1892, or perhaps even before that date.

Then an abominable plot blocked the last stock subscription, which was otherwise assured of success. A detestable political clique undertook to annihilate the project. Calumny and libel stopped the completion of the Canal at a moment when, for the first time, success was actually assured.

In my recent book From Panama to Verdun, I have described my battles in America to dispel the unjustified confidence in the plan for a Nicaragua canal and told how I led to victory the Panama Canal which won out on June 29, 1902, when President Roosevelt approved the Spooner law. I have also explained how, when everything seemed settled with Colombia, a political storm arose in that country against its granting the concession of the Canal strip to the United States.

As is known, in order to break up the opposition of Colombia, I had to organize the creation of a new republic (on November 3, 1903). The Republic of Panama named me as its Minister Plenipotentiary in Washington, and on February 26, 1904, I exchanged with Secretary of State Hay the ratifications of the treaty that we had both signed on November 18, 1903, and which had since been ratified without any alteration, by our respective Governments.

So the Panama Canal was going to become a reality. But what plan was to be adopted? A committee including prominent American engineers: General Davis, Professor Burr, and Mr. William Barclay Parsons, concluded on February 14, 1905, in favor of the execution of the Canal at sea-level at M. de Lesseps had done. I foresaw the moral defeat that threatened the United States and resolved to persuade President Theodore Roosevelt not to follow the advice of these engineers.

I went to America and, after two visits to President Roosevelt, he invited me to lunch at the White House on March 29, 1905, to discuss the project with my opponents, Messrs. Burr and Parsons, who were also my friends. I explained the grave risk to which their plan exposed the American Government.

"Mr. Bunau-Varilla," said Mr. Parsons, "is still under the impression of the terrible difficulties which he encountered in the higher parts of the Culebra. The level was then at 100 meters above the sea, while it is now only 45. The ground is much better and the sides of the cut will hold on a slope of 2 in 3 and in many places on much steeper slopes."

The well-deserved reputation of Mr. Parsons, chief engineer of the New York subway, then in the process of construction, as well as the apparent logic of his reasoning, seemed to make a deep impression on the President. I felt the success of the battle was becoming jeopardized. In order to clarify the situation, I said to Mr. Parsons: "Will you allow me to ask you a couple of questions?" "Certainly," he courteously replied.

I resumed: "Here is my first question: With a canal at sea level, will the Culebra cut not be the deepest in the world?" "Yes, by far," replied Mr. Parsons. "Do you know," I added, "any soil more treacherous and slippery than the hardened clay that constitutes the major part of this cut? That is my second question." To which Mr. Parsons loyally replied: "No; it is the worst possible soil."

I then retorted: "Now, then, dear Mr. Parsons, how can you have confidence in the stability of the deepest cut in the world, opened in the most dangerous of all soils, when a few days ago, in the very center of New York, buildings in Park Avenue began to slide toward the small cut of about 20 feet in depth that you are making for the subway in the New York rock, which is the hardest trap in the world?" To this Mr. Parsons could find no reply. But the President's opinion was henceforth established on a solid basis. At that moment, the sea-level canal to be dug in the dry was condemned.

The President then decided to convoke an international commission that was called the "consulting board," asking Germany, Great Britain, and France each to send a technical representative in order to give their opinion, with eminent American colleagues, on the plan to be adopted for building the Panama Canal.

The French Government, instead of choosing the most competent engineer, for this particular question appointed one of the heads of the Department of the Roads and Bridges, who had reached his position through length of distinguished service. However, he was far from being qualified for this particular mission. He knew nothing of the new methods that I had used to dredge the rock at Colon, nor of the more recent and still more economical method of breaking up the rock by vertical battering rams.

I wrote to President Roosevelt, explaining my regrets at this selection, and informing him that the engineer most qualified in the matter was M. Kellennec, chief engineer of the Suez Canal. By return of mail I received the appointment of M. Kellennec, and at the same time, in order that there should not be two French engineers with only one German and one British, the President of the United States asked the Netherlands also to send a technical delegate.

The consulting board met in the fall of 1905. Neither my own efforts nor those of M. Kellennec could convince its members that the rock dredging problem had been solved by me 20 years before, and that my new rock-dredging process thus tested was utilized at the Suez Canal itself to enlarge and deepen the channel, where the breaking of the rock by concussion to make it dredgible cost 25 cents per cubic yard.

Deepening a lock canal by dredging, which was the solution I had defended for Panama, was declared impossible by the almost unanimous commission, except for a sand or earth bottom that did not exist at Panama. To illustrate this, the consulting board agreed to a price for dredging rock which was equivalent, for the preliminary operation of breaking it, to $2.35 per cubic yard, i. e., almost 10 times the cost at Suez. Such in 1905 was the degree of technical knowledge of the official German, American, British, Dutch, and French experts, with the exception of M. Kellennec and myself.

The amusing part of it all is that the Culebra cut, even as established for a canal 85 feet above the sea, could only be finished by under-water dredging. The cut was flooded with the waters of the lake formed by the Gatun dam across the Chagres, near Colon. After having attempted the impossible by trying to excavate the Culebra cut in the dry, in spite of landslides and crumbling rock, Colonel Goethals acknowledged his defeat. In the issue of the Canal Records dated May 10, 1911, he announced that excavation work would be pursued by means of dredges, "enabling the work to proceed much more expeditiously and economically."

In this fight against the revelations of the experience that I had achieved in 1885 and that I brought 20 years later to the consulting board—revelations that had been rejected as impossible—Colonel Gaillard, chief engineer of the Culebra cut, to be opened with steam shovels on rails, lost his life.

Thus may be seen what dangers the United States were spared in the realization of the Canal through the marvelous intelligence of President Roosevelt, who thought my advice was sounder than that of the unanimous (with the exception of Kellennec) international "consulting board."

With the Canal at sea level, it would have been necessary to go some hundred feet lower than the present Culebra cut. And we have just seen that the present cut could only be finished thanks to the Gatun Dam and to the lake thus formed. Naturally this lake would never have existed with the plan of a canal at sea level. This shows what a disaster would have been caused by the execution of the scheme previously adopted by M. de Lesseps on the recommendation of the International Congress of 1879, which was again selected as the best 27 years later by the majority of the consulting board. It was the second time that committees or technical assemblies erroneously approved it. The first one had the excuse of lack of experience, but the second had none. The minority of the consulting board adopted the "Godin de Lépinay" idea and proposed the lock-canal with a summit level at 85 feet above sea level.

No mention was made of a possible transformation, because the members of the minority (as well as those of the majority) did not believe in rock dredging. The result was that the small modifications were not made in the type of locks adopted, which would have immediately permitted the necessary work of transformation. The minority's report was satisfied to leave the door open for the realization of my ideas, by stating that if later on this transformation was required the necessary steps would be taken. The minority evidently thought in 1906 that a century would elapse before such a transformation would be necessary. Events have disproved this opinion, and, as will be seen below, the hour has recently struck.

After seemingly endless discussions, the project of the minority finally won out over that of the majority, and was adopted in 1906. Senator Knox, acting as the champion of my proposals and supported by the authority of the President, carried the vote of the Senate, stating: "The lock type of the Canal can, if the necessary ever arises, be transformed into a true sea-level canal, one of 500 to 600 feet in width and of 50 or more in depth."

These were precisely the dimensions I had assigned to what I then called the Strait of Panama.

The Senate, by adopting the proposal of Senator Knox, on behalf of the Government, in reality adopted the plans of a lock canal

on condition that it be ultimately transformed into a wide sea-level canal without tidal locks into a "strait." This was the final triumph of the plan which already in 1887 had convinced M. de Lesseps to abandon the direct construction in the dry of a sea-level canal.

The lock canal was inaugurated August 3, 1914, on the day that Germany declared war on France. The magnificent development of traffic rapidly made it necessary to consider the transformation of the canal to free it from its dependence on the water supply of the Chagres River flowing into Lake Gatun. In 1924, in a lecture which I gave in Cincinnati, I developed the whole plan of transformation, estimating the total excavation to be made at 1,600,000,000 cubic yards for the strait and the derivations of the rivers on both sides, the total expense involved at a billion dollars, and the time required for the completion of the works at almost 20 years. The execution had to start with the construction of a third set of locks, built to permit the transformation without interruption of the traffic, and later on the necessary modification of the two sets of locks existing. The channel was to be about a thousand feet wide at the bottom and 50 feet deep at the lowest tide.

In two memoirs presented on my behalf to the Academy of Sciences on May 3 and June 27, 1909, by that eminent mathematician and statesman Paul Painlevé, I had established the perfect practicability of a strait across the Isthmus of Panama, entirely open at both ends. The mathematical laws that I had established showed that the currents in the strait would rarely exceed 3 knots and in exceptional astronomical circumstances could not exceed 3.32 knots, and this only at the Panama end, for the Colon end always will have weaker tidal currents.

We have now reached a point when the need for such a transformation in the Canal is being felt. The fact that the locks are insufficient in width and in length for the large battleships to be constructed by the United States has caused the decision to undertake considerable alterations. According to a dispatch from Washington under date of April 6, a credit of $200,000,000 has been established to enable the erection of a third chain of locks and for works in the Canal. The same dispatch announces the rejection of the plan of a canal at Nicaragua.

It is of the utmost importance that the new chain of locks differ from the former two not only in the width and length of the chambers; they must have the required characteristics to allow progressive lowering of the bottom and water level of the upper channel without interrupting traffic for even 5 minutes. Once this third set of locks has been established, each of the other two sets must be similarly modified. Then the Canal can be altered to assure a definite immunity from dangers of destruction by accidental causes, enemy acts, or seismic commotions.

Marshal Franchet d'Espérey, who visited the Canal in 1932 as a guest of Gen. Preston Brown, commander of the American forces, whom he knew during the war, tells the following anecdote:

Returning by airplane with Gen. Preston Brown and several other guests of the General, from Balboa to Colon, the conversation touched on the traffic question as the plane passed over the Culebra cut. One of the members of Gen. Preston Brown's party then said aloud: "If the Canal must be enlarged, we will follow Bunau-Varilla's plan."

It may be stated today that this final stage will shortly begin, and that the United States will at last inaugurate the supreme period of this heroic undertaking, an achievement worthy of its own greatness. The opening of the Strait of Panama, is now obligatory with the unlimited increase of the dimensions of battleships, for which 57,000 tons is now a minimum, instead of the 35,000 tons maximum of 1922; when guns of 457 mm. diameter must replace the former 305 mm., in order to fire shells weighing 3,000 pounds.

The connection between the two sea fronts of the United States must not be subjected to any limit of draft for warships or merchant vessels, nor to the hindrance of any more dams and locks which human ingenuity or seismic revolutions may destroy, thus instantaneously crippling traffic for years.

The honor of the United States requires an indestructible Canal. "The Strait of Panama" alone can give it to the American empire, thus safeguarding the constant communication between the oceans whatever happens in peace or war and making forever e duobus unum the Atlantic and Pacific fleets.

The Cotton Problem Is a National Problem

EXTENSION OF REMARKS

OF

HON. DAVID D. TERRY

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

ADDRESS BY HON. HENRY WALLACE, MAY 26, 1939

Mr. TERRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered at Little Rock, Ark., by Hon. Henry Wallace, Secretary of Agriculture, on Friday, May 26, 1939:

May I say in the beginning that I am awfully happy to be in Arkansas again. All of us in Washington have the highest regard for this State. Few men of the stature of Joe Robinson will ever work among us. You are admirably represented now by Senator CARAWAY, Senator MILLER for the State, and by Representative TERRY from this district. They are extremely valuable in the Federal scene. Here in the State you have Governor Bailey, whom we all know and esteem. I have just come from a most pleasant visit with him. Yes; we hold high regard for Arkansas. We are always happy to come here.

I am talking today not only to this splendid audience of cotton farmers, but also to that great unseen audience, the Farm and Home Hour listeners. I propose, therefore, to talk about the importance of cotton to the whole Nation as well as to the cotton farmers. Before the World War cotton farmers received 3 percent of the national income. Last year, even with benefit payments added in, they received only 1.4 percent. There are a million more people living on the cotton farmers of the South today than before the war. They have to buy more in the way of fertilizers, farm machinery, and spray material, and they have less left over at the end of the year after they have paid for their furnishings. High tariffs on manufactured products, discriminatory freight rates, and the price-determining powers of the great corporations have combined to put cotton into a more difficult situation than any other major farm product except, possibly, wheat.

In 1931 and 1932, when cotton farmers received less than 1 percent of the national income, the situation seemed hopeless. Hundreds of thousands of unwanted people had come back to the cotton farms when the factories shut down in the great cities. The soil was washing away. Misery was everywhere.

Then it was that the cotton farmers began to realize more clearly than ever before their kinship with the wheat and corn farmers. In May of 1933 for the first time the President of the United States signed a bill recognizing the unity of agriculture. Henceforth it will be impossible to think about the problem of any one of the great export crops by itself. Wheat and corn farmers are genuinely interested in the cotton problem because they know if vested interests destroy the cotton program, it will not be long until corn and wheat also are in the most serious trouble. The great export crops tend to go up and down together. Moreover, the great export crops set the pace for prosperity and depression in the industrial centers.

The world agricultural situation was exceedingly bad after 1930. Since that time every nation in the world has found it necessary to take special action to help its farmers. American farm income in 1932 had sunk to one-third as much as it should have been to put the American farmer on a basis of historical parity with his city brother. To meet the desperate situation prevailing in 1932 the farmers obtained Federal powers enabling them to raise their income to a fairer relationship with national income. They recognized that as long as we were a creditor nation with high tariffs, we could not sell such a large volume of surplus products abroad and expect to get a satisfactory price.

SIX OBJECTIVES OF FARM PROGRAM OUTLINED

To meet these changed world conditions we have built a unified program for agriculture which—

First. Accepts parity income for the farmer as the goal.

Second. Builds the soil.

Third. Adjusts production to help soil conservation on the one hand and to prevent burdensome supplies on the other.

Fourth. Works for increased consumption at home.

Fifth. Stands for American agriculture's fair share of the world markets.

Sixth. Sets up an ever-normal granary or warehouse to balance the years of good weather against the years of bad weather.

Cotton farmers, wheat farmers, dairy farmers, livestock farmers, and fruit farmers believe in these objectives. That is why the Senate voted 65 to 14 to appropriate $225,000,000 for parity payments and $113,000,000 for surplus-disposal payments. That is why the House last Tuesday in effect upheld the Senate. Yes; out of the experience of the last 6 years the farmers of this Nation have learned to work together. The beginning of wisdom in solving the cotton problem is to remember that it cannot be solved except in cooperation with agriculture as a whole.

COTTON HIT HARD BY ACTIONS IN EUROPEAN COUNTRIES

Without forgetting for a minute the ties which bind cotton to the rest of agriculture of the United States, we must remember that cotton has been hit to an unusual degree by actions taken in certain European countries. One of these countries is taking only one-sixth as much cotton as it did a few years ago. During the current year our cotton exports will be around three and one-half million bales, or the lowest in 60 years. Because of the low volume of exports, the carry-over of American cotton is building up day by day, with the probability that on next August 1 it will be 14,000,000 bales, or a record high.

Most of you know why this situation has come about.

In 1933, we set out to reduce our surplus of cotton. By 1936 the 13,000,000 bales on hand in 1932 were reduced by approximately one-half and to almost normal proportions. But something happened in 1936. The original Triple A program was killed. Up until that time the cotton program, financed by the processing tax, had just about paid its own way.

Without effective control, farmers planted more cotton. In 1937 an avalanche of cotton—19,000,000 bales—descended upon us, and, so far as our supply was concerned, it carried us back to 1932. The rest of the world grew another record crop. Had it not been for that 1937 harvest, the cotton loans of 1937 and 1938 would not have been price-pegging loans. We would not have 11,400,000 bales of cotton in the loan and our cotton would be flowing freely into export trade.

Obviously, there was but one thing to do after that 19,000,000-bale crop—begin the task of adjusting supplies all over again. Congress gave us a new Surplus Control Act in 1938. If we use this act in the right way, we can, within a few years, make an ordinary hill out of our great cotton mountain.

Cotton is an export crop. If a cotton loan is above the competitive world market price, it is almost certain to interfere with exports. Indian cotton, from the price standpoint, has been a better buy this season than American cotton. So has Brazilian cotton and so has other cotton.

MAJOR PROBLEMS OF COTTON PROBLEM EXPLAINED

We face, then, a situation at present which shows great gains in the income of cotton growers, from the benefit payments and the loan; but a large surplus carry-over is built up and our loan rate is higher than the world price, so that our cotton does not flow freely into the world trade. The carrying charge on the Government-loan cotton is $45,000,000 a year. The existence of the loan stock causes uncertainty and holds down the world price. We must reduce the loan stock if we are to adjust our supplies and have order in the industry.

We should add to that no considerable further reduction in cotton acreage can be recommended. Taking more acres out of production might keep the surplus down, but only at a cost of misery for many of the people now dependent on cotton for a living. Farmers on the land, workers in gins, shippers, and all the other interests concerned with this complex empire of cotton would feel a pinch if acres now given to cotton were used for growing the crops that mean so much to the other sections. I am not convinced that this fear is well founded, but I do know that it is a genuine fear. No, I think we must plan for a normal annual crop of around 12,000,000 bales. I should not like to ask our cotton farmers to plant less than 27,000,000 acres. Of course, it may be that eventually either European chaos or the world-wide use of substitute fibers will make it necessary to plant less than 20,000,000 acres of cotton annually in the South, but I do not see now and I hope we shall never see the necessity of such a drastic reduction in cotton acreage.

CONTINUATION OF COTTON LOAN AND BENEFIT PAYMENTS URGED

What shall we do about the cotton problem as we find it today?

First, let us continue the cotton loan. The real reason for a loan on cotton is to protect the growers of cotton. There is no doubt that our cotton loans have done just that. Loans on cotton—as on other commodities—have under existing conditions a definite place in this program. If we did away with the loan program the price of all our cotton, both that sold at home and that sold abroad, would immediately go down. It might go down 2 or 3 cents a pound. Assuming a 12,000,000-bale crop in 1939, this would mean a loss of from $120,000,000 to $180,000,000 in cotton farmers' income.

Southern cotton farmers are not getting nearly enough for their crop as it is. In justice to them I do not believe anyone should try to do away with the loan program for cotton. I am certain we should keep that program unless Congress is prepared to compensate producers for the drop in price that would follow abolition of the loan. Without a processing tax or some other practical way to raise more money, there is no chance to give them that compensation.

Second, let us continue benefit payments for production adjustment and soil conservation. I have already told you that the average annual cotton income under the agricultural-adjustment program is much greater than it was in 1932. I believe that the adjustment program should be continued to preserve our soil and to reach and maintain parity of income for farmers.

STRESSES NEED FOR EXPANDING DOMESTIC CONSUMPTION

Third, let us continue vigorously and thoughtfully to expand the domestic consumption of cotton. The consumption of cotton goods in our own country is far lower than it ought to be because the families who need these goods most can't afford to buy them. A study covering 300,000 families was recently made of this subject, and preliminary figures are now available.

They indicate that families with incomes of $5,000 and over spend nearly eight times as much for cotton goods as nonrelief families with incomes of less than $500 are able to spend.

If the 20,000,000 families getting less than $2,000 a year spent as much for cotton goods as those getting between $2,000 and $3,000 a year, the cotton farmer would have a home outlet for an additional 2,000,000 bales of cotton. Such a situation would add over half a billion dollars a year to the income of the cotton South, of which part would go to the cotton farmer and part would go to employ people in our cotton mills, on our railroads, and in our wholesale and retail dry goods stores throughout the country.

People having the lowest incomes buy the heavier kinds of cotton goods first. This is because they need mattresses, comforters, blankets, sheets, towels, overalls, piece goods from which they can make clothes for all their children. If they bought such items as these, approximately 20 cents out of every dollar spent would go directly to the cotton farmer; roughly, 50 cents out of every dollar would cover the cost of manufacturing, most of which would go to employ labor in our cotton mills, and about 30 cents out of every dollar would cover the cost of transportation and merchandising in our wholesale and retail dry goods stores.

This is not a complete solution for the cotton problem, of course, but I feel as strongly as I did at Fort Worth last fall that the Nation ought to find ways and means of turning its abundance of raw cotton into a greater abundance of cotton goods for our own people.

If the stamp plan for surplus foods proves successful, we may try a slight variation of this plan to move cotton goods to our low-income families. Satisfactory arrangements undoubtedly can be worked out with our retail dry goods people. An experiment conducted along these lines in a few cities for a year would teach us a great deal about what we could expect on this front. We want to know from actual experience just how effective such a program would be. Meanwhile, however, we are under an obligation to protect cotton markets and cotton income.

SAYS UNITED STATES MUST REGAIN WORLD COTTON MARKETS

As the fourth point in this cotton program, let us regain and hold our fair share of the world exports of cotton. As I have said over and over in talks on the subject of cotton—at Memphis in September 1937, at Fort Worth in September 1938, and at Macon in November 1938—we must look to volume as well as price if we are to have a good income. We must keep not only our domestic market but also our foreign market.

The foreign market for cotton normally has meant about one-half billion dollars a year to the American farmer, to say nothing of the business and employment it has given the gins, the cotton trade, the banks, the merchants, the railroads, the exporters, and the steamship lines. In the past, more than half the American cotton producer's crop had gone to other countries. I do not believe you want to give up that foreign market without fighting to keep it any more than any commercial firm would want to let its competitors take half its business.

The South simply cannot afford to lose its export market for cotton.

Neither can the rest of the country afford such a loss. Destruction of the South's buying power means idle factories, unemployment, and destitution in the industrial areas. Every part of our country will lose if we lose our export markets for cotton—every part will gain if we keep that market.

The problem of maintaining exports is both a long-term and an immediate problem.

FAVORABLE RESPONSE TO PROPOSED WORLD CONFERENCE

I think that the long-run solution must include an agreement among the cotton-producing nations of the world on sharing the world market. Great gains have been made through the reciprocal-trade program toward reaching international understanding in the exchange of many commodities. American farmers have been helped by the reciprocal-trade program. The American farmer needs more than the American market. Agriculture is largely on an export basis; and cotton especially, with its large surplus production, has an immense stake in the restoration of our foreign trade. Despite innumerable handicaps, literally hundreds of destructive trade barriers have been lowered or removed through our reciprocal-trade program. When anyone tells you that Americans are losing income as a result of trade with other countries, you ask for proof. Also ask what cotton producers would do if half their normal market were sacrificed.

Great gains would result from an international agreement on cotton to assure each country its fair share of the export market and to support a reasonable level of world prices. With these ends in mind, we have proposed an international conference on cotton. It is indeed a pleasure to announce here for the first time that favorable responses have been received from all important and cotton-exporting countries.

Both an international agreement on cotton and the reciprocal-trade program are exceedingly important for the long run. Our immediate and imperative problem, however, is to maintain our fair share of cotton exports. With the world trade disorganized, as it now is, with some of the cotton-buying nations taking only one-sixth as much cotton from us as formerly, we must adjust our export price to a level that will be fully competitive in the world market at all times.

PRESIDENT'S EXPORT SUBSIDY PLAN HELD ONLY SOLUTION

President Roosevelt, on March 28, proposed the only practical, immediate solution for this emergency. Exporters would be paid the amount necessary to allow them to export cotton at the world price without a loss. The price of cotton at home would remain protected regardless of what happened to the prices on sales abroad.

This is the cheapest practical way for the Government to reduce the cotton surplus. One alternative which has been proposed would be to pay farmers to keep their cotton out of the loan. To do so would probably result in a drop of at least 2 cents a pound. With a crop of 12,000,000 bales, an extra $120,000,000 over and above the $200,000,000 already appropriated for the 1939 cotton program would have to be raised for cotton alone.

Let me repeat, the President's export subsidy plan would offset the loan by payment on our exports sufficient to make American cotton as competitive with foreign cotton as our present supplies warrant. It would mean that we are going to do everything in our

power, with regard for the total national economy, to maintain our fair share of the world cotton market.

Last fall I did not feel that export subsidy payments would be necessary in the case of cotton. I stated my views in this connection in a talk at Fort Worth. Since that time conditions have changed. There was no clear evidence last fall that the 8.3-cent loan would interfere with the flow of cotton into export channels. At that time there were only about 7,000,000 bales of cotton in the loan and exports were moving at a rate near normal. So much cotton is in the loan there is very little cotton that is free to move into export channels. Exports are at a very low level and have been for several months. It appears now that if we are to keep the loan, action must be taken to offset its effect on our export market.

Our experience with wheat leads us to believe that an export plan will work for cotton. In the absence of the wheat export plan we probably would have exported less than 35,000,000 bushels of wheat this year. As it is those export sales of wheat from July 1, 1938, to May 16, 1939, totaled 109,000,000 bushels. Of this amount 86,500,000 bushels were subsidized at an average cost of 25 cents a bushel, or a total of about $22,000,000.

The combined effect of the wheat loan and export program has been to keep the Chicago price of wheat from 15 to 30 cents a bushel above its normal relationship with the Liverpool price. In other words this program has increased the income of the American wheat farmers at least $70,000,000 for the crop year just coming to an end.

Every dollar taken out of the Federal Treasury for running the export and loan program has meant at least $3 extra in the pockets of the men who raise wheat. Furthermore, the wheat-export program has kept unmanageable supplies of wheat from piling up under the wheat loan.

EXPORT SUBSIDY PROPOSAL EXAMINED IN DETAIL

Let's examine this cotton-export subsidy proposal in some detail. Is it dumping? No. It would not result in our having a higher percent of the world market than we had in the decade of the twenties or in the period before the World War. Our cotton would not be sold at a price under the world market price. It would not mean that we put more bales on the world market than we did in the decade of the twenties. No foreign nation can justly claim that a plan designed to enable us to get and keep from 70 to 100 percent of our former share of the world market is dumping.

Domestic orators, whose hearts bleed for foreign cotton producers, cannot expect the United States to subsidize foreign cotton growers by turning our own program into an umbrella to hold over them. We are going to get under that umbrella ourselves. And if our foreign competitors are not willing to come with us under the shelter of an international agreement, all of us are soon likely to find ourselves out in the rain.

Would the plan mean that cotton goods made abroad with cheaper cotton would flow back into the United States in competition with our own manufacturers? No. There is already in the law, provision that when such a backflow of cotton goods is discovered a restriction can be applied. Furthermore, there is possible, under the President's plan, a subsidy on exports of manufactured cotton goods as well as a subsidy on exports of raw cotton. The plan will not let textile manufacturers suffer from imports of cheaper cotton goods nor from disadvantages in the foreign market.

Does the plan mean that our own consumers would be deprived of cotton? No. I have already said emphatically that we are doing, and will continue to do, everything possible to increase domestic consumption of cotton. There is plenty of cotton. The export plan and increased domestic consumption are not opposed to each other, but are both needed in a unified solution of the cotton problem.

There is an argument against the export plan that few of you have heard. Some people representing the cotton-textile industry contend that if the President's plan were adopted, the domestic price of cotton would not be cheap enough, even though it's only about half of parity now. One of their spokesmen recently came right out and put it baldly when he told a Senate committee that "we have got to keep cotton cheap, because cotton has got to be consumed."

This statement was made in the face of the fact that the best years for the textile industry and the years when domestic cotton consumption was highest have been years when the price of cotton was comparatively good.

REAL ISSUE OF STRUGGLE HELD CHEAP COTTON

The real issue in this struggle is cheap cotton. Judging from their arguments, some opponents of this subsidy want cheap cotton for the trade, cheap cotton for the domestic mills, cheap cotton for the foreigners, cheap cotton for everybody.

Ask those opposing the export subsidy if the plans they propose would not result in a lower price for all the cotton crop.

The President would like to keep a floor under the price of cotton in this country.

The opposition wants the price to go on down to rock bottom.

Farmers have had some experience with cheap cotton. There is no question what their choice will be.

None of us believes that the solution of the cotton problem is still cheaper cotton.

If the men, women, and children who work in the cotton fields must reduce themselves to a state of poverty to keep the mills supplied with cheap cotton, their future and the future of the cotton-growing South is very dark indeed. What the textile spokesman is proposing is the greatest subsidy of all—the gift of the South's labor, soil fertility, and prosperity.

The cotton industry cannot be preserved by making serfs out of the men, women, and children who grow the crop.

The textile industry is protected by a high tariff. This spokesman proposes to withdraw protection from the cotton farmers, but I hear no proposal to reduce the tariff on textiles. He asked for cheaper cotton, but he said nothing about lowering the price of shirts, or dresses, or overalls, or the other things the farmers have to buy.

I refuse to believe that a majority in the textile industry wants cheap cotton at the expense of the men, women, and children who bend under a hot sun to produce the crop.

Some of those who oppose the President's plan seem to believe that if only they can prevent any constructive action from being taken in the present situation the entire cotton program will break down and then they will be rid of it. They have been trying to destroy this program since it began, but they have failed and will fail so long as it deserves and has farmer support.

Ever since the cotton program began in 1933 members of the cotton trade have been stressing the importance of the export market. They have laid the responsibility for the increase in foreign acreage to the higher prices brought about by the program. Over and over again they have expressed concern about keeping our traditional place in the markets of the world.

Now these same members of the cotton trade show that what they want most is for cotton prices, both in this country and abroad, to be less than 8 cents a pound.

Their congressional spokesmen, who have stood steadily for smaller Government expenditures, have now proposed the most expensive plan of all those being seriously considered. These spokesmen have proposed appropriations for cotton which would be so much in excess of current expenditures that when other commodities made their corresponding demands, the total would be so large as to become impossible.

Apparently the real objective of many of these gentlemen is destruction of the entire agricultural program.

As long as we have more than seven or eight million bales in the loan and there is no world cotton agreement, we need the subsidy plan.

REENACTMENT OF COTTON PROCESSING TAX FAVORED

Another thing is needed for this same purpose and for the total national farm program. In almost every statement I have made on cotton since 1933 I have stressed the importance of a continuing source of revenue for the cotton program. Last fall, once more, I suggested the reenactment of the cotton processing tax, which proved so useful and practical for the first 2½ years of the Crop Adjustment Act. We need such a source of revenue as badly now as we ever did. Those who propose to pay farmers to keep their cotton out of the loan should be fighting vigorously for a continuing source of revenue to support the program they propose.

Recently a variation of the processing-tax plan has been suggested. It is now being widely discussed. I refer to the so-called certificate plan, under which production certificates would be issued to growers. Manufacturers of cotton and importers of cotton products would be required to buy these certificates in order to sell their goods. The certificates would be equal in value to a certain number of cents a pound and the grower could sell them to the manufacturer, either directly or through a pool. This plan would not require funds from the Treasury.

But either the processing tax or the certificate plan will require new legislation. The authority for a cotton-export program already exists. It was given by amendments to the Agricultural Adjustment Act, approved in 1935, and also by the Agricultural Adjustment Act of 1938.

Funds which would permit the financing of the cotton-export plan have been voted by the United States Senate and final action by both Houses of Congress is pending.

Recently the Senate refused to suspend its rules to consider Senator BANKHEAD's proposal for limitations upon the existing authority for an export subsidy. In some quarters this vote was erroneously hailed as a defeat for the cotton-export plan, and as a repudiation of it by the South. But I wish to call your attention to three significant facts in connection with that vote: First, the vote was not on Senator BANKHEAD's plan itself; second, 21 out of the 32 voting Senators from cotton-growing States voted to suspend the rules; and third, in the debate which preceded the vote, Senator BANKHEAD pointed out that the authority to subsidize exports of cotton already existed, and the only question was whether limitations should be put on that commodity. In a speech in Birmingham on May 13 he reaffirmed that view. Whatever may happen in the future, the export subsidy plan is very much alive today.

UNIFIED PROGRAM TO ATTACK COTTON PROBLEM OUTLINED

Let us resolve to attack the cotton problem with this unified program:

First, by continuing the loan as a protection for the farmer's price of cotton.

Second, continuation of benefit payments to build and protect both incomes and soil resources.

Third, increased efforts to expand domestic consumption.

Fourth, maintenance of our fair share of the world market—now, by the necessary export-subsidy program; as soon as possible,

and for the long run, by an international agreement on cotton and by the reciprocal trade-agreements program.

Fifth, attainment of a more nearly fair and equitable division of the national income with farmers through a processing tax, or its equivalent, to serve as a continuing source of revenue.

If anyone should entertain the least doubt that farmers greatly need and overwhelmingly deserve an increase in their income, let him consider these national figures: Agriculture today has approximately 24 percent of the total population and 30 percent of all children, but only about 11 percent of the national income.

I challenge all those who criticize our unified program, which is based on the past 6 years of experience, to produce a plan that will do the job as well and at less cost. This unified program will no doubt be adjusted from time to time. When the surplus is whittled down again to 7,000,000 bales, when we have had an international conference to share the market, when other nations have begun to live and trade in peace, we shall have changes in our program. We may not then need an export subsidy. But as Secretary of Agriculture, I would be derelict in my duty if I let a year of such low cotton exports pass without doing everything possible to raise exports to a minimum of 6,000,000 bales or without striving to protect and increase the income of farmers at a minimum cost to the Treasury. That means an export-subsidy program for cotton, just as soon as such a program can be placed in effect.

This program is in conformity with the total national farm program for a unified American agriculture. The cotton problem is a national problem. Only by solving it can we make sure that the South, which has too long taken the short end, gains its proper share of our national income. Only by solving it can we keep American agriculture as a whole on the road to its well-deserved gains.

I believe we can solve it if the farmers have their way, and they will have their way if the facts are known.

Memorial Day—Its Historical Origin

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

STATEMENT BY MRS. JOHN A. LOGAN RELATING TO THE HISTORICAL ORIGIN OF MEMORIAL DAY

Mr. SMITH of Washington. Mr. Speaker, in an address delivered by me yesterday, May 30, 1939, at the Memorial Day services held at the National Cemetery, located at the United States Soldiers' Home, Washington, D. C., under the auspices of the United Spanish War Veterans, Department of the District of Columbia, I included a statement furnished by Mrs. Mary Logan Tucker and written by her mother, Mrs. John A. Logan, which sets forth the facts in relation to the historical origin and founding of Memorial Day. This is a matter of such interest and importance that I deem this statement to be worthy of preservation in our proceedings, for the information of all our citizens and specially the school children.

Said statement of Mrs. John A. Logan, wife of Gen. John A. Logan, commander in chief of the Grand Army of the Republic, is as follows:

General Logan had made an engagement for both himself and me to accompany Col. Charles L. Wilson, of Chicago, editor of the Journal of that city, to visit the battlefields of Virginia and the city of Richmond in March 1868. Colonel Wilson came on, accompanied by his niece, Miss Anna Wilson, and the young lady to whom he was engaged, a Miss Farrar, of Boston. However, it so happened that there were such important matters before Congress that General Logan could not go. The colonel, however, insisted I, with my two children, one daughter Dollie (now Mrs. Mary Logan Tucker) and baby son, John A. Logan Jr. (now deceased), should carry out the plan of our visit. We arrived in Richmond on a cold, bleak day in March to find the hotel in a very wretched condition. As it was so soon after the war, we were prepared to find evidences of the rebellion everywhere. The colonel had great difficulty in finding an equipage to drive over the battlefields around Richmond. He particularly wanted to go to Libby Prison and to inspect the fortifications that had afforded defense for the capital of the Confederacy for so many long months. I shall never forget the poor horses, the well-worn carriage, and the miserable-looking white man, accompanied by a boy about 13 years of age, who sat on the box. We had, fortunately, brought lap robes, cloaks, and warm robes, expecting the weather to be disagreeable. Driving about over the battlefield, we saw the colored people picking up the bullets and pieces of shell, which afforded them quite a livelihood immediately after the war. Foundrymen had established agencies around these fortified cities to buy up exploded shrapnel, shells, broken cannon, Minié balls, and every species of old iron that was so abundant on these battlefields. Driving about from place to place, we were greatly interested and realized more than we ever could have, had we not visited the city immediately after the war, the horrors through which the people of the Confederacy had passed. I remember hearing the poor little boy, who was so thinly clad that he had little to protect him from the inclemency of the weather, call out to the driver, "Well, it isn't so miserably hot today, is it?" At the same time his teeth were chattering in his head with the cold from which he was suffering. We were not long in finding that we could do without one of the lap robes, which we insisted that the poor child should wrap around his shivering body.

During the trip we visited churchyards and cemeteries at Richmond, Petersburg, and other points made historic by the struggle which had taken place in and around these cities. In the churchyard near Petersburg we saw hundreds of the graves of Confederate soldiers. These graves had upon them small bleached Confederate flags and faded flowers and wreaths that had been laid upon them by loving hands on the occasion of their Decoration Day.

Upon our return General Logan was much interested in our account of what we had seen, and I remarked to him that I had never been so touched as I was by seeing those little flags and the withered flowers that had laid on the graves. At this General Logan said that it was a beautiful revival of the custom of the ancients in thus preserving the memory of the dead, and that he, as commander in chief of the Grand Army of the Republic, would issue an order for the decoration of the graves of Union soldiers. Colonel Wilson, heartily approving the plan, said that he would be glad to exploit it in his paper in Chicago. General Logan sent for General Chipman, then adjutant general of the Grand Army of the Republic, and dictated Order No. 11 for the first decoration of the graves of Union soldiers that ever took place in the United States, as follows:

HEADQUARTERS GRAND ARMY OF THE REPUBLIC,
Washington, D. C., May 5, 1868.

GENERAL ORDERS NO. 11

I. The 30th day of May 1868 is designated for the purpose of strewing with flowers or otherwise decorating the graves of comrades who died in defense of their country during the late rebellion and whose bodies now lie in almost every city, village, and hamlet churchyard in the land. In this observance no form or ceremony is prescribed, but posts and comrades will in their own way arrange such fitting services and testimonials of respect as circumstances may permit.

We are organized, comrades, as our regulations tell us, for the purpose among other things, "of preserving and strengthening those kind and fraternal feelings which have bound together the soldiers, sailors, and marines, who united to suppress the late rebellion." What can aid more to assure this result than by cherishing tenderly the memory of our heroic dead who made their breasts a barricade between our country and its foes? Their soldier lives were the reveille of freedom to a race in chains, and their death tattoo of rebellious tyranny in arms. We should guard their graves with sacred vigilance. All that the consecrated wealth and taste of the Nation can add to their adornment and security is but a fitting tribute to the memory of her slain defenders. Let no wanton foot tread rudely on such hallowed grounds. Let pleasant paths invite the coming and going of reverent visitors and fond mourners. Let no vandalism of avarice or neglect, no ravages of time, testify to the present or to the coming generations that we have forgotten as a people the cost of a free and undivided Republic.

If other eyes grow dull and other hands slack, and other hearts cold in the solemn trust, ours shall keep it well as long as the light and warmth of life remain in us.

Let us, then, at the time appointed, gather around their sacred remains, and garland the passionless mounds above them with choicest flowers of springtime; let us raise above them the dear old flag they saved from dishonor; let us in this solemn presence renew our pledges to aid and assist those whom they have left among us a sacred charge upon the Nation's gratitude—the soldier's and sailor's widow and orphan.

II. It is the purpose of the commander in chief to inaugurate this observance with the hope that it will be kept up from year to year, while a survivor of the war remains to honor the memory of his departed comrades. He earnestly desires the public press to call attention to this order and lend its friendly aid in bringing it to the notice of comrades in all parts of the country in time for simultaneous compliance therewith.

III. Department commanders will use every effort to make this order effective.

By command of:

JOHN A. LOGAN, *Commander in Chief.*

N. P. CHIPMAN, *Adjutant General.*

After much discussion and investigation as to the time of the year when flowers would be in their greatest perfection in the different sections of the country, it was decided that May 30 would probably be the most appropriate time when this ceremony should take place. General Logan's anticipations were fully realized by the universal observance of the day in every State in the Union.

The Townsend Bill

EXTENSION OF REMARKS
OF
HON. OSCAR YOUNGDAHL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1939

TELEGRAM FROM TOWNSEND CLUBS OF HENNEPIN COUNTY, MINN.

Mr. YOUNGDAHL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram received by me this morning:

MAY 30, 1939.

HON. OSCAR YOUNGDAHL,
House of Representatives, Washington, D. C.:

The affiliated Townsend clubs of Hennepin County, representing 10,000 members, request that this telegram be read on the floor of the House on Wednesday. We urgently request that every Representative of Minnesota vote favorably on H. R. 6466, the new Townsend bill, when it comes on the floor of the House.

Alfred J. Barnett, president, Club 119; Ira H. Ross, president, Club 120; J. C. Dorchester, president, Club 53; C. A. Broberg, president, Club 124; Frank A. Carlson, president, Club 118; F. Johnson, president, Club 127; M. E. Drake, president, Club 99; William Baumgartner, president, Club 121; Barnard Wyrzykowski, president, Club 125; A. B. Cuffel, president, Club 1, Robbinsdale.

Memorial Day Address

EXTENSION OF REMARKS
OF
HON. WILLIAM B. BARRY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1939

ADDRESS BY LOUIS ORGELFINGER

Mr. BARRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by former Chief Deputy Register Louis Orgelfinger at the Memorial Day exercises of the Queens County Memorial Day Association, United Organizations of Queens County, at Baisley Park, Jamaica, N. Y., and at the Memorial Day exercises of the S. F. Du Pont Camp, No. 168, Sons of the Union Veterans of the Civil War, Department of New York, at their post plot in Lutheran Cemetery, Middle Village, Queens County, N. Y.:

Today our thoughts go back through the space of time to another day in the year 1861, when, on April 12, South Carolina opened the Civil War by firing on Fort Sumter. That marked the beginning of a war that lasted 4 years to decide whether a nation could live half slave and half free.

It is unnecessary to recount at this time the details of that bloody conflict, when fathers fought against their sons and brothers against their brothers.

That was 78 years ago, and there still lives among us the last vestige of that thinning line of veterans who wore either the blue or the gray, who fought for a cause they thought was right.

To them the Battle of Bull Run, the capture of Fort Donelson, the Battle of Shiloh, the capture of New Orleans, Antietam, the Battle of Fredericksburg, the Battle of Chancellorsville, the Battle of Gettysburg, which marked the high-water mark of the Confederacy, the siege of Vicksburg, the Battle of Chickamauga, the Battle of the Wilderness, Sheridan's ride from Winchester, the fall of Richmond, and finally Appomattox Court House, which brought to a close the Civil War, is no legend—these memories are still a stark reality, which, although mellowed by time, shall remain a living memory as long as life shall last.

The war took its toll in lives and money, for history tells us there were 2,666,999 Federal troops engaged, with casualties numbering 359,528.

One hundred ten thousand and seventy men were killed in action or died of wounds and 249,458 died from disease, accident, or other causes. Enrolled in the Confederate Armies were about 500,000 men. Their entire loss in killed and wounded was less than 100,000.

Today we again commemorate, not celebrate, Decoration Day.

This beautiful and reverent custom was first expressed by some southern women in Columbus, Miss., soon after the beginning of the Civil War.

On an April morning in 1863, having finished decorating the graves of her two sons, an elderly lady walked down a path in a southern cemetery, her arms filled with lilacs and roses, white and red, to place her offering upon two unmarked graves. She was told by those of her companions that these are "Yankee graves." "Hush," said the mother, "you are wrong; they are nameless graves where two soldiers lie buried. But somewhere in the North, in some city or little village, or perhaps in some lonely farm house, a mother or young wife holds them as dear as you and I loved our boys whose graves we have just decorated."

She turned back to the unmarked graves, stooped down, and gently placed her flowers, with a prayer upon her lips, for those Union soldiers whose final resting place was an unmarked grave far from home and the ones they loved. Thus, tenderly, she spread her flowers for the two heroes.

With tears in her eyes, but with her head held high, she proudly faced her companions who had silently gathered about her.

She pointed to the graves of the two Union soldiers and then to the graves of her two sons and said, "Let us express our love and devotion for them all. They are dead, our heroes of the South. They are dead, these two Union soldiers of the North, lying here in our churchyard in nameless graves. So here are our lilacs and roses, white and red, for both alike."

As nature covers over the scars of battle and decorates the fields with her living green, so the strewing of flowers on the graves of our soldiers has been an affectionate tribute for the men of the Civil War.

But, today, we remember not only the soldiers of the Civil War, for in 1899 the veterans of the Spanish War began decorating the graves of their comrades.

In May 1919 the men who died on the fields of Flanders, were paid the tribute of the soldier dead. Peasant women and children of France, living near the battlefields, gathered flowers to lay on the graves of American soldiers who died overseas.

"We do this," they explained simply, "not as strangers, but for the mothers who are far away."

Likewise, roses, red and white, and poppies that grew in Flanders fields, served to carry on the beautiful tradition started by those southern women in the little churchyard in Columbus, Miss.

In doing this we exalt our patriotism and rededicate ourselves anew to the Nation for which they gave their last great measure of devotion.

In the years that have passed since this first became the custom many changes have come about not only in our own country but all over the world.

In reverent attitude, then, we approach the task of honoring America's war dead with the same feeling of love and pride that actuated those women in Columbus, Miss., on that spring morning more than 76 years ago. Our hearts still beat with the same feeling of patrotism for those who gave their all that you and I might be privileged to live in the greatest free nation on the face of the earth.

It seems that in other days, prior to August 1, 1914, that day which tore asunder the civilization of 2,000 years, people laid greater stress upon their obligations to their country and their duties as good citizens.

With so many problems pressing for solution—economic, social, and spiritual—this day will be used to press the claims and personal ambitions of men.

Little will be said in many instances about the true significance of the day; a fleeting reference will be made to the soldiers and sailors who died upon the altar of war. But this is neither the time nor the place for such discussion.

Primarily this day was set apart to commemorate and decorate the graves of our war dead. Let us then approach our part in this memorial program, devoid of all extraneous philosophies, and rededicate ourselves to the cause of liberty and patriotic service, linking the present with the past, setting aside this day to honor our departed comrades not only of the Civil War but all who wore the uniform of our country from the days of Valley Forge to the Argonne.

Gen. John A. Logan, commander of the Grand Army of the Republic, in May 1868 issued the now immortal order setting aside May 30 of each year for the purpose of decorating the graves of the soldiers of the Civil War. In this order he expressed the hope that "no vandalism of avarice or neglect, no ravages of time, testify to the present or to the coming generations that we have forgotten as a people the cost of a free and individual Republic."

The passing of time has broadened the original concept of this ceremony until today we include within the scope of our reverence all men who have served under the colors of our country.

Our liberty was not bought in the market place; it was purchased with the blood of patriots.

Let us draw back the curtain of time and for a brief moment live again in memory with General Washington and his Continental soldiers. Let us march with those brave men and live again with them through the harrowing months at Valley Forge. With an abiding faith in their God, and a supreme confidence in their leader, they trudged through the snows of that bleak and desolate

winter when their bleeding feet left footprints in the snows as a decoy for the British whom they opposed in their fight for American independence.

Less courageous men would have given up the struggle; only hearts of steel and the vision of an American independence sustained these Continental soldiers in their fight, with starvation stalking its grim spectre among the ranks of a sorely harassed Army, many of whom were without sufficient clothing to keep them warm.

Undaunted, determined to carry on, these brave Continentals left behind them their homes, their families, and their friends, without thought of glory or reward save the reward of serving their country in the hour of need.

God, in His infinite mercy, placed the laurel wreath of victory upon their banners and blessed their cause with victory out of which was born a free and independent America.

Soldiers of the Continental Army, we salute you.

Again, in 1812, this Nation found itself facing Great Britain in another war upon the high seas. Again men of America rallied to the call, leaving all behind them to serve their country. They consolidated the perpetuation of our freedom as a Nation won only 36 years before. Men of the War of 1812, we salute you, too.

In 1847 our men went to Mexico to uphold our freedom and carried the Stars and Stripes into a foreign field. As in other wars many of these men never came back and for their contribution to a growing America we pay them homage on this Decoration Day.

Then came the terrible struggle from 1861 to 1865—when this Nation was torn asunder in the throes of a great civil war.

After 4 years of this momentous struggle, when the very foundations of our liberties were at stake and all but disappeared, there came peace and the Union was preserved—bound together with the inseparable ties of sacrifice made upon the battlefields of that great war. Out of this came the dawn of the first Decoration Day.

General Grant said, "Let us have peace," and this sentiment was echoed throughout the North and the South and a war-weary people prayed that it might be so.

But in 1898 this country again found itself embroiled in the Spanish-American War. Cuba and the Philippines were the theaters of war, and again on foreign soil our soldiers and sailors were fighting to lift the yoke of an oppressor from the backs of a weaker people. Soldiers of America wallowed through the fever-infested swamps and died a thousand deaths without complaint and without recompense save the melancholy glory of a hero's grave. Soldiers of the Spanish-American War, we salute you.

Upon the brow of Arlington's hills, just across from the great Memorial Bridge, in the shadow of our Nation's Capitol, stands a shaft of granite as white as the driven snow. Inscribed on this monument are the immortal words, "Here lies in honored glory an American soldier known but to God."

Here, too, lies buried all that remains mortal of America's unknown soldier who typifies the hero dead of the World War who sailed from these shores in 1917–18 amid the acclaim of a cheering multitude moved by the emotions of war. Today, in Flanders fields where poppies grow, between the crosses row on row, lie America's war dead, far from home and the ones they loved. Theirs, too, is the doubtful glory that comes of war and its devastating influence.

There, too, lies buried the hopes and aspirations of every mother in America who flew a service flag adorned by a star of gold, and there is no mother or wife living in America today who gave her loved one to her country who has not the right to believe that it is her hero who sleeps on the brow of Arlington's hills in honored glory and immortal slumber.

Let us fervently pray that never again will the mothers of America be called upon to bury their unknown soldier.

Peace is the theme of this Decoration Day echoed and reechoed throughout America. North, South, East, and West, Americans all, mindful of the terrible sacrifices paid upon the altar of war, are resolved that this must be the abiding desire of all our people.

The futility of war has been demonstrated again and again. Much of the map of the world has been changed since the signing of the armistice in November 1918. Kingdoms have crumbled, proud dynasties have vanished, dictatorships and totalitarian states have been set up, whole nations have been relegated into the bonds of vassals, religion has been banished from countries that once boasted of their grand cathedrals which reared their majestic spires into the skies.

Forty million men are under arms in Europe at this present moment waiting for the command to war again; is it any wonder that the people of America cry out, "Let us have peace"?

Our entrance into the World War was a costly experience in the lives of young Americans which can never be compensated for. In money the cost was about $13,000,000,000, in heartaches and misery to an extent beyond calculation.

To those who have died for our country we pledge ourselves on this Decoration Day to rededicate ourselves to the principles of peace; should we do less, then those who died have died in vain.

God in His infinite goodness has not forgotten the grave of a single American soldier wherever he may be buried; forgotten thought he may be by men, far from home and loved ones, the bountiful hand of nature in the beauty of springtime redecorates that grave with grass and wild flowers and perhaps a forget-me-not seed, blown by the gentle breezes of spring, found lodgment upon the grave of this hero and grew to a flowering blossom as a token of divine love.

In the eventide when the sun spreads its last rays in the western sky, and the first stars of night appear in the heavens, the nightingale will sing its song of requiem, and they shall sleep undisturbed under the blue canopy of heaven in immortal slumber, our soldier dead.

The snows of winter shall make a covering of white for their earthly beds and each recurring springtime will spread its benign verdure over their graves—such is the challenge of nature—can we do less?

No sorrow then, no funeral dirge,
To guide them on their way,
When they answer that last bugle call
On Resurrection Day.

All then shall be forgot,
All tears then wiped away,
When they answer that last bugle call
On Resurrection Day.

Battleground National Cemetery Memorial Day Address, Fort Stevens, Washington, D. C., May 30, 1939

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

ADDRESS BY HON. GEORGE A. DONDERO, OF MICHIGAN, MAY 30, 1939

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a copy of my memorial address delivered at Battleground National Cemetery, Fort Stevens, District of Columbia, on yesterday.

The address is as follows:

It is springtime. The fragrance and beauty of flowers fill the land. The flag is at half mast. The loom is hushed and the wheels of industry stand still. It is Memorial Day; a day on which to rekindle the fires of patriotism and love for the land we call home. It is a day of memories.

With heads bowed reverently and respectfully, Americans gather today on the hillsides, in the valleys, and on the plains to honor the Nation's dead. A grateful people pause to perpetuate the memory and recall the unselfish devotion and sacrifice of those who died that the Nation might live.

These dead, in memory of whom we are gathered, are sacred to us. They will remain sacred as long as each succeeding generation honors the supreme virtue of manhood.

These honored dead were patriots; and we today are inspired and ennobled by the memory of their deeds. Their dust remains an inspiration to their countrymen. Yonder on the inspiring dome of the Nation's Capitol, kissed by the sun of day and watched by the stars at night, floats the unconquered flag of the country they preserved for us.

The place whereon we stand is sacred ground. It has been well said that as Gettysburg was the crucial point of the Confederate penetration in to the Federal section, Fort Stevens was the crucial point of defense against the Confederate threat of the capture of the seat of the Federal Government. Its significance is not surpassed by any struggle during the entire war, for, had the Confederates captured Washington they would undoubtedly have been recognized by foreign powers desirous of seeing the Nation divided.

At the outbreak of the Civil War, Washington was well-nigh defenseless. There had seemed little need for fortification. Was not the Capital surrounded by patriots who would shed their last drop of blood in her defense? It was not foreseen that those on both sides possessed the same indomitable courage, the same sterling qualities—they were both Americans.

As the threat to Washington grew, however, the need of defense was realized. In 1861 a fort was built on the Seventh Street Pike—Brightwood Avenue—at a point 5 miles north of the Capital, and named Fort Massachusetts by the troops who built it. Discovered to be inadequate for its vital purpose, it was enlarged in 1862 and 1863, and its name changed to Fort Stevens in honor of Brig. Gen. Isaac Ingalls Stevens, who had just lost his life in the Battle of Chantilly, Va. When his men faltered under the fire of the enemy, General Stevens had rushed forward, seized the colors from the wounded bearer, and, calling on his troops to follow him, led them in the charge which forced the enemy to retreat. The victory won, he fell, his brain pierced by a bullet, the flag of his country still grasped in his dying hand. It was an heroic act to which was dedicated the new fort, an act to which this fort added fame.

The early days of July 1864 witnessed a race for the Capital. General Early, having defeated Gen. Lew Wallace, at the Battle of Monocacy, continued his march on Washington. General Grant, whose troops were concentrated at Petersburg and preparing for a siege of Richmond, sent the Sixth Army Corps, under Gen. Horatio Wright, back to the defense of the Capital.

"What a picture!" exclaims William V. Cox in writing of that dramatic moment. "Early, with his fighting legion, advancing on the Capital from the north while fleets bearing the veterans of the Sixth and Nineteenth Army Corps were on their way from the James and the Gulf of Mexico to save the Capital they loved so well. North and South looked on with bated breath and wondered which, in this race of armies, would reach Washington first."

However, as Early and the Confederates advanced upon Fort Stevens, beyond which loomed the majestic dome of the Capitol, they found that the Sixth Army Corps was there before them.

President Lincoln himself stood on a parapet, oblivious to his own safety and despite entreaties that he come down, as the valiant struggle ensued. An Army surgeon fell by his side, the victim of a sharpshooter's deadly aim. Finally General Wright is said to have exclaimed in despair:

"Mr. President, I know you are Commander in Chief of the Armies of the United States, but I am in command here and you are not safe where you are standing. As I am responsible for your personal safety, I order you to come down."

Lincoln, it is said, smiled indulgently and came down; but even then he persisted in standing up, and he loomed above the parapet.

Fort Stevens stands today, a mute but eloquent reminder of the heroic struggle which saved the Nation's Capital, and of the undaunted and inspiring courage of the President who spared himself no danger that the Nation might endure.

Historians pay little heed to this campaign and the battle here at Fort Stevens. It is but briefly mentioned in the mighty maneuvers of 1864, but it held the Nation breathless and the fate of the Nation was at stake in its outcome. Out of it came two events which are unique in the history of our country. First, Abraham Lincoln, a President of the United States in office, was under fire of the enemy. Second, it is the only engagement ever fought in the District of Columbia. Lee deemed the failure of General Early to capture Washington of such magnitude that he urged information of it be kept from the southern people lest their morale be weakened. Here occurred the last aggressive attempt on a large scale by General Lee to break the ring of steel that Grant was forging about the Confederate Army near Richmond. It was the last stroke of a master.

In the years since that time, we have healed the wounds of that war, "with malice toward none, with charity for all." We have sought that strength which comes with unity, that peace which comes with justice, that the American people might go forward together under one flag, inspired by one great tradition, united in one great mission, seeking one destiny for all.

The American ideal of freedom, justice, and liberty for all was bought by blood. It has been preserved by devotion. The true significance of Memorial Day is to remind us of the ideals for which these honored dead gave their lives, for the living to rededicate themselves to these ideals so dearly purchased and preserved, and to renew their determination that those who made the supreme sacrifice for those ideals shall not have died in vain.

The first official Memorial Day was May 30, 1868. According to John Clagett Proctor, the historian, Gen. John A. Logan, who issued the order for the commemoration ceremony, gained his inspiration from a trip through the South with his daughter. There he saw that upon "hundreds of graves of Confederate soldiers * * * small, bleached, Confederate flags, faded flowers and wreaths * * * had been laid * * * by loving hands on the occasion of their Memorial Day."

"If other eyes grow dull and other hands slack and other hearts cold in the solemn trust," declared General Logan in his order, "ours shall keep it well as long as the light and warmth of life remain in us."

What was once performed by military decree has become a national rite, a symbol of the rededication of the living to the sacred ideals passed on to them by the dead.

To every generation of Americans is given the task of carrying forward the torch, of passing on to each succeeding generation the undefiled heritage of the American tradition, a tradition based upon the highest conception of mankind that the world has ever known.

When Jefferson penned the Declaration of Independence, he included in that sacred document the principle that men are endowed with certain inalienable rights—life, liberty, and the pursuit of happiness. These rights are not granted by man. We are endowed with them at birth by the Great Creator. In order to guarantee the freedom to exercise these rights for themselves and their posterity, our ancestors wove this conception into the fabric of our Government.

Our fathers, in offering all they could give in the great War between the States, were ready to yield life freely that those principles might be preserved. We who live in this day and generation, we who have inherited the country which our ancestors by their sacrifice so nobly won, do not, perhaps, fully appreciate the sacred heritage we have received. There is today all too much of a tendency on the part of some to forget that which was so nobly achieved and preserved for us, and to take up the false, alien philosophies, the rampant "isms," the mistaken benefits which are being urged upon us. Foreign notions of government, utterly opposed to every principle and every ideal for which our fathers fought and bled and died, are being propagated among us.

Let us pray that this Republic will never forget the sacrifice and devotion of those who offered their last great measure of devotion to preserve intact every principle and ideal of right and justice embodied in the Declaration of Independence and the Constitution of the United States. If that time should ever come in this land when we no longer remember what the men who have followed the flag have done for us, in that day the Republic will no longer deserve preservation. Our form of government, with whatever faults it may have, stands out as the last and best hope of man—freedom to rule himself.

The Government, through Congress, makes laws to rule the people, but the people made the Constitution of the United States to govern their Government. Therefore, any assault on the fundamental law of the land is a direct attack on the rights of the people themselves. Rights which have been baptized in the blood of the Nation's soldiers.

The fathers who founded this Government understood so clearly the full meaning of our great triumph of independence, and knew so well the long struggle of those who had fought for liberty that they were unwilling to commit the full measure of their blood-bought rights into the keeping of any man. So when they formed the Union, before they entrusted any power to any man, they first set down in a written Constitution, beyond the profane touch of any official hand, those fundamental rights which neither Congress nor the President could alter or abridge; and for further assurance they established the judicial power to lay the restraining hand upon Congress and to make of no effect any act which ran counter to the Constitution. Thus was the light of liberty set upon a hill and so far its blessed rays have spread over the earth since that day that the oppressed of all the world have sought our shores.

Under our form of government every citizen is a sovereign and no one cares to wear a crown. We have accomplished what we have because we are what we are. Without these honored dead, it would not be so. America is not a creed, not a dream, but a breathing actuality with a magnificent past and, we hope, with a great future.

Who is an American? He who looks with pride upon the history which his fathers have written by their heroic deeds, who accepts with gratitude the inheritance which they have bequeathed to him, and who highly resolves to preserve that inheritance unimpaired and pass it on to his descendents enlarged and enriched, is a true American, be his birth or parentage what it may.

We must not fail to be true to those who died that they might pass this heritage on to future ages. We must not fail to defend to the last the ideals for which they gave their last full measure of devotion.

But we must remember that war means destruction. We know that the next war will be incalculably more ghastly, more horrible, more devastating than the last; that man has created new instruments for his own destruction by which death will stalk, not only on the battlefields, but will be hurled down from the skies upon thousands of innocent men, women, and children; upon the helpless young, crippled, and aged.

We know that another war will shake the very foundations of civilization itself. It will leave us exhausted and destitute morally, physically, and financially; and in the havoc that will ensue when it is over, so desperate will be the plight of the people that no democracy, no liberties will survive.

In the face of all this, the civilized peoples of the world shudder at the threat of another war. As the rumblings in Europe threaten to break out into armed conflict at any moment, as Europe arms to the teeth, as alarmists in this country tell us that we could not hope to keep out of a foreign war, and attempt to stir up the emotions of our people in the embroilments of Europe, American hearts unite in a prayer for peace.

If these noble dead could speak to us this day, their message would be one of peace and good will among men as taught by the Man of Galilee 2,000 years ago.

There is no peace under oppression. There is no progress under injustice. There is no way to the realization of man's aspirations to become "a little lower than the angels" along the pathway of fear and compulsion.

From the hour when our forefathers fell at Lexington to the hour when their posterity fell in the fields of France, none of our noble dead have fallen because they loved war. They have fallen because they were ready to give their last measure of devotion to the cause of peace and progress for the human family. They fought and fell, not for us alone. They shed their blood and gave up their lives on earth that this Nation might stand as a beacon light of hope to the oppressed, the downtrodden, the war-ridden, and poverty-stricken of all the world. It was, I say, to attain peace—a peace through justice and good will, a peace to be achieved through the exercise of the inherent rights of man—that our dead so nobly sacrificed themselves. Therefore, war is not the maintenance of the principles and the ideals for which they died. War is a betrayal of those principles and those ideals, and is a betrayal of those noble dead.

The American people do not want to become involved in another war should a general conflict break out in Europe. They do not want to send their loved ones overseas in another tragic

attempt to make the world safe for democracy, for they have learned that they cannot dictate the governments of other peoples without undertaking to police the world. And they are not willing to do so, for they know that this would lead to war.

In this country, more than any country on the globe, do we know that the path of peace is the only path to progress and prosperity. Although we have not yet banned the heinous crime of war, we have learned that war settles nothing, that it is not the solution to our problems. More and more we are becoming determined to seek their solution in the way of peace, mutual tolerance, and good will among men.

America, blessed among the nations of the earth, rich in material resources and in spiritual heritage, can and must take the lead in the promotion of world peace. But we must first seek the preservation of peace and the American ideals at home. A government like ours is the best example in the world as a force for peace and justice. We have no greater security against war than the Constitution of the United States, and we will act wisely in this country if we remember this before we malign the magna carta of our liberties. The underlying idea of our Government does not need change, for the truth is always unchanging and eternal. This was so when the morning stars sang together, and will be so when time shall be no more. Ours is the task of preserving these truths in a changing world.

We must seek no less to promote these truths in the family of nations. But we cannot promote world peace and understanding by hurling harsh words, by arousing the passions of hatred and intolerance against the peoples of other nations. Rather we must seek the solution of world problems by the instruments of peace, by the promotion of cooperation and good will among men.

Only thus can we hasten the arrival of the time—

"When the war drums throb no longer,
And the battle flags are furled,
In the Parliament of man,
The Federation of the world."

Only thus can we achieve the victory of peace, which is the realization of the destiny of mankind.

In the struggle to preserve for posterity the constitutional system under which we have so long prospered, may the historian of the future who records the part we play in that contest be able to set down opposite our names, "They also kept the faith."

"God of our fathers, known of old,
Lord of our far-flung battle line,
Beneath whose awful hand we hold
Dominion over palm and pine—
Lord God of Hosts, be with us yet,
Lest we forget—lest we forget!"

A Would-Be Czar

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

STATEMENT BY HON. SAMUEL B. PETTENGILL

Mr. HOFFMAN. Mr. Speaker, many times on the floor of this House and elsewhere attention has been called by me to the purpose and the methods of John L. Lewis. On this occasion I will not again repeat what I have so often said, but will give to you the same idea, the same thought, expressed in the language of a man who served capably and patriotically in Congress, who retired voluntarily, and who has in this news release so clearly and concisely described the condition which now confronts us on the labor front, that this statement of the Honorable Samuel B. Pettengill should be preserved in the RECORD:

A PLAGUE ON BOTH YOUR HOUSES

There is a big story behind those soft-coal negotiations. It will cast a long shadow into the 1940 campaign.

It is a sheer, naked struggle for power. Wage scales were not involved, nor hours, nor working conditions. It was an effort by John L. Lewis, of the United Mine Workers and the C. I. O., to acquire almost absolute control over a great natural resource. In so doing he would acquire a secondary, but scarcely less important, control over all industries dependent upon coal.

Mr. Lewis, as head of the United Mine Workers, wants to become the sole bargaining agent for the entire soft-coal industry in the country. He wants every coal miner to be compelled to pay dues to the U. M. W. In a word, he wants to crush any mine workers' opposition to him.

It is therefore a struggle for power between him, on the one hand, and the Progressive Mine Workers and all unions allied with the American Federation of Labor, on the other.

This opposition began years ago in Illinois where Lewis started his rise in the coal world. It is now spreading to West Virginia, Alabama, and Pennsylvania. Mr. Lewis wants to be dictator of coal. If he were to win, it would, of course, freeze out the Progressive Mine Workers and all other unions unwilling to place their fate in Mr. Lewis' hands.

The present struggle is also a challenge by Mr. Lewis against the principles of the National Labor Relations Act, which is recognized as his child. He does not want any other mine workers' organization as the negotiator for its own members.

Mr. Lewis is not anxious for a free election, at least in many mine fields, to determine the free choice of the workers in those fields. He has the unhappy premonition that if such elections were held, rival unions would obtain a majority of the votes. These unions have petitions pending for elections to test their strength. The Labor Board has been sidestepping these election petitions. If Lewis can force his agreement on the industry, good-bye, elections, and farewell, rivals.

Mr. Lewis is therefore fighting perhaps the most important battle of his long career. It is a fight for life. A closed-shop agreement with the operators means that he will be able to freeze out the rival unions because only members of the U. M. W. will be able to find employment in organized coal fields.

This has presented Mr. Roosevelt with one of the hottest potatoes he has ever had to handle. Mr. Lewis and the U. M. W. contributed or lent to the Democratic national campaign in 1932 some $600,000; more of the sinews of political war than was contributed by any other group.

There are insistent rumors in Washington that Mr. Roosevelt has practically abandoned his business-appeasement program, if ever seriously entertained, and is again contemplating a further determined movement to the left. If so, he can scarcely afford to offend Mr. Lewis, who is important not only in coal but in the automobile and many other important industries.

On the other hand, to put administration pressure upon the operators to force them to yield to Mr. Lewis will mean a definite breach not only with the Progressive Mine Workers but with William Green and the American Federation of Labor. That will put the fat in the fire!

Could Mr. Roosevelt, as candidate for reelection to a third term either on the Democratic or third-party ticket, hope to win without the united support of labor which he substantially had in his two previous campaigns?

Moreover, it presents the administration with the question whether it wants to give its backing to a practical abandonment of a basic principle of the National Labor Relations Act, which is, that workers have the right, by majority vote, to choose their own bargaining agents. In this case, there are scores of thousands of mine workers who do not want Mr. Lewis as their bargaining agent. It is like an Illinois constituency being represented in Congress by a Pennsylvania Congressman.

This controversy, which heretofore has been widely accepted by the public as "just another strike" has the makings of big politics. It will require all of the finesse Mr. Roosevelt has, and perhaps more, to solve this riddle. No doubt Mr. Roosevelt has said to himself many times in the last few days, "a plague on both your houses." If he does not support Lewis there is open warfare with one of his largest blocs of support. On the other hand, Mr. Roosevelt knows his politics. He no doubt read the election returns last November and realizes that the mine workers, the C. I. O., and Mr. Lewis together could not elect even a Senator or Governor in the single State of Pennsylvania. If ever American politics gave birth to a thorny porcupine, this is it!

But beyond politics is emerging the big issue of whether men shall be forced to join a union against their will in order to have the right to work. It is labor democracy or labor autocracy.

Shipbuilding Facilities on the Pacific Coast

EXTENSION OF REMARKS

OF

HON. RICHARD J. WELCH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

JOINT RESOLUTION OF THE SENATE OF THE STATE OF CALIFORNIA

Mr. WELCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Joint Resolution No. 5 of the Senate of the State of California:

Senate Joint Resolution 5, relative to shipbuilding facilities on the Pacific Coast

Whereas the development of a merchant marine is requisite to the furtherance of the commercial prosperity of the Nation; and

Whereas provision for an adequate marchant-marine fleet is an indispensable part of a program for the national defense; and

Whereas the immediate development of a merchant-marine fleet commensurate with the defensive and commercial needs of the Nation is a matter of great concern to the people of California; and

Whereas the development of a merchant-marine fleet capable of serving the needs of the coast area is dependent upon the existence on the Pacific coast of adequate shipbuilding facilities; and

Whereas the Maritime Commission has recently recognized the exigent need for adequate shipbuilding facilities on the Pacific coast and has awarded to a Pacific coast firm a contract for the building of two freighters: Now, therefore, be it

Resolved by the Senate and Assembly of the State of California, jointly, That the President of the United States be memorialized to include in the Federal Budget for the ensuing year provision for additional and increased development of shipbuilding facilities on the Pacific coast; and be it further

Resolved, That the Governor of the State of California is hereby requested to transmit a copy of this resolution to the President of the United States and to each Senator and Representative from California in the Congress of the United States.

Address of the Postmaster General

EXTENSION OF REMARKS

OF

HON. FRANCK R. HAVENNER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

ADDRESS BY HON. JAMES A. FARLEY, MAY 21, 1939

Mr. HAVENNER. Mr. Speaker, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Honorable James A. Farley, Postmaster General of the United States, for Postal Day, Plaza of Nations, at the Golden Gate International Exposition, Treasure Island, San Francisco, Calif., on the 21st of May 1939.

The address is as follows:

Today, as we came across the magnificent San Francisco-Oakland Bay Bridge and had our first glimpse of Treasure Island, my eyes were attracted by the great Tower of the Sun, about which this magnificent exposition has been built. As we came closer and I was given a more intimate view of the tower, I saw gleaming at its top the phoenix, emblem of San Francisco, rising majestically from its bed of flames. How appropriate that thought and that theme for an exposition sponsored by the city of San Francisco and the surrounding communities of San Francisco Bay and northern California. It is unbelievable that 33 years ago San Francisco, the city which now rises so impressively above the bay and this delightful island, lay in ruins and in ashes. For the second time in its colorful existence it had met what seemed a disaster complete and overwhelming. But inspired by the hardy spirit of the pioneers, the men and women who trekked across the plains, over the Isthmus or around Cape Horn, to reach this land, and to whom disaster was but an invitation to greater, braver effort, the city, like the phoenix, rose again from its ashes more beautiful, more powerful, more enterprising than ever before.

In this exposition the Federal Government has played an intimate and important part. The funds which were necessary to create this man-made island from the depths of San Francisco Bay were, in the main, supplied by the Federal Government. The work itself was under the supervision of the Engineering Corps of the United States Army. Among the magnificent group of buildings which make up this exposition, the Federal building is one of the outstanding structures, giving added evidence of the interest of the United States Government in this glamorous project. In its mission of good will, its educational purposes, its interest, entertainment, and opportunities for intellectual advancement, the Federal Government is in profound sympathy and cooperation.

A little more than a month ago another magnificent exposition was dedicated on the eastern coast—the New York World's Fair. It was my good fortune to be present at that dedication. I said then—and it can do no harm to repeat it now—"It is my fervent hope that events like these will play a part in bringing about lasting peace and permanent good will." After leaving the New York fair, crossing the continent, and gazing upon this, the Golden Gate International Exposition, I can but repeat that thought more earnestly, more sincerely, and with greater confidence of its fulfillment.

No man should attempt to draw comparisons between these two great undertakings. They are not in any way competitive. Furthermore, it is a mistake to compare two things, each of which is perfect. Our two great American expositions are in sequence. In this Western Pageant of the Pacific is the story of the development of the "world of today." In the eastern exposition, reflected in the trylon and perisphere, is the story of the "world of tomorrow." In expression and design, they differ as widely as the distance between them; they express the vast range of American intellect and ingenuity, but in purpose they are one.

It is a little optimistic to expect that every American will be able to see both expositions, but I do hope that every American will see at least one, and will follow closely, through the radio, the press, and personal associations the features and attractions of the other. Standing on the two ocean frontiers of the United States, these two great expositions add one more strand to the tie that binds the East and the West. And not only do they tell the story of our own great country, but also, of all North and South America, of the countries of the Orient, of the islands of the Pacific, and of foreign countries throughout the world. They stand as monuments to the march of democracy.

As our democracy advances, despite criticism and complaints and the thunderous clash of war lords in other lands, our Government's interest in its people must continue to advance. It must become an even more important and intimate influence in our daily lives, if for no other reason than to preserve and perpetuate the welfare, freedom, and happiness of our people, who are the foundation of our democracy.

I speak as the head of the organization which is the most intimate governmental influence in our daily lives—the United States Post Office Department. Everybody transacts his own postal business. If a citizen goes to court, he must have a lawyer; if he has dealings with the customhouse he hires a broker, if he has business with the Internal Revenue Service, he gets someone to assist and to advise him. But if he has any postal troubles, he puts on his hat and goes to see his postmaster, and he transacts the business himself, or he gets on the telephone and does it that way. The Postal Service is everybody's friend. It is always welcome. It serves no writs; it collects no taxes; it imposes no burdens. Every door is open to its agents, and the messages of joy and sadness, good or ill, of happiness or despair, sway the lives of the Nation.

This intimate fellowship is typical of all this Government's relations with its public—an attitude sympathetic, helpful, and understanding; its people's welfare, protection, and contentment, its sole unwavering purpose.

In time of peace and prosperity it functions quietly and inconspicuously. But in times of trouble or catastrophe the people instinctively turn to their Government for comfort and assistance, and never has it failed them. In flood, in storm, in earthquake and fire, in the dire distress of the Dust Bowl, and in the midst of the terrific storms that sometimes sweep over us, the Government is the first refuge and most powerful aid.

In the rehabilitation of San Francisco after the disaster of 1906 the Government, particularly the Post Office, played a large part. Mail service was resumed in the stricken city after the second day, and from then on it was the most important element of rehabilitation. It brought together families widely separated; it brought money and food and clothing; it brought messages from the people of the city to friends and relatives elsewhere and put them again in communication with the outside world when all other means of communication had been disrupted.

It seems that when the postal service was first reestablished—to be exact, on April 20, 1906—the San Francisco post office accepted some of the most peculiar mail that has ever been carried. It was imperative that the people communicate with their frends outside the city. They had no stamps, no envelopes, no writing paper, and so they wrote messages on cloth, pieces of newspaper torn from margins and blank spaces, bits of wood, collars, cuffs, or anything else that would bear an address and carry a message. There were no stamps on these queer communications—none were to be had—but the record shows that these messages speedily reached their destinations and caused a flood of messages to return bearing words of good cheer and of hope. These returning messages found their way to ultimate delivery, although the greater part of the population had moved into refugee camps or into the homes of friends in outlying parts of the city or had migrated to other towns.

Until he has actually crossed from ocean to ocean and from Canada to the Gulf, no man can possibly realize the expansive distances that exist in this vast country, and the need for swift and efficient communication that these distances make imperative.

In the mail service, you have the highest development of that speed and efficiency.

As history reckons time, it was not long ago that a journey from the Atlantic to the Pacific coast was an adventure to be undertaken only by the most daring. Three thousand miles of wilderness lay between the East and the West, and the journey was one of many months and full of hardships. Now, one can step into a luxurious airplane leaving San Francisco tonight and be in Washington tomorrow. Regardless of the miles of distance, a place is no farther than it takes to get there, and modern transportation has brought San Francisco within hand clasp of the eastern shore.

This annihilation or elimination of distance is due to the startling development in transportation that the inventive genius of the United States has made possible; but behind this inventive genius has been the urge and inspiration of the United States mail, and to this urge and inspiration more than to any other

thing, is due the efficiency of our communication service today. The spirit of the early frontiersman was essentially one of adventure, but coupled with that spirit was the strange complex of the home instinct. He penetrated deep into the wilderness for adventure or for gold, but in his soul was always the urge to maintain the home ties and his hope of ultimate reunion. With this in mind, he took advantage of all opportunities and all means to keep in touch with his people and bring them to him at the first opportunity.

In supplying this demand for communication, the post office has pressed into its service all manner of devices, from the tin can thrown overboard in the South Seas to the latest flight of the China Clipper. Horses, dogs, runners, stagecoaches, railroads, ships, airplanes, all have contributed to this demand to advance the mail, and in turn, have been propelled to greater speed and efficiency because of this responsibility. No system of transportation is so small nor so distant that its service cannot be made available to the post office, nor is any service as alert as the post office in taking advantage of these opportunities. So it has come to pass that the Post Office Department, with its tradition of swift, safe, and dependable service has been the most powerful influence in developing and holding together the vast areas of the United States and in supplying a system of transportation, in all elements, the greatest in the world.

Here in California, a State of magnificent distances of its own, you are particularly blessed with all that transportation and communication have done for you. Besides serving the needs of your people, they have enabled you to unfold to the world the natural wonders of your wonderful State. You have thrills for every lover of the new and strange and beautiful in Nature. Does he seek mountains? You have them in the rugged snow-capped Sierras and the rolling contours of the Coast Range. Does he seek plains? You have them in the long reaches of the fertile valleys of the Sacramento and the San Joaquin. You have the highest and the lowest points of altitude in all the country. You have even a volcano. On your mountain peaks you have the cold of the Arctic. And the hottest place in all this land is in the blistering deserts of Death Valley, lying 400 feet below the level of the sea. You have the friendly waters of the Pacific singing its surf song along a thousand miles of coast line. You have a place in your climate and your altitudes for practically everything that grows. In vigor and productiveness you are young; yet your soil harbors the oldest of living things, the giant redwoods of the Sierras. And in contrast, we have here the newest thing of all—Treasure Island—the latest possession of the United States.

This exposition is not the only important reason for this man-made Treasure Island. From this spot, giant airplanes leave on their flights to the westward over the Pacific on a mission of trade and fellowship, and carrying the United States mail, which makes their flights possible. Just now, supplementing these flights from the western frontier, planes are flying to the eastward over the Atlantic from the eastern frontier. Soon they will bind Europe and the United States by a regular service, and this service will have as its greatest reliance, for revenue and support and public confidence, the transportation of the mail.

This exposition has been made possible by the energy, industry, and enthusiasm of the people of San Francisco, the bay area and the Western States. I compliment them upon their enterprise. To those whose personal efforts have brought this exposition into being, men who have given unsparingly of their time and energy and supervision, I extend my sincerest congratulations upon the magnificent success of their efforts. I compliment also the countries of South America, of the Orient, of the Pacific Isles, and elsewhere that have so generously contributed to the beauty, the interest, and the educational influence of this pageant of the Pacific.

I compliment the inspiring leadership so representative of San Francisco, which again exemplifies itself here, and I compliment and thank the United Postal Service organizations of San Francisco and the San Francisco Bay counties which, by their attendance and sponsorship of this day, have indicated their interest in the success of the exposition. Particularly do I thank them for their courtesy and consideration in inviting me as the speaker of this occasion and for permitting me to see and express to the best of my ability the glories and the delightful attractiveness of this great exposition on Treasure Island in San Francisco Bay.

Lloyd B. Maness

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1939

Mr. DURHAM. Mr. Speaker, I am very grateful for the privilege and honor to pay brief tribute to Lloyd B. Maness for his heroic deed in the recent submarine disaster. This boy comes from the district of North Carolina which I represent here in this body. We mourn the dead, and let us not forget to honor those who gave their lives. There will be tears by father, mother, and friends for those who went down courageously and in line of duty. To father, mother, and friends may we extend our deepest and thoughtful sympathy. We here and elsewhere may dwell on this heroic deed as one true to discipline, true to loyalty, and one that will glorify a lifetime record coming from that sturdy pioneer stock which North Carolina is built of. This boy, Lloyd B. Maness, performed his duty as he saw it. No one ever responded to the inherent characteristics of courage and loyalty better than did he when it appeared that closing the door meant the end of life for his dearest friend. This longing for life is predicated on hope which will fulfill wishes, but what a firm conviction he had with reason when he stood on a moment's notice between life and death. His beloved comrades would say that no finer demonstration of duty could be offered could they speak. He was entirely honest with himself and with others without fear of reproach. Lloyd B. Maness has won for himself a place in the hearts of his countrymen by courageously meeting every responsibility of trust imposed upon him. He has left an indelible impression to loyalty and duty. The fact that he separated life and death with his heroic deed will speak for itself, but may we as Americans properly appreciate the performance and endeavor to emulate those qualities of American manhood so fully and completely exemplified by this boy in our service.

The Land of Make-Believe

EXTENSION OF REMARKS
OF
HON. J. WILLIAM DITTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1939

RADIO ADDRESS BY HON. J. WILLIAM DITTER, OF PENNSYLVANIA, MAY 27, 1939

Mr. DITTER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following address which I delivered over the Columbia Broadcasting System from station WCAU, Philadelphia, Pa., Saturday, May 27, 1939:

Daydreaming in a land of make-believe is the favorite pastime of childhood. A fairy prince waves a magic wand—stately castles are built of cloud and vapor, fantastic wealth is woven from sunbeams—and everyone lives happily ever after in a land of make-believe. These daydreams mean much to children. But with most of us they vanish like the mists of the morning when childhood days are gone and the real, rather than the artificial things of life make their sterner demands upon us.

For the last 6 years America has been a land of make-believe. Magic wands have been waved—stately castles have been built, fantastic wealth has been woven—and a more abundant life has been painted for everyone but the Republicans and the tweedledums.

We have had make-believe work, and make-believe money, and make-believe security, and almost a make-believe democracy. That might have gotten through, too, but the Court couldn't be packed and the Democrats wouldn't be purged. All in all, we have had the greatest daydream, to some of us the wildest nightmare, that America has had since Ponce de Leon developed the idea of a fountain of youth as a New Deal measure in Florida.

Looking back on the past 6 years it seems almost incredible that a daydream could last so long, seem so enticing, and prove so fantastic as the New Deal has been. But every daydream ends. Fantasy yields to reality. Pigs give up birth control. Tugwell's planned economy turns to molasses. Eleven million unemployed recall the story of the forgotten man. Business hangs on the ropes between breathing spells and appeasements. Corn is 35 cents a bushel, with few buyers. Henry Ford declines to let John L. Lewis run his plant. And the Democratic platform of 1932 continues to be a noble but an untried experiment.

One thing in this make-believe performance that is real is the money that it has cost us. That's one of the tragedies of it all.

It cost real money to the tune of billions of I O U's for this visit to the land of make-believe. For 6 long years we have lived so far beyond our means that the national debt has just about reached its legal limit with no prospects whatever of any let-down in the spending spree that has carried us closer and closer to financial disaster. Yes, one thing that has come out of our dream days that is real and not artificial is a national debt of $20,937,350,964.

We have dealt so loosely in billions, spending and squandering has become such a matter-of-fact thing, the Nation's debt—that means your debt—has soared to such dizzy heights that an old-fashioned account book belongs to the "horse and buggy" days, and the rules of simple arithmetic have become a lost art. Well, the fact of the matter is they are still with us—accounts and arithmetic. The account book stands as is, and no amount of figure juggling will change it one bit. Putting on blinders fools no one. We owe—you and I, and the rest of the American people—a debt of $40,234,816,549 that must be paid unless we try to run out on our obligations. That fact is painfully plain to everyone of us who is willing to come out of dream days and face the facts. After all, the public purse isn't a bit different than your family pocketbook and mine, only that it's larger. What you pay out you have to take in. We either pay our bills or we live beyond our income. We may get by on credit for awhile but, sooner or later, we have to put our house in order. And that's just what we should have done with our national house before it got so topsy-turvy—put it in order. It may be pretty late to start to do this now, but the longer we wait the harder the job will be and the greater the damage.

There are those who try to excuse the fast and loose way that the Federal Government has played with the taxpayers' money and with the Nation's credit, on the grounds that the only way to keep the American people contented was to coddle them, that human relationships were ignored prior to March 4, 1933, and that our well-being depends upon bigger and better hand-outs from Washington. That's just absurd. We all admit that some of the things that were done by the New Deal should have been done, but it's high time for all of us to realize that no one in Washington has an Aladdin's lamp which can be rubbed either for wealth or happiness.

Much the same rules apply to this national spending as apply in your home and mine. All of us see many things we'd like to have. Mother tells us of a new dress in the shop window. The children tell us of new games and toys. Our own suit looks a bit seedy. My, how we'd like to get those things. But we're faced with facts as we figure the costs—rent to pay, food to buy—so the old dress is made over, the old games and toys are brought out, and we sponge and press the old suit and make it do. I want to tell you very, very simply, that's the way most of us were taught in the old-fashioned homes that made America.

All of us admit that there are many things, goods and services, that the Federal Government has been buying which would be pleasant to have if we only had the money to pay for them. Again, all of us know that a lot of things that the Federal Government has been buying have cost a great deal more than they should have cost—the prices have been outrageously high and the goods and services have been of a pretty poor quality.

I was interested last Monday night to hear the President tell the American retailers that he had "no bargain basement." That may be so, but the New Deal has conducted the largest rummage sale in the history of storekeeping. Every exploded economic theory, every wild-goose experiment, every crack-pot notion, and every discredited financial fallacy that the mind of man ever conceived have been bundled together like so many patched pants and threadbare coats and peddled to the American people as new goods. They have not been bargains, either in the basement or on the top floor. They have been the most expensive and highest priced pieces of merchandise ever pushed across the counter.

All of us know there were some things that the Federal Government was called upon to do that could not be avoided, and that a part of our debt was just as necessary as a doctor's bill. Every penny that was honestly and wisely spent for the relief of the needy and the unemployed was money well spent. But millions poured into political rat holes are neither honestly nor wisely spent.

From time to time the President has suggested that he is eager to bring the national outgo in line with the income, but that when businessmen urge him to do so he asks them where cuts should be made. It seems to me the thing is deeper than that. That's not the way to start. It's not a matter of procedure. It's a matter of policy. It's a matter of getting down to bedrock and deciding whether anyone ever spent himself into prosperity—whether the policies of the spending specialists in Washington have worked. They haven't and they won't.

In spite of the sound advice of many of his party leaders, the President continues to look with favor upon those in his confidence who claim that the only way to recovery is to spend ourselves into it. That lies at the foundation of the financial mess in which we find ourselves. You and I know that neither time nor money has been spared to give the spending specialists a chance to prove that their theory would work. Every one of the 11,000,000 men and women looking for a job today is the best proof that it won't work. It never did and it never will.

It's just as reasonable to suppose that we can bring about national recovery by edging closer and closer to national bankruptcy as it is for you and me to think that we can become prosperous by moving closer and closer to the poorhouse. And remember this, the President himself said in 1932, we were on the road to bankruptcy, when our national debt was less than half of what it is today. The approach to this problem is not to pose questions to businessmen as to which of the regular functions of Government should be curtailed so as to bring order out of chaos. The thing to do is not to ask questions but to stop spending.

I believe, and I think you believe, there are some things that could be done which would bring about two very desirable and vitally necessary results—that is, start us on the road to real recovery and call a halt on this habit of living beyond our means. These things have at least one justification, and that is they have not been tried since March 4, 1933. We might give business—I mean the private industrial life of the country that wants to work—whether its big or little—the shop and the store and the factory in your town—a chance to get going. Let's be frank about it. We could stop hindering. We could start helping. We can stop the warfare between employers and employees. We can stop competition of Government with private industry. We can bring within reasonable limits the rules and regulations of bureaus and commissions. We can stop taxing the life out of business. We can give confidence to those who are anxious to invest in American enterprise by assuring them that the future has some hope. We can stop hating those who try to succeed. We can offer some premium to ambition, industry, and thrift. We can give something more than lip service to free enterprise. We can discard the philosophy of scarcity and let American genius produce a greater abundance at a lower cost to a larger number of our people. We can try fewer experiments and depend more on the value of our past experiences. We can remove the obstacles that dam up the flow of private investments. We can admit the mistakes of the last 6 years by giving practical men instead of star-gazing theorists a chance to do something.

In short, we can stop day dreaming in a land of make believe. We can come down to earth and go to work.

The Little T. V. A. in Richland Center

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

ARTICLE FROM THE REPUBLICAN OBSERVER, RICHLAND CENTER, WIS.

Mr. THILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled, "The Little T. V. A. in Richland Center," reprinted from the Republican Observer, Richland Center, Wis., January 19, 1939:

[From the Republican Observer, Richland Center, Wis.]

THE LITTLE T. V. A. IN RICHLAND CENTER

It may be surprising to some to realize that at least the principle of the T. V. A. was demonstrated in Richland Center years ago.

There was a local preacher who had quite a family while he drew somewhat of a small salary.

He conceived the idea that if he possessed a milk cow one of the heavy expenses of family maintenance might be reduced.

He discussed the proposition with some of his parishioners. One member of his congregation said he would give him a cow; another volunteered to furnish hay; another, straw for bedding. A neighbor gave the minister the use of a barn in which to keep the cow and store the feed.

Finding that the cow gave more milk than the family required, the minister sold the surplus to neighbors. Inasmuch as he had not a dollar invested in the cow, that the feed, bedding, and barn were furnished free, he readily saw that there was big profit derived from the milk he sold. In fact he was soon able to lay up enough milk money to enable him to buy another cow. Forgetting to tell the members of the church that he had the second cow he was able to get other friends to furnish additional hay, straw, and feed, and the fellow who allowed him the use of the barn also permitted him to keep the other cow there.

At this point the preacher committed the error of arriving at the conclusion that the milkmen of the town were robbers. When he saw them charging the prices they were getting he offered to sell milk at a slightly less price. He even preached a sermon on the crime of profiteering.

One of the milkmen was a member of that church. When he learned that his preacher was canvassing his customers to take milk from him and was also telling his brethren how their milkman was robbing them, he became angry.

He sat down and figured out that he couldn't afford to buy cows, build barns, furnish hay, and make delivery at the same price as could a competitor who didn't have a cent invested, got

his feed and barn room for nothing, and had customers come after their milk.

The milkman went to the mat on the proposition. It didn't take him long to convince other members of the congregation that the practice wasn't fair, especially when he backed his arguments by letting them know that if it continued he would cease making his large yearly contribution to the church.

Brother churchmen quit hauling hay to the preacher's cows and the neighbor asked for barn rent. When that came about the preacher discovered that to buy everything made his expenses run so high that it didn't even pay to keep a cow to furnish milk for his own family.

There was a perfect little T. V. A. set-up. With the Federal Government furnishing everything, even to writing off a loss of $1,000,000 in a single year, no private company can compete with it any more than the regular milkman could compete with the preacher.

William Ben Cravens

MEMORIAL ADDRESS
OF
HON. W. F. NORRELL
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. WILLIAM BEN CRAVENS, late a Representative from the State of Arkansas

Mr. NORRELL. Mr. Speaker, ladies and gentlemen of the House, it is not easy to find words adequate for expressing the profound sense of sorrow and loss occasioned by the death of Hon. WILLIAM BEN CRAVENS, Arkansas' senior Member of Congress, on January 13 of this year. BEN CRAVENS was not only the dean of the Arkansas delegation in the House of Representatives: he was in a real sense a strong and courageous leader, a wise counselor, and a true friend. As one of the four new Members from Arkansas, now serving my apprenticeship as a Member of this body, I share with my colleagues the conviction that we have lost much in the kindly and wise guidance that would have been ours except for his untimely passing, for while he was never one to burden others with his own problems he was ever willing and eager to extend the helping hand to those with less experience and less wisdom in the procedures and traditions of this body.

Quiet, earnest, always a gentleman in the true sense, Hon. BEN CRAVENS won his way to esteem and high honor, not through spectacular gestures and vain display of his powers, but through tireless, purposeful effort and perseverance. No headline hunter, no boisterous seeker of publicity, he went about his business quietly, endowed with a Lincoln-like quality of simplicity and gentleness which endeared him to all men, of every rank and station—

> The color of the ground was in him, the red earth;
> The smell and smack of elemental things:
> The rectitude and patience of the cliff;
> The goodwill of the rain that loves all leaves;
> The friendly welcome of the wayside well;
> The courage of the bird that dares the sea;
> The gladness of the wind that shakes the corn;
> The pity of the snow that hides all scars. * * *

BEN CRAVENS first came to the House of Representatives as a Member from the Fourth District, Arkansas, in 1907, and served three consecutive terms. He did not seek the office again until 1933. All men with experience and knowledge of public life know how difficult it is to backtrack the political trail, and yet this quiet, earnest man, after 19 years of voluntary retirement from public service, accomplished this feat without difficulty. He relinquished office as a young man and returned after years of distinguished service at the bar, campaigning against four younger men, all experienced in politics, and won.

This was in a year when the tide of public favor ran strong toward placing younger men in office; but this man, while he was no longer young in years, had kept his essential youth, which is a matter less of years than of spiritual growth and adaptability to change. At the time of his death he was again serving his third consecutive term, a signal accomplishment, and eloquent of the esteem of his home people, who had not forgotten his splendid record of service after the 19 years of his retirement from public office. Of such was his public record, unvarying success against a background of quiet, earnest, and unremitting effort in the service of his people and his country. In later months he had suffered constant ill health, and it is characteristic of his whole life that it was not until death was near that the grave nature of his illness became generally known even to those who were closely associated with him.

For this able and modest gentleman we today bear witness of our sorrow and our loss at his passing in halting but honest words, knowing that he would crave gradiloquence and rhetorical pomp no more in his dying than he did in his living. Our heartfelt sympathy goes out to the surviving members of his family, to whom he was ever devoted. For ourselves, while attesting our loss we at the same time keep and treasure the inspiration of his life and deeds.

> He held his place—
> Held the long purpose like a growing tree—
> Held on through blame and faltered not at praise.
> And when he fell . . . he went down
> As when a lordly cedar, green with boughs,
> Goes down with a great shout upon the hills,
> And leaves a lonesome place against the sky.

Embargoing Arms Shipments and War Materials Exports to Japan

EXTENSION OF REMARKS
OF
HON. JOHN M. COFFEE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1939

RADIO ADDRESS BY HON. JOHN M. COFFEE OF WASHINGTON, MAY 19, 1939

Mr. COFFEE of Washington. Mr. Speaker, under leave to extend my own remarks in the RECORD, I include the following address delivered by me over the radio on May 19, 1939:

We Americans are a peaceful people. Like other people in the world, we don't want war. We want to be secure in our own jobs and our own homes and our own lives. We belong to that 90 percent of the men and women of that world that President Roosevelt described as peace loving, as haters of war and all the world misery that war brings.

We want peace. We want peace based on justice and reason and on respect for international law and order, because we realize that only this way can peace be preserved. Peace cannot be secured in the way the military dictators would secure their kind of peace—by enslaving the world with armed might. We Americans realize this, that peace in the world cannot be imposed by military aggression, or won by yielding to aggression.

We know that the world can only be kept from war as long as war is made impossible, as long as no nation or group of rulers in control of a nation is permitted or encouraged to attack another nation for purposes of aggression.

As sensible people, we know that peace is constantly being broken throughout the world. A major war is raging in Asia. Formerly free and democratic nations in Europe have become the victims of invasion by foreign military powers. These acts of aggression, and other aggressions in preparation, threaten not only the peace and liberty of the victim nations, but keep the entire world in constant turmoil and fear.

We know that the world today is threatened with a new, universal conflict whose horrors will far surpass those of any previous world outbreak. These wars and alarms of world war make us afraid not only for the future of Europe and Asia but for our own future, for the safety and security of our own Nation, and our own families.

We cannot, and we do not, remain indifferent to the fact that peace is being violated all around us, that war is spreading in almost every part of the civilized world of which we are a part. It is our concern as much as it is the concern of every other civilized person in the world, because it is forced upon us. We are just as much alarmed and concerned at what is happening in Europe and Asia as we would be alarmed and concerned by a fire or

a homicidal maniac in our neighbor's house, because the danger to us is just as acute.

The peace and security of the world, and consequently of America, is threatened and violated in a score of danger spots. What is the source of this world threat that is alarming and menacing 90 percent of the world's population?

It is precisely those nations and the groups that govern them that constantly violate all international order, that break treaties, that carry on lawless acts of aggression against peaceful, democratic peoples that are the source of this present world fear and insecurity.

In every case of aggression by those nations, they have earned the condemnation of the overwhelming majority of free and thoughtful people in this country. The evidence of every poll of public opinion has shown this time and again. Americans reject the way of aggression, condemn the Fascist aggressor that makes war on a peaceful people for purposes of conquest and enslavement.

And in almost every case, these same aggressor nations have received the aid and comfort of the United States. This is a strong statement, but it is a true one. Our arms, our raw materials, our supplies have helped the aggressor countries to carry out their acts of invasion. In Japan in particular, our materials have made and are making invasion possible.

How are we doing this, in spite of the fact that our people and our Government have repeatedly condemned these unprovoked attacks on other countries? We are doing this by allowing aggressor countries to arm and equip themselves for war—a war that threatens our peace and well-being as it menaces the immediate victim—with munitions and supplies produced in the United States.

We have a rich country, wonderfully endowed with natural and industrial resources. The aggressor nations need these supplies to carry on their wars of aggression. And they are getting them from the United States, in quantities sufficient to carry out invasions and to keep the world in an unending state of fear and apprehension.

These natural and industrial riches, when sent to war-making nations, do us and the world no benefit, rather they do us and the world harm. Is America any happier, any more secure, because Japan relies upon American supplies for its war against China? Do we receive any benefit because our supplies and our munitions made possible the invasion of China? Any sordid profit from this shoddy business is offset by our loss of Chinese markets as Japan closes the door to American trade in China.

On the contrary, our own security is threatened precisely because we send these supplies to the Fascist, war-making nations. It is threatened just as our own homes would be threatened if we supplied a gun to a neighborhood burglar, or gave matches to a local firebug. Proof of this statement is shown by the fact that our Government must spend added billions to protect our shores against the danger of Japanese attack.

This is what we are doing by our present policy of supplying arms and materials of war to the war-making aggressor nations. This policy, in existence today, makes it possible for these Fascist madmen to run over the world destroying freedom and civilization wherever they attack, and getting closer to us with each act of aggression our policy enables them to carry out.

Some people call this policy of ours "neutrality." It is anything but neutrality. It is an unneutral policy that has only one result—in helping aggression and harming the victim of aggression. It no more protects our peace and security than Chamberlain's umbrella protected the security of Czechoslovakia.

Why is this so-called "neutrality" policy such a danger to the peace of this country? It is a danger to us, and to the world we live in, because it allows the aggressors to arm themselves from the richest source of supply in the world, from the resources of the United States.

Look at the war Japan is carrying on now against the people of China. Japanese airplanes, tanks, and military trucks run on American gasoline. Its fleet burns American oil. We furnish over 60 percent of all oil used in Japan. Its guns throw American steel into the bodies of Chinese men and women; its planes drop American bombs on Chinese children. More than 90 percent of copper, automobiles, and parts is purchased by Japan from the United States.

Without these munitions and supplies, Japan could not carry on its war in China even 1 more month. It could not bring death to millions of Chinese families, destroy Chinese cities, burn and annihilate Chinese homes. Without our supplies, Japan's war-mad Fascist leaders would have to behave as civilized beings—and the Japanese people would be liberated from a military dictatorship that has plunged them into misery as well as the Chinese people.

The war against peaceful China is our concern and our doing because we make it possible. We are responsible, because of our policy of selling war materials to aggressor nations, for a war of conquest that threatens Asia and the world and the United States of America that is part of that world.

What can we do to end this fearful responsibility, this reckless support of aggression that comes from our own Nation, and that threatens our own national security?

We can and we must drastically change our present unneutral "neutrality" law. We must change it so that we can differentiate between the aggressor and the victim of aggression. We must see to it that our own safety is not menaced any longer by the sale of the materials of death to the war-making nations of the world.

A bill which I have introduced in the House of Representatives will accomplish this purpose as far as Japan is concerned. This measure, H. R. 5432, would put an embargo on the sale of arms, ammunition, and implements and materials of war to Japan, and would prohibit their transportation by vessels of the United States for the use of Japan. It would forbid loans and credits to the Japanese war makers, and otherwise prevent private persons and corporations subject to the jurisdiction of the United States from rendering aid or support to the Japanese invasion of China and its future war against the United States and the world impossible.

Many Americans and also people of other countries have expressed their personal antagonism to Japan's aggression by boycotting silk and other Japanese products, and this has reduced the amount of money Japan has had in foreign countries for purchase of war materials. Our Secretary of State, Mr. Cordell Hull, has intervened in our sale of airplanes to Japan, but Japan has now built up her own factories and can still buy our materials with which to manufacture planes. It is essential for us to go much further, and at once to place on Japan an embargo such as the one I have just described as embodied in the Coffee Japanese embargo bill now pending in the United States Congress.

It is important to stimulate discussion and action on this matter. American citizens aroused to the need for a reversal of policy of aid to the aggressor have the right and the duty to express themselves to their congressional representatives in Washington, D. C.

Our own peace and security as Americans are menaced by the wars and threats of wars sweeping over the world today. For our own sake, as for the sake of the peace of the world, we must stop American aid to the aggressor nations that are bringing terror to the peaceful human beings who inhabit the world.

America's Our Father

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

POEM BY WILLIAM A. CHAPPELL

Mr. THILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a poem written by William A. Chappell of Milwaukee, entitled "America's Our Father."

AMERICA'S OUR FATHER

(By William A. Chappell)

Our Father who art above,
Instill in our hearts a greater love
For the glorious liberties we have today,
Before it's too late and they're taken away.

Continue to give us our daily bread,
And grant us the power to keep our head
When the radicals rave of their favorite ism,
With which they'd displace our Americanism.

Forgive us for meddling in foreign affairs,
Teach us to mind our business—not theirs;
To tend to our problems, and ours alone,
To better conditions right here at home.

Lead us not into war with the modern-day Neroes
That would cost the lives of American heroes,
And wipe out democracy, or worse still,
Subject us all to a dictator's will.

Deliver us, our Father who art above,
From the loss of those rights we cherish and love,
So that each night when we kneel and pray
We can say "Thank God for the U. S. A."

Robert Low Bacon

MEMORIAL ADDRESS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT LOW BACON, late a Representative from the State of New York

Mr. RICH. Mr. Speaker, I know of no ceremonial more beautiful or appropriate than the one which we this day are observing. For the moment we set aside the busy activities of

official life to contemplate the character of our departed friends and colleagues and to record our estimate of the virtues which he exemplified. ROBERT LOW BACON was a Member of this House when I was first elected to Congress, and from 1932 until his sudden and untimely death I knew him more than casually. Our acquaintance ripened into a mutual friendship. I admired ROBERT LOW BACON for the exceptional qualities of his intellect. Daily association afforded opportunity for accurate judgment, and I became more and more impressed with the abilities he possessed. He had abundant capacity for the most important public service. His equipment for the duties which devolved upon him was ample. He was a gentleman of the highest type and in every sense of the word. He died in the midst of his labors and in his death the country lost a valuable legislator.

He was a man of fine literary instincts and tastes, a scholar in politics. He represented a great State, and that State can ill afford to lose men of his exceptional quality. ROBERT LOW BACON was a patriot and served his country well. Citizen, businessman, statesman, father, husband, friend, the record is well written, and on memory's altar will ever glow a wealth of love and affection for one who through life was loyal to home and country and measured up to the full stature of man.

Secretary of State Hull and Neutrality Legislation

EXTENSION OF REMARKS
OF
HON. HAMILTON FISH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1939

Mr. FISH. Mr. Speaker, the secret apartment-house diplomacy of Secretary Hull has labored and brought forth a mouse. Even Secretary Hull will probably decline to defend his own week-end neutrality program before the House Committee on Foreign Affairs.

Stripped of a mass of camouflage, what Secretary Hull actually proposes to do is to scrap the mandatory embargo against the sale and shipment of arms, ammunition, and implements of war to belligerent nations, which was adopted and readopted by a unanimous vote of Congress and has been the law for the last 4 or 5 years. Secretary Hull's proposals undo the work of the Congress for the past 5 years in behalf of neutrality.

The actual result of Secretary Hull's program, if carried into effect, would be to make the United States the slaughterhouse and arsenal for arms, ammunition, and implements of war for all nations, and particularly for Great Britain, which controls the seas. Either we are a Christian nation or we are not; if we are, we should not, for sake of blood money and war profits, be dragged into every war by supplying the world with lethal weapons to kill people with whom we are at peace and have no quarrel.

The sentiment of the American people is in favor of keeping out of foreign wars, and I do not believe that Members of Congress will vote to do away with this prohibition against the sale and shipment of arms, which has for its main purpose the security and peace of the United States.

I am confident that if Mr. Hull's proposals are pressed the Congress will not adjourn before the fall, as the Senate would insist on discussing any such war-provoking measure until the snow flies.

If Acting Chairman BLOOM calls the Committee on Foreign Affairs together and urges action on the administration's new neutrality bill, repealing the embargo on the shipment of arms to warring nations, I will renew my demand that Secretary Hull come before the committee and father his own brain child.

William Ben Cravens

MEMORIAL ADDRESS
OF
HON. WILBUR D. MILLS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. WILLIAM BEN CRAVENS, late a Representative from the State of Arkansas

Mr. MILLS of Arkansas. Mr. Speaker, the unexpected and untimely passing of Congressman WILLIAM BEN CRAVENS on January 14, 1939, came as a shock to his many friends in Congress who had learned to respect and admire him with an abiding affection because of his fine character and because of the remarkable service that he had rendered the people of his district, State, and Nation.

His death has caused his friends to realize just what he has meant to them. They will forever miss his kindly efforts in their behalf, his untiring devotion to their cause, and his unexcelled honor of purpose and principle. The poorest individual had no better friend. The richest person felt this man was his friend. The laborer could always count on Ben. The farmer will long remember the efforts of this friend in his behalf. Words alone fail to express my own feeling of sorrow over the loss of this colleague whom I had known for only a short time but will never forget.

Many words have been spoken and written concerning this distinguished citizen of Arkansas, whose record of service is so closely interwoven with the pattern of our State's history. It is sufficient here to say that, since 1897 when he first held public office, his constituents have always reelected him each time he has run for office, clearly showing their trust in our deceased colleague and the type of man he was. He will long be remembered for the personal traits he possessed, a friendly disposition, even temperament, cool and collected manner, and love of home, life, and family.

What Reward?

EXTENSION OF REMARKS
OF
HON. WESLEY E. DISNEY
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1939

EDITORIAL FROM THE DAILY OKLAHOMAN OF MAY 27, 1939

Mr. DISNEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Oklahoman of May 27, 1939:

[From the Daily Oklahoman of May 27, 1939]

WHAT REWARD?

Political courage is manifested so rarely that Congressman PHIL FERGUSON deserves superlative praise for telling the Townsend Club of Enid that he is opposed to the pending bill, whose enactment would make the Townsend delusion the law of the land. He is both courageous and humane when he tells his pension-seeking constituents that the bill cannot by any possibility be passed and that nothing but its defeat can protect the pension-club members from the dues collectors who have misled them into believing that the Townsend scheme is about to win approval.

There are numerous other Representatives in Congress who feel exactly as PHIL FERGUSON does with reference to the Townsend mirage. But many of them will vote for it while conceding privately that its effects would be disastrous. Some will dodge a vote on the issue, lacking the courage to support it or oppose it. Forthright courage never was one of the preeminent virtues of politicians.

For a long, long time the general public has lamented the lack of honest courage among public officials. Now, the Eighth District Congressman gives them a rare exhibition of what the public has long demanded, and we wonder if FERGUSON'S courage will be its own reward. Will the voters of the Eighth District reward their Congressman by renominating and reelecting him, or will they sit idly by and permit the pension mongers to defeat him when he asks for another term? There will be far more involved in next year's congressional race in the Eighth District than the political fortunes of PHIL FERGUSON. His continued success at the polls would encourage many another timid Congressman to be a man instead of a mouse, while his defeat would convince many of his colleagues that it is hopeless to hold out against the pressure groups.

Seventy-six Years After Gettysburg

EXTENSION OF REMARKS

OF

HON. CHARLES O. ANDREWS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, June 1 (legislative day of Wednesday, May 31), 1939

ADDRESSES BY HON. HARRY FLOOD BYRD, OF VIRGINIA, AND JOHN D. KEITH

Mr. ANDREWS. Mr. President, an incident of historical importance took place on the Battlefield of Gettysburg last Tuesday. The Gettysburg Memorial Association, for the first time since its organization, chose a southern Senator to make the memorial address, to which I was an interested listener. United States Senator HARRY FLOOD BYRD, a son of the Old Dominion—the mother of Presidents—as their chosen speaker, delivered over a Nation-wide radio hook-up a very able and patriotic address, which was received by the many thousands present with patriotic interest and enthusiasm.

I ask unanimous consent to have printed in the RECORD a copy of the very able and eloquent address of the Senator from Virginia, together with the remarks of Hon. John D. Keith, president of the Gettysburg Memorial Association, in presenting the Senator from Virginia.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY JOHN D. KEITH, PRESIDENT OF THE GETTYSBURG MEMORIAL ASSOCIATION

Upon this slope and the surrounding hills was fought, 76 years ago, the battle which largely determined that a nation founded by a union of self-governing communities should not be dissolved.

Upon this spot an American now revered by all, Abraham Lincoln, gave utterance to the hope that this Nation might not perish.

It survived. The passions of that struggle have been outlived, as is shown by the fact that today the tribute to the memory of those who have found in the circles before us their last resting place is brought by a citizen of one of the foremost of the then Southern States; a descendant of men prominent in its affairs from colonial days; one who served that State with distinction as its Governor, and now serves as its representative in the Senate of that same Nation: a man admired and respected in the South and in the North alike for his able, fearless, and honest efforts to assure the continued preservation of that Nation—the Honorable HARRY FLOOD BYRD, of Virginia.

ADDRESS BY HON. HARRY FLOOD BYRD, OF VIRGINIA, AT GETTYSBURG, PA., MAY 30, 1939

Only a few short weeks before President Lincoln's tragic death, there spoke from his heart this message of sectional reconciliation:

"With malace toward none; with charity for all; with firmness in the right, as God gives us to see the right, let us strive on to finish the work we are in; to bind up the Nation's wounds; to care for him who shall have borne the battle, and for his widow and his orphan—to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

It is in the fine spirit of this moving declaration that you permit me to be the first southern Senator to speak on this day of national memorial—on this field enriched by the blood of the brave from both the North and the South. My sincere appreciation of the compliment that your invitation implies does not blind me to the fact that it is my State of Virginia rather than her junior Senator that you desire to honor.

Virginians may be pardoned if they recall again and again that Virginia's Patrick Henry phrased in the flame of his eloquence the determination of the colonists to be free; that her Thomas Jefferson declared the right of every American to life, liberty, and the pursuit of happiness; that her Madison was the father of the Constitution; that her Marshall made that Constitution effective as the supreme law of the land; and that out of her soil issued the immortal Washington who reigns first in war, first in peace, and first in the hearts of his countrymen.

Certainly no other State contributed more than Virginia to the foundation of this American Union. Many of the States were her children and from her territory were carved even some of the States that cried to her for help when the tragic proposal to secede pressed upon them. Virginia believed they had the right to secede, as she herself did; she knew that her soil would be the battleground if she left the Union, but she did not hesitate to go the way of sacrifice and suffering when she was called upon to fight her southern sisters back into the Union.

In eloquent phrase Dr. Edwin Alderman, a president of the University of Virginia, declared:

"The War between the States was a brothers' war, brought on, as our human nature is constituted, by the operation of economic forces, the clashing of inherited feelings, the impact of differing notions about the meaning of liberty, woven by no will of either section into the very fabric of the people's life. No war in human history was a sincerer conflict than this war. It was not a war for conquest or glory. * * * It was a war of ideals, principles, political conceptions, and of loyalty to an ancient ideal of English freedom."

Virginia has lived long enough as a readmitted member of our Union of States to behold Charles Francis Adams, sometime an officer in the Union Army and a member of that brilliant family that has reflected so much distinction upon his native Massachusetts, stand at the tomb of Robert E. Lee, pay tribute to the nobility of his character, and declare that had he been in Lee's place when Lee decided to leave the United States Army and offer his sword to his native Virginia, he would have done precisely as Lee himself did.

And we recall again today the declaration of Theodore Roosevelt, an intense nationalist and Union man, that "the world has never seen better soldiers than those who followed Lee, and their leader will undoubtedly rank as, without any exception, the very greatest of all the great captains that the English-speaking peoples have brought forth, even though the last and chief of his antagonists may himself claim to stand as the full equal of Marlborough and Wellington."

Here again at Gettysburg I rejoice to quote the tribute paid by Theodore Roosevelt to the soldiers of both sections alike. Said this former President of the United States:

A UNITED PEOPLE

"We are now a united people; the wounds left by the great Civil War have healed and its memories are now priceless heritages of honor, alike to the North and to the South. The devotion, the self-sacrifice, the steadfast resolution and lofty daring, the high devotion to the right as each man saw it, whether northerner or southerner—all these qualities of the men and women of the early sixties now shine luminous and brilliant before your eyes, while the mists of age and hatred that once dimmed them have passed away forever. All of us, northerners and southerners, can glory alike in the valor of the men who wore the blue and the men who wore the gray."

A great northern jurist, Francis M. Finch, of New York, many years ago clothed with these words of golden verse the beauty of our reconciliation:

"No more shall the war cry sever,
Or the winding rivers be red;
They banish our anger forever
When they laurel the graves of our dead!
Under the sod and the dew,
Waiting the Judgment Day;—
Love and tears for the blue,
Tears and love for the gray."

Here on this famous field our hearts feel without words that we stand on hallowed ground—hallowed by the human sacrifices of brave men on both sides who gave their last full measure of devotion to the right as God in His mysterious way gave to each the way to see the right; hallowed, too, by the oration delivered here 76 years ago by Abraham Lincoln, simple, yet in 272 vivid words was packed the eloquence of the ages.

Rather would I draw from the inspiration of this occasion spiritual force and resolution to fortify our determination as Americans to make good the high resolve here uttered by Mr. Lincoln "that this Nation, under God, shall have a new birth of freedom, and that government of the people, by the people, for the people shall not perish from the earth."

Only 20 years ago today another martyred President in another great crisis spoke on Memorial Day on foreign soil. Woodrow Wilson, at the Suresnes Cemetery in France, declared in his solemn eloquence:

"There is something better, if possible, that a man can give than his life. That is his living spirit to a service that is not easy,

to resist counsels that are hard to resist, to stand against purposes that are difficult to stand against, and to say: 'Here stand I consecrated in the spirit of the men who were once my comrades and who are now gone and who left me under eternal bonds of fidelity."

The lengthened shadow of Gettysburg once cast its sorrow over those who loved the men who died here, but today the mellow sunlight of the years has warmed us to a common devotion to our constitutional government of laws not of men. Loyalty to American ideals knows no line between the North and the South. Neither section has any apologies to make. The Unknown Soldier who sleeps at Arlington on Virginia soil may be the son of one who fought here with Meade or one who fought here with Lee. In either case he inherited the blood of an American who fought for what he believed to be right. The old sectional hatreds between the States are healed, but the unity of America is now threatened by new class animosities—racial and religious prejudice, and envy, hatred, and jealousy between those who have accumulated property and those who have not. Even congressional investigations tell us that men and women, untrue to our constitutional democracy, are exerting efforts in their secret way to incite disunion; to foment bad feeling between labor and capital, and to weaken the unity of our American economic life.

On March 21, 1864, Abraham Lincoln wrote a reply to a committee of the Working Men's Association of New York. The wisdom of that letter applies today. The truth of it is timeless for all who would be free. He accepted an invitation to membership in their association and said:

"Let not him who is houseless pull down the house of another, but let him work diligently and build one for himself, thus by example assuring that his own shall be safe from violence when built."

IT CAN BE DONE NOW

We have here at home a battle that will require real moral courage to wage. We must open our minds to the spirit of cooperation, of good will, of good fellowship. If it could be done after Gettysburg, surely it can be done now.

What will it accomplish us to achieve sectional unity only to be divided by economic dissension? What will it profit us to rejoice that the unity of States is strong if sappers are permitted to work underground to weaken the very foundation of our system of constitutional democracy?

It is not important that I should talk more of the battle that was fought here; it is important that all of us should draw from the men who died here a new devotion to American ideals.

What is the most priceless possession that our forefathers won for us in the establishment of our democracy? Is it not the freedom of each individual; the right of each of us "to life, to liberty, and the pursuit of happiness"? We can worship God according to the dictates of our conscience. Jew or gentile, Christian or non-Christian, may bow his head, each to his own God in his own way, without fear of the persecution he may suffer in both Fascist and Bolshevist countries today. Here we are protected against arbitrary arrest and imprisonment; we are guaranteed a fair and open trial, and guilt or innocence is determined by a jury of our peers; we do not fear that we may disappear into a concentration camp without benefit of counsel and witnesses to appear in our defense. The written law protects our life and liberty. The Constitution also guarantees us the right to accumulate and hold private property. This property may not be taken even by the Government for a public purpose without just compensation.

These individual rights make life worth living, and our forefathers died to achieve them. Alien despotisms may threaten their safety, but class hatred from within alone can destroy them. It will not suffice to preserve here the outward forms of government if the time comes when the American citizen no longer has the right to work his own way within the Constitution from poor station to prosperity. Out of America's free economic life have come inventors and executives who have made prosperity for millions; there has been established here the highest standard of living of any nation, and every man has been taught that this is a free land in which the door of opportunity is forever open to intelligence, industry, and ability. Do not let us close that door. Lincoln could not have developed to make the Gettysburg Address in any country where the door is closed.

Thomas Jefferson declared in his simpler day that the best government is the least government. While this statement must be modified today as applied to our immensely complicated economic organization, yet it is true that the most government is certainly not the best government. If the most government be the best government, then bolshevism in Russia and fascism in Germany and Italy are better governments than those supported by the democracies. In Germany and Italy we observe the most government accumulating tremendous military strength, but the liberty of the citizen is subdued to a state that would make Americans miserable. In both fascism and Bolshevist ideologies the state stands supreme over the individual. There the individual exists only for the state. Any totalitarian government is repugnant to American ideals and destructive of American progress.

OUR BUSINESS

Here we need not more Federal Government but better local government. Our system was soundly based on the principle of strong local self-government. The individual and the local and State political units should assume their own responsibilities. But it is equally clear that they in turn must meet their obligations. We cannot bring all-important business under the control of national agencies. America is physically too big and diverse to be managed from one central point. We must resist the trend of Federal centralization. It is the business of the people in these countries across the seas to have the kind of government they prefer, but Americans, like Patrick Henry, cry, "Give me liberty or give me death."

It is our business to make secure our own democracy and to attend to our own affairs. We are strong; our resources are great, but remember that the "power to tax is the power to destroy"; that government interference with individual life and individual business grows by what it feeds on, and that "eternal vigilance is the price of liberty."

Every form of social and industrial injustice—racial and class hatred, religious prejudice, monopolistic combinations that unfairly enhance the cost of living—all are enemies of democracy.

A liberal and a democratic government does not mean being liberal with other people's money. Among other things, true liberalism in America means preserving and protecting from attack from any source whatsoever the immortal principle that our Government was established in three branches—the judicial, the legislative, the executive—free of coercion or control, one from the other. Whenever one branch gains ascendancy over one or both of the other two, our Nation has forsaken a fundamental safeguard of our democracy founded upon checks and balances, the wisdom of which has been proved after 160 years of test and trial. Only a government financially solvent is a government founded upon the liberalism of democracy. The preservation of fiscal solvency capable and strong to meet any great national crisis is an obligation inherent upon those who wish the generations to come to enjoy the same freedom we have today. The maintenance of law and order under all conditions, the preservation of the principle of the sanctity of private property from mob possession are the basis of every form of liberal democracy; in fact, of any form of constitutional government.

Had the new lawlessness of sit-down strikes continued uncurbed by just punishment, the faith of the people in the duty of the Government to protect private property would have been impaired and democracy injured. Law and order must be maintained without consideration of the political power of the law violators. The same determination for impartial law enforcement should apply to the transgressions of the rich as well as the poor. And in this free country there is nothing more un-American than the effort to coerce and control the sacred privilege of suffrage by command of those who dispense relief to the destitute who are compelled to accept charity from their Government.

One of the wisest of Virginians was George Mason. He was the author of the Bill of Rights, which is now a part of the constitution of nearly every State in the Union. In this document for the preservation of human liberty, George Mason declared "that no government or the blessings of liberty can be preserved to any people but by firm adherence to justice, moderation, temperance, frugality, and virtue, and by frequent recurrence to fundamental principles."

NO MAGIC WAND

No magic wand of legislative panaceas will sweep away all our ills. There is no substitute for those time-old virtues of thrift, frugality, self-reliance, and industry. These virtues have made our country great. The character of the average American citizen is our most valuable national possession, a character builded upon American traditions and American achievements. Character comes from self-help and industry, not from idleness and shiftlessness. Above all, it rests on the firm support of Christian ideals—the common brotherhood of man and the common fatherhood of God.

Private enterprise, and not the Government, must provide employment for our citizens. It is a foundation stone upon which our democracy is built. When private enterprise fails, then representative democracy fails. Here it will not fail unless taxation becomes confiscatory, unless Government regulation becomes too oppressive, unless Government competition with private business becomes too destructive.

In this place of distinction and dignity, upon this soil made sacred by the blood of Americans from the North and the South, I hear again the solemn voice of Abraham Lincoln calling every American to guard a "Nation conceived in liberty and dedicated to the proposition that all men are created equal."

As we observe the destruction of democracies in other lands and the increasing subordination of the individual to strong, centralized government, we may repeat the apprehension that Lincoln expressed here whether this Nation or any nation conceived in liberty and dedicated to preserve the equality of all men can long endure. The fathers won for us this liberty, and it is for us, the living, here to dedicate ourselves to preserve and finish the work the fathers did.

As we see in imagination the sentiment spirits of all the thousands of Americans who fought to make this "the land of the free and the home of the brave," "let us here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; that government of the people, by the people, for the people, shall not perish from the earth."

Comrades All!

EXTENSION OF REMARKS
OF
HON. GEORGE L. RADCLIFFE
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, June 1 (legislative day of Wednesday, May 31), 1939

ADDRESS BY DR. JOSEPH F. THORNING, PH. D., LITT. D.

Mr. RADCLIFFE. Mr. President, I ask unanimous consent to have printed in the RECORD an address delivered at the United States Naval Academy, Annapolis, Md., on April 30, 1939, by Dr. Joseph F. Thorning, professor of social science at Mount St. Mary's College, Emmitsburg, Md.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The most important lesson of the Spanish War was the exposure of Leftist press tactics which followed immediately upon the fall of Barcelona. The capture of the capital of Catalonia took place on January 26, 1939. Ten days later (February 5, 1939) the Associated Press released the revelations of Mr. Joseph M. Escuder, outlining how thoroughly the Leftist regime in Spain had manipulated the news by an adroit use of press privileges. Motorcar transportation, gasoline, food-ration cards, and military passes to visit the front lines had been awarded only to those "who deserved rewards." In other words, the price of news coverage was journalistic surrender.

Why did we have to wait to learn these facts until the war came to an abrupt conclusion? Why did it take the news syndicates 2½ years to report the whole truth?

The revelations of Mr. Joseph M. Escuder, former propaganda chief of the Leftist Government in Catalonia, have been strikingly confirmed by Gen. W. G. Krivitsky, former trusted officer of the Soviet Russian secret police, in a sensational series of pieces in the Saturday Evening Post (April 15, 22, 29, 1939). Why have the metropolitan newspapers maintained editorial silence on the quality of service afforded them during the past 2½ years? Is it not their plain duty to institute a scientific analysis of the dispatches which reached their offices during the war and make a serious effort to sift the true from the false? Would not fulfillment of this obligation furnish suggestions as to future policy?

Officers and men in the United States military and naval service have a right to authentic information. They have a right to learn the technique of leftist propagandists who, disappointed at the defeat of the Soviet Union in Spain, are turning their efforts toward the collectivization of the means of production, exchange, and distribution in the United States. The materialistic, atheistic philosophy of Karl Marx led to moral and material disintegration of the Spanish Republic. The soldiers and sailors of the United States, determined to safeguard their high standards of morals, discipline, and spiritual idealism, are entitled to know the unpatriotic, Marxist methods which would exploit the Army and Navy of the American Republic.

What happened to the United States passports that were taken by leftist recruiting agents from the Marxist members of the international brigades? Is it true, as Gen. W. G. Krivitsky has charged, that these passports have been handed over to Commissar Josef Stalin in Moscow? Why do not our American citizens demand an investigation of the whole filthy business which induced American boys to spend their blood in the service of a foreign, Marxist flag? Why are we content to allow our passports to be exploited by the minions of the Third International?

His excellency, the Most Reverend James Hugh Ryan, bishop of Omaha, and the Reverend Dr. Maurice S. Sheehy, head of the department of religion in the Catholic University of America, brought back from South America strong evidence in confirmation of the accusations stressed by General Krivitsky. Bishop Ryan and Dr. Sheehy reported that American passports were being utilized as the "open sesame" to favors among the nations of South America. Since South America is vital to our economic life as well as to our national defense, why do the Marxist influences in the United States keep us from putting a stop to this illegal exploitation of American documentation? Is it impossible to institute a system of check-up inspection and identification at the principal ports of entry in Central and South America? These are questions fraught with interest to the armed forces of the United States as well as to the general public.

Above all, it is important to observe that the chief beneficiary of Spain's gold reserve, originally $650,000,000, was Comissar Josef Stalin, of the Soviet Union. The estimate of Gen. W. G. Krivitsky is a fairly reliable figure for the amount of the precious metal shipped from Madrid to Moscow. The ex-Stalinist agent is on record to the effect that half a billion dollars was transferred from Spain to Russia when the leftist government felt itself toppling from power.

Is it imagined that this huge sum of money, the rightful property of the entire Spanish people, will be used for anything but totalitarian dictatorship? Where is there more cruel, vicious employment of threat, intimidation, and violence today than within the confines of the Soviet Union? Let us not forget that 170,000,000 people are writhing in agony under the tortures of leftist terror. No one can estimate exactly how many have been murdered, with or without the benefit of a judicial masquerade. The silence of self-styled American liberals on these horrors is a paradox. Some of them even talk openly of the alliance of the United States with the worst form of brutality and mass terror on earth.

One of the leading newspapers of this country spoke blandly about the new approach to the Marxist dictatorship as "a marriage of convenience, not the partnership of friends." Do Christian leaders admit this reasoning or this distortion of fact?

It is my conviction that a so-called "marriage of convenience" between the United States and the forces of Dictator No. 1, Commissar Josef Stalin, would produce nothing but evil for our American people as well as for the world. An alliance with the Soviet Union would not only be a crime; it would be a stupendous act of blindness and folly.

Government Spending and Deficits

EXTENSION OF REMARKS
OF
HON. CHARLES L. McNARY
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, June 1 (legislative day of Wednesday, May 31), 1939

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO, MAY 22, 1939

Mr. McNARY. Mr. President, I ask unanimous consent to have printed in the RECORD a timely address delivered by the distinguished Senator from Ohio [Mr. TAFT] over the blue network of the National Broadcasting Co. on Monday, May 22, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Citizens and taxpayers of the United States, the future welfare of America is threatened today by one of the most dangerous fallacies ever adopted by any government—the fallacy that prosperity can be restored by increased Government spending and deficits. This is a brand new idea. There have been plenty of spendthrift governments, but no one of them has ever prided itself on its magnificent waste. Every President of the United States, whether Republican or Democrat, has recognized the moral obligation to hold Government spending within the limit of Government resources except in the case of extraordinary emergencies. Only the present administration has dared to advance deficit spending as a deliberate policy. Unsatisfied with a deficit at the rate of $4,000,000,000 a year, the Simon-pure New Dealers are shouting for bigger and better spending.

For politicians this theory is just what the doctor ordered. All their lives politicians have been trying to find a way to spend more money and levy less taxes; to get credit for spending on projects they think popular, and escape blame for taxes they know are unpopular. If the soundness of this new theory is admitted at all, there is no limit to what the Government should spend. And yet of all the utterly unsound and ridiculous economic theories, this is the most illogical. It is not only vain, it is utterly dangerous and completely immoral, and fortunately today the people know it to be so.

It is immoral because it deludes the people into thinking they can get something for nothing. Any nation which comes to believe in this theory is bound to give up working and turn to economic tricks for a living. It will not live long, because the unsoundness of the theory can only be equaled by the demoralization of the character of the nation. It leads, of course, to unlimited extravagance. If deficit spending is a good thing in itself, why should any Government department ever save any money? The more they can spend and the more they can waste the more they would be doing to help the people to that delightful heaven where no one will have to work. When any individual or business spends money, it must be subjected to the most careful criticism to be sure that he will not be likely to lose it and that some return will come from the investment. But Government activities are not subject to any such check. If the Government loses money, according to the spending theory, it contributes to prosperity. No man can have a pipe dream too fantastic for the Government to attempt. Florida ship canals, Passamaquoddy tide-harnessing projects, require nothing but a favorable report from some New Deal engineer who never had to meet a pay roll. The spending theory is supported by glib phrases. It is no longer "deficit spending" but "investment by the

Government." If it were investment, then definitely the Government ought to encourage private individuals to carry it through rather than pour in Government money. There are a few things which the Government has invested in which will pay themselves off, and some which are justified because private capital was not available in the emergency of the depression. But most of the things called investment, even money spent on T. V. A. dams, is not likely to earn any return, and yet it discourages many times that amount of private investment in the same industry, for no one wants to be in an industry where Government is a competitor. But, say the new dealers, they aren't balancing the Budget, but they are balancing the human budget. With due respect, this is merely a juggling with words and doesn't mean anything. A man who goes out and buys himself new automobiles and a new home when he hasn't any money to pay for them may just as well be said to be balancing his own human budget, but he goes bankrupt just the same.

Everyone knows that money must be spent today in great amount for relief and old-age pensions and subsidized housing for the poorer groups, but certainly it can't be spent even for these worthy purposes long unless the people are willing to pay the taxes to provide the money. In October 1932, Franklin Roosevelt set forth the dangers of spending and the virtues of a balanced Budget. This morning one of the New Deal columnists defends the President by pointing out that he made an exception if starvation and dire need made necessary additional relief spending. Of course, no one complains of a deficit for relief needs in an emergency. The complaint is that 6 years later spending is adopted as a virtue in itself, and extravagance characterizes every department of the Government, whether concerned with relief or not, and scores of new bureaus.

Fortunately the whole theory of spending is absolutely contrary to the genius of the American people. From the time the Pilgrims landed in New England, they have believed in thrift and hard work, and adequate rewards for saving and ability and industry. The spending program is offensive to the very people who receive its bounties. The other day Walter Lippmann attacked Senator BYRD, Senator VANDENBERG, and myself on the ground that we had consented to the farm parity payments because it was inexpedient to antagonize a group of voters as influential as the farmers. Mr. Lippmann was wrong twice. We opposed the parity payments. I voted against them in the committee, and went publicly on record against them, so that I could not have been afraid of a record vote as he alleged. But as a matter of fact, I am convinced that a vote against the parity payments would not have antagonized the farmers of the United States. They, more than anyone else, are opposed to wild Government spending. They know in their hearts that it is unsound and cannot continue without disaster. The individual farmer is glad to get a payment. He sees no reason why he should not have his share, if the money is being dished out, and he knows in fact that he deserves it under present economic conditions a good deal more than some who are getting it in the cities. But except for people in absolute need, there is not a group today which is not willing to sacrifice its own Government benefits if economy is favored by all the other groups, so that the situation may be brought into a normal condition where private enterprise again can restore employment and prosperity. The spending theory is immoral, and the people know it to be such.

The spending fallacy is dangerous. We have added $20,000,000,000 to the national debt in 6 years. In the year ending the 1st of next July we will have spent more than $9,000,000,000, with a deficit of nearly four billion. The year beginning July 1 is likely to be even worse. The President's Budget called for $9,000,000,000. Since then, under the outcry for more adequate national defense, we have added another three hundred million. The farm benefits are another three hundred million. We are asked to borrow another eight hundred million for slum-clearance projects. No doubt a drive will develop to add five hundred million for P. W. A., and it is doubtful whether the President's Budget for W. P. A. is going to be adequate. We will be lucky if we don't have a deficit of $5,000,000,000. And this is not the end. We are asked to prepare a bill providing Federal subsidies for schools, to cost two hundred million a year after 4 years; a bill to provide Federal aid for a great national health program, to cost five hundred million a year after 10 years. There is no limit to the public-works projects relating to water power, flood control, rivers and harbors. A Democratic Senator, neither New Deal nor conservative, said to me the other day that he saw no possibility of stopping spending until we reached a state of complete bankruptcy and repudiation. The thing feeds on itself. You can't spend money for one project or one group without making good arguments for other similar projects and other groups.

The end is perfectly clear. The interest bill today is already over a billion dollars and would be much higher except for abnormally low rates of interest due to the depression. It will become very burdensome, and the people will look around for ways of escaping that burden. Already we hear talk of paying off the debt with irredeemable paper money. No government ever has maintained a continued deficit without finally repudiating its debts. Government repudiation is carried through by paying debts in paper money, which comes to have little or no value.

In France and Germany and other countries inflation of the currency brought disaster to rich and poor alike, but particularly to the wage earner, and the man on low, fixed salary, and the man who had spent all his life saving money to take care of his old age and his family through savings deposits and life insurance. Prices would rise so rapidly, as they did in Germany, that money and life-insurance policies, and savings deposits payable in money, would soon have no value. If that ever happens, it is doubtful whether we can maintain our democratic form of government. It would have failed, not because of its own fault but because of the fault of its false New Deal prophets. But in the face of that failure we could not escape the experiment of a socialized state, contrary to every principle of American freedom. The spending theory spells the greatest danger that Americanism has ever faced.

And finally the theory is utterly vain. It cannot produce prosperity. If, after $20,000,000,000 of deficit spending from 1933 on, we only found ourselves plunged into another depression in 1937, surely the theory is unsound. If tremendous monthly deficits since the depression of 1937 have only left us today in the same unfortunate condition we were in a year ago, with more than 10,000,000 people unemployed, a national income well under seventy billion, ten billion less than it was 10 years ago—if the cry today is for spending and still more spending, what hope remains for any practical success?

Of course, Government spending temporarily increases business activity, but only mildly and only temporarily. It is said that the cessation of Government spending caused the 1937 depression. The argument proves too much. If Government spending can never stop without causing a new depression, then it can only lead to destruction. But, of course, that was not the cause of the 1937 depression because Government spending did not stop. The 1937 depression began in July of 1937. During the previous 12 months the Government spent more money than it had ever spent in peacetime before, if we exclude the bonus payment. True, the deficit was not so large because taxes had increased, and taxes do deter business, but Government spending has never ceased to increase.

The 1937 depression was caused by the tremendous interference of Government in business; by the too rapid increase of taxes and wages and commodity prices deliberately stimulated by the Government. This resulted in a complete collapse of the capital-goods industries, like steel, because no railroad or utility or manufacturer had any margin left to make permanent improvements or even keep up current maintenance. It was caused by the unwillingness of anyone to put money into permanent things, for fear that he could never get a return. It was caused by Government spending itself, which put the Government in so many business operations and regulatory fields that the ordinary individual is wholly unwilling to spend his time or money in any private enterprise that may be wiped out by Government action tomorrow. The present depression was a result only of New Deal policy, including spending. No similar depression exists in Europe, and in England they have balanced their budget for the last 5 years.

There are so many crack-brained economic theorists that we don't realize that there really are fundamental economic principles. Those principles do not change. We are not in a new era. Some of the Republicans tried to make us think we were in a new era in 1929, but it turned out we were subject to the same old economic penalties for speculation and inflation of private debt. Inflation of Government debt and inflation of Government currency lead to human misery and hardship and suffering, as they always have.

Sound Government finance is the basis of prosperity today, as it always has been. We can balance the Budget, and keep alive the important humanitarian enterprises which the people have determined upon and are willing to pay for, like relief and old-age pensions and subsidized housing. We can reduce our expenses if we have a Government that really wishes to reduce expenses, and proposes a plan for reducing them in every field at the same time, with the cooperation and assistance of the very groups who benefit temporarily from Government funds. Until the Government quits spending, we can't get individuals to resume those thousands of private enterprises which put men to work.

This is no matter of coddling big business. As the executives of big business testified last week, they have money enough to make improvements in their companies. It is the little business man who can't find anyone willing to put money in his business. It is the man who isn't in business at all who must be encouraged to put his time and money into thousands of little enterprises which put other men to work. New Deal spending and regulation and taxation are killing little business, not big business. It is the average workman and the average investor, and the average small-town American who is utterly choked and discouraged by Government activity. In a return to sound fiscal policy and a balanced Budget, the Republican Party appeals to the average man and woman. Unless that appeal is successful, we face bankruptcy, inflation, and the end of the American way of life as we have known it.

H. R. 6466

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

Mr. LUDLOW. Mr. Speaker, I have the deepest sympathy for those in distress and no one is more keenly anxious than I am to see that our worthy aged who are poor through no

fault of their own are generously provided with the blessings of peace and security in the evening of their lives. I know that our existing laws are pathetically inadequate to care for our aged people as they should be cared for, and I shall continue to do everything I can to assist in strengthening and liberalizing those laws along sound and constructive lines so that our old people will reap some tangible benefits and not be misled by the fantastic promise of $200 a month, which can never be realized. On the opening day of the present Congress I introduced a bill to amend the social-security laws by increasing the pension to be paid through Federal and State cooperation and by lowering the age limit, and I shall continue to do all I can to assist in working out a sound solution of this very important problem.

During the last few days I have received 58 letters and telegrams threatening me with political extinction unless I voted for the Townsend bill. I have tried so hard and so sincerely to do my duty as a Member of Congress and to serve all of our people of the Twelfth District lovingly and faithfully that such threats fill me with sadness, but they do not move me a hair's breadth from the path of right, as I see the right. I hope that sometime those who are threatening me will learn that I would not do a thing which I believe to be wrong and against the best interests of my constituents for all of the offices in the world.

The new Townsend bill, on which we were obliged to vote, made its appearance in the House no later than May 23. I doubt whether any one of its congressional advocates fully understands it. It was hastily thrown together and contains many provisions that appear absolutely absurd and meaningless, such as the following:

> Throughout the act the present tense includes the past and future tenses, and the future the present. The masculine gender includes the feminine and neuter. The singular number includes the plural, and the plural the singular. Shall means must and is mandatory.

Just what this means no one seems to know and yet it is no more amazing than other jig-saw provisions of the bill, which defy the closest analysis and scrutiny. The bill holds out the alluring promise of a pension of $200 a month and thus deceives our old people as it does not provide the finances for a pension of more than a small fraction of that amount. I will never be a party to such deception. I could not be honest with myself and vote for a bill that might wreck and ruin the country unless it were clarified and improved by amendments. The House leaders had carefully seen to it that no opportunity was to be afforded to offer amendments.

The Ways and Means Committee might have worked out a constructive piece of legislation, but it declined to do so and the Rules Committee reported a closed rule, which meant that amendments were barred. I think the Townsend advocates have been treated very unfairly by being denied the usual privilege of perfecting their measure by amendments. The whole purpose seemed to be to make the proposition as obnoxious as possible when it came to a vote.

I voted to recommit the bill so that it might be overhauled and improved and resubmitted to the House in a more acceptable form. I thought that was only fair to the advocates of the measure. When the motion to recommit failed, I voted against passage of the bill because I could not conscientiously support a bill which I believe, in its present form, would be highly injurious to the Nation as a whole, including the old people who would ostensibly benefit by it.

The bill is the most gigantic tax bill in the history of this or any other country. Under it every worker, however poor he may be, would have to pay 2 percent on his gross income. If he earned only $300 a year and had a dozen children to support, he would have to contribute $6 toward helping to pay pensions to persons over 60. The very poorest workers, struggling to live on a mere pittance, would be taxed on their starvation incomes to pay pensions to other persons. Of course, this should have been amended to exempt the very low paid workers from the gross-income tax. The sales tax also provided in the bill would fall most heavily on the poor and would encounter determined opposition from members of organized labor and others who are uncompromising in their attitude against consumption taxes. It would rapidly increase prices, because businessmen, following the history of all such taxes, would pass it on to the consumer. The very best economists believe that under this tax prices would pyramid until a dollar would soon buy only 50 cents' worth of goods. Under the bill, national banks are exempted but State banks are taxed. Chambers of commerce are exempted but labor organizations are taxed. The bill is full of such contradictions, injustices, and incongruities, and nearly every section of it needs amendment and clarification to become workable without risk of harm.

We were not permitted to alter the measure by amendment, even to the extent of changing a comma, and since in its present form it is an impossible measure, I followed my convictions and voted against it. I hope that before the present Congress ends we may have real practical legislation for the benefit of the aged.

Not the Cross of Christ

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

EDITORIAL FROM THE WASHINGTON EVENING STAR OF MAY 31, 1939

Mr. MARTIN J. KENNEDY. Mr. Speaker, ladies and gentlemen of the House, of all the indignities suffered by religious groups at the hands of the madman, Adolph Hitler, none is more dastardly than the one which occurred during the present week at Salzburg, when German troops seized the palace of Archbishop Waitz, Catholic Primate of Germany. As in the past, outrages against religious groups by this man have again been excused by "legal" justification.

Catholic and Protestant and Jew worshipers throughout the world have been tormented by the activities of Hitler and his cohorts—and men of intelligence without religious beliefs have openly expressed scorn at the antireligious depredations of the German dictator. The following editorial from the Washington Star explains lucidly the small, contemptuous character of Hitler much better than anything else I have read:

[From the Washington Evening Star of May 31, 1939]

NOT THE CROSS OF CHRIST

Nazi Germany did not disguise its displeasure over the election of former Cardinal Pacelli as Pope a few weeks ago, as the policies of Pius XII, while papal secretary of state, left no doubt of Vatican City's hostility to the practices and principles of the Hitlerian cult.

It was during the present pontiff's direction of the Holy See's foreign affairs that Chancellor Hitler on May 4, 1938, paid a state visit to Italy. The flaunting of the swastika all over Rome on "the day of the holy cross" provoked from the reigning Pope, Pius XI, a public protest against the display in the eternal city at such an hour of a flag bearing the emblem of a cross—the swastika—"which is not the cross of Christ."

It would seem as if events this week at Salzburg, the famed scene of music and dramatic festivals in former Austria, are Hitler's rejoinder to the action of the College of Cardinals in elevating to the papacy a prelate who was not of German choosing. Nazi authorities have seized the palace of Archbishop Waitz, Catholic primate of Germany, at Salzburg, stripped it of all its furniture, compelled its priestly tenant to take refuge in a seminary, and turned over the historic building to the S. S. (the Fuehrer's black-shirt elite private guard troops). Quibbling legal reasons are assigned as justification for the eviction, but Nazi spokesmen insist that in any event the building is needed by the S. S.

The Catholic Church has experienced a succession of Nazi indignities, of which the incident at Salzburg is only the latest, though one of the most flagrant. Cardinals, bishops, and humble priests, even nuns, and their official premises, including churches, schools, and convents, have at one time and another come under totalitarian persecution and oppressions in pursuance of the Nazi doctrine that worship of the state, with its concomitant tenets of

race and force, is the only true form of conscience and creed tolerable in the new Germany.

The Holy See is not likely to accept without protest the harsh treatment meted out to Archbishop Waitz. The Nazi offense is not mitigated by the circumstance that he appealed directly to Chancellor Hitler to rescind the order of confiscation and that his plea was wholly ignored. The contention that the archbishop's palace is, as state property, now needed for state purposes, naturally confronts the church with the possibility that wholesale expropriation of its real holdings in Germany may be signaled by the Salzburg seizure.

Old-Age Benefits

EXTENSION OF REMARKS
OF
HON. WILLIAM H. LARRABEE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1939

STATEMENT OF HON. WILLIAM H. LARRABEE, OF INDIANA

Mr. LARRABEE. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include a statement of my views concerning old-age pension legislation now pending in Congress.

In reply to a number of letters and other communications urging my support of the National Recovery Act, generally designated as H. R. 2, the Townsend plan, which was introduced by Representative HENDRICKS at the insistence of Dr. Townsend, on January 3, 1939, I have made the following reply:

Under date of May 7, 1939, at the request of Dr. Townsend, the bill, H. R. 2, was withdrawn and in its place a bill, H. R. 6378, was introduced by Representative HENDRICKS, which bill contained several changes from the provisions of H. R. 2. One of these changes was the elimination of the provision that the pension benefit to be paid annuitants must be spent within the month following its receipt.

While the Ways and Means Committee of the House of Representatives was considering the bill, H. R. 6378, and, I am officially advised, preparing to report it to the floor of the House for action, the sponsors of this bill advised the committee that it was being withdrawn in favor of a new bill, H. R. 6466, also introduced by Representative HENDRICKS.

During consideration of the bill, H. R. 6378, the committee read into the record of the hearings, the following statement of Dr. Townsend concerning his views with reference to the elimination of the enforced spending clause of his original bill: "Dr. Townsend: The reason I advocate that is just this: There will be less difficulty with the law than if you attempted to have supervision over everybody's expenditures. Somebody is going to have to do the supervising; and it may lead to a lot of political corruption; where if it were a blanket retirement annuity there would be no investigation necessary anywhere as to the spending."

Before the committee could report the second Townsend bill, eliminating the enforced spending clause, as suggested by Dr. Townsend, he had changed his mind and was again insisting on the enforced spending feature as restored by his third bill of this year, H. R. 6466.

During hearings on this bill, H. R. 6466, records of the Ways and Means Committee show, Dr. Townsend and his tax adviser, Mr. Silva, engaged in a discussion of the probable amount of pension that would accrue to the 8,000,000 aged folks under provisions of H. R. 6466. Silva stated that he thought the amount would be about $60 per month. Dr. Townsend said, "No; I think it will be about $50 a month."

Accordingly those advocates of the Townsend plan who have been told that they could expect $200 a month pension from the enactment of the plan should understand that not even the sponsor, Dr. Townsend, believes that such a sum will be possible. The bill, however, sets a maximum of $200 which might be paid, but sets no minimum which must be paid at all.

Many tax experts and students of taxation and old-age benefits report that under the tax plan provided in the latest Townsend bill, H. R. 6466, not more than $15 a month could be paid to each of the 8,000,000 aged persons, due in part to the heavy cost of administering the provisions of H. R. 6466, if it should become law, and in part to the grave uncertainty of the amount of revenue that would be raised by a tax of this nature.

I have consistently supported reasonable old-age benefits legislation, both as a member of the Indiana State Legislature and as a Member of Congress. I have repeatedly stated that I am not satisfied with the amount of benefits available under provisions of the Federal-State cooperative social-security plan now in operation, and that I would support sound, reasonable legislation to provide a reasonable annuity, direct from the Federal Treasury.

To that pledge I again subscribe.

There is now pending in Congress a bill—H. R. 5620, formerly H. R. 11—sponsored by the General Welfare Federation of America, which provides an immediate minimum benefit of $30 per month and a maximum of $60 per month, which would be paid when revenues accrued permitting such increase. This bill proposes a different type of tax, which I feel is more certain of producing sufficient revenue to pay a decent annuity than is the tax proposed in H. R. 6466, and with less burden to the taxpayers, by reason of being more fairly spread among the whole of the taxpaying body.

Since there is considerable evidence to support the reports of tax experts that the tax plan of H. R. 6466—the latest Townsend plan—would raise only enough revenue to pay about $15 a month to the annuitants, and since the tax would not be as fairly spread and would be much more difficult and expensive to collect, I am convinced that applicants for old-age benefits may reasonably hope for greater aid under the provisions of the bill H. R. 5620.

For these reasons I remain of the often-expressed opinion that I cannot support the Townsend plan. However, in keeping with my views and my desire that a beneficial old-age pension law be enacted, I am supporting the bill H. R. 5620, and it is my hope that this bill will soon be enacted into law.

However, I have no objection to the Townsend plan's being given careful consideration on the floor of the House, and I have done all within my power to aid in bringing it out for discussion and for a vote.

Where Are We Going?

EXTENSION OF REMARKS
OF
HON. ALBERT L. VREELAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1939

Mr. VREELAND. Mr. Speaker, it is most interesting in studying the present debt and the public debt as it will be on June 30, 1940, based on the present appropriations and comparing it with the figures of the 1930 census and the 1938 assessed valuations, to find the share of the national debt of my State of New Jersey and also the pro rata share of the counties of the State of New Jersey, which is set forth in the following table.

It is again interesting to note the relationship between the entire national debt and the debt incurred by the New Deal from March 4, 1933, to June 30, 1940, and in breaking down the figures we find that every man, woman, and child in this country owes as part of the national debt $362, of which $192 has been incurred by our New Deal.

"Where are we going?"

	Population	Assessed valuation of real and personal property, 1938	Share of national debt on per capita basis	Percent of assessed valuation	Share of New Deal debt on per capita basis	Percent of assessed valuation
New Jersey	4,041,334	$5,534,400,072	$1,462,962,908	26.8	$775,936,128	14.0
Counties:

Good Strategy

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1939

EDITORIAL FROM THE WASHINGTON POST

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post:

[From the Washington Post]

GOOD STRATEGY

Senator VANDENBERG's statement of principles that should guide the Republican Party in its selection of a Presidential candidate next year has made a good impression. The Senator has not announced himself as a contender for the nomination. His letter to the Michigan delegation in Congress leaves no doubt that he is in a receptive mood. But it is convincing in its emphasis that the national welfare should be placed above personal political ambition.

The first task of the 1940 Republican National Convention, says Mr. VANDENBERG, will be to "set down clean-cut, constructive, courageous principles which dependably promise to save the American system of free enterprise under the renewed spirit of constitutional democracy." When the platform has been outlined, he adds, candidates in harmony with its principles can be selected. There is a clear suggestion that if the platform is not straightforward and constructive the Senator would prefer to have the G. O. P. look elsewhere for a candidate.

Mr. VANDENBERG's second point is that the Republican candidate should be "prepledged" to a single term. In practice such a pledge might prove to be unwise, as it did in the case of President Wilson. The Democratic Party elected Wilson in 1912 on a platform favoring a single Presidential term, little realizing that circumstances would make his renomination seem imperative in 1916. The nomination of popular Presidents for a second term is almost as deeply ingrained in the American system as is hostility to third-term candidacies.

It must be admitted, however, that the stand taken by Mr. VANDENBERG has an unusual appeal at this time. Whoever the next President, he will be confronted by stupendous problems, not the least of which will be sharp retrenchment in Government spending. No doubt the next President would be less amenable to pressure groups if he renounced all hope of succeeding himself. It is contended, too, that the Senate, which is certain to remain under Democratic control until 1942, would be more inclined to cooperate with a Republican Chief Executive if he had no political irons in the fire.

Strength gained in this way might be lost by the weakened position in his own party of a President pledged to one term. That aspect of Mr. VANDENBERG's proposal will doubtless be carefully examined by the G. O. P. in advance of any commitments. In the meantime, however, talk of pledging the Republican candidate to one term serves to increase the disadvantages of a third-term nomination on the Democratic side.

By emphasizing the vast responsibility of the Presidency, and the need for subordination of all personal ambition to the national welfare, Senator VANDENBERG is employing good political strategy. And good politics and sound public policy are not necessarily incompatible.

Comment on Current Conditions

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1939

ARTICLE FROM SPHERE FOR JUNE 1939

Mr. SHORT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the current issue of Sphere:

[From Sphere for June 1939]

COMMENT ON CURRENT CONDITIONS

We think there would be peace in the world if governments were honest—particularly if the American Government were honest. Hitler's attacks on other peoples' property are more spectacular and dramatic, but they are hardly more immoral than the course being pursued by Washington.

The cash outpourings of the Federal Government for the next fiscal year will exceed $9,000,000,000. There is no revenue in sight that would justify such a prodigious expenditure. The money wherewith to make the payments can be had only through the manufacture of it. This process is concealed through the device of printing bonds which banks and other institutions are more or less compelled to take.

There is not an intelligent man in Congress who believes that the vast debt now being piled up ever will be repaid. Certainly not in the same kind of dollars.

There is not an intelligent economist anywhere who is in any doubt as to what is happening. Sooner or later, the accumulated capital of the country will be progressively confiscated, through taxes or otherwise, in order merely to keep up the appearance of solvency under existing conditions.

It is sheer hypocrisy to view the so-called have-not nations as ruthless bandits because they seek by force to take what they can from the have nations.

Where did they learn this effrontery and what emboldened them to practice it? The American Government, quite openly, is doing identically the same thing and doing it to its own citizens.

Hardly a week passes but some new dealer announces that the haves must surrender all or part of what they possess in order that it may be shared among the have nots.

This may be described as a redistribution of wealth, but it really is a blatant form of legalized banditry.

It is asserted that this profligacy will not be disastrous because the entire debt is domestically owned. Even should there be a default, it is argued, the material wealth of the Nation would remain—the buildings would still be here, and the highways, the fields, and the industrial plant.

But those who own things now would not own them then, assuming that anybody might, in these circumstances, own anything.

No bond of the United States warrants repayment in gold. On its face, every such instrument is a negation of honesty. It undertakes merely to repay in dollars, and these dollars are to be whatever Congress may determine they should be, at the time when repayment is promised.

In an active nation the tendency over the years inevitably is for the value of the currency to drop gradually, for a form of inflation is always under way.

This is usually taken care of by the interest rate which, as it were, amortizes the depreciation. But the Government, in order to make a showing, has artificially cheapened money, so that the interest rate is no longer a protection.

Those institutions which themselves are under commitment merely to repay in dollars, as are the banks and the insurance companies, can buy Government securities with comparative safety because they are, perforce, participants in the fraud. "We have mastered the technique of creating necessary credit," says the President.

There is only one kind of money they can handle, and that is whatever happens to be the legal money of the country. But no man who buys insurance knows what the dollars will be worth that will go to his estate when he passes on.

There can be no such thing as social security when the basic symbol of that security, money, is the plaything of politics, is without stability and has a value which, at present, is dependent to a large extent on the decision of one man, the President of the United States, to whom Congress has delegated, possibly legally, the right to restate the gold content.

Never before in all history has there been such a savage, persistent, and hypocritical attack on property as in this country over recent years. Nothing that Hitler has done, or that Hitler can do, equals in sheer audacity and future catastrophe this camouflaged and sugar-coated confiscation that the New Deal has engineered under the guise of humanitarianism.

Accordingly international banditry merely parallels an internal banditry, and the dishonesty of one nation differs from the dishonesty of another nation only in method.

The United States, however, happens to be the richest nation in the world and probably the most powerful. There was no occasion for it to make covenants with faithlessness.

There was no good cause for a general repudiation of debts and a scaling down of obligations, or for clipping the coinage, or for indulgence in a dozen different practices, each one of which involved "passing the buck" and substituting for the accepted moral code another and new theory of honor—the subterfuge of expediency.

The Sphere does not believe that the mightiest nation on earth can indulge officially in chicanery and fraud and not be aped by other countries.

The evidence is conclusive that the repudiation practiced by other nations in the handling of their debts to the United States, and thereafter by the United States in settling its own financial problems at home, set an example that was certain to be followed

by indiscipline, not only of private debtors but of public debtors as well, this being but a prelude to the taking-by-force attitude that some governments have since adopted in dealings with other governments.

The economic catastrophe that must inevitably follow the current extravagance practiced in Washington is only one element in the danger. The more terrifying thing is the moral loss.

This is exemplified not only in private relationships but even more in the relationship between the several States and the Federal Government.

Many of the States have been able to show balanced budgets, not because they have been properly governed or have sought to live within their means, but because hundreds of millions have been shoveled into their treasuries, one way or another, by the Federal Government.

They have been participants in the looting of the economy, and willing associates.

There are many corporations that already are paying dividends only to the Public Treasury. The stockholders get nothing. The tax collector takes what the stockholders ought to be receiving.

In other words, the Government has intruded itself into the situation and by sheer force has made itself a preferred partner in the business, keeping its own snout in the trough and allowing no other to get there.

In these circumstances it is not surprising that venture capital declines to venture. An essential thing in primary investment of capital is the gamble. America was built by gamblers, men who gambled everything, in new railways, in migrations to far parts of the country, in industrial plants, in all sorts of enterprise.

They took what capital they had—it was often very meager—and they bet it on the growth of the United States and on their own ability to make good.

But today the element of good chance has all but been eliminated. If the man of enterprise wins, he loses, because in advance his reward is taken from him. Why should he toil and sweat and stay awake at nights during the anxious period of his enterprise's beginning if the matured product is to belong not to him but to the tax collector?

It is about time that the good citizens of this country, instead of growing red with indignation as their attention is directed to outrages abroad, began to consider some of the outrages at home.

They ought to begin to understand that the Jew who has been pillaged in Germany is in no worse plight than they themselves, except that the outraged Jew has had the operation performed on him more rapidly. It is just a matter of timing.

There can be no social security here in the United States, and there can be no international security until there is something more than lip service given to the basic principle of honesty.

So long as the signatures of nations mean nothing—only last September the British and German Governments formally agreed that they should never again go to war but would settle any difficulties at the council table—and so long as governments at home think it is not shamelessness to forswear themselves in their relationships with their citizens, just so long will there be chaos and uncertainty and progressive ruination.

And this is true because the civilization we have built up is always dependent on credit, on the assurance that nations and men will live up to their contracts and that they will not, on the slightest provocation, substitute expediency for honesty.

There seems to be no limit to the immorality of governments. Every one of them is contracting debts it never can repay and is trying, by one method or another, to conceal the awful truth.

In this country, despite the enormous current deficit, the Congress is about to pass a new Social Security Act, revolutionizing the old one, and the extra cost over the next few years will amount to some $4,000,000,000.

With the deficit already so great that 1 year's deficiency could not be met by the sale of whole States, the Senate blithely votes another $350,000,000 for additional gifts to farmers.

Mr. Lewis, whose C. I. O. at times has appeared to be superior to the Government, insists that 3,000,000 persons should be continuously carried on the W. P. A. rolls without the "degrading means test" and with the right of the enrollees to organize, presumably that they may act as a union to intimidate the Government.

Yet, that would be almost double the program, in dollar terms, that President Roosevelt himself envisages, for he is merely asking for $1,477,000,000 for relief in the coming fiscal year.

Those people who believe in capitalism—and there are millions of them in this country—should begin to understand why capitalism does not function efficiently. It cannot operate successfully because monkey wrenches have been thrown into the machinery and because there are those who, either deliberately or through ignorance, adopt official policies that, if continued, make socialism, or bolshevism, inevitable.

If there is going to be peace in the world and security here in the United States, it is absolutely imperative that the Government be recalled from its junket and put back to work in its own proper sphere.

To reduce expenditures down to the point where they would meet the revenue would not be deflationary, but would be inflationary, because it would put to work all that vast credit, created out of public debt, that is now available but lies stagnant because competent people are afraid to employ it.

The crisis goes far beyond any mere question of partisanship or of political loyalty. It involves that very fundamental thing, integrity, and there will be no business recovery until there is a moral recovery of that priceless resource.

Chickens Come Home To Roost

EXTENSION OF REMARKS

OF

HON. JOHN A. MARTIN

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

On the bill H. R. 6466, the general welfare bill

Mr. MARTIN of Colorado. Mr. Speaker, I do not join in the criticism and abuse of the Committee on Ways and Means and the Committee on Rules for bringing in the Townsend bill, H. R. 6466, under what is known as a closed rule; that is, a rule under which no amendments can be offered, and which bill must be voted up or down just as reported. The folks out home may be fooled by all this abuse and criticism of the committees for bringing the bill in under a rule preventing amendment, but Members of Congress will understand that all this furore against the committees is just an alibi for voting against the bill.

The fact of the matter is, if the committees are subject to any criticism, it is that they did exactly what Dr. Townsend demanded. Any other course would have been denounced by him as for the purpose of hamstringing or destroying the bill. It did not matter that the committees nor anybody else had seen H. R. 6466, or knew what was in it, not even the Member who introduced it, the ipse dixit of Dr. Townsend has always been that a bill once introduced must not be changed in any way by anyone but himself.

In a week or two very material amendments to the Social Security Act will be reported out by the Ways and Means Committee. That act has many critics who will want to amend it, but the bill will be brought in under an open rule, subject to amendment, and every Member of the House will be permitted to offer any amendment and have it voted on, even though the amendment is intended to weaken or injure the act. And this, mind you, will be an administration act, handled by the same committee which framed it in the first place.

This is the making of legislation by representatives of the people in the proper and democratic way. Nobody will claim that because the bill is brought in under an open rule, and subject to amendment, that it is for the purpose of destroying the Social Security Act. Anyone who would make such a statement would be laughed at, but, of course, no one will make such a statement.

Chickens come home to roost. It has always been the No. 1 ironclad rule of the Townsend movement that a bill must be accepted or rejected as written and introduced. Any suggestion that it could be amended in any particular has always been regarded and treated as hostility to the whole plan.

Members of Congress have been opposed for reelection for no other reason than suggesting that a bill be amended. In the primaries and in the election of 1938, Members of Congress were opposed and defeated who proposed a gross income tax to finance the pension very similar to the gross proceeds tax in the bill voted on today. The bill received 97 votes out of a total of 400 cast. It is my opinion that had it been brought in under an open rule, subject to amendment, it would have received not less than 150 votes.

It seems peculiarly inconsistent to oppose all possible amendments to a long and complex bill proposing to levy billions of dollars in taxes, which has been largely rewritten on the spur of the moment to take the place of another bill

which has been pending in Congress for 3 years, and then say that no amendments should even be offered to such a bill, no matter how beneficial or necessary.

It was positively disturbing to me to have the sponsor of the bill during debate on the floor of the House disclose that he did not know of such a vital feature of the bill as the taxation of wages and salaries. It made me wonder what else he did not know. Legislation is not enacted in this slipshod, haphazard way. If this bill were being given the thorough and serious consideration it merited, and a consideration which it would have been given had there been any likelihood of its passage, such a disclosure as I have just mentioned would have resulted in someone getting his clothes torn off, legislatively speaking. It would have been immediately and overwhelmingly disastrous.

I pointed out in the debate on the bill yesterday that the first Townsend bill, introduced in 1935, H. R. 3977, exempted wages from taxation; that the second bill, H. R. 7154, taxed wages; that the third bill, H. R. 4199, and the fourth, H. R. 2, exempted wages; and that the pending bill, H. R. 6466, taxed wages.

With three of the five bills approved by Dr. Townsend himself exempting wages, it strikes me that this was a question important enough to be left to a vote of the Members of the House of Representatives. It will be considered important by labor, which had no notice it was to be taxed.

I also pointed out that H. R. 7154, which was known as the McGroarty bill, by far the best known of all the Townsend bills, limited pensions to persons having an income of not more than $2,400 per year, and that income below that figure was to be deducted from pension, while the other bills, including the one before the House today, proposed to pay the pension to everybody. Even Henry Ford would get a pension. Tens of thousands of people enjoying large incomes, more money than they need, would get pensions. And these pensions would lower the pensions of the common people. J. Pierpont Morgan and John D. Rockefeller would get the same pensions as people on relief. Surely such a proposition was entitled to the judgment of the House of Representatives expressed by a separate vote.

I also pointed out the fact that this bill was the first of all these bills to exempt national banks. Under the heading of a long list of exemptions the first two words are "National banks." In the debate I asked the question, Who did this, and why? And I ask again. That exemption above all exemptions that could have been suggested by the human mind was a red flag in the face of a bull to the liberal and progressive Members of Congress, who had to swallow it or vote against the whole bill. I do not want anybody to tell me that I did not have a right to vote for an amendment to strike that exemption out of the bill, because I would not be there listening to him tell it.

I could mention other desirable amendments, but these are sufficient to make my point. I know that inability to get a vote on such amendments cost the bill votes and required others to swallow these objectionable features of the bill if they wanted to cast their vote for the principle of the bill. And on the heel of it all, those Members who wailed about the action of the committees for proceeding as requested by the sponsors of the bill, and all Members who voted against the bill and desire to take advantage of the situation, can now go back to their people and pass the buck to the Committee on Ways and Means and the Committee on Rules—and they will do it.

In my judgment, it is high time the Townsend movement got down off its high horse. In the face of the material and contradictory changes which have been made in these successive bills, there is no longer any face for the claim that each particular bill is perfect and cannot be amended. The laws of the Medes and Persians were unchangeable, but they died.

Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

Mr. KEEFE. Mr. Speaker, for 5 years the Nation has been intensively discussing the problems of old age and the necessity for making adequate provisions for the payment of old-age pensions.

Out of this welter of discussion there has crystallized an overwhelming sentiment throughout the Nation which clearly recognizes the existence of the problem and the necessity of legislation to aid in its solution. It is exceedingly difficult to find a person today who does not admit and concede that it is a fundamental duty of the Government to make provision for the care of the aged in such a manner as will tend to relieve them from the constant specter of want and despair in their declining years.

Two schools of thought have developed. One school adheres to the so-called social-security plan, involving the matching of State funds by Federal grants, and supported by a system of pay-roll taxes. The other school demands an outright Federal old-age pension plan under which livable annuities will be paid to the aged direct from the Federal Government, the cost to be financed by the imposition of taxes on a pay-as-you-go base.

Many plans involving the latter consideration have been advocated, the most prominent among them being the so-called Townsend plan, which has crystallized in a bill submitted to the Congress by the Ways and Means Committee of the House.

Nearly 5 months of hearings were held by this committee on this subject in response to the demands of the millions of thoughtful citizens of America, and while the Townsend plan has been heralded as pretending to pay annuities of $200 per month, the sober judgment of Members of Congress and the men and women of America dictates the utter impossibility of such a program ever being enacted into law. What the proponents of this plan really demand is an adequate, decent, old-age pension plan to be financed on a pay-as-you-go basis, and the hope of millions of citizens of America was and is that out of the hearings on the Townsend plan such a program would be evolved and be submitted in the form of legislation to the Congress. Instead of doing this, however, the Ways and Means Committee, apparently determined to make the issue a political football, and instead of responding to the petitions of the citizens of America, who asked for the passage of a Federal old-age pension plan based on soundness and common sense, saw fit to report to the House a bill, without recommendation, sponsored by the Townsend groups, which bill is admittedly imperfect and which does not in all of its particulars measure up to what the members of the Townsend organization themselves expect or want.

The bill was brought to the House under a rule which prohibited any amendments, or any change, with the one hope and expectation on the part of the committee that it would be voted down and be temporarily forgotten.

Those of us in Congress who are desirous of seeing a Federal old-age pension plan written into law, have demanded of this committee that it prepare and submit to the Congress a bill embodying sound and sane provisions that will provide adequate annuities for the aged of America.

Because the Ways and Means Committee has refused to perform its function and its duty in this regard, in the preparation and presentation of an alternative bill, I have felt constrained to vote for the proposal submitted in the

hope that when this bill reaches the Senate of the United States, that further discussion and clarification and amendment could be had, so that out of all the discussion there would come a sane, sensible, decent, livable old-age pension plan that would meet the demands and desires of the great mass of the people of America who have petitioned the Congress for relief on this subject.

I, as one Member of Congress, refuse to permit the misery of the aged to become a political football to be used for partisan advantage and because of the manner in which this bill was submitted to the House, and because of the refusal of the Ways and Means Committee to make any recommendation, and because of their refusal to even try to write a sound piece of legislation on this subject, I will vote for the present bill, with full knowledge that while it is imperfect, and is not the bill that I would like to see enacted into law, I know that before it leaves the Senate, if it is passed in the House, it will be reconstructed so as to meet the demands of sensible, thoughtful people throughout the land.

There is no other plan that will be submitted to this Congress, and if the issue is to be kept alive and any opportunity afforded for an ultimate vote on a sound program, sound judgment dictates that the bill be passed in the House and messaged to the Senate, where an opportunity will be afforded to reconstruct the program and wipe out the imperfections which even the Townsend supporters admit are contained in the present bill.

The Ways and Means Committee have indicated that they propose to offer some amendments to the Social Security Act, enlarging its scope and providing some slight additional benefits to the aged. It is my judgment that the old people of this country will receive no adequate relief under this proposed program and that the burdens placed upon industry, under it, will continue as in the past, and instead of solving the problem and meeting it head-on, in this Congress, we will only be temporarily sidetracking the issue and intensifying the demand which will surely come in succeeding Congresses, until the representatives of the people finally write a Federal old-age law that will be responsive to the needs of the aged people of this country.

I have always advocated, and still maintain, that the aged people are entitled to relief now and that the issue should not be stalled along, year to year, because it cannot be stifled by ridicule or silenced.

The present Congress, dominated and controlled by New Deal spokesmen, committed to the continuation of the social-security pay-roll tax plan, does not intend to write an adequate Federal old-age pension law, and I cast my vote in protest against this attitude, in the hope that some time a Congress will come into being that has the courage to deal with and to solve this great national problem.

Old-Age Pension Bill

EXTENSION OF REMARKS

OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

Mr. WOLVERTON of New Jersey. Mr. Speaker, it is my intention to cast my vote for the old-age pension bill, sometimes called the Townsend bill, now before this House. I do so not because I am in accord with all of its provisions. Some are visionary and others impractical, but I am strongly in favor of the principle of old-age assistance. Thus my vote will be cast in favor of the bill as a declaration upon my part to support legislation that will provide more adequately for our aged than is now provided for under the provisions of the Federal social-security law and State statutes.

It is regrettable that the Democratic majority has brought this bill before the House under a gag rule that does not permit any amendment, even of a perfecting character. There are amendments that could be made and should be made that would materially improve the bill. Many of these have been acknowledged as necessary. To have made such would have undoubtedly brought additional strength and support to the bill. I am inclined to think that as the Democratic majority of the House was opposed to the bill that there is much to justify the thought that the purpose in bringing the bill before the House under a gag rule may have been to preclude any amendments that would have corrected imperfections or otherwise improved its provisions and thereby made it reasonable and workable. To have done so would have gained for the bill much additional support. In fact, there is a possibility that if opportunity had been given to remove some questionable features and insert others that would have been more acceptable there might have been sufficient additional support to have enacted an honest, workable, and worth-while old-age pension bill. However, I am not willing to withhold my support from the bill merely because it is not suitable in all of its particulars. To do so would be to give more importance to details than to the real principle involved. The bill, notwithstanding any imperfections it may contain, definitely declares a policy of providing more adequate old-age assistance. I am in favor of such, and my vote is cast in order to make that principle effectual. If there had been no gag rule it would have been possible to have had a bill that would have justified support not alone upon the basis of the principle involved but also upon the basis of the detailed provisions contained within the bill.

I voted for the social-security law now in effect. At the time I did so I pointed out the inadequacy of its provisions for the aged. I voted for amendments that would have increased the amount payable for their assistance. The Democratic majority opposed all such liberalizing amendments. Today it is forced to acknowledge the inadequacy of the provisions of the social-security law in this respect. In fact, it is even promised by administration leaders that a bill will be brought to the House before the present session of Congress concludes that will amend the Social Security Act and liberalize to some extent the old-age provisions now in effect. If this is done, then credit should be given to Dr. Townsend and other old-age pension groups for having aroused sufficient sentiment throughout the Nation to make it necessary for the administration to provide better treatment of the aged. Certainly whatever legislation may be offered to effect such purpose will have my sympathetic consideration.

During the last few years conditions have gradually grown worse for our old people. Employment seems entirely out of the question so far as they are concerned. Lifetime savings have either been lost or entirely depleted by use during the 10 years of unparalleled depression. The need for assistance cannot be denied nor the justice of their claim ignored. Of course, no serious-minded person would consider the payment of $200 per month as originally advocated by Dr. Townsend. Even Dr. Townsend does not urge it immediately. Nor does this bill make any such payment possible. However, an obligation does rest upon Federal and State Governments to make suitable provision for the aged.

We have recognized the right and justice of legislation that provides compensation for disabled workers during the time of their disability, and compensation for unemployed workers during the time of their unemployment. It is no different policy to provide compensation or assistance benefits to the aged who through disability or unemployment are no longer able to carry on. Certainly the monthly payments to those over 60 years of age that would be provided by this bill would not be unreasonable. Aside from the economic reasons that might be urged in behalf of legislation of this character there is the higher demand of humanity and the so-called human rights that impels me to favorable consideration of this legislation and all other legislation, of whatever kind or character, that seeks to give help to those who are physically handicapped in life. The great need that I know exists justifies me in the support I give to this legislation.

Security for Old Age

EXTENSION OF REMARKS

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

Mr. AUGUST H. ANDRESEN. Mr. Speaker, for many years, I have advocated the establishment of a Nation-wide old-age retirement system. A plan whereby every citizen of this country would have the opportunity of contributing to a retirement fund for his or her security and enjoyment in old age. A system of this character would be financed by all of the people, without cost to the Government, and every citizen would secure the benefit of a reasonable retirement annuity at the age of retirement.

ALL CITIZENS VITALLY INTERESTED IN OLD-AGE SECURITY

Insecurity of savings and investments for the average American has made the rank and file of our people extremely conscious of security for old age. Reliable statistics disclose that from 70 to 80 percent of our citizenship is dependent upon relatives, charity, or the public for a livelihood at the age of 65 years. No one desires to become a public charge or to be wholly dependent upon charity or relatives in the twilight of life. Therefore, Mr. Speaker and Members of the House, if the bill before us today—H. R. 6466—can be made the basis for a sound and self-sustaining old-age retirement system, the Seventy-sixth Congress will go down in history as having accomplished the greatest of all achievements in the interest of humanity.

The author and sponsors of the General Welfare Act frankly admit that the bill—H. R. 6466—is not perfect in every detail. I personally would like to offer important and clarifying amendments, but the Rules Committee has precluded the House from considering amendments of any character whatsoever. However, this fact will not deter me from voting for the principle of establishing a Nation-wide, self-sustaining, old-age retirement system for the United States. Perfecting amendments can and will be adopted by the Senate or when the bill goes to conference. Favorable consideration of the bill by the House today is but the first step in the legislative chain toward final perfection of a self-financed security plan to provide American citizens with security in old age.

Something-for-Nothing Principle Is Smashed in Remarkable Record of National Youth Administration for 4 Years—Concentration of Every Available Dollar on Youth Still Leaves Great Field of Opportunity Untouched—Texas State Federation of Labor Official Takes Lead in Call for Support of President's Proposal To Provide Sufficient Funds To Do Job More Adequately During 1940

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

LETTER FROM HARRY W. ACREMAN, OF AUSTIN, TEX.

Mr. LYNDON B. JOHNSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter I have received from Mr. Harry W. Acreman, executive secretary of the Texas Federation of Labor, of Austin, Tex. Mr. Acreman, voicing what I believe to be a universal opinion, urges approval of President Roosevelt's recommendation for an increase in the National Youth Administration appropriation for 1940 from $75,000,000 to $123,000,000.

It is my conviction, Mr. Speaker, that no agency of the Federal Government has done more constructive work both for the present and for the future of America than the N. Y. A. under the administration of Mr. Aubrey Williams and his efficient corps of assistants.

Had it not been for the N. Y. A. during the last 4 years since its establishment by Executive order of President Roosevelt in June 1935, thousands of American boys and girls never could have seen the inside of a high school or college. They would have been dumped uneducated, unprepared, and untrained into a world unable to give jobs to half the experienced persons applying for them—requiring them, in fact, to live and to support their families swept out in the depression.

The N. Y. A. has relieved the pressure upon our overtaxed labor market like a great dam, storing flood waters to be released in times of thirst and drought. It has kept thousands of boys and girls in high school and college, where they belonged. It has eased the emergency and insured youth the training twentieth century life demands as a requisite for success.

Those deprived of the opportunity to attend high school or college, or through with their formal education, have been allowed to earn about $10 a month on constructive part-time work projects. The work they have done is useful and permanent. Evidences of it lie across every State of the Union and our possessions. It is all a monument to the youth which built and which trained and learned under competent leaders and instructors while it was working.

Not one dime paid out by the N. Y. A. to boys and girls for education or on work projects has been disbursed except in return for actual and useful work performed. High-school and college students have worked for their wages in hours which did not conflict with their obligations to study. High-grade, even superior, work has been exacted on every project. It has not been work of gestures, but work of accomplishment. Something for nothing has not been tolerated.

During 4 years, under restricted appropriations, N. Y. A. officials have been aware that they were like a short-handed crew in a field white unto harvest. For every worthy boy or girl they have been able to reach there has been another just as worthy who has had to be turned away.

Here is how N. Y. A. dollars are spent:

John Jones is a boy 17 years old. He cannot go to school unless he finds a job. If he goes into the labor market to find a job he will compete with someone out of work and perhaps with a family or dependents to support. His school, participating in the N. Y. A. program, tells him to go on with his classwork and it will permit him to earn, say, 25 cents an hour doing useful work about the campus or in the school offices at hours which do not conflict with his studies. It will permit him to work 24 hours a month and earn $6 during a month—for lunches, supplies, carfare, shoes, or other necessities.

Here is Mary Smith, who has finished high school and wants to go to college to train herself for some special profession or calling. Her family is too poor to send her. If she works her way through school by going into the labor market, she competes with someone else who needs a job. The college gives her an N. Y. A. job, taking her out of the labor market and permitting her to train. She works for the college under the supervision of college officials and at rates set by the college. Her hours do not conflict with her work. She may earn approximately $15 a month to help support herself as she trains.

Now we come to Bill Kelly, who is through school. He wants to go to work. If he enters the general labor market as an untrained, unprepared worker, he not only has a poor chance to establish himself in life but he becomes a competitor. The N. Y. A. gives him a job. It is a job on a public project which is not only useful in itself but will permit Bill to learn the rudiments of a trade or profession—prepare him for apprenticeship. It is a job which will help him find him-

self and his likes and dislikes, his talents and capabilities. He can earn an average of approximately $10 a month by working part time.

That is the sort of work the N. Y. A. is doing every day of the year. Constructive, beneficial, American. I have never heard any educational, civic, business, labor, farm, or professional organization lift its voice in protest against the work the N. Y. A. has been doing or the money entrusted to it.

The following letter from Mr. Acreman is typical of the voices raised in its behalf. I feel that Mr. Acreman speaks not only for Texas labor but for all American labor and enlightened American opinion in general as well when he writes as follows:

THE TEXAS STATE FEDERATION OF LABOR,
OFFICE OF THE SECRETARY,
Austin, Tex., May 16, 1939.

Mr. LYNDON BAINES JOHNSON,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN: The President has proposed an increase of from $75,000,000 to $123,000,000 for operation of the National Youth Administration program throughout the next fiscal year, and his organization plan sets the N. Y. A. set-up as a separate entity.

The proposed increase in funds is badly needed. There are now in Texas thousands of young people eligible for participation in the N. Y. A. program who are being denied this advantage, due to inadequate funds.

It is my information that hearings on the bill, in which the N. Y. A. is included, will begin this week. May we urgently request your support and influence on behalf of the National Youth Administration program?

Respectfully yours,

HARRY W. ACREMAN,
Executive Secretary.

The Townsend Recovery Plan

EXTENSION OF REMARKS
OF
HON. W. STERLING COLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 31, 1939

Mr. COLE of New York. Mr. Speaker, during the election campaign of 1938 the Townsend recovery plan was an issue in my district. My position at that time was that I favored a full and complete hearing and study of the plan by the Ways and Means Committee, giving the proponents of the plan ample opportunity to present such evidence and testimony as they might be able to substantiate their claims of the practicability of the plan. I further said that if, after such a hearing and study, the committee was convinced of the soundness of the Townsend proposal and reported the measure favorably to the House I would, in all probability, vote to uphold its determination. This campaign pledge, while its reasonableness appealed to the national officers of the Townsend recovery plan, was not satisfactory to the local Townsend Clubs of the district and I was accorded their strenuous and bitter opposition. Having made that promise it has been my purpose to carry it out even though the support of the Townsend members did not contribute to my reelection.

For nearly 5 months the Ways and Means Committee, composed of 25 of the ablest Members of the House, sat in open sessions to take testimony relative to H. R. 2, the Townsend plan, and H. R. 11, the General Welfare Act. Nobody who wanted to speak was denied the opportunity, nor was any person curtailed in the time allowed for addressing the committee. Hundreds of witnesses appeared or their statements were filed with the committee; the entire testimony fills 3 volumes, with a total of 2,600 pages. There never has been the slightest intimation that the proponents of the plan were not given a full and complete hearing. Eventually the committee, with but two dissenting votes of members who were opposed to the plan, determined to report H. R. 6466, representing the final and seventh version of the Townsend idea, to the House without recommendation either for its passage or its rejection.

Mr. Speaker, my campaign pledge to my constituency has been kept. The hearings have been held; the plan is before the House for action. Now it is my responsibility, as Representative of 240,000 people, to cast my vote. The decision which I have reached is not a pleasant one. I recognize that there are thousands of aged persons in need of public assistance who have been taught to believe that they will receive $200 per month upon the adoption of this plan, and who look to me to stand by them. I recognize that the vote which I shall cast will be construed by them as from one who is blind to their wants and deaf to their supplications. I recognize that I shall be charged with being the tool of the moneyed interests and great wealth, with placing property values above human values, and with having no understanding of nor sympathy with the problems of the aged. I recognize it will be said that in my heart there is no portion of the milk of human kindness.

In truth, however, it is because I do know the plight of the aged, because I do have sympathy for their predicament, because I realize that it is a public responsibility to care for them in an adequate and comfortable way, because I have the greatest desire to support a system which is sound and permanent that I cannot bring myself to endorse a proposal which is bound to break of its own weight, which will bring economic ruin and chaos to the country and which in its collapse will carry to greater depths of despair the very persons whom we now seek to assist.

I have carefully reviewed the testimony given before the committee. I have listened to and read all the debate on this proposal in the House. Of the 25 members of the Ways and Means Committee who have studied the problem at firsthand, not a single one rose on the floor to voice his support of the merits of the plan. Every committee member who has spoken on the bill has denounced it vigorously and bitterly as being unsound and impractical, a fraud and delusion, a farce and fiasco. Of the scores of persons who appeared before the committee, the only ones to speak in behalf of the legislation were officers of the Townsend National Recovery Plan and several Members of Congress. The proponents offered no testimony of an economist, of a tax expert, nor of a businessman. None of them discussed the economic phases of the proposal. All of them extolled the objectives of the plan and certainly there is no one who does not agree with them in that respect.

There was no representative of labor nor of agriculture who testified in behalf of the proposal, but, on the contrary, there is ample testimony that the scheme would be ruinous both to labor and agriculture. Mr. William Green, president of the American Federation of Labor, in a letter to Representative DOUGHTON, chairman of the committee, said:

MY DEAR CONGRESSMAN: In the federation's testimony presented on March 7, 1939, before your committee by Mr. Woll, chairman of our social-security committee, the position of the federation was clearly stated in opposition to the Townsend bills. We believe that a clear distinction must be drawn between the type of benefit which is received as a matter of right by designated beneficiaries for whom insurance programs have been established and that which is granted as relief to persons in need. The rights which have been established under the social-security laws have been primarily for persons whose economic circumstances left them prey to insecurity which the Nation wished to remove, and have been definite in respect to the funds and the amount of benefits. Although it would be a happy situation if no consideration of needs were necessary, so long as we must raise the money for whatever pensions are granted we must consider the cost. It is unreasonable to tax persons ill able to pay and give pensions to many who are already secure enough not to need assistance in their old age.

We are convinced that to pretend to offer up to a maximum of $200 a month to all old persons regardless of need, as is done by H. R. 6466, is both dishonest and undesirable. It is dishonest because no such large sums could be paid to individual annuitants even with the burdensome taxes proposed. The amounts actually paid would be very much under the maximum and would fluctuate from month to month so that no real security would be achieved for those who really need it, while others would receive sums entirely unnecessary in their economy.

It is undesirable because it taxes wages and gross incomes with practically no regard for ability to pay, and because it offers tremendous incentive to integration of producing and marketing units at the expense of small independent business. The independent retailer, the consumer, and the wage earner will be the losers under this program. A gross income tax of a flat percent cannot be

other than regressive in effect. It is a thoroughly bad form of taxation.

The incomes of most wage-earning families are too small to justify this 2-percent income tax designed to furnish pensions for old persons regardless of need. The wage earners spend now nearly every cent of their wages. No increase in national purchasing power can be achieved by taking money from them to give to another part of the population.

The American Federation of Labor believes in enlarged social security for the Nation but achieved by reasonable methods. It condemns H. R. 2 and even more H. R. 6466 as wholly unreasonable devices and as unable to fulfill the implied extravagant promise of large pensions on the basis of which they make their appeal.

Not only will the laboring man be required to pay a tax of 2 percent on the wages which he received but he will also be required to pay the inevitably higher price for the goods which he buys. The executive secretary of the Railway Labor Executive Association also in a letter to Mr. DOUGHTON said that the members of his association "are definitely opposed to this bill."

As to the effect of the measure upon the American farmer there is ample testimony from acknowledged leaders of agriculture. Mr. Edward A. O'Neal, president of the American Farm Bureau Federation, transmitted to the Committee an analysis of the measure in which it is said:

Leaving out of consideration the merits or demerits of the pension features of this plan, concerning which the American Farm Bureau Federation has adopted no definite policy as yet, this proposed measure, if enacted into law, would impose upon American agriculture and the Nation a crushing tax burden which would be intolerable and which would ultimately destroy our economic system.

The tax policies adopted by the American Farm Bureau Federation in 1933 and reaffirmed with modification from time to time since, justify the Federation in condemning and opposing vigorously this proposed tax both from the standpoint of the nature of the tax and the alarming extent of the tax burden which it would place upon American agriculture.

Since early in the 1920's the American Farm Bureau has opposed the levying of a Federal sales tax by the Federal Government and has advocated the establishment of an equitable tax structure based upon ability to pay.

This proposed bill levies the most vicious form of a Federal sales tax. It proposes to tax every farmer, every worker, every person receiving income from virtually any source, and the tax is levied on the total value of every transaction, every wage or salary payment, and every income payment.

The tax is not based upon ability to pay but in fact bears heaviest upon those least able to pay. It levies the same rate upon the poor as upon the rich. Even the unemployed must pay the tax upon his food, clothing, and shelter.

Being levied upon every transaction and service again and again as commodities move through the channels of trade it is pyramided to the greatest possible extent like compound interest, by the time it reaches the consumer.

A disproportionate share of the tax would be borne by farmers because much of this enormous tax burden on agricultural commodities as they move through distribution channels would be passed back to the farmer, because of the inability to pass on such enormous costs to the consumer.

* * * * * * *

In short, this proposal would launch the Federal Government upon a course which imposes upon the masses of people, one of the most inequitable forms of taxation, which requires immediately as a very minimum an amount of money which would be ruinous in its consequences both to agriculture and to the Nation as a whole under present circumstances, which proposes ultimate burdens to be imposed upon the people that are utterly fantastic but which if really applied would wreck our economic system and perhaps destroy our Nation, and which imposes these heavy burdens unnecessarily upon millions of people unable to bear them, in order to pay excessive and unnecessary benefits to many people who do not need such amounts. It is unnecessary to impose these heavy burdens upon all in order to provide reasonable pensions for those who really need them.

Mr. Fred Brenckman, Washington representative of the National Grange, wrote to the committee in part as follows:

Every man who has social brains and the heart to feel for the wants of the old, the infirm, and the distressed is naturally willing that everything possible should be done to help these members of the human family. However, there is one point that must be kept firmly in mind. It is this: There can be no such thing as personal or individual security that is not based on national security. Any plan that would wreck the United States Government would surely leave each one of us stranded individually. That the Townsend plan would wreck the Government if placed in operation cannot be denied by anyone who will think the matter through and who is willing to look facts in the face. Among other things, it violates that sound principle of legislation which should always be kept in mind, namely, the greatest good for the greatest number. Placing our population at 130,000,000, it would tax 120,000,000 people to the point of extinction to give a joy ride to the other 10,000,000 people over 60 years of age.

According to census figures, the average farm owner of the United States is about 50 years of age. It may be assumed that his wife has lived about as long. Why should the farmer and his family, who toil from dawn until dusk, be asked to pay a part of the proceeds of every sale they make to help maintain in idleness or even luxury those who have attained the age of 60 or more? The same question may be asked with reference to those who are engaged in any other industry, vocation, or business.

There is only one basis upon which any government can endure, and that is that the people must support the government. Any attempt to reverse this principle, asking the government to support the people, could not fail to result in disaster.

Not only would the laborer and the farmer be adversely affected by this measure, but business, both big and little, could not withstand it. The stock broker, the real-estate agent, the commission merchant—all those businessmen who deal on a small margin of profit would be forced to close. It is thought that the small-business man would be benefited by reason of the fact that the funds of the pensions would be used to buy the articles on the shelves of the store. As a matter of fact, Dr. Townsend admitted that his plan would destroy the small merchant, the country storekeeper, the independent businessman—all of whom employ from eight to ten million persons. And the curious part is that Dr. Townsend says he thinks they should be destroyed.

Reference has been made to the fact that the plan has been in operation in Hawaii for some time and that it has proven successful. It is true that there is a somewhat similar system as the Townsend plan, but it differs in many respects from the one which we are now considering. The rate of the tax is lower, a great many services and commodities are exempt, it has raised the cost of living in Hawaii far in excess of that in the United States, and it has produced but $15 per month for the pensioner.

Mr. Speaker, the crowning stroke which persuaded me to make the decision which I have is that the proponents of the measure admit that it is filled with imperfections; that it is not constitutional; and in fact Mr. Jeffries, vice president of the Townsend National Recovery Plan, expressed to at least one Member of Congress the fervent hope that the bill would not pass. What is one to believe when he hears of such chicanery as that except that it is the desire of those who are on the receiving end to continue the flow of dimes and quarters into headquarters from those poor elderly people who have been deluded by the siren song of the promised utopia.

In the past I have voted in support of a measure which would have made it possible to pay $40 a month to the elderly people. It cannot be said that I am opposed to them or opposed to an adequate old-age pension. It is my responsibility to represent the interests of all of the people of my district. I cannot bring myself to support a measure which would place a crushing tax burden upon 92 percent of the people in order to benefit but 8 percent, and at the same time to ignore the needs of the young widow with her family of small children or the needs of the crippled and afflicted who might not have reached the age of 60 years. There is a way that this problem can be solved but it must be based on more sound and equitable principles of taxation and finance than the one presented to us today.

The easy course for me to follow would be to support this measure. Not since I have been in public office have I chosen to vote contrary to my sincere convictions. Much as I would like to help the old folks I cannot make an exception to that rule. I am admonished, as are we all, by the words of Martin Luther, who said:

To act contrary to conscience is neither safe nor upright.

If the time ever comes when the people of my district in New York State choose to send to Washington as their representative a person who is not ready to vote his convictions, who will succumb to the pressure of organized minorities in order to curry their favor and who will follow any political whim as it may occur, then I am ready to retire to private life, but when I go it will be with head erect and with the

satisfaction of knowing that I have exercised to the fullest extent the limited powers and ability that have been given me. I would rather be right with my judgment and my conscience than to remain in Congress.

H. R. 6466

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1939

Mr. ALEXANDER. Mr. Speaker and Members of the House, I have received upward of 5,000 requests from residents of my district that I support the Townsend plan as represented formerly in H. R. 2 and now in H. R. 6466. These requests have come from every corner of my district and not only from the older people but from all ages. They have come not only from private individuals, but from many groups and organizations including businessmen, lawyers, doctors, teachers, and other professional groups. I have one petition with nearly 1,000 names from southeast Minneapolis, in which is located the second ward, which is one of the most conservative wards not only in my district but in the entire city. There are other petitions from other sections such as Lindstrom, with over 200 names, including every businessman in that section, with only one or two exceptions, Wyoming, Taylors Falls, St. Francis, North Branch, St. Bonifacious, Grandy, Excelsior, Hopkins, Sunrise, Almelund, Shafer, Robbinsdale, and others.

On only one other subject have I had such an avalanche of correspondence, and that is with reference to the question of war and peace. And rightly so, for in my estimation there is a direct connection between the question of whether this country will keep out of war during the next 2 or 3 years and our economic situation. There is not a shadow of a doubt but that this Nation's business would boom if the Townsend bill were to be made a law, because it would result in better monetary circulation and also in more business turn-over, the two things which everyone agrees are essential if we are to get back to prosperity.

As a direct example of what happens when we distribute money to several millions of people, take the case of the payment of the soldiers' adjusted compensation in 1936. Business, not only in the Middle West, but throughout the entire Nation, started to improve, so that in the spring of 1937 the President decided that business was so good that he could reduce relief expenditures and cut down on Federal spending for unemployment. The improved situation was reflected in every aspect of our national life from the ex-soldier, the small-store keeper, and the businessman to Wall Street and our great corporations. Then, only slightly over 3,000,000 of our population suddenly were given money to spend, whereas, under the Townsend plan, upward of 10,000,000 would be included in the money movement. If time and space would permit, I could go on with countless illustrations of this economic phenomenon pointing to the need of something to create more turn-over.

We created a similar situation during the World War when we financed about $40,000,000,000 worth of manufacturing and loaned upward of one-half of that amount to foreign nations with which to purchase our goods. Everyone had a job at good wages then. If we could countenance the expenditure of such vast sums of money in such a questionable way for destruction and war, then it seems to me that it would be much better now in the interest of peace and in the interest of our working people and the aged, if we were to tax ourselves and establish a spending program such as proposed in this bill in order to promote peaceful business and a sound governmental economy. Now is the time to plan for, to promote, and to preserve peace. A vote against this bill is as much a vote for war as a direct vote for war will be 2 or 3 years hence when the stress and strain of our economic situation has brought us to such a low ebb in our national existence that the only question will be whether to allow our millions of unemployed and poverty stricken to starve or whether to sell goods, supplies, and munitions to war-torn Europe and Asia, which will thus again enmesh us in Europe's troubles.

I for one do not want that problem on my hands when that day comes; therefore I am glad to listen to the voice of thousands of my constituents in order that we may build peace and prosperity now before it is too late.

An Explanation of the Administration's Silver Purchase Program

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 5, 1939

EDITORIAL FROM THE WASHINGTON POST AND ANSWER THERETO

Mr. WHITE of Idaho. Mr. Speaker, in answer to some of the editorial comment and misleading statements published concerning the administration's silver buying program, I desire to insert in the RECORD an editorial that appeared in the Washington Post and my answer, which was printed in the Post:

[Editorial from the Washington Post of April 22, 1939]

SENSIBLE ADVICE

Not a single valid argument can be advanced for continuance of the Treasury's silver-buying program. Instead of encouraging the monetary use of silver, it has resulted in the abandonment of the silver standard in China and Hong Kong and has seriously upset the currency systems of a number of countries.

Our huge silver accumulations have not helped us to solve our economic problems, or even to raise the price of silver itself. In fact the world price of that metal is lower today than it was when the 1934 purchase act was passed, despite the support rendered the market by Treasury buying. Furthermore, although it has bought about 2,000,000,000 ounces of silver, the Treasury is not much nearer fulfillment of the terms of the law than it was at the time of its passage.

Meantime approximately $1,200,000,000 of silver certificates have been issued against the metal acquired. And a slightly greater amount could be issued against unpledged silver held by the Treasury. Testifying before the Senate Banking and Currency Committee, Marriner S. Eccles, Chairman of the Federal Reserve Board, pointed out that these silver certificates are displacing Federal Reserve notes in our currency system and increasing the volume of member bank excess reserves, thereby adding to the danger of inflation.

Since approximately 90 percent of the silver purchased by the Treasury is imported from other countries, Mr. Eccles' recommendation that foreign buying be discontinued would involve virtual abandonment of our present silver policy. It would relieve the Treasury of the necessity of acquiring huge amounts of a metal not acceptable to foreign governments or central banks in settlement of balances. It would put an end to a policy which enables foreigners to dump great quantities of overvalued silver into this country in exchange for American goods.

While there is not now and never was any justification for singling out the domestic silver industry for preferential treatment, it is probably expedient to make some concessions to domestic producers who have become accustomed to rely upon the subsidies handed out to them by an indulgent government. Consequently, Mr. Eccles, instead of urging complete repeal of the silver program, recommends retention of the domestic subsidy at a reduced rate and placement of an embargo upon further imports. That appears to be a sensible compromise which, for all practical purposes, would terminate a foolish and futile experiment.

[Letter to the Washington Post appearing in the April 30, 1939, issue]

WASHINGTON, D. C., *April 23, 1939.*

To the EDITOR, WASHINGTON POST:

At a time when the national Budget is hopelessly out of balance, when the Congress is cudgeling its brain to find new sources of

income through taxation to meet the rising cost of Government, you state in your editorial Sensible Advice, appearing in your issue of April 22: "Not a single valid argument can be advanced for the continuation of the Treasury's silver-buying program."

In considering this statement, let us consult the record of the United States Treasury in dealing with silver. We have today $1,645,729,305 in silver certificates, legal tender money, outstanding as shown in the Treasury statement of April 17, money circulating in the channels of trade and business which has been paid out by the Treasury in paying Government expenses flowing into circulation free of any interest charge as the cost of creating and issuing this form of currency. This class of the national currency, silver certificates redeemable in silver dollars, is placed in circulation by the Treasury at a profit of 100 percent on domestic silver and 200 percent on foreign silver and circulates free of interest in contrast to the cost of circulating Federal Reserve notes supported by interest-bearing eligible paper—short-term business notes or bonds.

We find that the Treasury's silver-buying program is operated to place a large volume of interest-free currency money in circulation to supply business with a medium of exchange at a profit of 100 percent and over to the Government effecting a saving in interest (a hidden tax) on business. If this is not a valid reason as well as an "argument" for the continuation of the silver-buying program, what "valid argument" does the Post advocate for the discontinuance of the silver-purchase program and the replacing of redeemable silver certificates with irredeemable interest-yielding Federal Reserve notes?

Now with the surplus commodities, particularly cotton and wheat, burdening our Government finances through the Reconstruction Finance Corporation and 10,000,000 men out of work seeking employment, is the Post serious in advocating putting "an end to the policy which enables foreigners to dump great quantities of overvalued (?) silver into this country in exchange for American goods"?

When the American people are eagerly accepting this silver in the form of silver certificates, money, to finance trade and business and the Government is making 200 percent on the exchange at a time when Government income is so sorely needed, must we keep our surplus commodities and pile higher and higher this burden on the Federal Treasury?

And while we are considering the price paid the miners for domestically mined silver, let me remind the Post that the Government derives a large source of tax income from the operation of these mines as disclosed by the record. One of the largest of the few producing silver mines in this country, the Sunshine at Kellogg, Idaho, paid 10.35 cents tax on every one of the 11,352,986 ounces of silver produced last year. Another mine in the district I have the honor to represent, the Hecla at Wallace, Idaho, paid in taxes at the rate of $266 for each of the 465 men employed last year. The Bunker Hill, one mine in one hill in Idaho, paid $376,095.55 in taxes in 1937.

Speaking of the subsidy to the silver miners when the Government is making 100-percent profit in buying their product paid for in certificates drawn against that product and at the same time collecting a huge tax income from the mines direct and other taxes all along the line, may I suggest that instead of advocating the cutting off of this source of Government income that the Washington Post, the great morning newspaper at the National Capital, use its influence to secure the adoption of an adequate, workable money system free of the continuing interest charge as a means of restoring permanent national prosperity?

Clarks Hill Dam Project

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

STATEMENT BY HON. BUTLER B. HARE BEFORE SENATE COMMITTEE ON COMMERCE, MAY 31, 1939

Mr. HARE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement filed by me before the Senate Committee on Commerce, May 31, 1939:

The Savannah is one of the longest and largest rivers of southeastern United States. Beginning at its mouth on the Atlantic Ocean, it forms the boundary line between South Carolina and Georgia for a distance of about 320 miles, where it is formed by the confluence of the Seneca and Tugaloo Rivers, the Tugaloo forming the remainder of the boundary line between the two States. The Seneca and Tugaloo Rivers have their source in the Blue Ridge Mountains, where the annual rainfall is from 60 to 80 inches; consequently, these three streams, the Savannah, Tugaloo, and Seneca Rivers, together with their tributaries or feeder streams, furnish an outlet for an unusual amount of water from the mountains to the sea.

NAVIGATION

A century ago or more, the Savannah River was navigable from its source to its mouth, cotton and lumber constituting the larger portion of the outgoing freight, brick imported from England being the leading incoming tonnage, which was no small amount. Navigation by shallow-draft boats has continued to date from Augusta to the Atlantic, a distance of 220 miles. At the mouth of the river the United States Government maintains a channel of 30 feet over the ocean bar, and a channel of 26 feet is maintained at the principal wharf at Savannah, a city of 90,000 population or more, located on the river about 17 miles from its mouth.

The problem of navigation, as well as flood control, from Augusta to the sea has been one of commanding importance for 50 years or more. Augusta, with a population of about 70,000, located on the banks of this river, is one of the largest inland cotton markets of the United States. For more than three-quarters of a century it has been the center of trade, covering a radius of 75 miles or more in both South Carolina and Georgia. Therefore, navigation on the Savannah is not a new problem. The Federal Government has made appropriations for 40 years or more at different times for aiding navigation by the construction of training walls, winged dams, and bank protection, the controlling depths at low water being from 3 to 4½ feet. It is proposed by the erection of the improvement here involved to provide a 6-foot channel from Augusta to Savannah for at least 85 percent of the time. The tabulated estimate of opinion of over 1,000 prospective shippers and receivers of freight shows that over 1,000,000 tons of freight will be available upon the completion of this project.

FLOOD CONTROL

Following the cutting and removal of forest timbers in the Savannah River Valley and the clearing of lands of adjacent areas, the control of flood waters became a problem of great and increasing importance. Augusta has spent upwards of $2,000,000 in constructing levees along the Savannah River to prevent flood waters from covering the city. The city of Augusta has a number of times been inundated by flood waters of the Savannah, and within the memory of the average citizen frequent floods have covered vast areas between Augusta and Savannah inundating thousands of acres of most fertile lands, destroying crops and livestock amounting to millions of dollars in value Many plans have been devised, without avail, to obviate the overflow of farmlands on both sides of the river. In recent years, however, engineers have found that it is easier and cheaper to control flood waters by constructing and maintaining reservoir dams near the source of streams in which floods are certain to occur. Following this plan of storing flood waters the question of using them for navigation purposes logically suggested itself. Conditions on the Savannah afford an excellent opportunity to justify the wisdom of such a policy.

POWER DEVELOPMENT

In more recent years it has been found that the waters impounded to prevent floods and the loss of life and property, which usually accompany them, when loosed for navigation purposes, can be utilized in generating electric power, which has become such an indispensable and a daily enlarging factor in our modern life. Hence, navigation, flood control, and power development on the Savannah have become associated as one problem.

INVESTIGATIONS AND RECOMMENDATIONS

When I came to Congress in 1925 representing the Second Congressional District of South Carolina, I found that my predecessor, the Honorable James F. Byrnes, now United States Senator, the Honorable Fred H. Dominick, who then represented the district I now have the honor to represent, Congressman Brand, Congressman Vinson, and Congressman Edwards, who at that time represented adjacent territory on the Georgia side of the river, had all manifested more or less interest in the problem of flood control, navigation, and power development on the Savannah. Two years later the River and Harbor Act of 1927 made provision for a survey and study of these problems as related to rivers in Southeastern United States, including the Savannah River. The report was to be prepared and submitted to Congress under the direction of the Secretary of War and the Chief of the Board of Engineers.

The survey and report were not completed and submitted to Congress until November 1934. The feasibility of flood control, navigation, and power development by one or more reservoir dams above Augusta was recommended, the reasons therefor being set out at considerable length and detail in the report.

On August 15, 1935, the President of the United States addressed a communication to the Secretary of War, the Secretary of the Interior, and the Chairman of the Federal Power Commission, directing that a three-member board be created, consisting of one representative of the Corps of Engineers, one from the Natural Resources Committee, and one from the Federal Power Commission to make a further study and prepare a report on the advisability of proceeding the following year with the Savannah River improvement by erecting a dam at a point approximately 21 miles above the city of Augusta. On February 29, 1936, the committee submitted a report, which has been filed and is now before this committee for consideration.

It shall not be my purpose to discuss the report at length or in any detail but think it appropriate to call attention to some of the findings and recommendations of the committee. Two feasible dam sites were found to exist in the immediate vicinity of the

point designated by the President. These were referred to as 222.3 miles and 222.7 miles from Bull Street in the city of Savannah, Ga. However, the committee did not hesitate to state that the site at 222.3 miles was found to be the more feasible for the proposed development and is referred to as the Clarks Hill project, because of its proximity to Clarks Hill, S. C., a small village near the river on the Charleston & Western Carolina Railroad. The report suggested that this site was exceptionally suited for the creation of a reservoir to impound waters for flood-control purposes; that it is equally well suited for storage waters to be used when needed for navigation purposes on the river between Augusta and Savannah, Ga., saying, "This reservoir is located well down the main stream of the river so that a large volume of water for filling purposes each year is definitely assured." "The reservoir could be operated in such a manner as to reduce the stage of major floods at points below the dam, without detriment to either navigation or power, and thus increase the margin of safety at Augusta against possible inundation." That is the committee found that the construction of a dam at Clarks Hill will prove to be an insurance against floods on the Savannah River, a distance of over 200 miles, and will insure a 6-foot channel for navigation for over 80 percent of the time. It found also that, "The Clarks Hill site is one of the best undeveloped power sites on any of the streams entering the Atlantic Ocean from the South Atlantic States."

More recently the report referred to was submitted by the President of the United States to the Natural Resources Committee and Federal Power Commission for a further study and report, both of which have approved the recommendations of the special committee in most enthusiastic terms. However, these reports reached Congress too late to be considered and included by the Rivers and Harbors Committee in the bill which recently passed the House of Representatives.

But these reports are all now before your committee, and it is unnecessary for me to review them at any length. It is sufficient to say that the Natural Resources Committee, as well as the Federal Power Commission, find and conclude that the industrial possibilities of the Savannah River Valley and adjacent territory are practically in their beginning, although within a radius of 75 miles of this site we find the center of the great textile industry of both South Carolina and Georgia. The Federal Power Commission concludes there is, and will be, ample and suitable markets for all of the power to be generated at this plant when completed.

It is made clear that the impounded waters will be sufficient to obviate the possibility of a major flood on the Savannah at any point between Clarks Hill and the Atlantic Ocean. It is shown further the waters can be loosed in dry weather and provide a 6-foot channel from Augusta to the ocean for at least 85 percent of the time. In addition, it is estimated that there can be generated upwards of 400,000,000 kilowatt-hours of electric current for rural electrification if needed, as well as added industrial enterprises.

Permit me to say, in conclusion, that it has been my privilege and honor to represent every county touching the Savannah River and its tributaries on the South Carolina side from the North Carolina line to the Atlantic Ocean, and I hope to see, before I retire from Congress, a development that will obviate the possibility of further disastrous floods on this stream and a development of electric power sufficient to meet the needs of every person and every activity adjacent thereto.

This proposal has probably been studied, investigated, and enthusiastically recommended by more governmental agencies than any other similar project now before Congress, and I confidently hope that it will be approved and authorized by your committee.

Memorial Day Address

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

ADDRESS BY HON. RAYMOND S. SPRINGER, OF INDIANA, MAY 30, 1939

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Memorial Day address delivered by the gentleman from Indiana [Mr. SPRINGER] at Muncie, Ind., on May 30, 1939:

This is the Nation's day of remembrance!

It is consoling, indeed, to come to this beautiful spot where the green mounds are enshrouded with fragrant flowers, where all is quiet and solemn, where the very earth seems to be hallowed ground. There is no confusion here, all strife and controversy have ended—but we meet in the presence of sweet and peaceful sleep of the dead.

Today we call the roll of those noble men that we, who remain, may pay due homage unto them. They are the soldiers, sailors, and marines of all wars, who gave their last full measure of devotion to the cause of their country. These brave men and women, and to all of our countrymen who have made such a splendid contribution to our cause of progress and who have passed beyond, we honor and revere on this annual Memorial Day. We shed our common tears upon their graves, we place our wreath upon the sepulcher which contains the mortal remains of our loved ones and we turn away to meet again the hardships and the burdens, the joys and the sorrows, of life. This is the inevitable plan of earthly existence.

We have had our conflicts in the days gone by. Our fervent prayer, today, is that we shall have no more of war.

When the smoke of battle cleared away in 1776, independence came to our Nation and our flag had been conceived and brought before the eyes of the world.

In the beautiful cemeteries throughout our land stand those markers upon which is engraved this simple sentence: "He was a Revolutionary soldier." To we who love liberty and proclaim freedom for our people, the silent tomb of those who gave so much to this noble cause is sacred and hallowed ground.

We cannot forget, in this moment of sacred memory, those conflicts of 1812 and 1846; the flower of American manhood marched forward, keeping the step with the shrill notes of the fife and the beating of the drum, following our flag. These conflicts did not long endure; the finances and the manpower of nations cannot continue endlessly when engaged in terrific combat—when men die for their country. When those wars had ended our boys came back home—not all of them, because those great sacrifices had been made—bringing our flag, the emblem of freedom and justice, spotless before the eyes of the world.

This is the day of the veterans of the Civil War. This is their memorial. We are here to do them the great honor which they so justly deserve. When they marched away from home, so proud to serve their country, they were the youth of our land. Their eyes were keen and bright, their step was quick, their faces radiant with the ambitions of young manhood and the vision of their country was before them. Their cause was a noble cause. No one can tell of their hardship; history can never recount their terrible suffering; the mental anguish those veterans endured will never be fully understood.

These men faced the enemy when hospitals were few and when surgery was crude and undeveloped; when the equipment necessary was of the commonplace, and when the wounds suffered were cauterized by their own hands; such was their day. The skill of today was not available when these veterans were under fire; their struggles were many and their hardships were great. Then the day came when the war was over. Our boys came back home—not all of them. Today, on many of the southern sunny battlefields, in unknown and unmarked graves, rest so many of our "boys in blue"—awaiting the resurrection morn. Yet, when that great conflict was over, our Nation was perpetuated and our flag was made supreme.

Since that happy day, time in its undisturbed flight has winged onward, keeping no account of heart beats; we are appalled at the few veterans who remain among us. In my own county, out of a great body of men who served we are honored with the presence of but two veterans of the Civil War. Throughout your own county those fine men who made such a fine contribution to our Nation have silently joined their comrades who have gone before. I pause in the presence of the few veterans who are with us—all that now remain of that mighty army of men—to say, "May God bless you and keep you—the saviors of our Nation."

Again, in 1898 the call was sounded and the boys of Spanish-American War days responded. They marched into a foreign land where disease was a menace, and where the poisoned bullets were ever a threat; they encountered every hardship, and when the war was over our boys came back—not all of them—bringing our flag still spotless and stainless before the world.

May I refer, at this moment, to my own comrades—the veterans of the World War? I can speak of them because I was one of them, and I recall how proudly they followed our flag as Americans. When we think of war we usually think of the terrific cost of war; may I analyze some of the cost of the World War? Our Army consisted of 4,791,172 men and women. We lost in action and from other causes 173,274 of our citizens; 205,690 of our boys were wounded; we have already paid out of the Federal Treasury the staggering sum of $7,572,621,751.75 to our veterans and to their dependents since the war ended. The greatest loss, however, was in the loss of life and in the disabilities suffered by our soldiers; the peak of the disabilities suffered has not yet been reached, and it will be many years before that great loss has been ascertained. And when we remember the World War cost the people of this Nation the sum of $1,000,000 and more each hour, from April 1917 to April 1919, we are reminded of the staggering cost of war. The available reports show that the cost of the World War was an amount sufficient to have carried on the Revolutionary War for a period of 1,000 years at the respective rates of expenditure entailed by those wars. Then, with that great and staggering loss of lives and money why do some of our leaders talk of war? They should talk of peace, of rehabilitation in our land, and happiness for our people.

But that war was soon over and our boys came back home again. We can think today of our comrades in the little cemeteries in France, where the simple wooden cross marks their place; there our noblemen sleep.

Therefore, today, we salute the veterans of all our wars! We are constrained to say:

"On fame's eternal camping ground
Their silent tents are spread,
And glory guards, with solemn round,
The bivouac of the dead!"

If these, our dead, could speak to us they would express a wish that we say something for our Nation! Let us speak of our today, as it is.

We have heard so much about war during the past few months that our people have become appalled at the thought of another conflict. It is true that Europe is in a troubled condition; the regime of the dictators in many foreign countries has caused much confusion and strife. However, they do not want war. May I say that we do not have any interest whatsoever in those controversies and our leaders should guard their public utterances and their actions in this critical period. By that expression I mean that those who speak with authority for our Nation should be temperate in speech and every utterance should be weighed in the balance of diplomatic care. We must not become involved in any foreign entanglements—we do not want any war anywhere! We want an enduring peace! I trust the people will not be frightened at this careless propaganda which is largely within our own boundaries. May I say to you that as long as I express the sentiment of the people of my home and of my district I will never cast any vote to send any boy across any ocean to help fight in any foreign war in which we have no concern!

We are greatly concerned because some of our national leaders have been very intemperate in their speech respecting war. This should not be countenanced nor continued. Our utterances should be those respecting the permanent establishment of peace. We do not want disabled veterans in our country—we want men who are strong and who, with initiative and incentive, will work in the arts and trades of civil life and who will aid in the building of our Nation; we want those who can and will work and earn in order that they may raise and educate their children and who will take that American pride in the American home!

Our simple American duty is to have and to hold a keener and a deeper respect for our flag and its ideals. We have witnessed the long columns of our marching men, of our school children, and of our citizens, at the head of the column was an American flag floating before the four winds of heaven; and we have witnessed our own people, in a thoughtless moment, fail to give that due respect, which is entirely proper, to our flag, by removing the hat when the flag passes by. On one occasion, not so long ago, a small child observed a police officer who failed to doff his hat when the flag passed by, and she said to him: "Mr. Officer, why don't you take off your hat when the flag goes by?" We are reminded in that story of those immortal words, written by the master hand:

"Hats off!
Along the street there comes
The blare of bugles, the ruffle of drums;
A flash of color beneath the sky—
Hats off! The flag is passing by!"

We think today of the glory and the beauty of our flag. We recall the lives of the hordes of men which have been ruthlessly taken for that flag. Let us ever keep within that deeper reverence for our flag and for our country.

A nation is builded largely upon its memories. These are sacred and inspiring. May we ever cherish these sacred memories and may they ennoble our thoughts and enrich our ideals. We must remember our country needs us today in time of peace, just as she needed us in time of war. There must be no "peace slackers" in our Nation. Let us go marching on for America.

While our struggles have been supreme and our sacrifices have been great, yet, we recall at this moment the simple sentence inscribed upon the tomb of Sir Christopher Wren, that great builder, which reads: "If you would seek a monument look about you." Our monument is our country, America.

And we may say of our Nation: "Mighty, majestic, with her head so proud, pillowed on mountain heights of snow and cloud; where kingly feet touched by the tepid tide of southern seas, low dipped, clear and wide."

Our America is the bright and shining star in the firmament of nations and the pacemaker of all time for freedom and justice; the unmatched, peerless, and priceless possession of a peace-loving people, the outstanding example of social equality and the haven of security for the common people. It is the land we love, and may it ever be the home of the free.

And, concluding, may I extend our annual farewell to all those who sleep here, so sweetly and so silently:

"So still they sleep
Beneath yon verdure deep!
On hill, in vale,
By brook and lonely farm—
A scattered army they,
Until the day
The bugles of the angels
Sound alarm.

They died to save
And but their grave
Is left to us, the living;
We who bow—
And place a chaplet
On each sleeping brow."

Memorial Day Address

EXTENSION OF REMARKS
OF
HON. JOHN G. ALEXANDER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 1, 1939

ADDRESS BY HON. JOHN G. ALEXANDER, OF MINNESOTA, MAY 30, 1939

Mr. ALEXANDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me at Minneapolis, Minn., on Memorial Day:

It is natural that at this time of year our thoughts should turn to Memorial Day. For nearly 70 years we have regularly and respectfully on May 30 honored our soldier dead of all our wars. This radio program of today is sponsored as a patriotic expression of the need for observance of Memorial Day. The award which is about to be made to 14-year-old Leonard Rosenfield by the Auxiliary of the Jewish War Veterans' Association of Minneapolis for his prize-winning essay on, "What Memorial Day Means to Me," is worthy of note and of commendation. The essay itself is also a gem and I hope many will desire a copy and will write WDGY asking for it.

The thought which you will note is expressed in the first paragraph by this young boy that we should make Memorial Day a daily matter or that we should observe it every day and thus keep in mind its meaning, is a very fine idea. If we are to honor our soldier, sailor, and marine dead I imagine there is nothing which could be more fitting or proper or pleasing to these honored souls than to remember the lesson of their supreme sacrifice every day of the year.

It is also probable that these heroes would also like a corollary suggestion made as to our own part which we the living shall play in the search for peace and for a higher plane of life for humanity. That suggestion is that we as individuals are the most important part in this quest for peace and for surcease from earth's pain and hell and war.

Is it not a wonderful thought that you, perhaps an undistinguished and unknown everyday person, can sit quietly in your room and do more to save the world from the inconceivable horrors of another war than can all the statesmen and diplomats put together? Yet, such is exactly the case.

Many people are speaking today as though another war were inevitable. Others, on the contrary, declare optimistically that such a thing is impossible. The actual fact is that another war is neither inevitable nor impossible. There can be another war, and if there is, the destructions and horrors entailed will eclipse anything dreamed of up to the present, owing to the extraordinary advance of natural science and engineering in the past two decades, and such an event would almost certainly be the end of western civilization as we know it.

On the other hand, there is not the least necessity for another war. It could happen, but it is not necessary. There is at hand a means by which a comparatively small number of people, if they so desire, can prevent war from breaking out.

To understand intelligently the problem that we have to face we need to inquire why war ever does break out. Most people suppose that a war occurs as the result of certain definite acts on the part of certain individuals. They think that national leaders in a position of authority decide to make war on a neighbor because they feel that they are strong enough to conquer him, or that they declare war in self-defense with the object of forestalling such an attack upon themselves. Or it may be that they are drawn into a war already in progress between their neighbors in spite of all efforts to keep out. This is the common view of history; but it is, however, quite wrong. The fact is that the concrete acts of individuals, such as ultimatums, declarations of war, and so forth, are never in themselves causal but are merely the results of wide and deep currents of thought and feeling already existing in the masses of the people concerned. War breaks out between two countries because, for a long time beforehand, such as in our case today as between us and Japan, the hearts of thousands of people on both sides of the frontier have been filled with hatred and fear, and sometimes also with greed, satanic pride, and the rest of the other inherent human sins. The war itself, and all the horrors that go with it—the shooting and bayoneting, the maiming and gassing, the destruction of property, and so forth—are but the aftermath or outcropping on the physical plane of the evil passions which preceded it.

It is not possible for an act of violence to take place in the outer world of experience unless there is first a thought of violence—fear, hatred, etc.—in the inner world of thought. And it is equally true that it is not possible for thoughts of violence to hold sway in men's souls without being sooner or later enacted in the outer.

It naturally follows from this that the scientific method for the prevention of war must lie in the changing of the mentality

of the people; and there is no other way. But how is this mental change to be brought about? Can it be done by the educational efforts of books and pamphlets, the holding of peace meetings, the convening of international conferences, etc.? Well, all these things are efforts in the right direction, of course, but it has to be admitted that their practical results are usually very meager and out of proportion to the expense and effort involved. We know that all recent wars were preceded by efforts of this kind, which, nevertheless, completely failed to prevent them. Indeed, there is a very definite danger lurking among these good intentions, because many spiritually minded people are lulled into a false sense of security by trusting in them.

And so, in conclusion, I urge each citizen who is interested in honoring our war dead to give this matter of bringing peace on earth, good will to men, much personal, intensive, and serious daily thought to the varied ramifications of this great problem than most of us are in the habit of doing. The problem is ours to solve—the job is our job to conquer. Will you come along with us?

Harry Must Be Happy

EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

Mr. HORTON. Mr. Speaker, Harry Hopkins' recent prayer asking for "increased imports," presumably to speed up the giving away of the American market to foreign countries, through the so-called reciprocal trade agreements, has been answered swiftly and with a vengeance.

During the first 4 months of 1939 almost 400,000 head of cattle were imported into the United States, as compared with 178,000 head for a like period in 1938. At this rate 1,250,000 head of cattle on the hoof will enter our borders during the present year. Besides this, and because of the President's recent "three cheers for Argentine canned beef," another million head will come in by the tin-can route.

Of course, these factors had nothing to do with last week's sudden drop in beef prices on the Chicago market. Oh, no! Lamb and mutton prices followed suit, largely because wool imports for the first quarter of 1939 show an increase of 66,000,000 pounds over a like period in 1938. Hogs, for the first time in 4 years, dropped below 7 cents.

Wool waste and rag imports, because of a 50-percent tariff reduction provided in the recent so-called reciprocal-trade agreement with the British Empire, were five times greater for the first third of 1939 than for a like period of 1938.

With 10,000,000 unemployed and 21,000,000 on some form of relief, presumably already in rags, it would seem that with the above importation of rags to go into clothes for those who can still afford to buy them, America will soon be a completely rag-clothed nation.

If you do not want to see the wool industry in this country ruined, vote for the truth-in-fabrics bill.

Up to the present time, a trade balance in our favor has been something to write home about. Some sane countries still have the same idea. For instance, Argentina is "chesty" because the first 4 months of 1939 show exports amounting to $29,000,000 more than their imports. The United States paid part of that bill by importing three times as much Argentine goods as we did during a like period a year ago.

We have to hand it to the New Deal. They are certainly continuing to get results. They have spent billions on relief, increased the national debt by more than $20,000,000,000. They have broken the fighting spirit of millions of good Americans. They have kept from ten to twelve million men out of jobs and twice that number on relief of some kind. In spite of all this, the United States is still at the very bottom of the industrial production chart submitted by the "Buy American" League, as follows:

Japan	174.6
Latvia	154.9
Finland	151.7
Sweden	146.0
Denmark	136.0
Chile	132.0
Estonia	127.1
Rumania	127.0
Germany	123.5
Norway	122.6
United Kingdom	113.7
Bulgaria	110.6
Italy	99.9
Austria	98.0
Poland	92.5
Czechoslovakia	84.6
France	78.7
Netherlands	75.9
Belgium	67.1
United States of America	64.7

Social Security Act

EXTENSION OF REMARKS

OF

HON. SANTIAGO IGLESIAS

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 24, 1939

Mr. IGLESIAS. Mr. Speaker, it has been announced by press dispatches that the bill containing the amendments to the Social Security Act are going to be reported out by the committee without including Puerto Rico in the titles of the law. Unless this House is kind enough to recommend and vote in favor of the inclusion of Puerto Rico, the island will again be out entirely of the titles V and VI of the law to help the children and mothers in accordance with said titles.

The legislature and the health department of the island in this special case are doing their part in the same way as the States of the Union, and I beg from the Members of this House to lend again their help in this humanitarian action as a matter of justice and of greatest need for my people.

On my appearance before the Ways and Means Committee I gave a complete statement regarding this important subject matter.

In part, I reminded the committee that—

During the last session of Congress I devoted a great deal of time and effort to have the Social Security Act extended to Puerto Rico. Unfortunately I was unsuccessful because of the desire on the part of Congress not to open the law to any amendments at that time.

Inasmuch as your committee is now considering recommendations from the Social Security Board and from groups and organizations which are deeply interested in having the benefits under the act flow more freely and more generously to all American citizens who come within its scope, I am here today to again renew my efforts on behalf of Puerto Rico.

Mr. Chairman, as Resident Commissioner for Puerto Rico, representing 1,800,000 loyal American citizens, I ask for my constituents the same consideration and the same treatment which Congress has already extended to American citizens in every other area in the United States, including the Territories of Alaska and Hawaii and the District of Columbia. To further deprive Puerto Rico of many of the benefits of the Social Security Act would be not only unjust but unfair to the millions of American citizens who reside in the island.

Before taking up the specific titles of the Social Security Act which are most important to the people of Puerto Rico, I want to call the committee's attention to the fact that notwithstanding our limited financial resources, we have been deeply interested for many years in the health and welfare of our people and that we have today a health department which compares most favorably with those of many of the States which lead in this field of work.

In order that this committee may better understand the work that Puerto Rico has been doing in trying to improve the condition of her people, I would like to call your attention to the department of health appropriations for the fiscal year 1939, which are as follows:

Department of health

Office of Commissioner of Health:	
Office of the Commissioner of Health	$40,265.00
Insular Board of Health	5,212.25
Child Welfare Board	2,370.00
Division of Property and Accounts	22,895.00
Public Health Review	812.25
General expenses, Department of Health	80,097.79
Total, Office Commissioner of Health	151,652.29

Department of health—Continued

Division of Public Health:	
Bureau of Epidemiology and Vital Statistics:	
Central office	$160,371.25
(Emergency fund for control and suppression of epidemics, $10,000.)	
Hospital for contagious diseases	25,289.00
Insular leper colony	31,786.00
Total, Bureau of Epidemiology and Vital Statistics	217,446.25
Bureau of General Sanitary Inspection:	
Central office	15,630.00
Division of Foods and Drugs	15,570.00
Division of Milk Supplies	9,880.00
Bureau of General Inspection of Construction and Plumbing	11,970.00
General Expenses	2,500.00
Total, Bureau of General Sanitary Inspection	55,550.00
Bureau of Sanitary Engineering	88,725.00
Bureau of Infant Hygiene	29,476.75
(Additional authorization to match Federal grants for maternal and infant health service, $76,175.50.)	
Bureau of Tuberculosis	13,245.00
Public health units and other field personnel	463,266.75
(Additional authorization to match Federal grants for extending the services of the public health units, $46,000.)	
Biology laboratory, San Juan	46,784.75
Auxiliary laboratory, Ponce	9,862.00
Auxiliary laboratory, Aguadilla	7,900.00
Chemical laboratory, Department of Health	24,840.00
Total, Division of Public Health	957,096.50
Division of public welfare:	
Section of public welfare, central office	61,974.00
Bureau of social welfare	24,000.00
(Additional authorization to match Federal grants for aid to crippled children, $52,110.52.)	
(Additional authorization to match Federal grants for work in cooperation with the Federal Children's Bureau, $10,000.)	
Insular Home for Boys	84,195.20
Insular Home for Girls	70,575.50
Institute for Blind Children	25,746.00
Blind Asylum for the Indigent of Puerto Rico	33,082.00
District Hospital, Ponce	43,842.00
Antituberculosis Sanitarium in Rio Piedras	152,849.50
Care of tuberculous patients, San Juan	10,619.00
Maintenance of tuberculosis hospitals under the control of the department of health	68,000.00
Insular Insane Asylum	238,350.50
Total, division of public welfare	813,233.70
Total, department of health	1,921,982.49

Mr. Chairman, on February 14, 1939, I introduced bill H. R. 4082 which is now before your committee. The purpose of this bill is to extend titles I, V, VI, and X of the Social Security Act to Puerto Rico so as to enable the island government to extend its health and welfare activities through the Federal assistance and cooperation provided for under the Social Security Act.

Under title V of the Social Security Act, the Secretary of Labor, through the Children's Bureau, is authorized to administer an annual appropriation of $8,150,000 for grants to States which is apportioned as follows: (1) $3,800,000 for maternal and child-health services; (2) $2,850,000 for services for crippled children; and (3) $1,500,000 for child-welfare services.

Miss Katherine F. Lenroot, chief of the Children's Bureau, United States Department of Labor, states the primary purpose of the maternal and child-health services to be as follows:

"The primary purpose of this portion of the Social Security Act is to extend and to strengthen services for mothers and children in rural areas, in areas suffering from severe economical distress, and among groups in special need. These are the people who have been hitherto and for the most part outside the reach of health and welfare services that have been more generally available in cities."

Miss Lenroot also explains that a uniform allotment of $20,000 is to be made to each State, plus an additional amount proportionate to the number of live births and to the financial needs of the State.

In connection with this part of the Social Security Act I wish to point out that the Department of Health of Puerto Rico is in the position to improve and to extend the maternal- and child-health services, child-welfare services through its Bureau of Infant Hygiene. The standards of this bureau have been approved by the Children's Bureau, and the island bureau is so organized as to be in a position to comply with any anticipated future requirements. In connection with maternal and child health and welfare services, and in anticipation of my bill being approved by Congress, the insular government has already authorized the expenditure of $76,175.50 to match the Federal grants under parts 1 and 2 of title 5.

With reference to that portion of the social-security program which relates to child-welfare services, Miss Lenroot makes the following statement:

"The appropriation of $1,500,000 for child welfare to be allotted $10,000 to each State and the remainder on the basis of rural population, is made available for the purpose of cooperating with State public-welfare agencies in establishing, extending, and strengthening, especially in predominantly rural areas, public-welfare services for the protection and care of homeless, dependent, and neglected children and children in danger of becoming delinquent. These grants are to be used for payment of part of the cost of district, county, or other local child-welfare services in areas predominantly rural, for developing State services, and for the encouragement and furthering of community child-welfare organizations in rural areas and in areas which have a special need for this type of work."

The bureau of social welfare of the Department of Puerto Rico has been engaged in child-welfare work for some time. Although it has been somewhat handicapped because of financial limitations, it is sufficiently well organized to be able to extend these services without any serious change in its present organization. All that is needed is additional field personnel to aid the specialists now in charge. In preparation for extending child-welfare work, and in order to match the Federal grant, the insular government has authorized the expenditure of $10,000. The insular government has also authorized the expenditure of $52,110.50 in order to match the Federal grant for aid to crippled children which services are also administered by the bureau of social welfare.

Title VI of the Social Securitly Act provides for a comprehensive Nation-wide health program through an annual oppropriation of not more than $8,000,000. This appropriation is to be allotted to the several States and Territories by the Surgeon General of the United States Public Health Service. In order to participate in the plan, it is understood that the States and/or Territorial organizations must have a health department which complies with the following requirements: (1) A qualified full-time State or Territorial health officer; (2) an acceptable vital-statistics service; (3) an acceptable State public-health laboratory service; (4) adequate service for study, promotion, and supervision of maternal and child health; (5) adequate services for study, promotion, and guidance of local activities, for control of preventable diseases, and for health promotion; and (6) services for study, promotion, and supervision of environmental sanitation.

Furthermore, the following conditions are required for participation of a local State service through the State or Territorial organization: (1) The public-health service of the city, county, or district should be under the direction of a full-time health officer; (2) the personnel of the city, county, or district health department should include, in addition to the full-time health officer, such medical assistance as public-health nurses and sanitary officers or clerks, as will insure at least the minimum of effective health service commensurate with the population and health problem of the area concerned.

My purpose in asking that the benefits of this title be extended to Puerto Rico is so that we may improve and expand the work now being done by insular department of health. The island government has authorized the expenditure of $46,000 to carry out this part of Federal health program.

On May 15 of last year, the insular government approved legislation creating a commission for old-age assistance and creating a special fund to assist them. While the returns under this act are not yet sufficient to match the Federal grant under title I, we nevertheless desire that this title be now extended to Puerto Rico so that we will be in a position to give old-age assistance as soon as the island treasury permits it. To postpone action at this time would only mean that we would have to wait so much longer once our financial position will enable us to match the Federal grant. I therefore urge that favorable consideration be given to Puerto Rico with respect to this title.

Title X of the Social Security Act provides for grants to the States and Territories for aid to the blind. For many years the insular department of health has done extensive work in the care, treatment, and education of the blind. As I have already explained, the annual expenditures for this purpose amount to more than $48,000. With the aid of the Federal grants, Puerto Rico will be in a stronger and better position to help out these poor unfortunates who in most cases are practically helpless and in need of care, treatment, assistance, and training. The extension of this title of the act to Puerto Rico will be a blessing to hundreds of blind persons who are now receiving but little of the help and assistance which they need so badly.

Mr. Chairman, it is not the purpose of my short talk to outline all of the work of the insular department of health. I have briefly taken up only those activities which have a definite relationship to the Social Security Act. From my statements you will agree that the Department of Health of Puerto Rico is a well-organized branch of the insular government; that it has carefully provided for the

health and welfare of the people of Puerto Rico in the past; and that it is in a position to comply with the provisions of the Social Security Act. Besides it is in a position to furnish all the skilled personnel necessary to administer the additional funds which will become available under the several titles of the Social Security Act. The effective work done by the department of health in the past is a sufficient guaranty that its high standards will be maintained with the additional funds which she will receive from the Federal Government. As to the need for expanding the health and welfare work in Puerto Rico, there can be no question, and the Federal grant which Puerto Rico will receive from the Federal Government will put her in a position to further expand her work in this field.

I sincerely trust that your committee will give favorable consideration to my bill, H. R. 4082.

AUTHORITIES AND PERSONALITIES FAVORING THE EXTENSION OF THE SOCIAL SECURITY LAW TO PUERTO RICO—EXCERPTS FROM LETTERS

President Roosevelt has said that his attention has been called to the omission of Puerto Rico from the provisions of H. R. 7260, although Alaska, Hawaii, and the District of Columbia are included.

I very much regret this omission. However, you will be interested to know that as soon as the original draft of the bill was prepared, the Division of Territories and Island Possessions of the Department of the Interior took up this matter with solicitors of the Department and is submitting an amendment which, if adopted, will rectify this situation insofar as Puerto Rico is concerned.

—

The president of the American Federation of Labor, Mr. William Green, stated in a letter to Mr. ROBERT L. DOUGHTON, chairman of the Ways and Means Committee, "that he wishes very much that the provisions of the social-security legislation recommended by the Ways and Means Committee would be extended to the people of Puerto Rico.

"The House Resolution 4120 as originally introduced provided that 'As used in this title the term "State" shall include Alaska, Hawaii, Puerto Rico, and the District of Columbia.' I understand that the social-security measure as recommended by your committee does not include the Territory of Puerto Rico in its definition of the United States, notwithstanding that its provisions are extended to Alaska, Hawaii, and the District of Columbia.

"There does not seem to be any good reason why the people of Puerto Rico should be excluded from the benefits of the social-justice provisions of this legislation herein referred to. May I ask, in the name of labor and of the organization of labor in Puerto Rico, that you favor the inclusion of Puerto Rico in the provisions of the social-security legislation recommended for enactment by the House Ways and Means Committee."

—

Hon. Harold L. Ickes, Secretary of the Interior, in a letter to Hon. MILLARD E. TYDINGS enclosed a draft of a proposed amendment to H. R. 7260, the social-security bill.

"The amendment related to titles I, IV, V, and VI, dealing with grants for old-age assistance, aid to dependent children, maternal and child welfare, and public-health work. The bill in its present form provides for grants for these purposes to the States, the District of Columbia, Alaska, and Hawaii but not to the insular possessions. The proposed amendment would extend the definition of the term 'State,' where used in these titles, to include Puerto Rico and the Virgin Islands.

"The need for aid of this sort in those possessions is at least as great as in the States and Territories. It is demonstrable by figures that in the case of Puerto Rico the actual need per capita is very much greater than in any State of the Union. Puerto Rico has suffered particularly from legislation designed to benefit the American people as a whole to the cost of which Puerto Rico has contributed, but the benefits of which were not applicable to its citizens. There seems to be no just reason for discriminating against these possessions. Indeed, because of their lack of representation in Congress, it seems to me that we should be particularly solicitous that they do not suffer economically through their lesser political status.

"In the original economic security bill (H. R. 4120) Puerto Rico was included among the 'States' entitled to grants under the titles corresponding to titles I, IV, and V. In the present bill (H. R. 7260) Puerto Rico has been excluded and the amounts authorized to be appropriated have been somewhat reduced. The proposed amendment would restore the amounts authorized to be appropriated in those titles in the original bill, in order to make some provision for the needs of the island possessions.

"I am advised by Mr. A. J. Altmeyer, Second Assistant Secretary of Labor, on behalf of Miss Perkins, the Chairman of the President's Committee on Economic Security that 'the Committee on Economic Security has never given specific consideration to the question of whether the security legislation should cover the Territories and possessions of the United States,' and that he believes, therefore, that I am free to make such recommendations on this subject as I deem proper.

"In view of the urgent need for aid of this sort, so essential to social security in these possessions, I strongly recommend that this amendment be given favorable consideration."

Money Panics

EXTENSION OF REMARKS

OF

HON. JED JOHNSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

RADIO DISCUSSION BY HON. ED. V. IZAC, OF CALIFORNIA, HON. KENT E. KELLER, OF ILLINOIS, AND HON. CHARLES G. BINDERUP, MAY 23, 1939

Mr. JOHNSON of Oklahoma. Mr. Speaker, under leave to extend my remarks, I desire to present a very interesting and informative radio discussion by Hon. Ed. V. Izac, Member of Congress from California, Hon. Kent E. Keller, Member of Congress from Illinois, and Hon. Charles G. Binderup, former Member of Congress from Nebraska, as follows:

CONGRESSIONAL BREAKFAST TALK

ANNOUNCER. Tuesday morning, once again WOL presents the congressional breakfast talk, conducted by Mr. Charles G. Binderup, former Member of the United States House of Representatives from the State of Nebraska. This morning Mr. Binderup presents the final in this season's series of broadcasts on monetary reform, which has been a weekly feature on WOL's musical clock program. We give you now Mr. Charles G. Binderup, who will introduce today's speakers and conduct this morning's broadcast. Mr. Binderup.

Mr. BINDERUP. In behalf of the Constitutional Money League of America, we again bid good morning to our President Roosevelt, Members of the Senate and House, members of our President's Cabinet, and members of the Federal Reserve Board. Our discussion this morning is inspired by that encouraging statement made by President Roosevelt in his last inauguration address when he said, "Let us refuse to leave the problems of our economic welfare to be solved by the winds of chance and the hurricane of disaster. Let us not admit that we cannot find a way to master economic epidemics, just as we have found ways to master epidemics of disease." That statement in itself constitutes an indictment against the Governor of the Federal Reserve Board. I am now pleased to introduce the guest speakers this morning, Congressman IZAC, of California, and Congressman KELLER, of Illinois. As this is the last week of our congressional breakfast talks, we will review and discuss the major principles of the plan for Government monetary control and constitutional money.

Mr. IZAC. Mr. Binderup, I read in the press May 14: "In the hope of heading off another 'recession,' a new broad-scale spending program is being urged on President Roosevelt by advisors of the White House 'inner circle' * * * so the grave danger of another business slump next spring may be averted." Of course, after we, the people, have gone through 27 of these money panics and depressions and recessions, it does not take much to scare us. Do you think your plan for Government monetary control can avert this threatened new recession?

Mr. BINDERUP. Definitely, yes. For it includes every safeguard, with a balanced additional money supply, therefore dormant money will immediately start flowing. As everyone knows, it is a money famine which invariably starts depressions and continues unemployment and low prices.

Mr. KELLER. Mr. Binderup, in your judgment, if a bill were passed including these principles, as you suggest, how long would it be before we might expect the return of prosperity?

Mr. BINDERUP. Prosperity will start immediately as soon as either the Voorhis bill or the Hunter bill is passed or for that matter any other bill containing these principles for Government money control. In fact, as soon as the public is advised that there is a possibility of passing this bill, prosperity will start by leaps and bounds. Mr. IZAC, you are quite familiar with our plan for Government monetary control. What do you think is the outstanding feature of the plan?

Mr. IZAC. Well, I know one thing that will sound mighty welcome to the people, and that is that under this plan there can be no more bank failures.

Mr. KELLER. And another principle included in the plan for Government monetary control that we will all welcome, is to take the Government out of the banking business of lending money, and the banks out of the Government business of creating money. This is certainly one of the primary steps in preventing booms and depressions and in solving the problem of unemployment.

Mr. IZAC. I understand that with 100-percent reserves back of demand deposits in bonds and cash held by the Government Federal Reserve banks, every penny of demand-deposit checking accounts would be safe, but how about time deposits? Surely

there are some conditions under which there could be bank failures, aren't there?

Mr. KELLER. Under the 100-percent reserve system the time deposits would absorb savings and expand loans correspondingly. Of course, the demand deposits would operate differently and would always be safe, as you say; that is, any money deposited in a demand deposit checking account should stay in the bank and not be loaned out. There would no longer be a double use for checking, or demand, deposits. The circulating medium would not be expanded by loans but would merely be redistributed. Loans would increase with savings, but the circulation medium would not increase with loans. Loan funds would come out of savings, but no longer out of thin air. In other words, the bankers would lend actual money, either his own money or the actual money of his depositors' time deposits; and, having loaned actual money, which cannot vanish but always exists in circulation, banks couldn't fail. These time deposits and loans merely revolve through the banks at an unchanging velocity and volume, propelled by Government safety and necessary supply. I said a bank could not possibly fail. Oh, of course, it is possible that a bank might fail because of sheer crookedness of the bank. But, of course, that would be very exceptional. Banks fail usually just like all businesses fail—by a contracted money volume in circulation which crushes prices down and destroys their security. However, in any case where a bank might fail, the Government must pay, for they supervise the banks, and the people trust to their Government.

Mr. IZAC. Mr. Binderup, in order to provide 100-percent reserves back of all the demand deposits in all the banks of the Nation, can you tell us just how much the banks are short of this now?

Mr. BINDERUP. Outside of a few New York banks, the banks would require less than $6,000 per bank on an average. This, of course, would also include the 6-percent reserve back of time deposits, which under our plan could be entirely unnecessary and the banks should be relieved of this unnecessary burden.

Mr. IZAC. Suppose this unnecessary reserve on time deposits were eliminated. Then how much would the banks lack in establishing the 100-percent reserve?

Mr. BINDERUP. In that case the banks, outside of a few big banks in New York, would have more than enough, on an average, to establish the 100-percent reserve by depositing their bonds, reserves, and surpluses with the Government banks. Of course, the banks would continue drawing their interest on their paper the same as they do now.

Mr. KELLER. Mr. Binderup, what do you think of postal-savings accounts, where the people deposit their money in the post offices, as at present?

Mr. BINDERUP. At present, with the miserable banking and money system we have, the postal-savings bank is a most necessary Government institution, but with 100-percent reserve back of demand deposits, this would be unnecessary, and postal savings would soon eliminate itself. But let me add that if the banks continue to obstruct the plan for 100-percent reserves back of demand deposits with their army of banker-lawyers sent here to Washington from the New York banking interests, we should immediately bend our efforts toward legislation making a bank out of every post office in the Nation, where the people can carry their checking accounts with safety. For then the people will have 100-percent reserves back of their demand deposits. I personally am not in favor of coaxing the banks on this issue. If, after their system has wrecked the Nation 27 times, they still insist on a system that will continue to allow this wrecking privilege, I say eliminate the banks entirely as to demand deposits and checking privileges. It's up to the banks. The people have decided that we shall have no more Federal Reserve bankers' created panics.

Mr. IZAC. I believe our radio audience would like to have the first part of section 1, article A, of the plan, as originally contained in your bill, H. R. 9800, explained. What is the purpose of defining just what a commercial bank is which comes under this act?

Mr. BINDERUP. Since this plan does not contemplate that the Government should go into the banking business, but is intended only to bring back to the people their constitutional right to coin and regulate the value of money as and when measured by commodities, and to maintain a uniform purchasing and debt-paying power of the dollar, it concerns only those banks or that division of those banks doing a checking business. This is explained in Uncle Sam's Hospital Chart on page 101, section 5.

Mr. IZAC. But in order to get this to our people over the radio, isn't it a fact, Mr. Binderup, that in the past there has been considerable contention relative to just what constituted a bank? For example, there were some large factory banks which did business only with their employees and therefore claimed to be private treasuries, but as they carried demand deposits and checking accounts and loaned money to their employees, they became money creators or banks. Then there were some individual private banks, and some State banks incorporated under State charters, and some cooperative banks, savings banks, and investment banks. So it became necessary to make a clear-cut provision as to just what banks were included in this act or plan.

Mr. KELLER. But isn't it a fact that within the past year, the decision by the Supreme Court in the Associated Press case established the ruling that even the sending of as intangible a thing as a message over the State lines was interstate commerce? This automatically included all banks dealing with checks or credits over the State lines as being in interstate commerce.

Mr. BINDERUP. Yes; I think that decision is conclusive, but as Congressman IZAC stated, it was safer to specifically mention in the act just what banks we included and why.

Mr. KELLER. But don't you think many of the banks would object to being blanketed in under the Government supervision?

Mr. BINDERUP. Well, in the first place, we are not blanketing these banks in under Government supervision. It is as you said, Congressman KELLER, the recent ruling of the Supreme Court in the Associated Press case definitely and specifically made every commercial bank come under national jurisdiction.

Mr. IZAC. Mr. Binderup, you do not consider this objectionable to the commercial bankers, do you?

Mr. BINDERUP. Decidedly no. The advantages to all commercial banks would be so great that they would want to be included. But we must have complete jurisdiction over all commercial banks as far as it pertains to their demand deposits in order to give them Government assistance in establishing 100-percent reserves back of demand deposits, and in order to make banking safe for the banks as well as for the people.

Mr. KELLER. But there are 1,100 banks now who refuse to belong to the Federal Reserve System? Why is this?

Mr. BINDERUP. This is for the reason that the restrictions made by the Federal Reserve System are so severe on the small banks that they become practically prohibitive.

Mr. IZAC. I can hardly imagine anything that would make me feel better than to know that I had Uncle Sam's protection if I were a banker and had just read in the paper about another threatening recession expected by the friends of the administration to come in the spring. Would it not be comforting to have Uncle Sam say to us, "Here; I will take care of you. I will make it impossible to have a depression or a recession. I will see to it that you do not go bankrupt. Just deposit the Government bonds you hold in your vault in my vault together with such cash as you have belonging to your depositors, and if this does not equal 100 percent of your depositors' accounts, just let Uncle Sam hold some of the abundance of slow paper with the bank's guaranty, which you now hold and is good but cannot be paid until prosperity comes back. You can continue drawing the interest. All Uncle Sam wants to do is to hold the Government bonds and cash, and the paper that you banks bought for the depositors' money. With a raised price level we will bring back prosperity and make your slow paper good. And if your depositors come and demand every cent of their demand deposits, just tell them, 'Your Uncle Sam is holding it and you check on the Federal Reserve bank in your district for every cent of your demand deposits.'" Where on earth could a banker ask for more or better assurance or security?

Mr. KELLER. You said to take slow paper to hold as part of the 100-percent reserves. Why slow paper?

Mr. IZAC. There is a very good reason for the Government's accepting slow paper. For the reason it would prevent forcing of immediate payment on slow paper which would cause a loss to the banker as well as the borrower because of the borrower's inability to pay in full during a money famine. With the return of prosperity, this slow paper would again become good and our money plan thereby becomes a constructive instrumentality in place of a wrecking crew as it now is.

Mr. KELLER. No; I really do not know where the banks or the people could ask for more of a protection against another panic and depression, and assurance of a lasting prosperity, than under a Government-controlled money system.

Mr. IZAC. Mr. Binderup, you have repeatedly made the statement on the floor of the House as well as in your recent book, Uncle Sam's Hospital Chart, that money famines are deliberately and intentionally caused by the Federal Reserve Banking System through the Governors of the system. I think you should give some more definite proof.

Mr. BINDERUP. I have just reread Congressman KELLER's new book, entitled "Prosperity Through Employment," which shows his perfect knowledge of money and the cause and cure of depressions. Suppose, Congressman KELLER, that you answer Congressman IZAC's question and substantiate my many statements relative to just who causes money panics.

Mr. KELLER. The commercial bankers know better than anyone else how completely they are in the hands of Wall Street, and I speak of Wall Street as the symbol of money monopoly. When this huge Frankenstein wants to create a money famine, they use their most convenient, forceful, and infallible medium, which is the Board of Governors of the Federal Reserve banks, Washington, D. C., who by their edict create a restriction of credit by advising the Federal Reserve member banks to cut down loans and refuse to make new loans. Let me quote word for word just how the former Governor, W. P. J. Harding, of the Federal Reserve banks, instructed the bankers at one of their meetings which manufactured a money panic. This was on May 18, 1920. This is found in Senate Document No. 310, page 4.

"There are two remedies that suggest themselves to us, first a reduction in credit—credit contraction" (meaning taking money out of circulation, taking away the people's money). "This is a drastic remedy; it is not pleasant medicine, but it is necessary to give medicine of this kind at times. We can restrict credit and expand production, letting the increase in production proceed at a greater rate than the restriction of credit, and we are then working in the right direction. Restrictions of new loans and collections of old loans must proceed as rapidly as possible."

This was stated by Governor Harding. And you commercial bankers, you didn't know about this secret meeting which was planning to destroy you and your community, did you? And this is the bunch you are contributing to through your American Bankers' Association. You should read this piece of criminal banking history. You will find it in Mr. Binderup's book, Uncle Sam's Hospital Chart, on pages 26 to 36. Read about it in the minutes of this secret meeting from the records.

There is no dispute about the authority. So all the Wall Street Frankenstein has to do is to issue his edict and the Board of Governors of the Federal Reserve banks furnish the propaganda, preying upon the human characteristics of optimism or fear. In this way are booms and depressions created. Thereby are destroyed the security of the small commercial banks and the ability of their customers to pay. By reducing prices and demand for what the producers have to sell, this machine forces the commercial bankers, in order to protect their depositors, to demand payment of loans against their will and compel their customers to sell, thereby flooding the market which forces prices still lower. This economic thumbscrew forces the commercial banker to destroy his community, by forcing his customers to sell below the cost of production and pour the profits of their hands and brains to which they themselves are so justly entitled into the coffers of the money manipulators.

Mr. IZAC. I think you are right about this, but what I think our audience would like to know is just how we are going to change this condition and relieve the commercial bankers from the clutches of the Wall Street machine.

Mr. BINDERUP. By expanding our necessary money supply, by creating a purchasing and consuming power among the multitude, through the lower income group. That is the answer. Thereby our money immediately goes into the rural communities and commercial banks, either in demand deposits where the banker is paid a fee on checks and $1 a month for his services in keeping the money safe, in time deposits where the banker is paid interest upon the loans. It would make the large banker dependent on the small banker in place of the small bankers kneeling to and begging of the large bankers. It would prevent booms and depressions, because at present when money gets tight Wall Street restricts the money supply, making money still tighter, and if times are booming, the big bankers liberalize the money supply, meaning liberalizing loans, and inflate our money still more, which, of course, is just exactly opposite of what our monetary plan provides.

Mr. KELLER. But, Mr. Binderup, we do much more in our monetary plan, for we actually build our money system on a definite, permanent base in place of as is our present system which is builded on a little flickering spark called confidence, that, like a house of cards, tumbles with the first little breeze of threatened deflation.

Mr. IZAC. Mr. Binderup, let me ask you how much money have we attempted to put into circulation since 1933.

Mr. BINDERUP. About $17,000,000,000 to date in about 6 or 7 years.

Mr. IZAC. Well, how did Congress attempt to put this into circulation?

Mr. BINDERUP. By selling bonds to the big bankers.

Mr. IZAC. But doesn't that take money out of circulation? Isn't it a fact that the interest we, the people, are paying on bonds amounts to a billion dollars a year, and doesn't that centralize the money right back in the big banks?

Mr. BINDERUP. That is exactly the case, but the calamity goes still further than that, for immediately when the big banks have bought up these bonds they begin to peddle them out to the rural commercial banks and thereby they drain every cent out of the rural communities and load up our rural banks with bonds. All the money for which we sold bonds plus interest goes back to the big banks.

Mr. KELLER. Then, do you mean to say that all this money we have appropriated went right out of circulation and did not do the people any good?

Mr. BINDERUP. Yes; except for the short time it was out, which is about 90 days. That is the reason we are worse off now than we were in 1933.

Mr. KELLER. Would you say "worse off"? Practically all the banks were closed in 1933.

Mr. BINDERUP. The banks are all closed now so far as the public is concerned. The banks are not functioning as banks but as bond brokers, gathering up all the W. P. A., P. W. A., C. C. C., and butter and egg money which dribbles into their banks in demand or time deposits. But if I were a banker under this monetary system, I would do just exactly what the bankers are now doing. I would not lend a nickel of my depositors' money under such a hazardous money system.

Mr. KELLER. No, and you can't blame the people for putting their little money in a sock or tin can either.

Mr. IZAC. I think, Mr. Binderup, that everyone will agree that all the suggestions contained in this plan for Government monetary control and constitutional money are wonderful and will bring about a speedy and permanent recovery, but what are you going to do about the Board of Governors of the Federal Reserve banks who must carry out the provisions in such a bill? They say they are opposed to every plank in this plan. They say it just can't be done, and if it could they would still be against it. A Board of Governors so adverse to this plan placed in a position to carry out the provisions of such an act would make it a hopeless case.

Mr. BINDERUP. You are right, Congressman IZAC. It would be like placing your child in the hands of a doctor who would like to see it die. But it does seem that the present Board must admit their record as a Board of Governors is the most dismal failure, and that no institution of Government has ever caused so much misery and poverty and want, and as the present Board has admitted that they can't do the job, and as their only suggestion is to keep right on with booms and depressions, even though they must know this great Nation cannot continue to live unless this question is solved, it seems to me that they should be about ready to resign and give place to someone who can solve the problem. But regardless of who may be on the Board in the future, there is a provision in this plan intended to take care of this. It provides, first, that this Board shall serve only until another Board is provided for, and second, that the salary of the Board of Governors shall be the same salary as that of the President's Cabinet, subject, however, to the 1926 price level. That would mean payment with the same kind of a dollar with which the farmer, the merchant, and the laboring man is paid for their goods and services. With such a plan in effect today, under the present low price level, it would mean that we would dock each member's salary about $5,000 a year. As the price level was raised, so would their salaries be raised accordingly, until it had reached the maximum of $15,000, which is the same salary as received by the members of the President's Cabinet. Now, that would create a personal interest in this plan, wouldn't it? It seems we have been unable to touch the heart of the Federal Reserve Board; perhaps we can touch the pocketbook and be more effective. And why shouldn't they be paid in this same kind of a dollar with which the farmer and laboring man is paid?

Mr. KELLER. Mr. Binderup, is this plan explained in detail available to the public.

Mr. BINDERUP. Yes; in the book containing speeches made on the floor of Congress on the monetary question called Uncle Sam's Hospital Chart.

And so, friends, we conclude our 13 weeks of congressional breakfast talks over this station, WOL, Washington, D. C. And let our closing remarks be once more an expression of appreciation to this broadcasting station. We believe the people of America owe a debt of gratitude to this station for the great privilege that has been granted us in allowing an explanation to be made of this vital question.

Electrical transcriptions of these congressional breakfast talks will be furnished free of charge to broadcasting stations over the entire Nation.

ANNOUNCER. Thank you, Mr. Binderup. Ladies and gentlemen, this morning's broadcast concludes the 1939 series of congressional breakfast talks conducted and arranged by Mr. Charles G. Binderup, former United States Representative from the State of Nebraska. It is anticipated that at some future date we will resume broadcasting these monetary reform discussions and until then good-bye and good luck, Mr. Binderup.

This program was an educational features division presentation of Mutual station for the District of Columbia.

Old-Age Pensions

EXTENSION OF REMARKS
OF
HON. MATTHEW A. DUNN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

BILL INTRODUCED BY HON. MATTHEW A. DUNN, OF PENNSYLVANIA

Mr. DUNN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following bill, which I introduced yesterday:

A bill (H. R. 6587) to provide a pension of $50 a month for men and women in the United States and its possessions who have attained the age of 50 years and whose incomes are less than $1,200 per annum

Whereas the time has come in the United States when men and women who have attained the age of 50 years have a difficult task in obtaining employment in our mills, mines, and other business establishments; and

Whereas many departments of our municipalities, States, and the Federal Government will not consider persons who have applied for positions who have attained the age of 50 years; and

Whereas hundreds of millions of dollars are collected annually by a multitude of would-be charitable agencies for benevolent purposes; and

Whereas a great deal of the money collected for people who are in need goes for overhead expenses; and

Whereas millions of dollars are expended for the construction and maintenance of poorhouses which are abominable and a disgrace to society; and

Whereas it would be more economical and humane to provide a pension for our aged than to have them humiliate themselves by taking a pauper's oath in order to obtain relief or be admitted to a poorhouse: Therefore

Be it enacted, etc., That an appropriation be made to provide pensions for all persons in the United States and its possessions who have attained the age of 50 years and whose incomes are less than $1,200 per annum.

SEC. 2. The amount of pension paid to an applicant shall not exceed $50 a month or $600 per annum. An applicant for a pension whose income is more than $50 a month or $600 per annum shall not receive the full amount of $50 a month or $600 per annum, but shall obtain the difference between the amount of his or her income and $1,200.

SEC. 3. An applicant for a pension shall deliver his claim in writing to the Treasurer of the United States in the manner and form prescribed by the Treasurer of the United States.

SEC. 4. All statements in the application shall be sworn to or affirmed by the applicant, setting forth that all facts are true in every material point.

SEC. 5. Any pension when granted shall commence on the first day of the calendar month following that on which the application was received by the Treasurer of the United States.

SEC. 6. If the person receiving a pension is, on the testimony of reputable witnesses, found incapable of taking care of himself or his money, the Treasurer of the United States may direct the payment of the pension to any responsible person for his or her benefit.

SEC. 7. If at any time the Treasurer of the United States has reason to believe that a pension certificate has been improperly obtained, he shall cause special inquiry to be made and may suspend payment of any installment pending the inquiry. If on inquiry it appears that the certificate was improperly obtained, it shall be canceled by the Treasurer of the United States; but if the certificate was properly obtained, the suspended installments shall be payable in due course.

SEC. 8. Any person who by means of a willfully false statement or representation or by impersonation or other fraudulent device obtains or attempts to obtain or aids or abets any person to obtain a pension certificate to which he is not entitled shall be guilty of a misdemeanor, and upon conviction thereof shall be sentenced to pay a fine not exceeding $500 or to undergo imprisonment not exceeding 1 year, or both.

SEC. 9. All moneys necessary to pay the pension guaranteed by this act and the cost of establishing and maintaining the administration of this act shall be paid by the Government of the United States. All such moneys are hereby appropriated out of all funds in the Treasury of the United States not otherwise appropriated. Further taxation necessary to provide funds for the purpose of this act shall be levied on inheritances, gifts, and individual and corporation incomes of $4,000 per annum and over.

SEC. 10. This act shall become effective within 60 days after its passage.

Memorial Day

EXTENSION OF REMARKS

OF

HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

RADIO ADDRESS BY BRIG. GEN. FRANK T. HINES, MAY 28, 1939

Mr. WOODRUM of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Brig. Gen. Frank T. Hines, Administrator of Veterans' Affairs, on the coast-to-coast network of the Mutual Broadcasting Co., under the auspices of the Grand Army of the Republic Memorial Day Corporation, May 28, 1939:

Chairman Harlan Wood, veterans of all wars who are today in hospitals, ladies and gentlemen of the radio audience, before I begin these brief remarks, I want to thank Chairman Wood for inviting me to say a few words on the subject of Memorial Day, on behalf of the Grand Army of the Republic Memorial Day Corporation. I also wish to thank the Mutual Broadcasting Co. for extending us the courtesy of its great coast-to-coast network for this purpose today.

As most of you realize day after tomorrow will be a national holiday because it is Memorial Day, the day of the year when we decorate the graves of our veterans who have fought in all of the wars in which this Nation has been engaged. Although the War Department places United States flags on each of the 455,000 graves in our national cemeteries, it is the unofficial decoration of the graves of our soldiers, sailors, and marines that occupies the real purpose of the day. This is left to civilians, to the various veterans' organizations, and in particular to the ladies of our Nation who strew the flowers and lay the wreaths on the graves of our heroic dead. These are the acts of remembrance which have given to us, as a nation, the true significance of Memorial Day.

I think most of us know that Memorial Day was inaugurated officially 71 years ago through the famous General Order No. 11 of the Grand Army of the Republic, issued by Gen. John A. Logan, its then commander in chief. These orders designated that May 30, 1868, and the same day in succeeding years, should be set aside for the purpose of strewing with flowers or otherwise decorating the graves of comrades who had died in the Civil War.

Although this was the official start of Decoration Day, it actually had its beginning 2 years earlier, when the women of Columbus, Miss., about 1 year after the close of the Civil War, went out to decorate the graves of Confederate soldiers who had died in that terrible conflict. These women were the wives, widows, mothers, sisters, and daughters of Confederates, many of whom were still wearing mourning for the loss of their loved ones. In addition to the Confederate soldiers, there were also about 40 Union soldiers buried in that cemetery. These southern women, with a proper nobility, decorated with spring flowers the graves of the blue and the gray alike without partiality.

General Logan's daughter, who is now Mrs. Mary Logan Tucker, relates that some 2 years later she made a tour of the Virginia battlefields and noticed that in the church yard near Petersburg, Va., hundreds of graves of Confederate soldiers had been decorated with small Confederate flags, and that faded flowers and wreaths still lay upon them from the recent observation of the Confederate Memorial Day. Upon her return to Washington, Mrs. Tucker suggested to General Logan that this Dixie custom would be appropriate for a national observance of memorial day. She was supported in this suggestion by Adjutant General Chipman, of the Grand Army of the Republic, and the result was General Logan's issuance of the famous general order No. 11—setting aside May 30, 1868, as the first national Decoration Day, or Memorial Day, as it is now known.

Every year since that year Memorial Day has been properly observed. This year a total of 455,000 graves of veterans, who sleep in our 82 national cemeteries in the United States, will be decorated with flowers and flags. Many thousands of other graves of veterans who are not buried in our national cemeteries will also be decorated by loving hands in remembrance of their heroic deeds.

We also have nearly 31,000 graves of American boys in our overseas cemeteries in England, Belgium, and France. These are cared for on Memorial Day by the American Battle Monuments Commission, which is headed by Gen. John J. Pershing. However, members of war veterans' groups residing abroad and the women and children of the various countries in which these graves are located likewise decorate them with wreaths and strew them with flowers in remembrance of their heroic sacrifices upon foreign soil.

In our national cemeteries in the United States 300,000 of the graves of the veterans are identified, but 155,000 of the graves contain the bodies of unknown and unidentified soldiers, nearly all of whom fell in the desperate conflicts of the Civil War. Included among the identified graves are those of 10,700 Confederate veterans who were identified and buried in our national cemeteries during the Civil War.

Of the nearly 31,000 graves in our overseas cemeteries, more than 29,000 are known and identified, the unknown and unidentified graves of American boys over there now totaling only a little more than 1,600.

Although we have in the United States more than 156,000 unknown and unidentified graves of the Civil War, we have in this country only 1 grave of a World War soldier which contains an unknown and unidentified body. That American boy is our Unknown Soldier in Arlington National Cemetery. There he rests in a simple tomb of white marble which neither time nor circumstances can destroy. An armed sentry guards him. He has received our highest decorations for valor, and those of many foreign countries as well. He will be enshrined forever in our hearts, as well as in the hearts of those who will come after us.

Nobody has any idea who he might have been. But every American mother who lost a son in France who does not occupy an identified grave has a right to hope that our Unknown Soldier may be her own lost boy.

The Unknown Soldier may have been an immigrant lad, or perhaps the descendant of our proudest colonial stock. He may have come from the East, the West, the North, or South. His race and creed is likewise unknown. He might have been a Protestant, a Catholic, or a Jew. All we know of him is that when America called upon her sons in her hour of need that he freely and fully answered that call. We also know that he died gloriously in battle in far-away France, although we do not know upon what battlefield he fell.

Yet that is all we need to know. For in this free land of ours the great Bill of Rights was proposed by the Congress 150 years ago, which under our Constitution guarantees to each man the freedom to live and believe according to his own conscience so long as he does not invade the rights of others.

So, day after tomorrow, Tuesday, May 30, will be a national holiday, dedicated as a day of remembrance, to honoring and decorating the graves of those who have served our Nation well in defense of its honor and its integrity. The chief public exercises will be held in the Memorial Amphitheater at Arlington, adjacent to the Tomb of our Unknown Soldier. But other exercises will be held also at many other points throughout the Nation and in Europe, and I feel sure that these will be attended by as large groups of patriotic and reverent citizens as ever before in our history.

I am sure that our citizens throughout the Nation, in rendering honor and remembrance on Memorial Day, are reminded of these words of the great Emancipator, delivered at Gettsburg many years ago: "It is for us, the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this Nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people shall not perish from the earth."

Dedication of the Cuban Pavilion at the New York World's Fair

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

ADDRESS BY DR. PEDRO MARTINEZ FRAGA, AMBASSADOR OF CUBA TO THE UNITED STATES, MAY 20, 1939

Mr. DICKSTEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Dr. Pedro Martinez Fraga, Ambassador of Cuba to the United States, during the ceremonies of the opening of the Cuban pavilion at the New York World's Fair, May 20, 1939:

The New York World's Fair, this gigantic torch of color and hope, kindled by men of courage in an epoch so dangerous that it seems to mark the penumbra of civilization, finds Cuba amidst a great process of national reconstruction.

The Cuban people rose against a dictatorship 6 fateful years ago, not only to free themselves from such an inhuman and ruthless system, but to remove the abuses of a political, social, and economic order through a sweeping and constructive reform.

That revolution, which began on August 13, 1933, ended on September 4 of the same year, and though successful in destroying the dictatorial regime, was unable to realize at once its aims and objectives.

This was natural and to be expected, and it took us 3 long, tragic years to restore the foundations of moral peace and public order on which the republic rests and to start the nation on her path toward a new, better, and more just life.

We emerged from darkness and chaos in 1936, and today, just 3 years later, Cuba offers to the world the rare example of a country where moral and material peace, freedom of thought, speech, religion, and political and social credos reign supreme; where there is not a single political prisoner in its jails, nor a single citizen in forced exile; where color, religion, or race are not motives for domination and power, nor for humiliation and death. A country which honors itself in the opening of its doors to the victims of intolerance from other less happy lands. A country friendly to all, but which, though sometimes fighting terrible odds, is working its own destinies with firm assurance, complete self-confidence, and indestructible faith.

We have been, and we still are, not only extremely busy, but dramatically and vitally busy.

The tremendous job of sound economic reconstruction has barely been scratched. To restore a nation's international credit; to build up a rural civilization; to open new outlets of wealth through the establishment of a banking system; to create a better and more just democratic order, as we are doing and as we plan to do, are not very easy jobs.

Much has been accomplished, but there is still an impressive amount of work to be done.

The election and the decisions of a constitutional assembly are paramount among the most urgent issues of our reconstruction.

That assembly, the election of which has already been convened, shall meet in Habana this year. Freely elected by the Cuban people, organized in as many political parties as there are schools of political, economic, and social thought, from the extreme left to the extreme right, the assembly shall be a turning point in the country's history.

But busy as we are we could not ignore the invitation from the group of eminent New York friends to come to this great World's Fair, and, accomplishing quite a pleasant effort, we are bringing with us here, in the first place, something which we love and revere above any other thing in the world—our flag—and in the second place, what I would like to call a "token exhibit" of modest proportions, made up of samples of our art, and of typically national important products of Cuban soil and Cuban hands.

We could have brought here many other Cuban natural and artistic things, and maybe during the course of the fair we shall bring them to make our present exhibit fully representative. But not in a year nor in 10, nor in one modest pavilion, nor in a thousand pavilions, could we hold and exhibit the many conquests we have won, and which, because they belong to cultural, educational, and spiritual orders of life, cannot be measured nor judged by the material yardstick, nor by bricks, stones, marble, or bronze.

You, the Government and people of the United States, helped us not only to free ourselves from an absurd and tyrannical, colonial yoke, something which has happened many times in the history of mankind, but with an honesty of purpose and a spirit of justice which our gratitude cannot even measure, have lent us your friendly hand through difficult periods of our independent life, setting an example which is, indeed, unique in the annals of big and powerful nations.

Cuba, therefore, occupies a very special place in the international record of this country, and, we are all sure of it, in the hearts of the American people. It must give you special pleasure to listen to a swift enunciation of some of the things we have done since 1902, during the 37 years of independence which we so proudly and so happily celebrate today.

Our population in that fateful year reached 1,572,797 inhabitants. Today it is 4,130,000—practically triple.

Cuba was, at the end of its colonial days, a dreaded focus of disease and infection. Today its sanitary status is so high that I am reluctant to mention comparative statistics in this field with those of the other nations of the world.

Carrying on the grand tradition of Finlay, Reed, Agramonte, Guiteras, and Nuñez, we feel very proud, indeed, when foreigners—and among them many distinguished American doctors and professors—laud the work we are accomplishing in our fight against tuberculosis, rickets, cancer, and many other diseases. In a few months the national tuberculosis sanitarium in the Trinidad Mountains, with a capacity of 2,000 beds, will be opened to Cuba and to mankind, and this institution is already being reproduced on a smaller scale in every one of the Republic's six provinces.

In 1902 our illiteracy reached the frightful percentage of practically 75. It has now been reduced to less than 20, and in 2 years more that proportion, which corresponds to areas of difficult access, will be carried to zero.

Throughout long years, and as near as 1935, rural education, although officially compulsory, was a problematic and hazardous enterprise. Today, thanks to the work of the Corporative Council of Education, Sanitation, and Welfare, the major creation of Col. Fulgencio Batista, through the 1,300 civic-military and rural schools, 40 children's homes, and the great technological center of Ceiba del Agua, more than 150,000 children and adults receive the benefit of elemental and applied instruction, and the cornerstone of a progressive and realistic rural civilization has been laid.

The social and labor legislation established in the last few years have transferred the island republic from a glorified trading post of the purely colonial type into a real, modern nation which puts social justice above any other thing under the sun.

Slowly but firmly we are tackling the fundamental problem of national land parceling and subdivision, giving back to the people in a practical way what essentially belongs to them. We are working, we are planning, we are fighting tremendous forces and difficult obstacles. Sometimes we stop and ponder, but always go forward, because things—many things—must be done and must be done now. In the new Cuba mañana as a symbol is a poor joke or a notion of the forgotten past.

But why should this extremely synthetic enumeration interest you?

Without belittling the supreme importance of historical or spiritual bonds, allow me to tell you that an island 90 miles from the shores of the United States, which, though having only 44,000 square miles of territory and a population of over 4,000,000, was able to hold, and holds now, notwithstanding terrific and destructive crisis, a firm position among the first 10 sellers and buyers to and from this country, possesses a certain importance and is of a certain interest to the people of the United States.

American citizens have invested in Cuba near $1,000,000,000, a figure surpassed only by your investments in Canada and Germany.

More than 400 products of American industry and agriculture enjoy in the Cuban market a practical monopoly, thanks to our reciprocal-trade agreement and these products come to Cuba from every one of your 48 States.

The cargo and shipping tonnage under American flag between Cuban and American ports is the second largest—second only to the American-Canadian trade—in the statistics of your great mercantile marine.

We sell to you, of course, a much smaller number of our products, but some of them are actually or potentially of paramount importance both in time of peace and in time of war; and one, sugar, is big enough to counterbalance, when normally produced and sold—something which does not happen now—practically single-handed, the privileges granted to the 400 American exports to Cuba.

That is the reason why we bring to the fair our cigars, the best in the world, Cuba's gift to mankind, which combine in wonderful performance the treasure of nature and the handicraft of man and which carry as a magnificent ambassador to the four corners of the earth with their exquisite taste and unique aroma the marvel of our sun and the richness of our soil.

That is the reason why we endeavor to show you the amazing growth of our cattle wealth and industry, which represent today

$400,000,000 and occupies practically 50 percent of the island's useful lands, giving employment to more than 80,000 farmers; of our mining, rum, coffee, foodstuffs, applied arts, and other industrial and agricultural manifestations important enough to belie the already stale legend that Cuba is a single-product agricultural country.

And, of course, we bring here the sweet—and sometimes how bitter—king of our staples—sugar—a foodstuff which is still the main foundation of Cuban commerce with the United States, even when subjected, as now happens, to the artificial contractions engendered by quotas, reductions, low prices, and many other well-known misadventures.

A very important foodstuff, indeed. So important that in 1938 the aggregate value of the Cuban quotas of raw and refined sugar for direct consumption in the United States at an average price of 4.48 cents per pound, amounted to $163,714,762, out of which the United States Treasury received in tariff and compensating taxes $54,637,752; the American refineries, $23,302,144; and the American shipping companies received $5,068,523, making a grand total of the general American share in the profits of that Cuban export of $83,026,419, or 50.71 percent of the aggregate value of the entire Cuban quota imported into this country.

Cuban raw sugar refined in the United States provides work for 5,273 men—almost 1,000 wage earners over and above the total number of those employed by continental sugar industries. The wages earned by workers processing Cuban raw sugar in American refineries, which amount to $5,995,960, exceed those received by laborers in the continental cane-sugar industry by about $3,615,981, and represent more than 50 percent of the wages earned by laborers in the continental beet-sugar industry.

A very important product, indeed. So important that if the transportation to, refining, and packing of Cuban sugar in the United States were discontinued, the United States Treasury, the American refineries, and the American shipping companies would lose over $83,000,000 yearly.

Finally, the sale of its sugar to the United States allows Cuba to import from this country 70 cents of every dollar she exports.

Our import statistics tell the truth about Cuba's winning fight not to transform herself into a self-sustained and self-sufficient heaven, which is absurd because it is impossible, but to eliminate from her spending budget imports which could be and are produced in the island. And your export figures show in a very eloquent way, on the other hand, the magnitude and growth of your trade with us.

I am not going to tire you with the list of the different American exports to Cuba. Let me just mention one at random, which until 2 years ago was quite insignificent, due to the Far East competition, but which today holds the first place in my country's imports of a typically national foodstuff—rice. Figures are not always dull.

In 1936 we imported 4,882,279 kilos of American rice with a value of $216,034. In 1937 we imported 51,934,156 kilos of the same rice with a value of $3,220,042. In the first 3 months of 1938 the American rice imports by Cuba reached 20,649,121 kilos with a value of $1,996,031; and over the same period of the present year, 1939, that import has been 32,274,487 kilos with a value of $1,785,883. These figures may look small, and indeed they are from the standpoint of your world commerce. They may look so to the big exporters of industrial implements, but I do not know whether that is the opinion of rice growers and farmers in the South, and principally of our friends the Louisiana rice growers.

Cuba's relations with the United States are neighborly, friendly, and extremely cordial. The Republic reached full maturity in 1933, and she had grown up so much that the original right of intervention consecrated by the famous Platt amendment became not only offensive and obsolete but positively futile. Thanks to great men of vision like Presidents Roosevelt and Mendieta, Secretaries of State Hull and Torriente, Colonel Batista, and Diplomats Sumner Welles and Marquez Sterling, the American right to intervene in Cuba was relegated to the limbo of forgotten historical deeds, or misdeeds, through the new relations treaty of 1934.

But while we cannot bring our friendly and happy relations more close, because it is impossible, that we can improve the economic ties between the United States and Cuba is unquestionable. It is up to you and up to us to act intelligently, with a realistic and sound economic philosophy, in order not only to maintain that happy situation but to enhance it and to strengthen its basis.

It will be an easy thing to do if we both apply to that fundamental business, good will, a clean outlook, a true sense of what international commerce is, and the traditionally sincere and fraternal sentiments which have so closely united us in the past, in war and in peace, and unite us today, and, we hope, forever and ever.

The New York World's Fair is a definite, practical, and honest step along the path to better relations, better understanding, better business, and more constructive and fruitful friendship.

I am sure I am interpreting the thought of the Cuban people and of the Honorable Federico Laredo Bru, President of Cuba, when I state that the creators of this magnificent miracle of will power deserve our heartfelt gratitude. It is a unique opportunity, and Cuba, for one, I am sure, shall know how to take full advantage of it in her earnest efforts to build up into the infinite a still brighter and larger picture of her relations with the United States.

Let us look into the world of tomorrow from this dress rehearsal of the world of tomorrow and let us do it with unbreakable faith in our own tireless efforts, and with hope immortal in our triumphant destinies.

Address at Tomb of the Unknown Soldier

EXTENSION OF REMARKS

OF

HON. CLIFTON A. WOODRUM

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

ADDRESS BY BRIG. GEN. FRANK T. HINES AT THE TOMB OF THE UNKNOWN SOLDIER, MAY 28, 1939

Mr. WOODRUM of Virginia. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Brig. Gen. Frank T. Hines, Administrator of Veterans' Affairs, before the State Council of Virginia, Daughters of America, at the Tomb of the Unknown Soldier, May 28, 1939:

National and State officers, members, and friends of the Daughters of America, it is a great pleasure to address the ladies of the State Council of Virginia, Daughters of America, today, and I am sure we all agree that it is always an honor to speak before the tomb of our Unknown Soldier of the World War. This the most hallowed spot in all our native land is a fitting place to pledge ourselves anew to the principles of our citizenship and our Government. I thank you for the opportunity you have given me to do this.

You have a very large organization, with a membership in many States. One of the foremost interests of the Daughters of America, I understand, is in education, and the maintenance and promotion of our free public-school system. That is an objective worthy of any patriotic group in the land. Free schools mean freedom of opportunity for all. That is one of the blessings of free America. No matter how humble the parentage of a child, he or she is entitled to a free education at the expense of the State. Thus, if a child has ability and ambition, there are no heights to which he may not rise in our Nation.

Our free public schools are one of the foremost factors in helping to make America great. They are essentially a democratic institution. It is the custom in some other lands to limit educational facilities to those whose parents can afford to pay for it. Thus opportunity is confined there to privileged classes and denied to the great majority who are less fortunate in position and worldly goods. This of necessity must eventually limit the type of people who can attain leadership in business and politics, the professions, and finance. Such a policy of exclusion must of necessity leave untapped that great reservoir of human energy and ability which is contained in the vast majority of a nation's population. Withholding from them educational advantages restricts their ability to rise; in fact, in most cases prevents this, and thus denies their nation the use of their fully matured talents when these might be needed greatly in time of national emergency. Thus a system of privately financed education not only harms a nation's children but hampers the nation itself.

So I congratulate you ladies upon your deep interest in our free public-school system and assure you that in promoting this you are performing a most useful and patriotic public service.

It is now 2 days before Memorial Day. Already many of the graves in this beautiful Arlington National Cemetery have been decorated with flowers in preparation for the annual national exercises which are to be held here and in other cemeteries on day after tomorrow.

As you are aware, Arlington was at one time the estate of George Washington Parke Custis, the adopted son of President Washington. His daughter inherited the estate. The Federal Government took it over during the Civil War as Miss Custis had become the wife of Gen. Robert E. Lee, the leader of the armies of the Confederacy. Since that time it has been used as a national cemetery, which is now the largest and best known in the United States.

Soldiers, sailors, and marines who have lost their lives in all of our major wars lie buried here as well as veterans of our various wars. In the cases of the Revolutionary War and the War of 1812, bodies have been transferred here from other places of burial. Veterans of the War with Mexico in 1845 and the Indian wars are also here. But the Civil War still provides the greatest number of graves, some 19,000 of the Union forces resting here in addition to 400 Confederate soldiers. The World War comes next with 10,000 boys buried here—4,000 of them having been brought home from France—while 3,500 veterans of the Spanish-American War also have found their last resting place here in Arlington.

It is with solemnity we reflect that military men from each of the 48 States have been brought here for final burial. The world has also contributed her share, Americans having been brought here from 47 foreign countries for burial, including such far off places as China, Puerto Rico, Cuba, the Philippines, the Panama Canal Zone, Hawaii, France, Flanders, and distant Russia. From all of these have come American soldiers, sailors, and marines, who gave their last full measure of devotion, to find an honored resting place here on the wooded Virginia hills overlooking beautiful Washington and the broad Potomac River.

So when we meet here to honor our valiant dead it is with the recognition that they have protected the honor of this country on many battlefields, in many far places of the world, but are met here together at last in well-deserved rest and peace.

The Daughters of America have done well in setting aside this Sunday preceding Memorial Day to do special honor to our Unknown Soldier of the World War.

As was so well said at the time of his burial here, the Unknown Soldier was honored by the Nation, neither because of his family, nor influential connections, nor for pride of birth or worldly power. His poor unidentified body was selected as the symbol of a nation's grief—and to represent the thousands of American boys who then slept in unidentified, unknown graves in France.

He rests in a simple tomb of white marble, which neither time nor circumstance can destroy. An armed sentry guards him. He has received our highest decorations for valor, and those of many foreign countries as well. He will be enshrined forever in our hearts, as well as in the hearts of those who will come after us.

Nobody has any idea who he might have been. But every American mother who lost a son in France, who does not occupy an identified grave, has a right to hope that our Unknown Soldier may be her own lost boy.

The Unknown Soldier may have been an immigrant lad or perhaps the descendant of our proudest colonial stock. He may have come from the East, the West, the North, or South. His race and creed is likewise unknown. He might have been a Protestant, a Catholic, or a Jew. All we know of him is that when America called upon her sons in her hour of need that he freely and fully answered that call. We also know that he died gloriously in battle in far-away France, although we do not know upon what battlefield he fell.

Yet that is all we need to know. For in this free land of ours the great Bill of Rights was proposed by the Congress 150 years ago, which under our Constitution guarantees to each man the freedom to live and believe according to his own conscience, so long as he does not invade the rights of others. In return this Nation expects that each of us will recognize and apply its tenets of good citizenship.

Surely if we are to continue as the great Nation that we have a right to be, it is necessary that there be developed among our people a greater interest in public affairs, a greater appreciation of the value of citizenship.

Citizenship is born in the schoolroom. Therefore, the ideals of our school teachers should be the true ideals of America. The importance of their work cannot be overestimated. First impressions are lasting and are reflected definitely in after years. The proper spirit of Americanism should have its inception in our schoolrooms, together with lessons in respect for law and order. Attention should be given to the early establishment of those high ideals so essential in the development of the true and patriotic citizens of our country. Young America should be taught to love America, to support our Constitution and our laws. To learn that to violate these is to trample upon all that is good and distinctive in the high ideals fought for by the forefathers of our Nation.

Our country was founded on certain great principles fundamental in character. It seems to me in times like these through which we are passing it is imperative to consider these principles and see to it that we shape our lives in accord with them.

The form and functions of our Government are the result of the independent experience and thought of our people. Too frequently these activities of government are left in the hands of a few who have made such matters more or less their life work, when as a matter of civic responsibility we, too, should give them our own consideration. It is only natural for America to look to her younger generations to carry on her great principles and ideals. This is a peacetime service comparable in urgency to that required in time of war, and this service is the first obligation of citizenship. A good citizen, mindful of his country's traditions and welfare, should uphold a proper respect for constituted authority and assist in preserving and advancing the integrity and prestige of his Government.

On this day as we gather on this hallowed ground in respect to those who have served their country in times of great emergency it is proper that we should look proudly to our country, revere its traditions, fight for its prosperity and future, and, above all, live that life, whatever be its intrinsic reward, which will cause us to know that we have been honorable citizens, appreciative of the privileges our country affords, jealous of its integrity, and alert in its defense. Be not afraid of patriotism; it is the soul of citizenship. Be not afraid of service; it is the road to contentment, and it is a thing we all can give.

Oil Legislation and So-Called Independents—Apologists for the Oil Monopoly

EXTENSION OF REMARKS

OF

HON. JOHN M. COFFEE

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

Mr. COFFEE of Washington. Mr. Speaker, I have heretofore called the attention of the Members of Congress to various bills relating to the oil monopoly, and which are of vital concern to the consuming public. Recent developments cause me to believe that the oil lobby is exerting every bit of its strength to deceive Congress and independent oil men. They hope to defeat the Borah pipe-line divorcement bill, S. 2181; the Harrington marketing bill, H. R. 2318; and to enact as permanent legislation the Connally Hot Oil Act, S. 1302, and its companion, H. R. 4547; also, its proposed bill, not yet introduced, that will except the oil monopoly from the operations of the antitrust laws.

INDEPENDENT PETROLEUM ASSOCIATION OF AMERICA

This is a psuedo independent association. It was formed by true independents but it was soon dominated by the major oil companies that now control it. They have taken it over lock, stock, and barrel. Every movement the organization makes is dictated by the Standard of New Jersey and companion corporations.

A few true independents proposed that a committee be appointed to study and make a report on pipe-line divorcement, also the complete disintegration of all integrated companies and other questions. This committee was appointed last October. It held what was supposed to be secret sessions, but I charge that the sessions were not secret but every word uttered in the sessions was made known to the monopoly before the committee adjourned. This committee has been called by Mr. Charles Roeser, the president of this association, to meet in Dallas on June 6. It is practically certain that the report of the committee, with its findings, conclusions, and recommendations, has been prepared at the dictation of the monopoly, and that they are already in the hands of the lobby in Washington to be used instantly upon their ratification and approval by the committee of 36.

The president of the association, Mr. Roeser, is associated with the Humble Oil & Refining Co., which in turn is owned by the Standard of New Jersey. Major companies have invaded the association directly by having connected with it as officers and committeemen such people as Judge Amos Beatty, just recently deceased; W. G. Skelley; Frank Phillips, who recently contributed $3,500 to the association; Burdette Blue, of Cities Service; and others.

Independents in that meeting may screw up courage enough to advocate measures for their own protection, but heretofore the majors have invaded their meetings. They have employed such able counsel as former Secretary of War Patrick Hurley to browbeat and terrify them. They have supplied so much money to the Independent Petroleum Association of America that they feel they have a right not only to dominate but to use it as a cat's-paw to continue their nefarious operations against the American public and independent oil men.

In 1933 that Association received the following contributions from major oil companies:

Consolidated Oil Co	$10,000
Texas Oil Corporation	10,000
Atlantic Refining Co	2,000
Phillips Petroleum Co	3,000
Standard Oil Co. (of Ohio)	3,000
Standard Oil Co. (of California)	5,000

The proper committees of Congress are charged with the duty of investigating the sources of revenue of such associations which maintain lobbies in Washington as this one does. I predict that if an audit of its sources of income were made at this time this association would be found to be merely an adjunct of the American Petroleum Institute, the propagandizing organization of the oil monopoly.

TEXAS PETROLEUM COUNCIL

As an example of the sabotage conducted against independent organizations, I refer to another association called the Texas Petroleum Council, and take my information from the senate journal of the State of Texas for 1937. The Texas State Senate investigated this fake independent organization and said:

> The founders of this organization were no doubt imbued with worthy motives and conceived it to be their duty to assist and cooperate with the enforcement agencies of the State in enforcing the conservation laws. Accordingly, the Texas Petroleum Council was formed as an "educational institution."

The testimony before the committee discloses the fact that this concern has not functioned as an "educational institution," but rather, on the other hand, has functioned as a vigilante group.

The committee found that the objective of the council was "the extermination of smaller competitors," and that the contributors who furnished approximately $100,000 to this psuedo independent organization were the following:

Arkansas Fuel Oil Co	$1,666.67
Atlantic Oil Producing Co	7,180.00
Continental Oil Co	1,000.00
California Co	1,375.00
Ethyl Gasoline Corporation	1,500.00
Gulf Production Co	4,583.00
Humble Oil & Refining Co	9,083.33
Magnolia Petroleum Co	7,750.00
Pure Oil Co	5,000.00
Sinclair Consolidated Oil	5,000.00
Shell Petroleum Co	8,905.47
Standard Oil of New Jersey	4,500.00
Stanolind Oil & Gas Co	4,221.35
Sun Oil Co	7,949.74
Texas Co	10,083.33
Tidewater Oil Co	2,240.00
Union Oil Co. of California	1,250.00

OTHER MAJOR OIL COMPANY PROPAGANDA

The interests which seldom show their faces in public always arrange to have other organizations pull their chestnuts out of the fire. We may look for protests from chambers of commerce and other so-called civic organizations. I understand that the Oklahoma Stripper Well Owners Association has passed a resolution against pipe-line divorcement on the grounds that if others than the major companies own the pipe lines it will cause a waste of the oil in the ground and loss of markets. I anticipate opposition inspired by the majors from the Mid-Continent Oil & Gas Association, and I would not be surprised to see fake labor leaders opposing constructive measures that will protect independent citizens in the oil business from the ruthless operations of the monopoly.

THE CARTEL SYSTEM

In a recent meeting of the United States Chamber of Commerce held in Washington the major oil companies' spokesman, Frank Phillips, of the Phillips Petroleum Co., exposed the hand of majors when he actually advocated before the chamber the exemption of the oil industry from the antitrust laws of the United States. He pleaded "conservation," as the reason for permitting the oil industry to "regulate" itself by a code of its own design and adoption. This is perhaps the first time that the oil monopoly has exposed its iniquitous and evil designs upon the independent oil men and the American consumers.

This astounding proposal goes even further and strikes at the very heart and soul of American Government. Should we permit the oil monopoly to form a cartel, then every other major industry will likewise apply for and obtain the right to loot, pillage, and destroy the American people. We have only to look at the operation of the system in Italy and in Germany to make us fear that dreaded specter hanging over American liberty.

CONTROL OF MONOPOLY NECESSARY

The oil monopoly can be regulated only by enacting legislation protecting independents against unfair competition. Divorcement of marketing and pipe lines from major control, as provided by the pending bills, will be a step in the right direction. Independents who are willing to fight for their existence must be protected and encouraged. Congress must take the lead, because that responsibility is upon us.

Tribute to Our War Dead

EXTENSION OF REMARKS

OF

HON. DAVE E. SATTERFIELD, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

ADDRESS BY HON. COLGATE W. DARDEN, JR., OF VIRGINIA, MAY 30, 1939

Mr. SATTERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. COLGATE W. DARDEN, JR., of Virginia, made at the memorial services held in Norfolk, Va., May 30, 1939:

Mr. Chairman, ladies, and gentlemen, we have gathered together here today at the close of our spring season and the beginning of summer to pay tribute to our war dead. It is a fitting time, because when death kissed down their eyelids in dreamless sleep most of them were in the springtime of life, standing upon the threshold of a useful and happy summer, still far removed from the fall and winter, which, with the relentless passage of time, comes finally to all of us.

The observance of which we are at this moment a part has an interesting story. I cannot vouch for its truth, although I have no reason to doubt its accuracy. I found it a short time ago in a collection of stories by Grace Humphrey, entitled "Stories of the World's Holidays," which was published in 1923.

It is of such particular interest to many of us that I shall take the liberty of very briefly telling it to you. On an April morning in 1863 there met in Columbus, Miss., a little group of women to decorate the graves of their soldier dead.

Roses, lilacs, lilies, and many other flowers of that spring month had been gathered for the graves of their fallen heroes.

It was a sad occasion—the bitter struggle which had so tragically divided the States of the Union had dragged on for 2 years, taking its frightful toll from both sides. While they bent low over the graves arranging the flowers, they thought of other friends and relatives far away in the Army of Virginia or with the troops at Vicksburg. They thought, too, of the soldiers in gray who had given their lives at Shiloh, at Corinth, and at Stone River.

An elderly woman who had finished decorating the grave of her two sons, with her arms filled with flowers, was walking up the path toward a corner of the churchyard.

"Do you forget," cried one of the group, "whose graves those are? They're two Union soldiers."

"Hush," said the mother of the two heroes. "You are wrong. I do not forget. They are nameless graves marking where two soldiers lie buried. But somewhere in the North, in some city or little village or perhaps in some lonely farmhouse, a mother or a young wife or a sweetheart mourns for them just as you and I grieve for our dead."

She turned back to the unmarked graves; gently she pushed aside the long grass; tenderly she spread her flowers over the two mounds. With tears in her eyes, but with her head held proudly, she faced the women who had silently gathered about her.

"We bring these flowers"—she pointed to the grave of her sons, then to others decked with blossoms—"to express our love and devotion. They are dead, our heroes of the South. They are dead, these unknown soldiers of the North, lying here in our churchyard in Columbus in nameless graves. But when the war is over and peace comes again we shall call them all heroes. So here are my flowers, red and white and blue, for both alike."

"And mine."

"And mine."

"And mine, too," said the other women, as they softly added their flowers to the lovely blossoms on the unmarked graves in the corner.

The next spring, and the next saw them again decorating the graves in the churchyard at Columbus. The grim tide of war ran its course—and peace finally came to an impoverished and a starving Southland. A larger and larger group assembled at the churchyard and with blossoms they covered the graves of those who had fallen—the dead of both armies slept beneath a blanket of flowers.

In 1867—2 short years after Appomattox—the New York Tribune printed a story about what had happened in Columbus, Miss. Throughout the Nation the story was republished, and the people

were deeply touched. It marked in a humble way a supreme effort—an effort to replace sectional hatred and passion with friendship and love.

In May 1868 it was suggested to General Logan, national commander of the Grand Army of the Republic, that his organization adopt this beautiful custom and he issued an order designating the 30th of May as a day to be set aside for this purpose.

And so the little gathering in Columbus in 1863 initiated a service in honor of our war dead which has become Nation-wide. It is true that the actual day is not the same in all of our States, but the spirit is the same, and it is the spirit which makes the occasion great.

Of late years Memorial Day has come to be a day set aside in honor of our dead of all wars. It is in memory of those gallant seamen who went to their death off Flamborough Head in the North Sea, when a heretofore little known captain—John Paul Jones—in the service of the American Colonies, lashed the rotten hull of an old East India merchantman, hastily converted into the man-of-war, *Bon Homme Richard*, alongside the 50-gun English ship, *Serapis*, and struck the blow that made his name immortal in American history and wrote a brilliant chapter in the story of a navy which now stands guard over the western world.

This day is in memory of the ragged troops who died around the smoldering camp fires of Valley Forge—of those who died with their French comrades under Lafayette at Yorktown.

It is in memory of those who fell in the far away Mediterranean, guarding our commerce against the pirates of the coast of northern Africa and those who in 1812 and in 1846 gave their lives for their country.

It is in memory of those in the blue and in the gray who fell at Manassas, at Gettysburg, in the Wilderness, and at the Crater, as well as for those who at the turn of the century, in their great sacrifice, broke the power of Spain in the western world.

Happily, the wounds of the struggle between the States have healed; we are again a united people with one flag and one country. A most fortunate situation which gave rise to a short poem at the time of the World War which expresses well, I think, the feeling of our people:

"Here's to the boys of the windswept North!
When they meet on the fields of France,
May the spirit of Grant be with them all
As the sons of the North advance.

Here's to the boys of the sunny South!
When they meet on the fields of France.
May the spirit of Lee be with them all
As the sons of the South advance.

Here's to the Blue and the Gray as one!
When they meet on the fields of France,
May the spirit of God be with them all
As the sons of the flag advance."

And last of all it is consecrated and dedicated to those who gave their all in the struggle which engulfed the world in what was but yesterday.

They lie buried both here and in foreign fields; some have found their final resting places in distant seas, others sleep beneath the frozen plains of northern Russia, while in the northern reaches of France from the Vosges to the North Sea there slumbers a mighty host.

But wherever they be, in whatever land, be their graves marked or unmarked, they belong to us, and we have gathered here today to do them honor.

Nothing that I can say can add to their glory. Nothing that we can do can adequately express either our sorrow or our deep obligation.

In fact I have long felt that speeches on this occasion are of questionable value. In many instances the very recounting of the conflicts and struggles which are a part of our national history tends to depress many of our people—for others long slumbering memories charged with bitterness and sadness are awakened.

I believe the most fitting tribute that can be paid is the minute of silent contemplation and rededication which is observed each year on Armistice Day, when countless millions both here and abroad pause briefly in their appointed tasks and with uncovered and bowed heads think of those who in defense of their country made the supreme sacrifice during the World War.

That moment of silence is to me more expressive than the orations which have been made, more expressive than the essays which have been written on a subject so very near to the hearts of our people.

And so today the thing that really counts is that we have gathered in honor of those to whom we owe a deep and a lasting debt.

In a day when the clouds of war menace the world, when human freedom cringes under the lash of tyranny and oppression, and when the tramp of armed men and the roar of the cavalry of the air, bent on the destruction of innocent men and women and children far removed from the scene of battle, threaten to drown the laughter and the songs of peoples everywhere, we must dedicate ourselves again to the principles for which this supreme sacrifice was made.

We must keep in mind the high courage and the dauntless spirit which was theirs and with which they carved this Republic from the wilderness that was the New World. In their going they have thrown to us the torch; we must hold it high. We must keep the faith.

Robert Low Bacon

MEMORIAL ADDRESS
OF
HON. LEONARD W. HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT L. BACON, late a Representative from the State of New York

Mr. HALL. Mr. Speaker, it is to me a solemn privilege to pay tribute to the memory of my illustrious predecessor, the late Honorable ROBERT L. BACON.

My friendship with "Bob," as we all loved to call him, began when he first became a candidate for Congress and continued down through the years to his untimely passing.

Mr. BACON served the First New York District for nearly 16 years and during that time became personally known to thousands of voters from Flushing to Montauk Point, to many of whom he had rendered personal favors not altogether connected with politics or with his official position. Indeed, he made no distinction between members of his party and those of others if only he could help his people in any legitimate manner.

He was a thorough Republican to be sure, never once swerving in his loyalty to his own organization, but he possessed a wide conception of his position and duty, and it can be truly said that he was the Representative of all the people in his district, shaping his life and conduct accordingly. Many a humble bayman, and others none too well blessed with this world's goods, as well as many of his own class and social position, have cause to bless his memory.

I imagine there never was a more conscientious or more hard-working Congressman, in his own time or any other, than ROBERT L. BACON. He was a martyr to what he considered his plain duty, and he made of himself a hard taskmaster because of that characteristic. He was considerate of others but never of himself. Many times during the heat of the summer, after Congress had adjourned, following a long and weary session, have I known Bob to continue work at top speed in his home county of Nassau, rather than seek the rest and recreation he so ofttimes needed.

For a number of years Mr. BACON set up headquarters in Mineola, where, with a secretary, he carried on much of the detail work which could not be finished in Washington. Here he received delegations daily of men and women usually seeking favors for themselves and never doubting that Bob would move heaven and earth to secure for them anything and everything to which they were legitimately entitled.

In my opinion BOB BACON died in the service of his country just as truly as if he had fallen on the field of battle. In my opinion, also, he might be living at this moment if he had closed his ears to the call of duty. If he had thought more of his own physical well-being and less of others' problems, he might not have left us in the prime of life and at the apex of his powers and usefulness.

Mr. Speaker, I am not sufficiently gifted with the power of expression to indicate all that fills my heart and mind when I think and talk of the late ROBERT L. BACON. He was my ideal of the perfect American gentleman—cultured, courteous, generous, thoughtful, and democratic in the real sense of that term. He is gone, and that is our serious loss, for none too many men of affairs are cast in his heroic mold.

Hon. Allard Henry Gasque

MEMORIAL ADDRESS
OF
HON. MARTIN F. SMITH
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ALLARD HENRY GASQUE, late a Representative from the State of South Carolina

Mr. SMITH of Washington. Mr. Speaker, it was my privilege to serve with our late colleague ALLARD H. GASQUE, of South Carolina, during the last three Congresses. When I became a Member of the House in 1932, on account of my interest in veterans' legislation, I asked to be assigned to the Committee on Pensions, of which Mr. GASQUE had, after serving on that committee since 1924, recently been named as chairman. I was assigned to his committee, and he was my chairman for 6 years. I consequently became very well acquainted with our late colleague, and our relations were always most cordial and friendly. I learned to know and appreciate his sterling worth of character, outstanding ability, and fidelity to duty. He was in poor health for several years and passed away in the closing hours of the Seventy-fifth Congress, deeply mourned by all his colleagues.

In the fore part of this session the following resolution in honor of his memory was unanimously adopted by the Committee on Pensions:

The Committee on Pensions in regular meeting assembled, desires to spread upon its records the deep regret and sorrow of its members owing to the death of Hon. ALLARD H. GASQUE, of South Carolina, who departed this life immediately after the adjournment of the Seventy-fifth Congress.

Our late colleague was first appointed to the Committee on Pensions on February 22, 1924 (68th Cong.), and served continuously on the committee until December 15, 1931 (72d Cong.), when he was made chairman. He served as chairman of the committee to the date of his death on June 17, 1938. He rendered able and distinguished services in the capacities in which he served and was beloved by the veterans of our wars, whose true and loyal friend he ever proved himself to be. He was held in high esteem by his colleagues in the House, who mourn his passing. The members of the Committee on Pensions crave the privilege of tendering to his widow and children sincere sympathy in their loss and bereavement.

ALLARD H. GASQUE was an educator by profession, and prior to his entry into politics spent many years of his life in that important work and for 20 years served continuously as superintendent of schools in the county of Florence—formerly Marion—in which he was born, in the State of South Carolina. He served as president of the State Teachers Association and State County Superintendents Association of his native State. After filling important posts in the Democratic Party he was elected to Congress in 1924 and was reelected continuously, often without any opposition, until his death in 1938. In recognition of his services to the cause of the Veterans of the Spanish American War he was made an honorary member of the United Spanish War Veterans, a fact of which he told me more than once that he was very proud.

Our departed colleague had a very happy family life and his widow, who survived him, was a real helpmate and companion, to whom he was very devoted. Their union was blessed with two sons and two daughters, in whom he took a justifiable pride, as they did in the career of their distinguished and illustrious father. It was the happy privilege of my wife and I to recently attend the exhibition here in Washington, D. C., of a very fine portrait likeness of Mr. GASQUE, painted by Mrs. Dial, the talented wife of Hon. Nathaniel B. Dial, formerly United States Senator from the State of South Carolina.

Mr. Speaker, both life and death is a mystery. We are born to die. After all, the important fact is not that we have lived nor that we do die, but how we have lived. When we ask that question in regard to ALLARD GASQUE we find that as student, teacher, educator, politician, statesman, champion of the war veteran, husband, father, and friend he played well his role in the drama of life.

The night dew that falls,
Though in silence it weeps,
Shall brighten with verdure
The grave where he sleeps;
And the tear that we shed,
Though in silence it rolls,
Shall long keep his memory
Green in our souls.

Charles J. Colden

MEMORIAL ADDRESS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. CHARLES J. COLDEN, late a Representative from the State of California

Mr. BLAND. Mr. Speaker, it is with a high appreciation of the splendid, patriotic, and intelligent service of CHARLES J. COLDEN, that I attest my memory of his worth.

Soon after he came to Congress as a Representative from the Seventeenth District of California, I met him. I had then been a Member of the House of Representatives for many years, and I had seen men come and go. By long experience, I had learned to appraise quickly the merit of the newcomer and with a fair degree of accuracy to distinguish between the man who was merely a timeserver and the man who was a diligent worker, who had real work to do, and who went about his tasks with a patriotic fervor to leave nothing undone that he could do to make his country better and stronger than it was when he came. I saw very soon that CHARLES J. COLDEN was of the latter type.

Day after day, when the House opened its sessions, he was in his seat. While it wended its way through tireless and weary debates, COLDEN was there. When the issue was beclouded, his timely, pertinent, and sensible inquiries frequently dissolved the confusion and resolved into clarity what was in doubt.

When the daily session adjourned, he was still on hand. When a vote came I found Mr. COLDEN always patiently and intensively seeking that which was best, rather than that which was popular. He usually found it.

As the months passed, Mr. COLDEN's interest in marine matters and his knowledge of maritime problems drew us more closely together. He appeared frequently before the Committee on Merchant Marine and Fisheries, of which I am chairman. I found that his knowledge of the many subjects of that committee's jurisdiction made him valuable in helping to clarify our problems. He was always welcome.

It was with real pleasure to me and to all of the members of my committee that later Mr. COLDEN was elected to serve on that committee. From the time of his election on the committee to the day of his death, except when sickness prevented, he was on hand whenever possible and at almost all of the hearings and executive sessions. He spared no effort to inform himself fully on all bills coming up and as to all matters under consideration. His searching investigations into the truth and merit of every proposal, his untiring patience, his genial manner, his cordial friendship, and his keen humor made him beloved and respected by all.

He met his illness with the same courage and the same patience he had met all of the other problems of life. He died as he had lived, undismayed and unafraid. When he passed hence his district lost a faithful servant, his State a devoted son, and his country a patriot of the highest order.

I lost a friend whose memory will linger long. His association was for me an example and an inspiration. It is my hope, and will be my satisfaction, if when my service in this body ends, I shall have done my work with some of the zeal,

efficiency, and success with which CHARLES COLDEN did his work. I cannot meet him now in the daily grind, but I can and do remember his loving handclasp, his genial smile, his cheerful salutation. These I shall always remember and cherish.

And now, old friend, tried and true, I salute you.

Creation of Bureau of Fine Arts

EXTENSION OF REMARKS

OF

HON. WILLIAM I. SIROVICH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

ADDRESS BY HON. WILLIAM I. SIROVICH, OF NEW YORK, IN THE HOUSE OF REPRESENTATIVES JUNE 15, 1938

Mr. SIROVICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to state I may call hearings this session, if time will permit us, on the bill to create a department of fine arts, which is House Joint Resolution 149. This bill was considered for almost 2 years by the Committee on Patents and reported out unanimously by our committee. The Rules Committee reported out a rule for consideration of this measure, but, unfortunately, it was brought out on the closing day of the Seventy-fifth Congress, when due consideration could not be given to it.

I thought, therefore, that it would be of great interest to the membership of the House to be acquainted with the subject matter contained in my last address on this most important subject. The speech is as follows:

Mr. COX. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 526 and ask for its immediate consideration. * * *

The gentleman from New York [Mr. SIROVICH] has given a great deal of thought to the proposal and is probably, if not certainly, the best-informed man in the country on the subject. He is prepared to make a fair, accurate, and understandable statement of the whole matter, and I yield to him for that purpose 15 minutes at this time.

Mr. SIROVICH. Mr. Speaker, to me God reveals Himself in three mysterious ways: First, through the life of the universe, which we term "nature"; second, through the thoughts of man, which we term "art"; and, third, through the precision and exactness of the mind in correct thinking and observation, which we term "science." The cumulative contribution of everything that has ever been written regarding nature, science, and art constitutes the culture, the education, and the civilization of the world.

Mr. Speaker, there are no geographical and national frontiers to science born of the analytical mind. The human mind has a universal logic expressing itself everywhere in the same way. It produces everywhere the same mathematics, chemistry, physics, botany, physiology, astronomy, and so forth. But there are national and geographical frontiers to art born of the soul of the Nation, of its imagination, of its illusion, and of its deepest emotions. Just as the mind is general and universal, so is the soul subjective and individual. While geometry is everywhere alike, painting is not. While astronomy is everywhere alike, music is not. While physics is everywhere alike, poetry and literature are not.

It has often happened that two scientists in two different places have, independently of one another, made simultaneously the same scientific discovery. As, for instance, Leibnitz and Newton in discovering the infinitesimal principles in mathematics. Or Leonardo da Vinci and Harvey discovering independently of one another, in different centuries, the circulation of the blood. Or La Place and Kant discovering independently of one another the nebular theory of the solar system. But it has never happened that two painters paint the same pictures, that two composers compose the same music independently of one another, or that two playwrights write the same drama independent of one another. These concrete examples demonstrate clearly that art is individual and subjective, while science is universal and general. It is for this reason that every civilized nation, with but few exceptions, cultivates its arts officially, and imposes upon its national government the supreme duty to promote and support, to encourage and to help, the artistic forces expressing themselves in drama, literature, music, plastic and graphic arts, as well as the dance and its allied arts.

On the European Continent, which I visited last year, every government, regardless of size and importance, has either a ministry or a subministry of the fine arts. In England, where no provision for a minister of fine arts is made, the various royal academies, such as the Royal Academy of Art and Letters, the Royal Academy of Science, take care of the matters of the spirit, the nation entrusting the royal court with the task of promoting the different arts and sciences and the drama and lyrical poerty. The funds for their promotion and maintenance of the different arts and art institutions are supplied by the Government.

The official promotion of the fine arts by the European nations began with their artistic and literary maturity. When the leaders of the nations recognized that their peoples came of age artistically and culturally they moved that their national governments adopt measures to promote, protect, and support young artistic and literary creative talents. Such was the case in France, Germany, Austria, Hungary, Italy, Belgium, and Holland.

Looking objectively at the recent developments of American art and literature, we must reach the conclusion that the American people have come of age culturally and artistically, for America is now leading the world not only in science, in mass production, and in the organization of life, but in art and literature as well.

Destiny willed it that the growth of America as a great power economically, politically, and militarily coincide with American cultural and artistic maturity. I, for one, am thrilled by the thought that America today, in spite of its youth, is one of the greatest cultural centers of the globe. The new artistic and cultural energies in America, assuming all the time more beautiful and newer forms, hold out the fair promise to make America the foremost cultural power in the world. Thus the Old World, with its great artistic traditions, will be forced to orientate itself in the marvelous artistic creations of the New World.

When a nation decides to promote and protect its creative talents it does so for two reasons—for cultural reasons and for reasons of justice.

It is necessary to promote and encourage art to bring out the very best in the creative artist and thus contribute to the normal development of the national art, which alone testifies to the greatness of a nation. What was the glory of ancient Greece? Was it its army, its navy, its bridges, its tunnels, its viaducts? No; it was its art, its poetry, its philosophy, its drama. What was the glory of the Italian Renaissance, the greatest chapter in man's history? It was Michelangelo, Raphael, Leonardo da Vinci, Titian, Dante, Petrarch, Boccaccio. While the names of the great captains of industry, commerce, and finance, and even politics, have been forgotten in the ashes of time, these glorious names will live on through the ages, and their works will forever be a source of inspiration to mankind. [Applause.] But none of these immortal men could ever have achieved what they have accomplished if not for the aid of the courts or the help of the church—in short, the government that was behind them.

It is from this background, vantage point, and perspective that this bill to create a bureau of fine arts in the Department of the Interior must be considered.

It is my contention, and I trust yours, that the artist and the poet as a citizen has the same rights and claims on the Government as the businessman, the workingman, the merchant, the military man, the sailor, the farmer, and worker. They can all apply to the Government for counsel and suggestion and guidance. The worker can apply to the Labor Department, the farmer to the Department of Agriculture, the businessman to the Department of Commerce, the banker to the Treasury, the military to the War Department, and so forth.

Modern government is so organized that it can offer aid, guidance, and protection to the citizenry of every walk of life, except to the artist and poet. To fill this gap and to serve not only art and literature, but to give the creative artist and poet the same rights and privileges as a citizen, as the citizens in other walks of life have, this bill is being offered for your approval and adoption. [Applause.]

Mr. Speaker, this bill which we are debating today in the closing hours of Congress and which should have been brought out a month ago, to give it a fair chance, provides for the creation of a bureau of fine arts in the Department of the Interior, for the promotion of art and literature, through the use of copyright and copyrightable material, and to define the powers and duties of said bureau and for for other purposes.

During the past few years, particularly as a result of the Federal arts projects, a cultural transformation has occurred in our national life. Theater, music, painting, sculpture, literature, and the other arts have become the possession of millions of people in every section of the country who never before had the means or the opportunity to enjoy the benefits of culture. Twenty-five million people in 22 States have witnessed Federal theater productions; 65 percent of them had never witnessed a play before. Federal musicians have played to aggregate audiences of 92,000,000 persons in 273 cities in 42 States. Eleven million people have witnessed art exhibits or have been taught in art classes. The American Guidebook Series has been published in a greater number of States. This is but a brief résumé of the testimony offered before the committee, but it serves to indicate what has been accomplished.

This historic contribution has been made under a temporary emergency set-up, and as a result it has been impossible to plan a long-range program. The purpose of House Joint Resolution 671 is to make such planning possible. Obviously the only method is through the setting up of a permanent bureau of fine arts.

There exists in our country potentialities for the development of a great culture. This is an important part of our national wealth, and it must be safeguarded and fostered. It is the function of democratic government to secure the benefits of education and cultural enlightenment for all the people. By so doing it guarantees the perpetuation of democracy.

Mr. Speaker, this bill has the endorsement of Burgess Meredith and Frank Gilmore, president and former president of the Actors' Equity Association of America. It has been approved by Mrs. Edgar Stillman-Kelley, president of the Federated Music Clubs of America; Deems Taylor, president of the American Operatic Society; Lawrence Langner, founder and director of the Theatre Guild; Brock Pemberton, president of the Producing Managers Association of America, and president of the League of New York Theaters; George M. Cohan, Frances Starr, Blanche Yurka; by the Authors League, Dramatists Guild, by Heywood Broun, president of the American Newspaper Guild; by William Green, president of the American Federation of Labor, who wrote the following letter:

Hon. WILLIAM I. SIROVICH,
Chairman, Committee on Patents,
House Office Building, Washington, D. C.

DEAR REPRESENTATIVE SIROVICH: Having read and studied House Joint Resolution 671, which provides for the creation of a bureau of fine arts in the Department of the Interior that would be instrumental in providing for the theater and its allied arts, music and its allied arts, literature and its allied arts, the plastic and graphic arts, and their allied arts, and the dance and its allied arts, I can assure you that it has the enthusiastic support of the American Federation of Labor.

It is heartily supported by the organized actors, musicians, writers, and other organizations of labor, who believe that the development in our country of cultural institutions is an important part of the life of our people now and in the future. Institutions for the advancement of culture and civilization in art are found in nearly every civilized nation in the world, and the United States should not be backward in creating such a bureau.

I am sure that the purpose of the resolution will appeal to the Members of the House of Representatives and the United States Senate.

Sincerely yours,

WILLIAM GREEN,
President, American Federation of Labor.

Also by James Hulley, general organizer of the United American Artists, and John Lewis, president of the C. I. O.; E. L. Oliver, of Labor's Nonpartisan League; by Lawrence Tibbett and Rosa Ponselle, the great operatic singers of the Metropolitan Opera, who appeared personally before our committee, together with Irving Berlin, George Gershwin, Rudy Vallee, Irving Caesar, George Middleton, Erskine Caldwell, Percy Mackage; and Martin Popper, counsel to the Federal Arts Committee; by Rockwell Kent, the great artist; Gutzon Borglum, the distinguished sculptor; by Gene Buck, president of the American Society of Composers, Authors, and Publishers; George Creel, author and writer, and president of the Authors' League of America; by Chester Crowell, representing the Authors' League; Charles Edward Russell, representing the art clubs of Washington, D. C.; Stanley Riggs, representing the Archeological Society; Sigmund Romberg, the great musical composer of Maytime, Student Prince, Desert Song, Blossom Time, and so forth.

This is but a cross-section of the eminent and distinguished dramatists, novelists, authors, poets, artists, musicians, sculptors, and painters who appeared before our committee and endorsed the principles embodied in the bill we are now presenting for your consideration and deliberation.

Mr. Speaker, the modern drama is an escape from the hard realities of life, created by the industrial and machine age to a world of phantasy and illusion. The industrial and machine age, with its routine and efficiency, sameness, and monotony, creates boredom for man, and to get rid of the boredom he escapes to the theater. This explains best the phenomenal success of the movies. Thus if in former generations the drama was a luxury, today it is a necessity. Close the theaters of our country and the insane asylums of the Nation will become overcrowded. For modern man cannot stand the strain and tension of life without a periodic escape to the world of illusion, the theater. This elemental function of the theater in the life of our Nation makes it imperative that the National Government pay attention to this all-important phase of our national life. The more free time modern man acquires as a result of the shortening of labor hours the more important must the function of the theater become in national life. To suggest that the National Government represent all interests of the Nation with the exception of the interest of art, literature, and drama is to deny its sovereign character and to make the creative genius the stepchild of the Nation.

Mr. Speaker, I appeal to the patriotic spirit of every Member of the House of Representatives, who is here assembled, to help us to achieve this great ideal in the creation of a bureau of fine arts. To me, Mr. Speaker, an ideal is a place to which God descends as man rises to meet Him. Let us bring the ideal of a fine arts department to the home, hearth, and fireside of our American people in every section of our country. This would enable us to have a democracy where economic security could be guaranteed to all the people of our Nation in order that we might only compete in the development of the mind in science, in art, in literature, in philosophy, in drama, in music, and in all the beautiful things that go to ennoble mankind. The shibboleth of our Nation is "E pluribus unum." Out of many we have become one great Nation. Let us through the department of fine arts become the greatest and mightiest nation in the world in culture and artistic development that will be a monument to our genius in the centuries to come. [Applause.]

Mr. RABAUT. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. I yield to my friend from Michigan.

Mr. RABAUT. Why should art be controlled by the Government? Has not art always been free? Has not art always been developed along free lines?

Mr. SIROVICH. That is a very fair question, a very interesting question, and I shall be glad to answer my distinguished friend.

Please remember, Mr. Speaker, art cannot be controlled and regimented by any government in the world, unless people are forced to write, paint, and compose as dictators tell them. Art is individualistic. In the early part of my address I showed how no two men, from the standpoint of literature, can write the same books. No two newspapermen up there in the gallery can write the same story about the same thing. No two painters can paint the same object in the same way. No two architects can design the same building exactly alike. You cannot regiment the human mind in a democracy. [Applause.]

[Here the gavel fell.]

Mr. COX. Mr. Speaker, I yield 2 additional minutes to the gentleman from New York.

Mr. SIROVICH. You cannot regiment in a democracy arts, drama, music, literature, the plastic and graphic arts. Art can be regimented only where you have destroyed freedom of the press and freedom of speech.

Mr. WADSWORTH. Mr. Speaker, will the gentleman yield?

Mr. SIROVICH. I yield.

Mr. WADSWORTH. On page 5 of the bill, commencing in line 4, follows a list of professions, vocations, or occupations, with some of which I am not familiar. What is a "wirter," for instance?

Mr. SIROVICH. This is a typographical error. It stands for the word "writer."

I notice there are a couple of typographical errors in the bill. For instance, the word "draftsman" should be "craftsman."

They are typographical errors.

Mr. WADSWORTH. Apparently the draftsman was lacking. Outside of the field of politics, what is a puppeteer?

Mr. SIROVICH. A puppeteer is one who creates and performs with puppets, like a Punch and Judy show.

Mr. WADSWORTH. I thought so.

[Here the gavel fell.]

Mr. TAYLOR of Tennessee. Mr. Speaker, I yield the gentleman 1 additional minute.

Mr. MICHENER. Will the gentleman yield?

Mr. SIROVICH. I yield to the gentleman from Michigan.

Mr. MICHENER. I want to pursue further an inquiry propounded by the gentleman from the gallery who suggested we were regimenting everything else in the country and he wanted to know why we could not regiment art.

Mr. SIROVICH. You cannot regiment art, because art symbolizes the soul of the individual and represents an individual expression. You can suppress the teaching of science and art in totalitarian governments, as they are doing in Nazi totalitarian Germany, but in a democracy you cannot regiment the individual mind because he has freedom of expression and freedom of thought. So long as human beings in a democracy have freedom of thought, freedom of expression, and freedom of the press, you can never have regimentation in American art and in American literature. [Applause.]

[Here the gavel fell.]

Civil Liberties Investigation

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 2, 1939

RESOLUTION OF THE CALIFORNIA STATE ASSEMBLY

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I am including a resolution passed by the California State Assembly. It refers to the proposed investigation of the Associated Farmers for alleged violation of civil liberties. The resolution follows:

Assembly Joint Resolution 46

Relative to civil liberties investigation

Whereas a subcommittee of the United States Senate Committee on Education and Labor was authorized to investigate violations of civil rights in California and other Western States; and

Whereas the subcommittee initiated the investigation but was unable to complete it because of a lack of funds; and

Whereas there has been a widespread public demand for the continuance of the investigation as evidenced by action taken by such organizations as the National Grange, the American Federation of Labor, the Congress of Industrial Organizations, and others, urging an appropriation of additional funds for the use of the subcommittee; and

Whereas the Associated Farmers of California, Inc., in a telegram to Senator HIRAM JOHNSON, dated April 4, 1939, inserted in the CONGRESSIONAL RECORD on that date, demanded an opportunity to be heard before the subcommittee in respect to charges made against it; and

Whereas Senators SCHWELLENBACH and DOWNEY have introduced Senate Resolution 126 in the Seventy-sixth Congress, providing for an appropriation of $100,000 for use in enabling the subcommittee to continue its investigation; and

Whereas Gov. Culbert L. Olson has already communicated with the chairman of the United States Senate Audit and Control Committee, Senator BYRNES, to support Senate Resolution 126: Now, therefore, be it

Resolved by the Assembly and the Senate of the State of California jointly, That this legislature approves of and endorses Senate Resolution 126, now pending in the Seventy-sixth Congress; and be it further

Resolved, That copies of this resolution be sent by the chief clerk of the assembly to the President and Vice President of the United States, to the Speaker of the House of Representatives, to each Senator, and to each Member of the House of Representatives from California in the Congress of the United States; and to Senator JAMES BYRNES, chairman of the United States Senate Audit and Control Committee.

The Ludlow Resolution

EXTENSION OF REMARKS
OF
HON. LOUIS LUDLOW
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 2, 1939

RADIO ADDRESS BY HON. WILLIAM P. LAMBERTSON, OF KANSAS, JUNE 1, 1939

Mr. LUDLOW. Mr. Speaker, no Member of this Congress, and no one in the public service of this Nation anywhere, is more deeply and genuinely interested in maintaining the people's right to rule than is the distinguished gentleman from Kansas, Hon. WILLIAM P. LAMBERTSON.

In a very enlightening radio address delivered over radio station WOL on Thursday night, June 1, Mr. LAMBERTSON pointed out that our existing democracy is confined to our domestic concerns; that our democracy stops at the water's edge; and that in its foreign relations our democracy is not a democracy at all but a pure autocracy. As proof of his statement, he pointed out that while our people may vote on the location of a sewer or the construction of a school building, they have no opportunity to vote on the greatest and most tragic of all decisions, the question of sending our boys into foreign lands to die in the settlement of quarrels of alien origin.

Mr. LAMBERTSON very impressively presented the case in favor of the Ludlow resolution and advocated the enlargement of our democracy by giving those who have to suffer and to die, and bear the costs and griefs of war, the right to decide whether this country shall send soldiers abroad to give up their lives in foreign conflicts. He made a special plea that women shall have an equal right with men to vote on the question of participation in foreign wars, pointing out that under the present war-declaring mechanism, which vests the power to declare war in Congress, women are pathetically impotent in expressing their views, since only 5 of the 531 Members of Congress are women. His point of view was that since women go down into the valley of the shadow of death to bring our boys into the world, they should have something to say as to whether their flesh and blood shall be hurled into the hell of a foreign conflict.

Mr. LAMBERTSON's address was timely and scholarly and was particularly appropriate at this time, when the war fever has subsided and our people can discuss the question of national security in an atmosphere of thoughtfulness and reason. By unanimous consent of the House, I present Mr. LAMBERTSON's address for printing in the RECORD, as follows:

To my radio listeners: Through the courtesy of the Inter-City hook-up I am privileged to speak this evening in favor of the Ludlow resolution. We are very happy to find that the war fever has cooled off a little and because it has, it makes the consideration of the Ludlow resolution more in order. As we approach a war which people fear is imminent, some raise the question challenging the patriotism of those urging a change of our Constitution to let the people vote on a foreign war; but with this spirit subsided a little, we can dare to stick our heads up and proclaim ourselves for a real democracy which passes on the deepest and most profound thing in our life.

On the whole I am glad to announce that there is a growing sentiment among the people, as the Ludlow resolution is better understood, in its favor. I find many men in great national patriotic organizations who have been opposed to it on the face of it, are, as they think more about it, looking on it with more favor. On a recent visit to my home district, it was my privilege to visit in the 10 county seats. There were more questions asked and more interest in the war situation than in anything else. They were worried about what we in Congress and the President might do. I talked to several members of the American Legion and Veterans of Foreign Wars who used to fear that a referendum might handicap the Nation in its medium of defense by proposing to let the people vote on something before the Government could act. I notice a distinct improvement in favor of the proposal over what it had been last fall.

One of the things which I think has stirred my people up is the large appropriations which we have been making for our armed forces. I think they were particularly interested in the $750,000,000 Navy bill which has gone through the House and the Senate and has been signed by the President. They seem to understand that it required very little debate, that the subcommittee's recommendation was accepted after a few moments by the Whole Committee of the House without any hint of reductions, that the House floor debate lasted only an hour or two before it was passed—this record-breaking bill. This Navy bill will call for $950,000,000 next year to carry out the provisions that have been started this year. There is bound to be a $200,000,000 increase next year. The people are not so dumb that they believe this is just a Navy for defense. They know it is a Navy that is getting prepared to go places away from the American shore if need be, further even than this hemisphere, and the tremendous increases of the Army and air forces have made a pacified people 3,000 miles from either the belligerent East or West to believe that we are headed for places which they wouldn't sanction and this has sharpened their eagerness for the Ludlow resolution.

Senator BORAH's statement that we might be driven to attack in order to defend ourselves is deserving of some consideration, but the point is not the most serious. Under things as they exist today, if we saw an enemy moving to some position which might be threatening, the President of the United States as Commander in Chief of the Army and Navy could move our forces before any declaration of war was made by Congress, to give us the advantage or to offset some disadvantage. There may be a real question about whether it is a foreign war or not, the distinguished Senator says. Congress would decide first and then the people would decide second. If there were any strong hint that it was to be a war at home, nobody would be keener for defense than the people themselves, but they wouldn't be fooled so quickly as a Congress surrounded by propaganda on the question of a foreign war. Yes, it is true that we can't think of any rule that makes it perfect, but this proposition would make it more nearly perfect and would do more to prevent war than anything else we could do. Of course, those on the other side would say that because we had a referendum of the people we probably wouldn't fight as quickly and therefore other nations might dare to be more offensive or aggressive toward us. Secretary Hull said last winter that when he proposed something to a foreign country there was sort of a secret voice that came up behind and over his head that said to those countries, "We wouldn't fight," and it weakened the force of his threat or his diplomacy, we should say. There is the good and the bad side to that. Possibly it is a little humiliating to a leader who assumes to make diplomatic proposals with fears that his country isn't behind him, but there is a fine wholesome force in that secret voice that comes up from behind and goes over his head, which is the real expression of our democracy and should be his guiding spirit after all.

I note with interest as the debates on the Constitution are reviewed that there were two schools of thought about where the declaration of war should lodge. The Tory school thought it should lodge with the President, and the other extreme thought it should lodge with Congress because they were the nearest to the people. The people themselves, then, were inaccessible. They were widely scattered, of course, without radios, without telephones or telegraph, or even roads, and with very limited mail service it was next to the impossible of thinking they could get a referendum from the people in any reasonable time at all. But how different it is today. If the people could have been reached then as they are reached today by a sound of a voice at every cross road and every drug store, there isn't much question but what the authority would have been left with the people to have voted on the question of a declaration of war. The Congress was chosen, let me reiterate, because they were the closest approach to all of the people at that time.

The Ludlow resolution furnishes us a double check on the subject of war. If the substance of this resolution became a part of the Constitution and a foreign war became imminent, the Congress would first submit the resolution to the people. That would be their judgment, and then the people would vote whether or not they should sustain Congress. That furnishes us a double check

like we have in the two Houses of Congress, like what is emphasized in the check-and-balance system of government. I think a great many people think that under the proposed change the people would initiate and vote on the question regardless of Congress. Understand, Congress would submit the resolution and vote the declaration of entering a foreign war first, as they have done; then, under the proposed change, the people would have the chance to verify what Congress had declared or veto it.

Then the people would have a secret vote, and this is highly important. No one can tell or coerce an American soul when he goes into that ballot booth alone. The votes of Congress many times are not true votes. Congressmen don't always dare to do what they would like to do, but the people at home would do just exactly what they wanted to do on a secret ballot on a referendum submitted back from Congress. The war propaganda in the spring of 1917 was so built up that only a few Members of Congress voted against the declaration of war. It was not so much the fear of the people at home as the fear of forces about Washington—the fear of being called a pacifist, the fear that somebody might call them unpatriotic. They didn't have time to get back home to mingle with their people. On April 6 in '17 no one thought we would send soldiers to France; it was to be an economic war. Those who had courage to overcome the influences that were asking for war have been thoroughly vindicated in the public mind. The people on a referendum would not have to think of criticism, because their vote would be a secret vote, and that is the finest vote of all.

Another reason for the referendum is that it will give women, and particularly the motherhood of the country, an equal chance with the men in a vote on whether their sons shall be made cannon fodder in foreign fields. Today in Congress there are only 5 women—4 Members of the House and 1 in the Senate—out of the 531. You can plainly see that women are not equally represented in Congress, although they have equal suffrage; and under the present arrangement the men statesmen of the country determine the declaration of war. Women vote now in the United States probably to as high a percentage as men, and they would particularly on a war referendum. Everyone knows that it was the women's vote in the United States in 1916 that reelected Woodrow Wilson after a promise that he made through the campaign that he would keep us out of war. There isn't the slightest doubt in the world but what that thing, and that alone, gave the electoral vote in Kansas to Woodrow Wilson over Charles Evans Hughes. So on a referendum of war women for the first time would come to their own.

Our democracy is effective for internal things, but not in dealing with our international relations. Our democracy is effective before bonds are issued on a sewer project, on a school building, on the building of a courthouse, and in all these instances the people must vote their approval, but when we get down to the water's edge our democracy ceases. When we begin our dealings with the nations of the world through the State Department, when it comes to the deepest and most sacred thing of life—war and the power to conscript—our democracy goes out the window and an autocracy takes the throne. We have delegated all our powers in tariff rates under the reciprocal-trade agreements with the Secretary of State to use in our international relations. We have given away our democracy, and this whole thing that we have given away is the source that tells us now that we must not let the people have the chance to vote ultimately on whether we shall be involved in European wars because of one department's failing to make a satisfactory friendly relationship. We are pleading for an equal democracy in picking up a son from the home circle, sending him to European soil to die for his country, the equal democracy that we demand now on whether a sewer project can be successfully projected. I belong to that increasing American percentage who believe that the same democracy that exists for the common and material things of life should exist for the deepest and most sacred thing in this world—a declaration for a foreign war. It is a question of bringing to our foreign relations the same democracy which is universal in our domestic affairs.

Aid for Dependent Children Should Be on 50-50 Basis

EXTENSION OF REMARKS

OF

HON. DUDLEY A. WHITE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

Mr. WHITE of Ohio. Mr. Speaker, someone has said, "The measure of the degree of civilization of a country is reflected in the provision which it makes for its children." I do not know who uttered those words, but I believe most of us will agree with the thought.

There have been numerous plans for assistance to needy children. The method which has been put into effect by the Federal Government is contained in the Social Security Act. As we all know, it is the law which governs the pattern of State laws at the present time for aid to dependent children.

In January 1939, 42 jurisdictions were administering aid to dependent children under plans approved by the Social Security Board. Nearly $9,000,000 from Federal, State, and local funds were obligated for monthly grants to 666,655 children in 272,385 families.

The grants averaged $32.52 per family, the lowest average grant for any State being $8.14 per family, the highest $64.17 per family. In four States the average grant is less than $15 per month per family unit and in three others less than $20.

The purpose of legislation for aid to dependent children is to prevent disruption of families on the ground of poverty alone and to enable the mother to give home care to her children. The assurance of a definite amount of aid not subject to change from week to week or month to month unless conditions in the family change is one of the chief advantages of this form of assistance. The enactment of laws for aid to dependent children was evidence of public recognition of the need for long-time care for those children whose fathers are dead, are incapacitated, or had deserted their families, and that security at home is an essential point of a program for such care. There is no substitute that compares with a wholesome home influence in the care of children.

So far, so good. Now, let us turn our attention to the Social Security Act and one of its features which, in my judgment, constitutes an inequality that should be corrected by this Congress. The Federal Government reimburses States for blind assistance and old-age assistance upon a 50-50 basis. But the companion provision for aid to dependent children reimburses the States on a one-third basis. Why this discrimination? I can see no reason why Federal participation in the aid for dependent children should not be on the same basis as blind assistance and aid for aged.

The children in need of assistance do not constitute an articulate group. They are not able to speak for themselves, and therefore they might easily be forgotten. That must not be. Whatever amount may be spent under this program, it seems to me that the Federal participation in their behalf should be on the 50-50 basis, the same as for other divisions of assistance under the same law; that the percentage derived from the Federal Government should apply equally to each group; and I urge that this change be made in the present session of Congress.

Relief Conditions in Florida

EXTENSION OF REMARKS

OF

HON. LEX GREEN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 2, 1939

RESOLUTION OF THE HOUSE OF REPRESENTATIVES OF THE STATE OF FLORIDA

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently adopted by the House of Representatives of the State of Florida:

House Resolution 59

Whereas, from press dispatches, it now appears extremely probable that approximately 13,600 needy Florida people are soon to be forced from the W. P. A. pay rolls in accordance with general orders from the National Administrator, Col. Francis C. Harrington; and

Whereas in excess of 10,000 men and women formerly on relief have already been stricken from Florida relief rolls during the past few weeks; and

Whereas at the peak of W. P. A. employment in 1938 there were many hundreds of worthy and needy persons unable to secure W. P. A. placement, although certified for relief; and

Whereas economic conditions in Florida, owing to the deplorable citrus prices show no improvement, but, on the contrary, deep depression; and

Whereas temporary inflow of money from the tourist trade has produced but slight economic benefit, now ended for the year, with no hope of resumption until late autumn; and

Whereas the business of Florida follows trends directly opposite to those ruling in northern cities, reaching lowest levels in summer and peak proportions in winter; and

Whereas the discharge of more than 10,000 W. P. A. workers since January 1, coupled with other depressing conditions, has already produced an unemployment crisis—pitiable and impossible for local governmental units to meet owing to lack of funds; and

Whereas the discharge of 13,000 additional workers will create a deplorable situation during the summer and early fall, likely resulting in untold suffering from hunger and want; and

Whereas the Honorable Roy Schroder, State administrator of W. P. A., has gone to Washington to lay the needs of Florida before the national administration and to plead the cause of the needy in this State in an effort to hold the pending slash of personnel to the lowest possible level: Thereby be it

Resolved, That the House of Representatives of the State of Florida, in regular session assembled, appeals directly to Senator CHARLES O. ANDREWS and Senator CLAUDE PEPPER, and to congressional Representatives PETERSON, GREEN, CALDWELL, HENDRICKS, and CANNON to give the question of Florida relief collective, respective, and paramount attention and lend every aid possible to State Administrator Schroder in his efforts in behalf of the needy distressed of Florida; and be it further

Resolved, That our congressional delegation be urged to every effort toward securing sufficient funds for continued relief by supporting pending or increased appropriations for relief; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States, to each of the Florida Senators and Congressmen, and to Col. Francis C. Harrington, National Administrator.

The "Morris" and the "Wainwright"

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 2, 1939

ADDRESS BY HON. COLGATE W. DARDEN, JR., OF VIRGINIA, JUNE 1, 1939

Mr. ROBERTSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. COLGATE W. DARDEN, JR., of Virginia, at the launching of the *Morris* and the *Wainwright*, Norfolk Navy Yard, June 1, 1939:

Admiral Simons, ladies, and gentlemen, I deeply appreciate the kind invitation extended me by Admiral Simons to be present today and to take part in the launching of these two ships of the Navy.

It is always a pleasure to visit the ships and shore stations of the United States Navy. It is a particular pleasure to visit what I believe to be the finest navy yard in this country.

The two slender and graceful ships now nearing completion represent the best that can be produced in this class. They will shortly join the fleet—there to take their places in what may fairly be called the bulwark of the West.

On behalf of Tidewater Virginia, I want to welcome Mrs. Nutter and Mrs. Meiggs, who have come today to christen the ships which are to bear the names of their distinguished forbears. We are glad to have you with us. We are happy to share with you this great occasion.

I regret that time permits only a brief reference to the distinguished naval officers whose names are to be given these destroyers.

Charles Morris was born in Woodstock, Conn., July 26, 1784. As a young officer he served on the *Constitution*, and in her took part in the operations against Tripoli. He was the first of the gallant band sent to burn the *Philadelphia*, to board that ship.

The war with England in 1812 found him still serving on the *Constitution*. On August 19, 1812, the *Constitution* met and defeated the *Guerriere*. In this engagement the young officer rendered distinguished service and was severely wounded.

Recovering from his wounds he was promoted captain and assigned to the *Adams*, a 28-gun frigate, then lying at Washington. He at once set to sea as a commerce destroyer.

Unfortunately in September 1814 he was forced to burn his own ship in the Penobscot River to prevent its capture by the British. He was, however, able to save his men.

Made a commodore, following the war, he had the honor of commanding the *Brandywine* when it conveyed Lafayette back to France in 1825. He served as Superintendent of the Naval Academy at Annapolis and as Chief of the Bureau of Ordnance and Hydrography in Washington, where he died January 27, 1856.

The *Wainwright* is named for Commander Jonathan Mayhew Wainwright, his son, Jonathan Mayhew Wainwright, Jr., Rear Admiral Richard Wainwright, and Commander Richard Wainwright.

Commander Jonathan Mayhew Wainwright was born in New York City July 27, 1821. During the Civil War he commanded the U. S. S. *Harriet Lane*, Admiral Porter's flagship, in an engagement with Forts Jackson and St. Philip, and was killed in an attack upon Confederate forts in Galveston Harbor January 1, 1863. He was buried with the honors of war January 2, 1863, in the cemetery at Galveston.

Ensign Jonathan Mayhew Wainwright, Jr., his son, was born in New York City January 29, 1849; he graduated from the United States Naval Academy in 1867. He was attached to the *Mohican* of the Pacific squadron, and while in command of a boat expedition against the piratical steamer *Forward*, lying in a lagoon at San Blas, Mexico, was wounded. He died on the *Mohican* from the effects of wounds June 19, 1870.

Commander Richard Wainwright, United States Navy, was born in Charlestown, Mass., 1817. He served in the Coast Survey and on home station from 1841 to 1857, and cruised in the U. S. S. *Merrimac*, special service, 1857–60. In 1861 he was ordered to command the U. S. S. *Hartford*, Admiral Farragut's flagship. On April 24 and 25, 1862, during the passage of the forts below New Orleans, he rendered conspicuous gallant service in extinguishing the fire on the *Hartford*, caused by a Confederate fire raft, while continuing the bombardment of the forts, and was highly commended by Admiral Farragut. Commander Wainwright participated in the operations of the fleet below Vicksburg until taken ill with fever. He died in New Orleans, La., in 1862.

Rear Admiral Richard Wainwright, United States Navy, was born December 17, 1849, in Washington, D. C. He was executive officer on the U. S. S. *Maine* when she was blown up and sunk in the harbor of Habana, February 15, 1898. He commanded the wooden gunboat *Gloucester* (ex-yacht *Corsair*) during the battle of Santiago, July 3, 1898. When Admiral Cervera's squadron came out of the harbor of Santiago in an effort to escape, Wainwright maintained his advanced position and awaited the exit of the two torpedo boats *Furor* and *Pluton*, which he attacked at close range, sinking the *Furor* and driving the Pluton on the beach. After saving the survivors from these two prizes, Wainwright proceeded to the *Infanta Maria Theresa* and *Oquendo*, which were beached and burning fiercely. Despite the great danger from explosions, many persons were rescued from these vessels. Lieutenant Norman, in charge of one of the *Gloucester's* boats, formally received the surrender of the Spanish commander in chief and all of his officers and men present and brought on board all the high-ranking officers, including Admiral Cervera. For his valor in this engagement Admiral Wainwright was advanced 10 numbers in rank for "eminent and conspicuous conduct in battle with the enemy." He died March 6, 1926.

It is a tragic circumstance that we chance to live today in what appears to be an era of international anarchy. One by one our hopes have turned to ashes in the white-hot forges of war. Those who place their trust in the instrumentalities of war rather than in the more orderly but far less spectacular processes of peace now strut and thunder. Their ominous threats are heard with increasing frequency as they seek to strike terror into the hearts of mankind

Force is on the march. Tyranny and oppression seek to strike down human liberty and enslave mankind. Mark this well: Only those nations will survive today who are able to defend themselves.

These ships, as I have said, go to join our fleet—they, with many others now being built in the yards of this country, are America's answer to those who feel inclined to challenge the western world. We do not propose to stand idly by and leave this great Nation undefended in a time of such great peril.

We covet no land on the surface of the earth; we envy no nation or group of nations; we are eager to further the cause of peace and to do our full part toward a peaceful adjustment of the problems of mankind.

However, let no man, whatever be his station or his title, mistake this earnest desire for peace, for fear. Let no ruler or group of rulers delude themselves into believing that the descendants of those men and women who carved out of the wilderness this great Republic of the West, who spanned this continent with the great transcontinental railroads and highways; who bridged its rivers and built its cities; who cleared the way through almost impenetrable forests and over forbidding and soaring mountains—all that they and their children might be free—let no ruler or group of rulers, I say, delude themselves into believing that we, their descendants, are either unwilling or unable to defend this country. It is a great and a rich land, purchased by the blood, the unremitting toil and the almost incredible sacrifice of those who have gone before us. It is a heritage of which we are proud and whose territorial integrity we propose to defend with our lives if need be.

I cannot conclude these remarks without paying a richly deserved tribute to the men who built these ships; a tribute to those of both the civilian and naval service who labor here in this yard.

They have done far more than bend and weld the steel. They have built into these vessels, with the skill and the integrity which is theirs, the stamina and the endurance which has ever been the

product of good workmanship. Whether the cruise be in peace or in war, in fair weather or in stormy seas, I know that the course will be well run.

The *Morris* and the *Wainwright* will do credit to a great Navy and the distinguished names which they bear, because they have come from the hands of honest and skillful men.

Business and the New Deal

EXTENSION OF REMARKS
OF
HON. LEE E. GEYER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 2, 1939

ARTICLE BY JAY FRANKLIN

Mr. GEYER of California. Mr. Speaker, much has been said by big business about the way the New Deal is ruining them. There is only one way to get at the facts and that is by comparison of figures.

I invite those who are gullible enough to have swallowed whole the propaganda put out by antinew dealers to read the following article by Jay Franklin in the Evening Star of May 31, 1939:

[From the Washington Evening Star of May 31, 1939]

WE, THE PEOPLE—ROOSEVELT HELD RIGHT AND BIG BUSINESS WRONG ON ECONOMY APPRAISAL

(By Jay Franklin)

Figures are rapidly rolling into Washington showing the extent to which big business has been ruined by the New Deal and why there is such an overwhelming demand for tax relief on the part of the great corporations. Here, for example, are the "tragic" figures of the economic recovery movement of 1934–37, as reflected in industrial sales. For convenience, the figures are expressed in millions of dollars, so when you read steel sales for 1937 as being $2,847, that means $2,847,000,000.

Industries	Number of firms	Assets		Sales	
		1937	1934	1937	1934
Steel	12	$4,181	$3,957	$2,847	$1,215
Meat	5	825	794	2,179	1,852
Chain stores	10	517	458	782	678
Motors	12	1,525	1,282	2,604	1,348
Cigarettes	6	734	703	938	765
Beet sugar	6	129	122	70	65
Mail order	6	544	396	1,038	616
Oil refiners	20	6,880	6,211	4,122	3,069
Office equipment	10	272	231	224	145
Cement	8	138	166	56	39
Department stores	31	662	625	1,003	823
Containers	11	500	406	455	299

These figures are based on data from W. P. A. projects, sponsored by the Securities and Exchange Commission. What is impressive about them is the fact that the 1934 figures represent recovery from the trough of the depression, while the 1937 figures are based on the earnings of the year when it was evident that the New Deal was here and here to stay. Statistical arpeggios make sweet music to few but certified public accountants, but here are some percentage of gains in sales during 1937, as compared with sales in 1934:

Steel, up 134 percent; meat packers, up 18 percent; chain variety stores, up 15 percent; automobile manufacturers, up 92½ percent; agricultural machinery, up 68½ percent in 1937, as compared to 1935; cigarette sales, up 22½ percent; mail-order houses, sales up 69 percent; oil refiners, up 34 percent; office equipment, up 55 percent; cement sales, up 44½ percent despite 17-percent shrinkage in assets; containers, other than paper and wood, up 52 percent.

But—I can hear the Tories roar in outrage—1937 was not a representative year. I agree. It was not. It was the year of the great sit-down strikes which "paralyzed" industry, "crippling" the automobile industry so that it could show only a 19-percent increase in assets and only a 92½-percent increase in sales over 1934. It was the year of the Supreme Court fight, when Roosevelt "destroyed confidence" and threatened to "become a dictator" by reorganizing the Federal Government in the interest of efficiency. It was the year when the Supreme Court validated the "ruinous" Labor Relations Act. It was the year when labor warfare broke out between the C. I. O. and the A. F. of L., still further "undermining confidence" and "paralyzing industry." Yet this was the year when our big business firms increased sales by percentages ranging between 7½ percent and 134 percent, and increased assets up to a total of 37½ (mail-order houses).

It seems clear that in the light of these distressing figures no Congress should be so hard-hearted as not to take pity on the wealthy corporations, remove the undistributed-profits tax, and apply economic democracy by taxing the corner grocery at just the same rates as applies to the wealthiest and most powerful industrial enterprise in America. It is equally clear why the big business leaders hate Roosevelt: He was right in his appraisal of political economy and they were wrong.

The 1938 figures are not so good. That was the year when Congress resisted the President, the year when Roosevelt tried to balance the Budget.

The Domestic Sugar Quota

EXTENSION OF REMARKS
OF
HON. JAMES F. O'CONNOR
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 2, 1939

LETTER FROM THE MALTA IRRIGATION DISTRICT, MALTA, MONT.

Mr. O'CONNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the Malta Irrigation District in Montana:

MALTA IRRIGATION DISTRICT,
Malta, Mont., May 25, 1939.

Representative JAMES F. O'CONNOR,
Washington, D. C.

DEAR REPRESENTATIVE: In today's Great Falls Tribune I notice that you are making a move to secure a revision of the domestic sugar quota by getting the Ellender bill before the House.

The present regulations now in effect, in regard to sugar production in the United States, are working an injurious effect upon the economy of northern and eastern Montana, especially upon the Milk River irrigation project and on other projects which are in the pioneer state of development, and for this reason I feel justified in taking up your valuable time by writing you in regard to the matter.

The following are some of the facts which, it seems to me, support the opinion that, at least in these parts, the growing of sugar beets should be encouraged to expand rather than be restricted:

(1) The sugar beet is the principal and, in most cases, the only cultivated cash crop available to the irrigation farmer. They furnish the money with which to meet fixed charges such as interest, taxes, and water, and construction repayments, which the Reclamation Bureau is now commencing to collect on the Milk River project. It is plain that a failure to meet any or all of these obligations will mean loss of the farm and ruin of the farmer.

Few farms are at present developed to the point of having sufficient acreage in beets to meet these quotas; realizing this fact, a group of farmers in the Nashua area made a survey early this spring on the possibility of substituting some other cash crop for beets. The survey showed overproduction in processing the following, which are the principle types of cultivated crops that can be grown in this area: Corn, beans, peas, cabbage, cucumbers; tomatoes and potatoes are advised against as being too variable a market to be depended upon as a basic crop. It was so apparent that beets were the only available source of cash that one farmer succinctly summed up the situation by the remark, "Well, it looks like the only thing left for us is to raise hell."

(2) But the production of an assured cash return is not the only argument in favor of increased beet production in this area. There is no other crop which is so efficient in putting the partly developed irrigated farm in shape. The working of the soil, the leveling, the accurate application of water and drainage necessary to the raising of a good crop of beets, coupled with the practice of crop rotation and soil fertilization works toward full utilization and conservation of each individual farm.

(3) Every byproduct of beet farming acts as a stabilizer to the economy of this territory. Range livestock raising is one of the other legs upon which our prosperity rests, and its success is leaning more and more upon the finishing and feeding of livestock with the byproducts of the beet farmer.

(4) The large amount of employment that beet raising furnishes is not to be overlooked in an estimation of its value to any community.

(5) The so-called benefit payments the wheat growers receive may help some of the individual farmers who have reached the maximum acreage of beets to fit in their farm rotation, but it is a detriment to the larger number of farmers who have not developed their farms to that point and who are prevented from doing so by

the working of the sugar-beet allotment. The net results, so far as the district as a whole is concerned, is to prevent it from meeting construction payments. If regulation must be attempted, it would be better if it were applied only to those who raise over 40 acres of beets, which is considered suitable for the rotation plan on a 160-acre farm, while those growing less should be encouraged to expand their acreage to that amount.

The Milk River irrigation project furnishes an object lesson in the value of beet culture in building up a country.

The writer has been a resident within the boundaries of this project for the past 36 years. He carried the rod when the surveys were made, and irrigated his farm with the first water which came down the canal southeast of Malta. This farm raised some of the first beets grown in the Malta district, and still produces beets, though it has been under lease for several years.

I have not only raised beets myself but I have been in a position the past 7 years, as president of the Malta irrigation district of the Milk River project, to observe the effect of the expansion of the beet growing upon the development of the project as a whole, and I do not hesitate to give it as my well-considered opinion that unless the beet acreage under the project is permitted and encouraged to expand, the construction costs cannot be met and the project would be a financial failure. I think the corollary is also true, and that the sooner the farmers are able to raise the maximum acreage of beets suitable to the farm the sooner will prosperity arrive.

It is a fact under my observations that prior to the introduction of beet raising the districts were not able even to meet their O. & M. charges, but since then they not only paid off an accumulated debt from that source but have been able to make substantial payments on construction as well. I am convinced that the more beets the project produces, the closer it will come to meeting these costs in full.

The almost complete collapse of dry-land wheat raising and range livestock business due to a long succession of dry years has convinced all of us that we must turn to irrigation as our salvation. The soundness of this view is endorsed by a special committee which reported to the President on northern Great Plains conditions. Surveys are even now being made and projects being considered utilizing our water resources through this end. None of these beneficent projects can realize the self-liquidating requisite imposed unless beet raising is practiced as part of the crop-production program.

All the above, combined with the fact that there is admittedly no surplus of domestically raised sugar, convinces that room should be left for steady expansion of the sugar-beet industry rather than drastic reduction applied.

If these facts are convincing, but it is still maintained that beet acreage should be curtailed to help promote friendly foreign relations, the reply must be that perhaps friendly domestic relations are not wisely neglected.

And so I am heartily in favor of your plan to get a readjustment of these sugar-beet regulations, and wish you all success in your efforts to that end.

Sincerely,

JOSEF SKLOWER,
President, Malta Irrigation District.

P. S.—Although I have been here at Glasgow as secretary of the chamber of commerce for somewhat less than a year, the Malta Irrigation District has insisted that I serve out my time as chairman, and it is in that capacity that I am writing this letter. My present address is Medical Building, Glasgow, Mont.—J. S.

Mrs. Lena Hawkins Rigney

EXTENSION OF REMARKS
OF
HON. CLAUDE V. PARSONS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 2, 1939

Mr. PARSONS. Mr. Speaker, under leave to extend my remarks in the RECORD, I announce with sorrow the death of Lena Hawkins Rigney, beloved wife and companion of Hon. Hugh Rigney, a former Member of the House of Representatives, representing the Nineteenth Illinois District.

Mrs. Rigney passed away May 16, 1939, following a serious operation at the Barnes Hospital in St. Louis, Mo. Funeral services were held at the Vine Street Christian Church, Arthur, Ill., Friday, May 19, 1939, with Rev. J. T. Davis in charge of the services.

The membership of the House learns of their former colleague's loss with profound sorrow and extends to him its deepest sympathy.

Not Statesmanship

EXTENSION OF REMARKS
OF
HON. J. PARNELL THOMAS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 2, 1939

ARTICLE BY WESTBROOK PEGLER IN THE WASHINGTON POST FOR TUESDAY, MAY 30, 1939

Mr. THOMAS of New Jersey. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Post of May 30, 1938, by Westbrook Pegler:

[From the Washington Post of May 30, 1939]

FAIR ENOUGH—NOT STATESMANSHIP

(By Westbrook Pegler)

It is worth while to pause about here and observe that some characteristics of the New Deal also might be put to the uses of a violent reactionary or Fascist regime. A Fascist President of Huey Long's brutal and ruthless temperament or Hitler's would use methods which the radical left has endorsed to justify acts that a Communist would deeply mourn.

For example, this Government has indulged in violent, hate-provoking language not only in speeches of the President himself but in occasional orations by lesser figures, notably Harold Ickes. Now name calling is not statesmanship, and the bright and mischievous young epitheticians of the New Deal who wake up in the night to snap on the bedlight and jot down dirties to be inserted in fireside chats are asking the people of the country to assume great risks as the price of their vanity and fun.

Of course, it pleases the radical new dealer to hear American businessmen who are neither devils nor saints called Bourbons and Tories, and political moderates called copperheads, a copperhead being a venomous snake. But it must be remembered that Hitler and Goebbels are gifted name callers and that a Fascist President would claim an established right to call all his opponents Bolsheviks and traitors.

WE DO NOT KNOW WHAT HATE CAN DO

There is no truth in these generalizations in Germany, nor would they be honestly applicable to all opposition here, but a political paranoiac of the type which springs up in frantic nationalist movements these days would give them the effect of truth by constant, angry repetition. Hitler frankly admits that the truth is a handcuff to a dictator, and says that lies, repeated over and over, will wear down the intelligence of the people and be accepted.

Up to now we in this country don't know what hate really can do, but a little reference to its exploitation in Europe should warn Americans that that gun is loaded. Ickes may think of himself as a harmless wag whose needling will not be taken seriously, and it is true that the same speeches by the same man would command no hearing at all if he did not occupy an important Government position. But it happens that he does hold an important position, and when he reveals a preference for groups that are notably cordial to Communists and is guilty of carelessness or exaggeration in matters of fact to obtain effect he invites a future Secretary of Interior to consort with Fascists and take similar liberties or worse.

Propaganda by the government is another weapon that the New Deal justifies on the same ground that is offered in Russia and in the axis countries. It is said that the people have a right to pure information about their government and that the government itself is in the best position to give it to them. But a government will not give itself a bad report, and the information service, including radio material, becomes political propaganda.

MINTON PROPOSED PRESS-GAG LAW

It takes no effort of the imagination to fancy the uses to which this New Deal precedent might be put by an administration with Fascist leanings. There is no need to use the imagination. The examples are visible in Europe, and it is a grave mistake of the New Deal to endorse by its own practice a weapon that a future administration could use to overpower the intelligence and resistance of the people. The New Deal may claim to have used it sparingly, but it has approved this weapon nevertheless.

One New Deal Senator, MINTON, of Indiana, once proposed a press-gag law that might have made it felonious to publish the Bible and, although this bill did not pass, it was not condemned by the administration and was considered rather amusing by those of the radical left wing who believe in censorship and try to sabotage the free and more or less independent daily press of the country. To keep the record straight and declare itself on that proposal the New Deal should have hit it a faint lick of repudiation, for Mr. MINTON offered it in connection with a cherished project of the New Deal.

Court packing, the purge, the misuse of tax information for political coercion, and the cynical adjuration of Mr. Aubrey Williams to a quasi-Communist group of relief employees to "keep your friends in power," all are part of the pattern of precedents which might be put to awful uses by a government elected in a nationalistic, fascistic glow of spirit comparable to the expression of hope and faith which elected Mr. Roosevelt the first time.

Pending Farm Legislation

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

Mr. LEMKE. Mr. Speaker, just 207 years ago George Washington first saw the light of day. He was born a British subject, because at that time the Colonies were part of the British Empire. Abuse of power and misgovernment brought about friction and that friction finally wound up in the Revolution which separated the Colonies from Britain.

The result of that Revolution was the birth of our Nation. which has since become the greatest Nation on earth. It was born because the desire for self-government and self-expression is part of the very nature of man. It was born because of human hopes and aspirations. It was born and baptized in blood. It became the shining star among nations. It became the home and refuge of the oppressed everywhere, because it created a government of, for, and by the people.

Under our Constitution you and I and all of us are "We, the people." We are 48 States—but 1 Nation. This Government, created by men of iron with nerves of steel—born amidst the privations and sufferings of Valley Forge—is ours. It does not belong to any clique or clan. It does not belong to any official or set of officials in Washington. These are all but our servants.

We must never permit our patriotism to be dimmed or divided because of religious or racial differences. Tolerance and forbearance is our watchword. We shall continue to extend the hand of good fellowship to all. We shall not permit the religious or racial hatreds of Europe to be transplanted to our shores. We are through forever with foreign entanglements. We will not again permit ourselves to be engulfed by the war-mad insanity of Europe.

We are more interested in the 130,000,000 men, women, and children of our Nation than in Great Britain, France, Germany, Italy, Japan, and Russia combined. We sympathize with the persecuted everywhere, but charity begins at home. Our first duty is to our own people. There is plenty of suffering in our own country. We invite the attention of the President and of Congress to the fact that millions are gradually starving because of malnutrition.

This administration has been in power for over 6 years. It was pledged to get agriculture out of the red. It was pledged to solve the unemployment problem. Yet, in those 6 years one farmer out of every five lost his farm by mortgage foreclosure, judgment, forced or tax sale. The average farmer who still owns his farm is deeper in debt than he was in 1932. We are aware that the farm indebtedness has been reduced, but how was that reduction brought about? It was brought about by mortgage foreclosure, judgment, forced or tax sale, by evicting innocent men, women, and children from their farm homes.

Likewise the unemployment problem is still unsolved. There are as many unemployed now as in 1932. Every courthouse is still a poorhouse. This problem never will be solved until the agricultural problem is solved, first, because industry and employment are directly dependent upon the success of agriculture.

As a result of this unemployment, hundreds of thousands of industrial workers have also lost their homes. Here, the Government, through the Home Owners' Loan Corporation, has been the principal offender in taking away homes. Let us quit shedding tears for the oppressed in Europe, but let us shed a few for our own unfortunate who have been so cruelly and so brutally evicted from their homes because of misplaced confidence in the Home Owners' Loan Corporation.

Yet during these 6 years there have been pending in Congress bills that, if passed, would have solved both the agricultural and the unemployment problems. If, in place of fireside chats, the administration had assisted us in passing the farmers' cost-of-production and the Frazier-Lemke refinance bills, then it would not have been necessary to have plunged this Nation $24,000,000,000 into the red. The relief and dole system could have been avoided.

This cost-of-production bill would have increased the farmers' income $7,500,000,000. Since every dollar of farm cash income increases the national income by $7.55, therefore the national income would have been increased by $56,625,000,000. That would have meant prosperity by plenty and not starvation by scarcity—by the curtailment and the destruction of agricultural wealth.

This bill would not cost the Federal Government one penny. When it becomes a law there will be no further need for subsidies to the farmer. There will be no further need of the 27 varieties of Federal agencies now riding on the farmers' backs. There will be no further need for an army of Federal employees to regulate the daily lives of the farmers. It will take at least 3,000,000 off the W. P. A. pay rolls because they will find useful employment. Prosperity and security for agriculture means prosperity for labor and business as well. When this bill becomes a law the Government will no longer have to bail out the farmer—the farmer will bail out the Government.

The Frazier-Lemke refinance bill provides that the United States Government shall refinance existing farm indebtedness at 3 percent per year, the interest rate to be 1½ percent and the balance of each payment to be applied on the principal on the amortization plan, not by issuing bonds but by issuing Federal Reserve notes secured by the best securities on earth—first mortgages on farm lands; better security than gold or silver, because you cannot eat gold or silver, but you can eat the products that grow on the farms; therefore your life depends upon the farms.

These farms are the best security on the face of the earth. If our Government has enough intelligence to do this, it will make a profit of $6,345,000,000 at 1½ percent interest in 47 years, the time required for amortization of the farm indebtedness.

Ever since 1920 there has been a real farm problem. Since 1920 over 5,000,000 farm boys and girls have been driven into the already overcrowded cities to swell the ranks of the unemployed—compelled to look for W. P. A. jobs or doles. This is an insult to our intelligence. This condition has been brought about because we have compelled the men, women, and children who live on the farms to feed the Nation—to feed us—below the cost of production.

Any intelligent person knows that a farmer can no more continue in business by selling the things we eat, drink, and wear for less than it costs him to produce them than a businessman can stay in business and sell goods for less than he pays for them. If they do they will both become insolvent.

The nation that does not protect its protectors cannot long endure. No nation on earth is great enough to ignore the appeals for help of its citizens. There are times when a nation must protect its citizens from misfortune in order to preserve its nationalism. Patriotism is the feeling that you are somebody. It is the feeling that you belong to a nation that is not only powerful, but that is interested in your welfare.

Without this feeling of security and reciprocity, there can be no true patriotism on the part of the individual—there is no nationalism. The 12,000,000 unemployed and the one farmer out of every five who lost his farm are more dangerous to our democracy than the combined armies of Hitler, Mussolini, and Stalin.

We are greatly excited over communistic and un-American activities. Why should we want to destroy the Communists?

We make them. We prepare the soil in which they grow. We prepare the seedbed of rags, filth, hunger, want, and all-around poverty and misery. This is the soil in which un-Americanism thrives. We attack the effect and forget all about the cause. Let us clean up these seedbeds and grow good American citizens. When we do this we will have removed the cause—the seedbed in which the seeds which fall by the wayside thrive.

The United States, because of its great natural wealth and unlimited resources of raw material and skilled workmen, has, through its ever-increasing mechanical inventions and chemical discoveries, become self-sufficient and able to develop economic freedom for all. It can and will abolish poverty by an ever-increasing and higher standard of living not of the few but of the many. This Nation need no longer concern itself with other nations; it is all-sufficient unto itself. It will trade with its friends for friendship's sake as far as essential and necessary for their mutual well-being, but it will not drive bargains or sell part of its people in foreign market places.

I am an optimist, though I know that truth is still on the scaffold and wrong is still on the throne. But I know that behind that scaffold and behind that throne an enlightened public opinion is still shaping the destinies of this Nation. I know that in the end decency and righteousness will prevail. This Nation is in a transition. America will yet be economically free. In this struggle for social justice only the coward and slave surrenders; only the dullard accepts the yoke. I am sure that the American people know that a democratic form of government, although defective, is the best form of government that can possibly be devised for their own best interest. I am confident that they know that without representation there is no democracy, and that without democracy the government "of, for, and by the people" is dead.

I am confident that you, the intelligent people of this Nation, will insist upon and inform Congress and the President that they must solve the agricultural and the unemployment problem during this session of Congress. If you fail to do your duty as American citizens, then another collapse is in sight, and another collapse may mean that the unthinking will take control of our democracy. And when they get through with it there will be little left of it.

I have confidence in our democracy, but I approach the future with apprehension and with determination. I am sure we are going to reestablish the democracy of Jefferson and Lincoln—go forward to a happy, prosperous, self-supporting, self-reliant, and self-governed people—a people with hopes and aspirations—forward to the true grandeur of this Nation where every man and woman and every boy and girl is given an opportunity to make good; with a future where their dreams for a home of their very own will be realized.

The Corned-Beef Fiasco

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, June 2, 1939

EDITORIAL FROM ST. LOUIS POST-DISPATCH

Mr. COCHRAN. Mr. Speaker, while I am sure the general public now realizes the President used sound judgment when he ordered the Navy to purchase canned corned beef in Argentina, still I am sure it will be of interest to read a short editorial in the St. Louis Post-Dispatch on the subject. I hope those who discussed this subject read this editorial, which follows:

[From the St. Louis Post Dispatch]

THE CORNED-BEEF FIASCO

When the Navy recently purchased 48,000 pounds of corned beef from the Argentine, a cry of indignation arose from the country's livestock interests which frightened Congress into forbidding such purchases by law.

What are the facts?

(1) Argentine corned beef is superior to the American product because it contains the choice cuts of beef. Since the American cattle grower can get more for his beef on the hoof, he cannot afford to put choice cuts into corned beef. These cuts instead are sold for roasts and steaks at higher prices.

(2) The purchase was made after open bidding, in which American canners offered to sell the beef at 23½ cents a pound, while the Argentine bid was less than 9¾ cents a pound. Acceptance of the Argentine bid meant a saving to the taxpayer of about 14 cents a pound.

(3) The money paid to Argentine canners would probably find its way back to this country by the purchase of American products, since in the past 15 years the South American country has spent $486,000,000 more for American goods than we have spent for Argentine products. So profitable a customer deserves consideration on the most selfish ground.

Though the transaction was a comparatively minor one, so far as dollars and cents are concerned, the vociferous objections to it and the subsequent submission of Congress to those objections are highly significant. They show how sectional interests triumph over the interests of the Nation as a whole in questions of foreign trade. Here was a deal good for the men who have to eat the beef, good for the taxpayers who have to foot the bill, good for the manufacturers who sell their products to the Argentine, good for the employees who work for the manufacturers. Yet Congress, under whip and spur, says "no."

The incident throws dramatic light on Secretary Hull's reciprocal trade policy by which, against tremendous obstacles, the Secretary is trying to introduce common sense and sound business principles into our trade relations with the world.

The Townsend Plan

EXTENSION OF REMARKS

OF

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 2, 1939

Mr. HENDRICKS. Mr. Speaker, yesterday we had a roll-call vote on the Townsend plan, which was defeated by a substantial margin. I have no intentions of making any excuses or presenting any alibis. It was a clear defeat. It is my desire, however, to say that the proponents did not have the slightest idea that the bill would pass. Dr. Townsend and I repeatedly advised the people back home to not be discouraged, that the bill would not pass, but a roll-call vote would serve a purpose, and that purpose was served to my full satisfaction.

I am young compared to the average age of Members of Congress. I have only served less than 3 years in the House, but I have been a student of politics and human nature for many years. After having been permitted to study both more closely from the inside of Congress I will say that the Townsend plan gave me the finest study problem I have had since I have been a Member. This has shown me that many Members of Congress have been willing to play on the heart-strings of the old people, the civil veterans of this country, so long as it would net them a single vote in a political campaign, when they never had any intentions of voting for the measure. I must be frank in admitting that many of the Members who were endorsed by the Townsend organizations never actually promised to vote for the plan. Neither did they—only in one or two exceptional cases—say they would not. They only led the old people to believe that they would, when they knew in their own minds that they would not, which is simply cruel and indefensible.

I have no quarrel with a man who honestly believes in a proposition, although it may seem silly to me. The Townsend plan may seem absurd to the opponents, but we have a right to our views, and I am grateful to every man who voted with me on the plan.

I have no quarrel with the man who said to me, "I think your plan is impractical and I cannot vote for it." He was honest and we knew where he stood. The figurative cannon fire of a roll call was leveled at neither those who were for the plan or those who were against it. The fire was directed on

that group in "no man's land" who maintained the position of a chameleon, changing political color to suit his environment.

The roll-call vote had its effect. One Member, discussing those who had indicated they were for the plan and then voted against it, asked me the question, "How can he explain to the people back home?" My reply is that he cannot. No explanation can go beyond the roll-call vote. The record speaks for itself. Each Member must do the same, and I can assure each one that that opportunity will present itself in the elections of 1940.

The first vote on the Townsend plan showed 30 votes for it. Then came the Bell investigation, after which the enemies held a funeral for the plan, brushed their hands, and went home contented that they had done a good job.

Yesterday a most animated ghost of the plan stared the opposition in the face again. Even the opposition admits now that it is not near dead. I can assure all concerned that the ghost will walk again.

A Partial Analysis of the Townsend Bill

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 1, 1939

Mr. PATMAN. Mr. Speaker, the Townsend bill, exactly as Dr. Townsend, founder of the movement, drafted it, was voted on in the House of Representatives recently. The vote was 97 ayes and 302 noes. The bill, at the request of the Townsend forces, came before the House under a gag rule, which meant that no amendments were in order and the bill had to be accepted or rejected as it was without any change whatsoever.

This bill, according to the founder, was intended to raise $200 a month for each person in the United States over 60 years of age, in the hope that the amount could be increased to $300 a month in the near future.

SUPERMULTIPLIED SALES TAX

In other words, the bill proposed that 10,000,000 people receive $24,000,000,000 a year from the taxpayers—the money to be raised by a supermultiplied sales tax upon all sales, including the necessities of life. Twenty-four billion dollars is twice as much as is now paid in taxes to the Federal, State, county, city, and all different governments in America, and is more than one-third of the total national income.

The following classes of persons, among others, are now receiving the attention of the Federal Government:

(1) Citizens past 65 years of age;
(2) Dependent widows;
(3) The blind;
(4) Dependent and neglected children;
(5) Unemployed;
(6) Young people who need assistance to go through school and college;
(7) Physically disabled, including handicapped; and
(8) The one-third of our people—farmers, workers, and others—who are ill-fed, ill-housed, and ill-clothed.

The Townsend bill proposed that none of these groups be helped except all persons over 60 would receive $200 a month or whatever the multiplied sales tax would produce.

If this bill had become a law, the present Social Security Act would have been repealed by it. No more checks would have gone out.

CONSTITUTIONALITY

When the Social Security Act was considered in 1935, Congress was careful to provide that the money obtained through a pay-roll tax for unemployment insurance and old-age benefits for workers should be paid into the Treasury and then reappropriated by Congress to a fund for that purpose. This was done in order to make the bill constitutional. The Townsend bill provided that all the people be taxed for the aged groups, and if the Supreme Court should continue to hold as it has always held, this would make the law unconstitutional. Therefore, if the Townsend bill had passed, no money would have been paid on this multiplied sales tax until a contest of the constitutionality of the law had gone through the courts, which would require several years; and then if the law was held unconstitutional, the old people would be back where they were before they had any law in 1935. The bill did not provide that the aged would receive the present benefits or anything during the years of contest. Next, the confusing language in the bill would have necessitated thousands of lawsuits to determine who would pay a tax and how much. So it occurred to me that it would be a very unwise thing for Congress to throw overboard a law that is paying the aged people something, although an inadequate amount, for an uncertainty and very probably nothing. An old Negro once said, "I had rather have a little bit of something than a whole lot of nothing."

TWELVE CITIZENS PAY ONE CITIZEN $2,400 A YEAR

In order that one may understand the full effect of this far-reaching proposal, we will consider that the 130,000,000 people of the Nation are divided into groups with 13 people in each group. One of these 13 is a person over 60, the other 12 are men, women, and children representing all walks of life, including the blind and those in distress. The philosophy behind this bill is that 12 of these people will pay $2,400 a year in a multiplied supersales tax to the Government with the understanding that the Secretary of the Treasury will immediately send this $2,400—$200 each month—to the aged citizen in the group. This means that each person in the United States will have to pay annually an average of a $200 tax on his food, clothing, and other necessities and comforts of life along with other purchases and transactions in order to support this program.

TAX ON POOR

This is not a tax to be paid by the rich or by those who have a net income over and above their expenses. It is to be paid by the poorest people on the barest necessities of life, as well as by the rich on the luxuries and at the same rate, the same tax on bread as on diamonds.

PRESENT LAW FOR AGED

For 145 years this country did not recognize its obligations to the aged. Five years ago this obligation was partly assumed by the Federal Government. I was one of the Members of the first organized congressional group in the United States pledged to work for the passage of an old-age pension law that would cause the Federal Government to pay a reasonable amount to aged citizens every month. Although the step has not been as long as we would like for it to be, a substantial step has been made in the direction of granting this aid.

SOCIAL-SECURITY LAW TO BE AMENDED

I predict that the present act will be greatly improved upon at this session of Congress and future Congresses will liberalize it, and we hope the time will come in the near future when the Federal Government will make an adequate payment direct to the aged, but we cannot hope to get everything we want immediately. Every major law represents a compromise of view or a sacrifice of opinion on the part of practically every Member of the House and Senate, comprising 531 Members in all. We must give and take.

Dr. Townsend refuses to consider permitting other distressed groups receiving any part of the money which the Government can provide. His contention is that if the people over 60 get $200 or $300 a month such great prosperity will be brought to our country that the blind, the physically disabled, and all others will be adequately and sufficiently helped.

HOW MUCH WOULD THE TAX PROPOSED BRING IN?

Under the multiplied sales-tax proposal, if carried out without a contest and the tax is actually collected, it would probably produce $200 a month the first few months. After that, business would become completely monopolized, thereby reducing the number of transactions and causing the amount

collected, divided among the aged, to be less than they are now receiving in most States. Guesses have been made by the proponents that it will produce from $60 to $100 a month, but my opinion is, if it would produce anything, it would produce the $200 a month at first. The bill has no major exemptions except No. 1—"all national banks." This means that out of the 15,000 banks in the Nation, the 5,000 national banks would be exempt, but the 10,000 State banks would be immediately put out of business, as they could not pay the tax and compete with the national banks.

IMPORTANT STATEMENTS BY THE AUTHOR OF THE BILL

The sponsors of the bill received many criticisms because the money under the original proposal had to be spent within the United States and that they possibly could not sell their homes and buy anything that they wanted to with the money; also some would not want the responsibility of spending the full $200 a month.

SELL HOME, BUY YACHT, TRAVEL AMONG UNITED STATES POSSESSIONS

May 24, 1939, the gentleman from Florida, Congressman HENDRICKS, the author of the bill, inserted a statement in the CONGRESSIONAL RECORD, in which he stated that important changes had been made in the new bill just introduced, H. R. 6466; that under the terms of this new bill—which was the one voted on in the House—the aged pensioner may sell his home and purchase a yacht if he desired and "they may spend their annuities en route to or from our territorial possessions, which will enable the annuitants to do a little traveling if they desire" (CONGRESSIONAL RECORD, p. 2217).

IF TOO OLD AND FEEBLE TO SPEND WHOLE AMOUNT

In the same statement Congressman HENDRICKS stated:

If he is too old and feeble to go about spending the full $200 to create prosperity for others, he should be allowed to take what he needs for his comfort and happiness and leave the rest in the fund for those who do want it and will spend it properly (CONGRESSIONAL RECORD, p. 2217).

FRANK OUT CHECKS—SAVE EXTRA COST

The gentleman from Florida, Congressman HENDRICKS, in this statement seemed to be enthusiastic about the provisions of his new bill and stated that the Secretary of the Treasury under its provisions would be able to save extra cost by mailing the checks "under Uncle Sam's franking privilege" (CONGRESSIONAL RECORD, p. 2217). I doubt, however, that this would amount to much compared with $2,000,000,000 a month, or $24,000,000,000 a year. At 3 cents per letter to 10,000,000 pensioners this would amount to $300,000 a month.

TWENTY-FIVE-CENT FEE TO OBTAIN $200 WILL REDUCE POST-OFFICE DEFICIT

Further, the gentleman from Florida, Congressman HENDRICKS, said that the aged persons would have to pay 25 cents a month for the services of someone authorized to administer their oaths, verifying the return of the applicants. The postmaster, under the bill, is given the power to administer oaths and to charge 25 cents for each verification, which will become a part of the revenue of the Post Office Department, and, according to the Congressman:

This revenue will amount to several million dollars monthly, as annuitants will naturally patronize Uncle Sam rather than a notary public, for they will gain by doing so (CONGRESSIONAL RECORD, p. 2217).

Any saving is appreciated by the taxpayers, but if 10,000,000 people pay 25 cents a month the Government will only receive two and one-half million dollars a month, but will be paying out $2,000,000,000 a month.

NATIONAL DEBT TO BE PAID WITH EXCESS

Evidently the author of the bill anticipates that the tax proposed in the bill will probably raise more than $200 a month, so he states in his remarks heretofore referred to that—

Any surplus over and above the $200 per month maximum would be used to pay off the national debt until the same is cleared, after which the surplus goes into the general fund (CONGRESSIONAL RECORD, p. 2218).

INTERPRETATIONS OF LAW MADE SIMPLE

The gentleman from Florida, Congressman HENDRICKS, stated further regarding the new bill, which was introduced 1 week before it was taken up in the House and upon which no hearings were held by the committee:

The basic rules for proving age and citizenship are laid down by Congress in the act itself rather than being left to the executive department to determine. This may seem unimportant, but when it is considered that an administrative interpretation might bar an applicant for an annuity from receiving $200 per month for the rest of his life, the real importance becomes evident (CONGRESSIONAL RECORD, p. 2217).

Clarence Wyly Turner

MEMORIAL ADDRESS
OF
HON. SAM D. McREYNOLDS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. CLARENCE WYLY TURNER, late a Representative from the State of Tennessee

Mr. McREYNOLDS. Mr. Speaker, God in His infinite wisdom has seen fit to take from us one of the most lovable characters it has ever been my pleasure to know. Quiet, unassuming, caring little for the spotlight, yet tireless in his efforts in behalf of his district and his country, CLARENCE W. TURNER was of the mold that is at once great and humble. One had but to meet Judge TURNER to know that behind his serenity of spirit lay a driving persistence of attainment of lofty ideals. Simplicity was the very core of his being. His attainments lay not in a belligerent aggressiveness but in an effective appeal to unemotional logic. Indeed, his contributions to the promotion of the welfare of his constituency appeared on the surface to be so effortless that one was apt to loose sight of the active part he played in their attainment. Yet in his passing, Mr. Speaker, all of us know that Tennessee and the Nation has lost one of its most illustrious sons.

Born on a farm near Clydeton, Tenn., CLARENCE W. TURNER attended the public schools of Humphreys County. He was graduated from National Normal University, Lebanon, Ohio, with B. S. degree, later receiving his B. A. and LL. B. from the Northern Indiana Normal College at Valparaiso, Ind.

Owner and editor of the Waverly Sentinel, CLARENCE TURNER was elected chairman of the Democratic executive committee of Humphreys County, in which capacity he served for 15 years. He was elected to the State Senate of Tennessee in 1900 and was reelected to that body in 1909 and 1911, where he served with distinction. He married Mrs. Nell Rust Cowen on December 18, 1919. Serving successively as mayor and as city attorney of Waverly, Tenn., he was elected to the Sixty-seventh Congress on November 7, 1922, to fill the unexpired term of the late and distinguished Honorable L. P. Padgett, chairman of the Committee on Naval Affairs. CLARENCE TURNER was not a candidate for the succeeding term, but returned to his home to serve as county judge of Humphreys County, to which office he had been elected in October 1920. He was a delegate to the Democratic national conventions at San Francisco in 1920 and at Chicago in 1932. Resigning from his office of county judge in January 1933, Judge TURNER returned to Congress, having been elected to the Seventy-third Congress on November 8, 1932.

Reelected to the Seventy-fourth, Seventy-fifth, and Seventy-sixth Congresses, CLARENCE W. TURNER served as Representative of the Sixth District of Tennessee. A member of the Military Affairs Committee, he was instrumental in securing the passage of the original and succeeding acts setting up the Tennessee Valley Authority, which has brought such great benefits to the State of Tennessee and its people.

Leaving his office on the evening of March 23, CLARENCE W. TURNER went to his Washington residence, never to return. True to ideal and friend, his lovable character will live on in memory in the highest traditions of statesmanship in the history of his city, State, and Nation.

Robert Low Bacon

MEMORIAL ADDRESS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT LOW BACON, late a Representative from the State of New York

Mr. KEOGH. Mr. Speaker, I wish to join in the tribute to the memory of ROBERT LOW BACON, with whom I was privileged to serve.

His service to his country in war and peace has been the service of a soldier, statesman, and patriot. Devoted to duty, inspired with the Americanism of a noble man, and enlisted for life, he has erected for himself a monument that will stand forever.

His vision and faith in his fellow men served him well, and commanded the respect, admiration, and friendship of all his colleagues.

As the soldier he was, he died in "battle," and with his passing his country lost a worthy son, his district a capable Representative, and we who knew him a sterling friend.

My sincerest sympathy is extended to his family, who can be confident that by his life he has earned and must be enjoying the reward of eternal peace and happiness.

John J. Boylan

MEMORIAL ADDRESS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. JOHN J. BOYLAN, late a Representative from the State of New York

Mr. KEOGH. Mr. Speaker, it was my high privilege to have come to know JOHN J. BOYLAN, to whom we pay tribute this day. To have been able to serve with him, talk with him, and associate with him were most beneficial and inspiring. His words of advice, spoken softly, were always rich of his long and valuable service, his kindly manner, and his broad tolerance.

He was truly paternal in his desire to guide the young legislator and I shall long remember his sage observations.

His life was a life well spent in the service of his people and his memory and accomplishments shall remain long after us all.

To his family I extend my deep-felt sympathy, for we who knew him are conscious of their great loss.

May he rest in peace.

Stephen Warfield Gambrill

MEMORIAL ADDRESS
OF
HON. THOMAS D'ALESANDRO, JR.
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. STEPHEN WARFIELD GAMBRILL, late a Representative from the State of Maryland

Mr. D'ALESANDRO. Mr. Speaker, the sudden and untimely death of STEPHEN WARFIELD GAMBRILL, of the Fifth Congressional District of Maryland, on December 19, 1938, came as a great shock to all who had known him. To those who had known him well and who had shared his friendship, death carried with it a sense of deepest personal loss.

That Mr. GAMBRILL was well beloved and highly respected by his constituents is shown by the fact that he was elected to the Maryland State Legislature in 1920 and 1922, to the Maryland State Senate in 1924, and to the United States House of Representatives from 1924 until his death in 1938. What further evidence of their affection and esteem could they have shown?

His personality, his sincerity, and his generosity endeared him to all who knew him, and especially to those who had the pleasure and privilege of serving with him and he well deserved their respect, devotion, and love which they freely gave. He had qualities of mind and heart which made him an exceptionally effective Member of Congress and public servant.

As his friend and a Representative from the same State, I am proud to pay tribute to his memory.

Royal S. Copeland

MEMORIAL ADDRESS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROYAL S. COPELAND, late a Senator from the State of New York

Mr. KEOGH. Mr. Speaker, I approach the task of paying tribute to the late ROYAL S. COPELAND with humility, for here, truly, was a great man.

Kindly under all circumstances, patient beyond words, sympathetic to all, his stature grew with lengthening years.

His service was the service of one steeped in things American—capable, patriotic, representative.

His life was the life of a benefactor of mankind—ministering to man's ills—physical, social, economic—here was a "doctor" of medicine, public health, statesmanship.

His death was indeed a loss to a great Nation and a great State.

To his family I extend my heartfelt sympathy. To his wife, his constant companion, I confess that no words of mine could begin to bring adequate consolation. Her consolation can only come in the realization that his life was a noble one, his benefactions many, and his memory sacred and hallowed to his countless friends and colleagues.

He has earned eternal happiness. May he have it!

Oration at Funeral of Will Rogers

EXTENSION OF REMARKS
OF
HON. JOSH LEE
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, June 5, 1939

ADDRESS BY HON. JOSH LEE, OF OKLAHOMA

Mr. LEE. Mr. President, tomorrow, June 6, 1939, the State of Oklahoma will unveil the statue of Will Rogers in the National Hall of Fame in the rotunda of the Capitol.

Will Rogers has already taken his place among the great men of history. It merely remains now for us to place his statue in the Hall of Fame as a physical indication of that fact.

Morton Harrison, the manager of the Will Rogers Hotel at Claremore, Okla., himself part Cherokee, was one of the original motivating spirits in the movement to place Will Rogers' statue in the Hall of Fame to represent Oklahoma. He was the mainspring of the commission that did all of the necessary preliminary work leading up to this memorial occasion. Therefore, it grieves me deeply that he is not here to enjoy the fulfillment of his dream. He was deprived of that justly earned pleasure.

However, I am sure he will be present in spirit if not in body. He is my friend, and I shall miss him greatly on this occasion.

It was through him that the relatives of Will Rogers extended me the invitation to deliver Will Rogers' funeral oration at the services which were held in Oklahoma.

Mr. President, I ask permission to have printed in the Appendix of the RECORD the address which I made on that occasion.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

From the Land of the Midnight Sun last Friday there came the saddest news that has flashed across the United States since the assassination of Abraham Lincoln. News of the tragic death of Wiley Post and Will Rogers so stunned the world that people solemnly stood in sad and silent suspense. Business stopped. Businessmen, if they talked at all, would talk about nothing but the untimely death of these two distinguished men.

Many a cup of breakfast coffee was left untouched—listlessly and absent-mindedly people turned to their duties. Automatically they performed those tasks that were necessary, but no others.

Perfumed handkerchiefs dabbed many moist eyes. So also were many tears brushed away by the back of rough and brawny hands.

In the theater world many a make-up was streaked by the mascara the actors used on their eyelashes.

Then we caught at hope, "perhaps it is not true"—but the next flash from the Land of the Midnight Sun destroyed our feeble hope. It was true. Will and Wiley had gone out together. Both as they had wished; both at the zenith of their fame.

Oklahoma's two most distinguished sons and aviation's two most ardent champions "took off" together on their last flight.

The announcement of their tragedy swept the news from the front page of every newspaper in the entire English-speaking world.

Now we have met here in the home community of Will Rogers to honor him, but we can only honor ourselves in honoring him.

Will Rogers was my hero. He was the big brother of the world, whose wholesome humor always boosted the fellow who needed a lift.

He was a self-made man. He blazed his own trail over the mountain to fame. He never waited for opportunities; he made them. While others slept, he was poring over the daily news, digging the fun out of it. It takes brains to be witty. His chain-lightning mind played back and forth over the events of the day. When he spoke it was in a humorous vein, yes, but it showed plainly that he had a grasp of the most profound problems.

The hardships which he overcame prepared him for the great life he led.

He was a part of Oklahoma. The dash and romance of the new State appealed to his pioneering spirit. It was this admiration of the pioneer that drew him to the intrepid and daring Wiley Post.

The red man's trail of tears ended here, and the red man named our State Oklahoma, which means "land of the red man."

Before I left the National Capitol, I walked into the Hall of Fame and stood before Oklahoma's son who graces that Hall of Fame—Sequoya, a Cherokee. There he stands benignly looking over the Hall of Fame in the rotunda of the National Capitol. I said, "Chief Sequoya, one of your sons will be with you soon." Will Rogers had the blood of that proud and haughty race coursing through his veins.

He was a part of Oklahoma, both of its red man and of its white man. He was a cowboy in the day when the ranchers were a lean and fearless race of men. His generosity was typical of the big-hearted cattleman. The old school of the devil-may-care cowboys and big-hearted cowmen is passing. Will Rogers was one of the last.

Oklahoma, his Oklahoma, opened with a run. The very nature of the opening appealed only to the swift, the young, the daring, the strong. That is one reason Will Rogers loved Oklahoma as he did.

The hard-riding cowboy and the generous cowman are passing—most of them have gone on before, and now Will Rogers has gone to join them. Hang up his famous lariat; hang his saddle on the saddle rack. The best loved cowboy in the world has gone to the last round-up.

He was typically American. He represented the American spirit of smiling at disaster. He was fiercely patriotic—always kindly and always fair, but it was America first for him. The last time I heard him speak was here in Chelsea last fall. You remember he talked to us for awhile, and without discrediting other nations told us how much better off we were than people elsewhere.

He always took pleasure in telling the people who traced their ancestry back to the Mayflower that his people met the boat—showing his pride in everything American.

His humor was optimistic and wholesome. It never "bit like a wolf," but always "like a lamb." He never used sarcasm nor cynicism. He never destroyed an ideal, crushed an ambition, withered a hope, or disillusioned a dreamer; but instead he encouraged, he cheered, he inspired.

His sharpest arrows of wit left no bleeding wounds. His keenest thrusts of humor left no ugly scars of hate.

His humor was clean and wholesome. His jokes left no unsavory taste. He left no unpublished manuscript of coarse comedy. His repertoire contained no ribald jokes. Humorists with less refined conscience have yielded to the temptation of substituting coarseness for humor in order to get the guffaws of the groundlings, as Shakespeare would say. But Will never did. He didn't need to, nor was it ever necessary for him to use profanity in order to be effective in speech, as is sometimes done by men of more limited ability.

His humor took the sting out of political strife and poured oil on the troubled waters of international controversies.

His humor was the safety valve for American life. The high tension of our fast-moving life found release of pressure in his wit and wisdom.

His philosophy was saneness. He "walked with kings," but never "lost the common touch." Affectation, sham, and pretense were defenseless before his thrusts. The plaudits of two nations failed to shake his faith in the plain and simple things of life. To him one ounce of common horse sense was worth all of the fine-spun theories in the world.

His humor was only the superficial tinsel tapestry that concealed the great white soul underneath.

Few men become ideals while they still live. But just as the flag is more than a piece of colored bunting, so also was Will Rogers more than a mere man. He was an ideal. He encouraged the discouraged, he cheered the cheerless, he inspired the despairing, he shamed the greedy, and praised the generous.

His life was clean. The news of his death hurt us, but the news of immoral conduct by him would have hurt us more, because he was our hero. But he never disappointed those who admired and loved him.

His life gave people faith in humanity and confidence in one another.

He represented everything that was clean and decent and fine in American life.

His home was a true American home, where the members of his family loved each other and unselfishly shared each other's joys and sorrows.

Will Rogers was happiest when he was at home with his family around him.

The full weight of his influence was always in the balances on the side of virtue and honor, yet he never preached to people, but lived before them.

His charity was unlimited. He accumulated a fortune but gave away more than he kept. He tithed by keeping one-tenth and giving away nine. He beat the Red Cross to the scene of every disaster.

Three years ago this summer, when the searing hot winds of the drought curled up the last stalk of corn in southern Oklahoma and Arkansas, there came on the next wind the glad news, "Will Rogers is coming." He followed the devastated path of the drought and left groceries on the shelf and cheer in the heart.

Then again the roar of the hurricane that swept Puerto Rico was still in the ears of the survivors when the cheering news was flashed over the radio, "Will Rogers is coming." By his benefit programs he collected enough to relieve the destitute.

Then again, above the confusion of the Nicaraguan earthquake was heard the drone of an airplane motor. Latin lips shouted with new courage, "It is Will Rogers."

And still again, down in the flooded area of the Mississippi Valley, the victims were marooned. Above the roar of the seething, boiling floodwaters was heard the roar of an airplane. A cheer went up from the victims, "It's Will Rogers."

Do you wonder that we loved him? He brought more than food and money; he brought cheer and courage.

Today Campfire girls and Boy Scouts are laughing and playing in the open country in camps that were made possible because of the generosity of this man.

Today immaculately uniformed nurses and expert doctors attend suffering humanity in modern hospitals because of the generosity of this man.

Children who were once crippled are today running and playing as other children because of the love of this man.

By his benefit programs he gave millions to charity. He saved many hearts from black dispair, and kept many little mouths from going to bed hungry. Every Christmas he filled hundreds of little empty stockings. He contributed to every cause and gave for every need.

Every call for the relief of distress and the betterment of humanity received his support. The spires of churches that he helped to build today lift their slender fingers to heaven in tribute to the generous heart of Will Rogers.

The Master of men will say to him, "I was hungry and ye gave Me meat. I was thirsty, and ye gave Me drink. I was a stranger and ye took Me in; naked, and you clothed Me * * *."

Then Will Rogers will say in his unpresumptious manner, "Lord, when saw I Thee hungry and fed Thee? Or thirsty and gave Thee drink? Or naked and clothed Thee?"

Then the Carpenter will say to the cowboy, "Inasmuch as ye have done it unto one of the least of these, my brethren, ye have done it unto Me."

Where shall we place his body to rest? Golden, sun-kissed California wants to bury him there. All the heroes who sleep in sacred Arlington are inviting him to rest there.

But Oklahoma, his beloved Oklahoma, is calling for her most-loved son. Lay him to rest here in Oklahoma. Bring him back to the soil from which he sprung. Bring him back to the land of the beautiful Osage hills and let him sleep here. The travelers of the world will make pilgrimages to his burial ground, and it will become a sacred shrine where people will dedicate themselves to the noble things of life.

Though his body may rest here, his soul has taken off in the "Great White Ship" for that unexplored land beyond. Happy landing, Will.

Third Presidential Term

EXTENSION OF REMARKS

OF

HON. JOSEPH F. GUFFEY

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, June 5, 1939

ADDRESS BY JAY FRANKLIN

Mr. GUFFEY. Mr. President, I ask unanimous consent to have printed in the RECORD a radio address on the subject of a third presidential term, delivered by Jay Franklin over the National Broadcasting Co. facilities on May 31, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Whether Roosevelt should have a third term is a question which must be answered, not in the newspapers or over the radio, but by you. In your homes and at your jobs, in your minds, and conscience. That is what you are called upon to decide between now and next election day. The choice lies with you, not with the politicians or the banks, not with the editors or the commentators—but with you. You know, that under your Constitution, you are allowed to elect Roosevelt to attend a fourth, a fifth, or a sixth term, according to your desires. If you want Roosevelt for a third term, you will reelect him. If you don't want him, not all the powers and dominions of business and politics can force Roosevelt back into the Presidency. All that a man like myself can do is to put the question before you. Only you can answer it.

Before you make your decisions, before you frame your answer, you will want to know who is this man Roosevelt that you are considering for reelection in 1940.

Is it the man who lives in the White House, at 1600 Pennsylvania Avenue, in Washington, D. C.? Is it the man who was born some 57 years ago at Hyde Park, N. Y., the man whose picture you see in the papers, whose large and lively family are so frequently in the news? Is Roosevelt the man who went to Groton and to Harvard, who served as Assistant Secretary of the Navy under Woodrow Wilson, and was defeated for the vice presidency in 1920, the man who got infantile paralysis and only partly recovered from that dread disease? Is Roosevelt the President who works hard, eats well, and sleeps soundly, the man who loves salt water and sailing, the man who reads and writes and studies, who laughs and smiles or sets his jaw? Is that the man you are asked to reelect?

No. That man is not the Roosevelt you are considering for a third term. The friends and relatives of that Roosevelt feel that he has earned a rest from the burdens of public life. They wish him to enjoy a few years of leisure and privacy, to recruit his strength, and to cultivate his friends. They wish him the ease which he has deserved after a busy, useful career in your service. No man or woman who knows that Roosevelt and who knows the terrible pressure of the Presidency, wishes him to suffer another 4 years of imprisonment in the cares and duties of his tremendous job.

Who, then, is this Roosevelt that you are considering for a third term? Is it Roosevelt the Democratic politician? Is it the man who twice supported Al Smith for the Presidency in the 1920's, the man who was drafted as Governor of New York State in 1928, the man who finally beat Tammany after 30 years of struggle? Is it the Roosevelt whose political agents quietly cornered the Democratic delegates before the Chicago Convention in 1932 and who was triumphant over President Hoover. Is Roosevelt the man who so conducted his first term in the White House that when he ran for reelection in 1936 he carried all but two States against Mr. Landon? Is Roosevelt the party leader who found himself locked in deadly struggle for control of his own victory against treachery and intrigue? The man who vainly tried to purge his party of the men who had broken political bread with him and then betrayed him? Is that the Roosevelt you are thinking of choosing for a third term? The political planner, the orator, the wily campaigner, the manager of men and issues? Is that Roosevelt?

No. That is not your Roosevelt. You need not consider the interests of Roosevelt the politician except in the light of your own interests. Politicians, men who are Roosevelt's political associates, feel quite naturally that no one man can do everything in and everything for this huge Nation. They feel that he has fought the good fight; that he has run the straight race; but that the time has come for him to stand aside and let other politicians, other managers, other campaigners, carry on. Perhaps after 4 years, they feel he could come back, refreshed and powerful, to rescue the country from the crisis which an ignorant opposition is preparing for us. By then they hope he may be able to make another political combination, another set of promises, another grouping of interests and ideals, which will serve the political ambitions of the Democratic Party. Until then, until 1944, they think it would be good strategy for Roosevelt to step out of the picture and give someone else a chance.

Who, then, is this Roosevelt that you are considering for a third term? It is something much greater than Roosevelt the man, something far more powerful than Roosevelt the politician. It is the Roosevelt whom you yourselves have created out of your own hopes and fears, your needs, your interests, and your gratitude. You—millions upon millions of you—you are that Roosevelt, and he is everywhere throughout America.

I have seen it in your faces. I have heard it in your voices. I have witnessed it in your tens of cheering thousands, as Roosevelt accepted your nomination at Philadelphia in 1936; when Vice President GARNER also promised, "I have enlisted for the duration," and you took him at his word. I have heard it in the great shout with which you greet Roosevelt, and I have felt it in the earthquake of votes with which you have supported him.

There is your Roosevelt. He is the farmer whose land was saved by the New Deal. He is the factory worker who got decent hours and working conditions and who won the right to stand up like a man and bargain with the corporation. He is the voiceless and voteless sharecropper of the South. He is the homeless migratory worker in the West. He is the honest businessman who has been saved from bankruptcy. He is the man out of a job who got work relief on self-respecting terms, the youngster who got a chance to complete his education. He is the old people who got pensions, the sick who got medical care, the hungry who got food, the men and women everywhere who received justice and hope, and who gained fresh courage and new faith in their own country and in themselves.

That is your Roosevelt. I have seen it on the picket lines and in the mines, on the production belt and behind the shop counter. I have seen it in the great dams and the terraced fields, in the C. C. C. camps and the W. P. A. projects. I have seen that Roosevelt when he faced a hostile crowd of men, men who were timidly thinking of their own bank accounts instead of thinking of your welfare, when Roosevelt broke through their fear and enmity—as a swimmer breaks through a toppling wave and emerges laughing—and made them stand up and cheer him. I have seen that Roosevelt in Congress, where even his political foes combined to pass the New Deal program against their own desires, because it is what you want.

There is your President. It is not the smiling pictures in the newspapers and news reels; it is not the friendly voice of the fireside talks; it is not even the gallant fighter who has refused to let you down. You have made Roosevelt in your own image. It is you who must have a third term.

That Roosevelt of yours is a bank where you have deposited your political destiny, your business institutions, your social welfare. He is an electric cable through which your hopes and beliefs flash with vibrant energy. You have made him a far greater man than he could ever have been alone, for he is your President, the only man in America who represents all of you.

A moment ago I mentioned a bank. Roosevelt, I said, is the bank where you have deposited your destinies. During the early years of the depression, which President Hoover failed to understand or master, it was made a public crime to spread malicious rumors as to the solvency of a national bank. The loss of faith, the withdrawal first of confidence and then of deposits, could wreck any financial institution and thus bring ruin to a whole community. However, it is not commonly regarded as a crime to spread malicious rumors as to the solvency of what I have called a political bank. The opposition considers it quite a smart trick to try to undermine your faith in your President, to urge you to make a run on the New Deal, to withdraw your deposits from Roosevelt. They want you to wreck him, because he wouldn't make a deal with them in the back room, and they either do not know or do not care that by so doing you may ruin yourselves and your own country. It is not Roosevelt that they want to do out of a third term, even as they have, by treachery, all but wrecked his second term. It is you they want to keep from having a third term.

Oh, yes. I know the history and the arguments on the third-term issue. I know that the men who wrote the Constitution refused to put a limit on the number of terms a President might serve, wishing to keep an able executive as long as possible. I know that George Washington, old and tired, stepped aside after two terms of office. I know that Thomas Jefferson confirmed Washington's precedent. I know that Andrew Jackson was three times elected President of the United States but served only twice, having been robbed of his first term by a conspiracy of conservative politicians. I know how General Grant tried for a third term and was blocked by the Republican old guard. I know that Theodore Roosevelt sought more than 8 years in office and have been told that he was slated to be the official Republican candidate in 1920, before his untimely death. I remember the movement to draft Calvin Coolidge for a third term in 1928 and have been told of his bitterness when he got word that Herbert Hoover had been nominated at Kansas City. I know the facts, I know the arguments—and so do you. Do they make sense?

The other night at Washington I met a conservative Dutch merchant, a shrewd and elderly man on his second visit to this country. He told me that the international bankers in New York had told him that Roosevelt was on his way out, and he wanted to know why we were going to get rid of a popular and successful President. As well as I could, I explained that some politicians regarded the third-term tradition as a complete barrier to Roosevelt's reelection. The Dutchman was deeply shocked. "So," he said, "so you throw away experience just as a man learns to do the job?"

Why throw away experience? That is one way of looking at it, the practical way. But with us, we put the question differently. We ask, Why throw ourselves away?

I do not care what the politicians argue or the editors write. I do not care what the cartoonists draw or what the columnists think. I do not greatly care what Mr. Roosevelt himself wishes or believes about this issue. We are entitled to a third term, and what we, the people, want, we are going to get, under democracy.

Settlement of American Negroes in Africa

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, June 5, 1939

EDITORIAL FROM THE PROSSER (WASH.) RECORD-BULLETIN

Mr. BILBO. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Record-Bulletin of Prosser, Wash.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Prosser (Wash.) Record-Bulletin of May 18, 1939]

THE ONLY ANSWER

Backed by the signatures of two and a half millions of Negroes, United States Senator THEODORE BILBO, of Mississippi, has entered a resolution in Congress proposing to form a new African state adjoining Liberia and to transport all the Negroes in America who are willing to go.

BILBO would have this done in businesslike manner, with ample preparations made before the great hejira would be undertaken.

We wish to express our hearty approval of the plan and are happy to learn that such a large percentage of the Negroes are backing this idea.

We in the North are not faced with this problem and give it little thought but, in our opinion, this great issue is yet to be solved. The black race has increased from 3,000,000 to 12,000,000 since the Civil War. It is more prolific than the white race and when we stop to consider the constitutional rights of the Negro and the sure effects of education we feel that some day he will demand his full rights and that ahead of us lies an impending conflict of race and racial prejudice.

There appear to be two alternatives: either amalgamation or the complete domination of many States by the blacks, with a large percentage of black men in Congress and perhaps higher up.

With mixed marriages illegal in many States amalgamation seems very far off, indeed, and were it accomplished it would result in the transformation of the white race here into a muddy brown.

That we should ever abandon the South to black rule is inconceivable and yet the rising tide continues to enlarge and the pressure increases.

In spite of both law and religion, race prejudice still exists. Recently in Georgia night riders burned Negro effigies prior to an election. Next day the blacks responded with the largest vote they had ever cast. This situation is bound to get worse.

BILBO may not know it but he is endorsing a plan once proposed by Abraham Lincoln. Although we are 75 years late with the adoption of this plan it is still not too late, and we submit it as the only real answer to the problem.

Were I a Negro I would favor it. I can think of no situation more heartbreaking to a parent than that he should have to look forward to his children being subjected to daily insult, having to ride in Jim Crow cars, eat and sleep in third-rate restaurants and hotels and spend their lives, from the cradle to the grave, in an atmosphere of inferiority.

The white race committed a crime when it took the Negro from his native land and the only way that crime can be effected is to return him where he came from and help him build up a civilization where he can respect himself and be respected; where black will be the rule instead of the exception, the popular as well as the prevailing color.

The Negro should cease to try to change his color and take the kinks out of his hair; he should cease singing "I shall be washed whiter than snow" but should swell with pride as, with matchless melody, he sings with fervor, "I shall be blacker than coal." He should cease looking forward to a white heaven but instead should change the color scheme to one he would naturally have selected had he never heard of the white race. He should dream of a black heaven, filled with black angels and ruled over by a black God.

Civil Liberties and the Cities

EXTENSION OF REMARKS

OF

HON. ROBERT M. LA FOLLETTE, JR.

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 5, 1939

ADDRESS BY HON. FRANK MURPHY, ATTORNEY GENERAL OF THE UNITED STATES

Mr. LA FOLLETTE. Mr. President, on Monday afternoon, May 15, 1939, in New York City, the Attorney General of the United States delivered a very excellent address entitled "Civil Liberties and the Cities" before the joint meeting of the United States Conference of Mayors and the National Institute of Municipal Law Officers. I ask that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Almost instinctively, my thoughts today go back to another conference of mayors—a smaller one than this, that met in circumstances far more desperate than any we see about us today.

It was 1932 and the Nation had reached the depths of the great depression. In Detroit, where it was my fortune to be mayor, the municipal resources had been virtually exhausted in an effort to protect the citizens from an economic collapse that had struck the city like a famine.

Probably the American Nation had known no such sadness since the Civil War. I pray that the mayors of this country will never again have to foregather in a similar situation.

But, looking back, it is an inspiring thought that we came through that ordeal without a single untoward incident of major proportions. We did so, I believe, primarily because even in the darkest hour, the devotion of the great mass of the people to the ideal of civil liberty did not falter.

I doubt that there has ever been more convincing proof that the people of a democracy can keep their civil liberties in the bad weather as well as the fair.

Having stood that acid test, we should not fear any other. Certainly we should not waver today when our condition is vastly better, even though far from what we know it can be.

This is a time to strengthen our civil liberties, to freshen our understanding of them and to redouble our efforts to extend them in full to every member of our democracy. This is a time to renew our determination that civil liberty must be protected, with fine impartiality, without prejudice or favor, for everyone, from the poorest laborer to the wealthiest man in the land.

That is the American way. It is—this idea that liberty must be for all—the finest thing that America has given to civilization.

It is true that in material things our contribution has been vast and wonderful. To us and our fathers before us, mankind owes inventions by the score that have transformed the character of human living.

And justly we are proud of these achievements. Justly we erect a World of Tomorrow and a Golden Gate Exposition, to demonstrate what we have achieved in years gone by and what we hope to achieve in years to come.

But, recognizing the splendor of these accomplishments, and without detracting in the slightest from their significance, I venture

to suggest that in our faith in the idea of individual liberty we have given to the world something even finer, something more priceless, something so precious, in fact, that dollars cannot buy it.

It is an idea that men—some of them consciously, and the vast majority unconsciously—have reached out for all through the ages, seeing in it the realization of their fondest hopes. But never did they see its actual fulfillment until a group of fugitives from Old World tyranny established that idea, like a jewel, in a framework of government, a pattern of social living that we today call the American democracy.

In all our public discussions, I suppose there is no word we use more often than the term "democracy." It is fine that we do. I hope that in untold ages to come the American people will still be using that word, and using it with the devotion that men give to their most priceless possession.

But I wonder sometimes if we do not too often use the word "democracy" without thinking what it means. I wonder if we have not become a little numb to the significance of the idea of individual liberty that is the secret of democracy. How often do we profess our faith in democracy and forget to associate it with the things in our own lives that are democracy?

What, exactly, is this idea of individual liberty? What do we mean when we talk about the beauty and the dignity of the human personality?

Why we mean that unknown fellow, mounted on his soap box in the city street, speaking his piece about the way he thinks the country and the Government ought to be run.

We mean that editor or author, writing as he pleases, condemning or commending the administration as his opinions dictate.

We mean that little group of Mennonites or Mormons or Quakers worshipping in their own churches in the way that their consciences tell them is right.

We mean the ordinary citizen expressing his frank opinions to his mayor or Congressman or President, and getting consideration of them.

We mean the businessman setting up shop for the kind of business and in the kind of community that he prefers, with nothing but the public welfare to say him nay.

We mean the workingman at liberty to choose his own occupation and to move when he pleases into another.

We mean the scientist free to search for truth, and the educator free to teach it, unhampered by the fear of some "superman" who makes his own truth and allows no competition.

These are ordinary things to a people that has done them pretty much without interruption for a century and a half. They seem elementary and commonplace—so simple that it seems unnecesary to speak of them.

But actually they are not ordinary things. They are the hallmarks of civilization. They stand for the gracious way of living that humanity has always been groping for, through even the blackest nights of tyranny and barbarism that history has recorded.

Looking at it that way, you have a powerful, positive argument why we in America must cling to these things with all our strength, no matter how great the cost. In a very definite sense, we are trustees of civilization. We are guardians of the idea without which civilization is a hollow shell—the idea that every man, no matter how meek and humble and inconspicuous, shall have his place in the sun.

But if we want a stronger argument, there are many close at hand. They are negative arguments but they strike home with the force of a thunderbolt.

What exactly does it mean when a people gives up the idea that the individual's freedom to live his own life is, after all, the most priceless possession of any society?

It means the suppression of every one of the "simple, ordinary" things that we are so prone to take for granted.

It means for any man who presumes to speak unkindly of the powers that rule, a concentration camp at hard labor, or perhaps something worse.

It means a cringing, servile press that writes not as it pleases, but as some great man at headquarters directs.

It means the suppression of religion or the steady, demoralizing persecution of those who refuse to embrace some barbaric creed that makes a god of an all-powerful State.

It means the ruthless conscription of industry and labor and business alike, all dancing like marionettes at the direction of the State, for the greater glory of a political doctrine that sees human beings only as nameless cogs in a great machine.

It means the debasement of science and education and the arts to the level of tools of an arrogant minority that happens to hold the key to the gun room.

Worst of all, it means the enslavement of the human mind and spirit—a slavery that undermines self-respect and slowly destroys moral integrity.

There is no doubt in my mind that should the American people ever have to choose between these alternatives, they would make the right choice. I believe the habit of 150 years is bound to win over any momentary loss of direction.

But the unmistakable fact is that the seeds of barbarism have been sown among us, and there are those who would like to see them sprout and grow.

This is why I am speaking today about civil liberties and have often spoken about them in the past, even at the risk of appearing repetitious and needlessly insistent upon the obvious. For civil liberty is simply the idea that I have mentioned—the idea of human dignity—translated into actuality. And measurably as we safeguard civil liberty, we enrich human dignity. Measureably as we make real to every member of our democracy the spirit of the Bill of Rights, we demonstrate that we are qualified to be the trustees of civilization.

I do not mean to exaggerate the danger. I do not mean to erect a straw man. I am eager only that we should be on guard against the tendencies and practices that corrode democracy and sap its strength.

These things do happen here. They happen every day.

About 4 months ago the Department of Justice established a new unit for the specific purpose of increasing the Federal Government's ability to protect civil rights. Since that time we have received a steady deluge of letters complaining that civil liberties have been abridged.

Some of the complaints, of course, are unwarranted, but many are not. They indicate clearly that some public officials have used their power arbitrarily; that ordinances have been passed and invoked that are oppressive and unjust and violate common right; that citizens have been denied the right to express freely their opinions and to worship as they please; and that some have been prevented from petitioning their Government for the redress of grievances.

We are a tolerant people; yet it has been estimated that some 800 organizations in the United States are carrying on definite anti-Jewish propaganda. All told, the claim in the neighborhood of 6,000,000 followers—no doubt a considerable overstatement. But even if we reduce the figure by half or more, we face the fact that a large number of our people subscribe to the philosophy that has reduced the Jews of Central Europe to a condition of misery seldom equaled in the world's history.

Almost daily we hear from one quarter or another the familiar suggestion that always accompanies periods of stress and uncertainty—the suggestion that we solve our problems by suppressing those whose talk is out of line with the majority, or by "taking steps" against some group that is supposed to be the source of our troubles.

It has been said before, and I believe should be said plainly many times again, that in the last analysis, the remedy for that kind of attitude lies in the people themselves. For that attitude will have a very slim chance of survival in the face of a public opinion that will have no traffic with it.

But it is not entirely a matter of public opinion. It is far from that.

Public opinion crystallizes slowly, and in times like this when there is so much that is confusing and misleading, the process is abnormally slow. And until public opinion does reach the point where it will not tolerate violation of civil liberties, there can and will be such violation—unless government takes a hand and refuses to permit it.

In a sense, the part that government can play is purely negative. But it would be a serious mistake to conclude that it is therefore of little significance. Let government play its part vigorously, and with a clear understanding of its responsibility, and it is bound to be a powerful bulwark of civil liberty, not only as an agency that imposes penalties but as an influence on public thinking.

Each of the States is equipped to protect civil liberties through its own constitution and bill of rights. The fourteenth amendment of the Federal Constitution and the Federal civil rights statutes, all products of the Civil War, have enabled the Federal Government to take a much more vigorous part than it could formerly under the Federal Bill of Rights alone. We believe the new Civil Liberties Unit of the Department of Justice will make that part more significant than ever before.

Today every dweller in our land, no matter how humble, can look to the State for defense of his liberties, and if that should fail, then to the Constitution and laws of the United States.

But it is an inescapable fact—and one that no one knows better than you mayors and municipal law officers—that the first battleground of civil liberties is the local communities. It is you gentlemen who man the front-line trenches. It is you who decide, in the first instance, whether to suppress the individual who criticizes the mayor or the President, or who wants to hire a hall, or who walks up and down the street with a sign on his back, or who spreads some alien doctrine in his newspaper, or who preaches some strange and unorthodox religion. You decide whether to silence him or let the democratic process run its course.

I have been a mayor myself, during three of the bitterest years that the American people have ever suffered. I know that this responsibility is often a heavy one. I know that sometimes the pressure to turn one's back on the democratic faith in civil liberty for all seems to be almost irresistible. In moments of great tension, well-meaning people, gripped by hysteria, are likely to insist that the "realistic" way to meet the threat of extremist philosophies is to deny to their advocates the liberty that they themselves, given the power, would take away from all others.

Superficially, it is an appealing argument. It seems to be a common-sense method of fighting fire with fire.

But it will quickly lose its appeal if we remember this simple truth: You do not and cannot strengthen or protect democracy by undermining it. And you begin to undermine democracy the moment you begin to draw the line and say that this or that person or group shall not have civil liberty. Draw the line against one group and it is an easy step to draw it against another and then another.

And every such step is another attack on the concept through which democracy functions—the concept that Justice Oliver Wendell Holmes spoke of as "free trade in ideas." Simply stated, that concept means that democracy gives a hearing to every idea. It gives every philosophy the opportunity to get itself accepted in the competition of the market. And ultimately, as our history shows, the true idea, the right policy comes out on top.

I do not mean to say that we should not be on guard against dangerous and extremist notions that get into the market place. We should and must be on guard, and not just some of the time, but all of the time.

We have criminal laws that protect us against violence and incitement to violence. We should be ready and able to use them.

We have legitimate methods of bringing propaganda groups into the open, and exposing their nature and their origin to the light of day. We ought to know not only what they preach, but who their sponsors are and where they get their funds.

But as devotees of democracy, we cannot crush them and deny them a place in the market. We need not do this. We have no reason to fear their competition. We have a better article to sell. And because we have a better article, we can do a better job of salesmanship—a job of salesmanship that will endure long after the terrorism and the coercion of the autocrats have been proved the futile methods that they are.

It may seem that I have stressed the evils that will come to us if we fail to meet our duty of preserving civil liberty.

But we do not owe it merely to ourselves. We owe it to the generation after ours and to unborn generations yet to come. And we owe it to the generations past that did fulfill their trusteeship.

Especially we owe it to that small band of inspired men who forged a state on a foundation of civil liberty out of the raw materials of a wilderness and a people who knew liberty mainly in their hopes and aspirations.

We owe it to Roger Williams whose courage was equal to his conviction that freedom of thought was not freedom of thought until it was shared by all. We owe it to men of the stamp of Patrick Henry and the noble Jefferson who fathered the Bill of Rights.

They fought to gain civil liberty, confident that those who followed, seeing its pricelessness, would never let it go. It is for us to prove ourseves worthy of that trust.

Program of Adolph A. Berle

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 5, 1939

EDITORIAL FROM MILWAUKEE JOURNAL

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful and interesting editorial published recently in the Milwaukee Journal, entitled "Berle Outlines a Revolution."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal]

BERLE OUTLINES A REVOLUTION

The Nation ought to be grateful to Adolf A. Berle, Jr., for making it clear that he is advocating a revolution in the American way of life and thinking.

Compared with what Mr. Berle now proposes, the most chimerical policies of the New Deal are mere bits of patchwork. For Mr. Berle would have the Government owning everything of importance in the country, all production controlled by Government, everyone working for Government. This is not interpreting Mr. Berle; it is what he says.

We are headed for a business downturn in 4 or 5 years so serious that an explosion must be expected, says Mr. Berle. We may get through it, but if we do, another decade will see a "showdown." By showdown he means a revolution, peaceful or otherwise. To head this off, Mr. Berle, now Assistant Secretary of State, proposes his own revolution. This is it:

"The Government can create and does create wealth in the form of roads, parks, public buildings, public hospitals, etc.

"Plainly these, as they now stand, are not sufficient to serve as the market for more than a fraction of the capital goods production in the United States.

"Briefly, the Government will have to enter into the direct financing of activities now supposed to be private; and a continuance of that direct financing must mean inevitably that the Government ultimately will control and own those activities.

"Put differently, if the Government undertakes to create wealth by using its own credit at the rate of of four billions or so a year, and if its work is well done, the Government will be acquiring direct productive mechanisms at the rate of four billions' worth a year or thereabouts.

"Over a period of years, the Government will come to own most of the productive plants of the United States."

There is the purpose of a revolution frankly announced and the plan of achieving it plainly outlined. Mr. Berle, one of the President's official advisers, has decided for the United States that our free private enterprise has failed and must come to an end. It is a more radical change in American institutions than the President's attempt to win control of the Supreme Court. Like that proposal, it is calmly offered, although no word of socialism has been spoken in the Democratic Party platforms or discussed with the people.

Mr. Roosevelt has constantly assured the Nation that reforms will be carried on within the framework of the Constitution and in accord with American institutions. Mr. Berle's program would not leave a single American institution unchanged. President Roosevelt accepts the program to the extent of approving the opening wedge, a bill introduced by the New Deal Senator MEAD, of New York, for Government to guarantee loans to private concerns by a corporation to be set up; that is, to use the Government's credit and yet keep the enormous expenditures contemplated separate from the public debt.

Mr. Berle's plan, of course, is socialism. For private initiative, he would substitute Government. A Government, virtually admitting failure of its schemes over 6 years to bring recovery, is to be launched on ownership.

Whether this socialism with a small "s" would take the form of Russian communism, or Italian fascism, or German nazi-ism, does not matter. Those are all names for ending the liberties of men as men, and by making them believe they are getting benefits, subjecting them to the "state." Wherever anything like this has been tried, liberty has departed.

As we said, the people of the United States owe Mr. Berle thanks for his frankness. Some things he did not say. One is that if we are to take this road, we must in 1940 reelect the administration whose brain trusters have devised it and now seek to put it in operation. Whether this means a third term for President Roosevelt, or merely the acceptance of some creature of his circle, is unimportant. Why not Mr. Berle himself, since he is the author of the revolution?

For 2 or 3 years various Government employees in relatively humble capacities at Washington have been using a phrase: "The last spring under the Republic." Perhaps they knew more of what was going on than the rest of the country.

Committee on Foreign Policy

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, June 5, 1939

RADIO ADDRESS BY HON. ROBERT J. CORBETT, OF PENNSYLVANIA, AND AN ARTICLE BY RAYMOND Z. HENLE

Mr. DAVIS. Mr. President, the American people have the will to peace. This fundamental determination requires for its success the best intelligence and the surest wisdom that can be obtained. Representative ROBERT J. CORBETT, of the Thirtieth District, Pennsylvania, has advanced a plan for the creation of a joint congressional commission to advise and consult with the President on all important matters of foreign policy. If this plan is accepted, it will constitute a new development in our American will to peace.

Representative CORBETT brings to this proposal special preparation and understanding. From 1927 to 1929 he was Wallace research fellow in history at the University of Pittsburgh. For 9 years he has taught political science and economics at the Coraopolis Senior High School. His plan represents careful study and research. It is arousing discussion throughout the country and serves to focus the attention of the people on this all-important problem of how America may keep the peace.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Representative CORBETT over the Mutual Broadcasting Co. from

station WOL, May 19, 1939, embodying his plan, together with an article by Raymond Z. Henle, published in the Newark Star-Eagle, May 18, 1939, commenting on it.

There being no objection, the address and article were ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. ROBERT J. CORBETT, OF PENNSYLVANIA

Ladies and gentlemen, the most serious problem facing the present Congress is not the foreign situation. The most serious problem has been and continues to be our domestic economic depression. However, the foreign situation is second in importance; it calls for quick action; it is dramatic. I have included this unusual preface to my remarks because I do not want to distract and I do not want anyone else to distract our attention even slightly from the fact that our Nation is still suffering from internal economic cancer.

During the next brief moments I will attempt to summarize the testimony which has been presented to the Foreign Affairs Committee of the House of Representatives during the past several weeks and the endless stream of printed articles and letters that have come to my desk.

First, and I desire to establish it as the basis of our thinking, continental United States is absolutely safe from any serious invasion for an indefinitely long period. I know of no authority of any standing or reputation who does not subscribe to this statement. It is true that a few saber rattlers, some opium eaters, and a few misguided zealots fear invasion and have aroused terror in the hearts of those who do not have time to read the facts, but any competent corporal will explain that no nation or possible combination of nations in Europe and Asia could dare to expose both of its flanks and its rear to attack meanwhile extending a line of communications 3,000 miles and over to fight the strongest defensive nation in the world. We are about as safe from invasion by earthly forces as we are safe from invasion from Mars.

Second, there is a prevailing and rapidly growing belief that the United States can better serve the world and democracy by following a policy of nonintervention. Radios and periodicals have furnished the information to the public that a war in Europe will be a war designed to rewrite the Versailles Treaty, secure revenge on hated neighbors, redraw the boundaries of eastern Europe and northern Africa, or it will come as a result of conflicting economic rivalries. In none of these things do we have a vital interest worth our active participation. We wisely refused to sign the Versailles Treaty 20 years ago, and we should not now allow ourselves to be doped into defending its provisions. Possession of Djioubiti, Tunisia, and parts of the Ukraine by either of the conflicting camps is not worth one drop of American blood. Do not be deceived. The next European war will not be a struggle between conflicting ideologies—of democracies against dictators. The line-up for the next war will see dictatorships and democracies on both sides.

And please remember those of you who would have us fight to preserve democracy that the last war and its after effects destroyed almost every democracy in the world. Likewise to establish here an efficient democracy would do more to reestablish democratic governments elsewhere than participation in any war. An efficient government anywhere inspires its duplication or partial duplication everywhere. We also know from history and by reasoning that American participation in any major war would demand the establishment of a military dictatorship in this country; a dictatorship that would minutely regulate our daily life with a loss of personal liberty which could never be fully restored. Furthermore, if the next war is to leave European civilization groggy and punch drunk we have all the more reason to conserve our strength for the days to follow.

Third—and this requires no proof—there is an overwhelming desire for peace and security among the American people. This deep-rooted desire has already forced the President and his interventionist advisers to start throwing olive branches instead of firebrands into Europe, but I am not here concerned with the American firebrands that greatly increased the danger of a European conflagration. I am here concerned with the fact that the popular desire for peace and security has caused a tremendous revival of our interest in foreign affairs in general and specifically it has resulted in a demand for neutrality legislation.

Basically, the hope is that we can write neutrality laws that will prevent incidents which arouse our passions; laws which will control our passions when these incidents do occur; and laws which will prevent one-man decisions and hasty and ill-considered action.

The job is not simple. Seventeen specific bills are now under consideration. More are in preparation. Few members of the committee and few Members of Congress can agree on any formula. Expert witnesses go from one extreme to the other. Propaganda in unprecedented quantities beclouds thinking. Some of the bills designed to name aggressor nations and employ sanctions are, in effect, economic alliances to insure our active participation in war; others would strip us of even the right to yell "ouch" if we are punched in the nose.

Out of this maze of contradictions and confusion a few things are coming clear, and this brings me to a fourth and a fifth conclusion.

Fourth, it is next to impossible to write fixed rules for application to future unpredictable situations. This is particularly true when we recognize that these fixed rules must be sufficiently flexible to permit some freedom of choice or we might in any given instance find ourselves either on the wrong side or be left appearing very ridiculous in the eyes of the world.

Perhaps the most that can be done in this direction is to lay down a few guiding principles and a few definite don'ts.

Fifth, to anyone who has studied the question, it is evident that the Constitution of the United States, precedent, legal opinions, and his position as commander in chief of the Army and Navy, gives the President such single-handed control of our foreign policies that any neutrality laws are apt to be passed in vain. I submit that for better or worse the present neutrality law was never invoked in the Far East by the President because he accepted the Japanese contention that this undeclared war against China was not a war but an incident. The President of the United States, be he Democrat or Republican, is the dictator of our foreign policy. The recognition of this fact gets us to the heart of the situation. It is a fact that leads to a proposal that I plan to embody in a bill and submit to the committee next week. The bill will bring down the wrath of the administration leaders on my head if they elect to notice it, but I am confident that it contains a program that will some day be written into our laws. In its preparation, I have already consulted and advised with many of the most competent authorities available, and I must acknowledge my indebtedness to David Lawrence for the outline of the plan.

The bill will provide for the creation of a permanent neutrality commission. The commission would be composed of 12 regularly elected members of Congress. Six from the Senate and six from the House of Representatives. Three of the Senate Members would be elected by the Democratic caucus, and three by the Republican conference. The same procedure would be followed in the House. To these 12 members would be added the Secretaries of State, War, and Navy with the stipulation that they could vote only in the case of a tie. In general, but working under guiding principles, this commission would advise and consult with the President on all important matters of foreign policy subject to appropriate checks by the House and the Senate. Particularly shall this commission invoke such rules and regulations as may exist governing our behavior in the event of foreign wars.

The details and trimmings to fit possible constitutional limitations will soon be a matter of record; for the moment I want to outline its advantages.

First, it will place a democratic check on the powers and pronouncements of the Chief Executive. Perhaps this check will not now get beyond the check of crystallized public opinion but that will be a real gain.

Second, it will retain where necessary secrecy and speed of action without the dictatorial aspect.

Third, it will provide the necessary flexibility to meet changing situations.

Fourth, such a Commission will operate decidedly more free from the pressure of propaganda agencies than individual Members of Congress besieged with mail and petitions can hope to operate.

Fifth, it will relieve the President of a responsibility in times of foreign crisis that one veteran Representative stated "no man fit to have such responsibility would desire to have it."

Sixth, it would, I partially repeat, begin the inevitable movement toward the most democratic control of our foreign policy consistent with our national welfare—a movement too long delayed.

Seventh, it would tend sharply to do away with the playing of politics with foreign issues and with one-man decisions.

Eighth, in the event of any vitally important pronouncement by the President it would strengthen his position and would make for greater national unity of purpose if he could announce to the country that his action had been taken only after receiving the approval of the representative neutrality commission. The plan therefore would work as a definite aid to the President when his policies are sound, just as it would act as a check when his policies are unsound.

This plan for a neutrality commission is not perfect in detail nor scope. It is merely the first beginning in what may prove to be the development of a very much needed cohesion of effort between the executive and the legislative regarding foreign policy. As time goes on and traditions and precedents are established a great weakness of our constitutional system may become a great strength. Let me assure you that I have no pride of authorship; any or all parts of this proposal may be amended. I am only interested in making some contribution to the solution of this baffling problem, and therefore the thoughts and criticisms of anyone who has been thinking along these lines will be sincerely appreciated.

In support of the whole idea, I would like at this time to quote from a recent editorial of Walter Lippmann in which he declares: "Many things are being done these days in Washington to reorganize the machinery of government, but there is one part of the machinery about which nothing is being done. Yet it is now the most dangerously defective part of the whole Government mechanism, the part that most urgently needs to be reorganized. This is the mechanism for conducting foreign relations."

It would be a pleasure to go on discussing the possible merits of this proposed neutrality commission, but a more urgent expression should be made.

I am among those who do not believe that war in Europe is just a matter of weeks. Perhaps some unexpected jolt may explode the filled powder barrel which is being drawn over a road

that is certainly rough, but the statesmen of Europe are becoming increasingly cautious, and Europe does not want war. Predictions are always dangerous, but existing evidence indicates that war in Europe will probably not come this year and if it does not come this year it may be delayed for an indefinite period.

However, we must be prepared for the worst, and this means the best possible moral, mental, and military defense. This in turn means that we must do all we can to create and sustain the will for peace. This means that we must resolve to separate fact from fancy and be on close guard against propaganda designed to bring about our participation.

It means that despite our safety from invasion we must be prepared for any eventuality. Let us resolve to do everything honorable to escape the horrors of another war, but if we are to be caught in the awful suction a European war would create, we do not want to be caught without the best equipment possible.

Let me bring, in closing, the happy message that few members of Congress are war minded. Few if any have been guilty even in private of the provocative remarks that characterized until recently the bellicose threats of administration interventionists. Rather there is a powerful undercurrent of resolution that we will not fight any war where our own vital and immediate interests are not at stake.

The Committee to Keep America Out of Foreign Wars composed of Members and former Members of Congress is gaining strength. Its effects are already in evidence. All in all the tension of the past months is easing.

God willing and the people resolute, this generation of Americans may yet escape a blood purge of its best sons.

UNDER THE CAPITOL DOME—TOWN MEETING DIPLOMACY

(By Raymond Z. Henle)

WASHINGTON, May 18.—One of the most sincere and intelligent young Members of Congress who took office in last November's Republican sweep is Representative ROBERT J. CORBETT, of Pennsylvania. He is studious and serious-minded and not given to jumping at conclusions. His inclination is to inform himself on every issue upon which he is called to vote. That sooner or later he will find this impossible does not detract from the character of the impulse. It is safe to say that there are few Members of Congress who so zealously search for the facts in order to make wise decisions.

Therefore it may be assumed that Mr. CORBETT sincerely believes the welfare of the country can be advanced by curbing the powers of the President in his negotiation of our foreign policy. Mr. CORBETT has prepared for introduction a resolution providing for the creation of a commission of Congress which "would advise and consult with the President on all important matters of foreign policy" and would be instructed particularly to "write the rules and regulations governing our behavior in the event of foreign wars."

One of the surprises of this session is the support being shown by this proposal of a new Congressman. It is quite possible that the plan may cause as much interest on Capitol Hill as did the proposal of Representative LUDLOW for a constitutional amendment requiring a popular vote of approval before this Nation could engage in war.

Many people will say that Mr. CORBETT's resolution to provide an advisory board for the President is a thrust against the diplomacy of the particular man who happens to be President at this time. Yet that is not true, despite the fact that Mr. CORBETT is a Republican. The resolution was framed in pursuance of a sincere belief that the President of the United States, whoever he may be, has too much power in the matter of foreign relations and that he should be given the support of an advisory group in order to decentralize this power. Nevertheless the resolution will receive support—much support—specifically because so many Congressmen are fearful of Mr. Roosevelt's conduct of foreign affairs. Others will support it because it is just one more idea calculated by well-meaning persons to remove a little further the possibility of war.

So the President is to be instructed what to do and what to say in the matter of our foreign relations by a group of 12 Congressmen, three Republican and three Democratic Representatives, and three Republican and three Democratic United States Senators.

Conceding that such a proposal might be approved it is difficult to see how matters would be improved. No matter who he is, the man who happens to be President of the United States, in this writer's judgment, has the welfare of the country uppermost in his mind and the great destiny of this Nation deep in his heart when it comes to our relationship with other nations. Of course, good as may be his intentions, his judgment may be in error. But in that event the people through their mediums of recording and public opinion through their ballot boxes will correct him.

A Representative and a Senator are closely concerned, in the big majority of cases, with doing the thing that will get them the most votes. That is not always the thing that is best for the people as a whole. It does not seem that a congressional commission would be moved to act by higher conceptions of public duty and public good than would a President of the United States acting alone. To circumscribe a President's actions with a congressional commission would seem to be coming pretty close to town-hall-meeting diplomacy.

Drafting Wealth in Time of War

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Monday, June 5, 1939

RADIO ADDRESS BY HON. CHAN GURNEY, OF SOUTH DAKOTA, JUNE 4, 1939

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the so-called Lee bill for drafting wealth in time of war, delivered by the distinguished Senator from South Dakota [Mr. GURNEY] on the American Forum of the Air of the Mutual Broadcasting System on Sunday evening, June 4, 1939.

There being no objection the address was ordered to be printed in the RECORD, as follows:

Hello everybody, in undertaking a discussion of legislation of the type of the so-called bill to "draft" the use of money in time of war, it is very necessary that we avoid emotion and hysteria. Calm reasoning and deliberate thought are necessary in dealing with such legislation if we are to avoid making an irreparable mistake. Nothing whatever is gained by declarations that "dollars are no more valuable than the blood or life of a mother's son." Of course, dollars are not—and there is not a man in Congress or elsewhere who would contend they are. But such declarations hinder rather than help a clear understanding of what is proposed in this bill. If this bill is desirable and necessary legislation, surely that fact can be demonstrated on its merits without resort to emotionalism.

So at the outset let's clear the air of the confusion thrown around this legislation. We are all opposed to war. We want to keep America out of war, and we propose to do so.

But I gravely doubt that this bill, despite its avowed purpose "to promote peace," will make any contribution whatever toward keeping this country out of war. In the first place, the provisions of this bill would not become effective until we entered a war or were on the threshold of doing so. But, say the proponents of this legislation, this bill will promote peace by eliminating the prospect of profits from the financing of a war. Apparently they are under the illusion that an urge for profits constitutes the primary motivating force toward plunging this country into war. The record, however, does not sustain that argument. Today the strongest kind of opposition against this Nation's participation in another war comes from business and financial circles.

However, for the moment, let us appear to agree with the argument that those in favor of the bill are using. They give as the main reason for wars, the urge to make big profits. This bill does not stop profiteering. The first few lines of the bill definitely order the President to take a census of all the net wealth of all the people before a war starts—all mandatory bond purchases, then, and later, are based on the net worth ascertained in the first wealth census. No later census of wealth is provided for during the duration of a war when profits pile up. I repeat that there are no provisions in this most drastic bill that tend to take notice of profits made during a war period. Therefore, this bill does not give us the remedy sought by those favoring the bill. The danger of war to the United States comes today from those in positions of responsibility and power who would undertake to make the affairs of other continents the direct and immediate concern of our people. It comes from those who undertake to aline this country and its Government on the side of nations with one set of the ideologies against nations professing another. There is our danger and the provisions of this bill do not even remotely touch that situation.

So much for the contention that this legislation would promote peace. Its next avowed purpose is to promote the national defense. I gravely doubt that it would. It is not necessary to take my word for that. Both the War and Navy Departments are opposed to this bill on the very ground that in all probability its provisions would hamper the national defense should the country again become embroiled in a war. Acting Secretary of War, Louis Johnson, in a report on this legislation, declared that in the opinion of the War Department such a bill—and I quote his words—"is not in the interest of the national defense." He added that the War Department "recommends that it be not enacted into law." Such is the opinion of the responsible heads of the War Department—men charged by law with the promotion of our national defense.

How about the Navy Department, the other arm of our national defense? Admiral William D. Leahy, speaking for the Navy Department in a letter to the chairman of the Senate Committee on

Military Affairs, declared that under such legislation "serious delay in the final determination of the wealth and consequent obligation of each individual would be inevitable."

Pointing out that such legislation might adversely affect industrial production in time of war, Admiral Leahy added that "any measure which would limit production in time of stress would be detrimental to the national interests." He placed the Navy Department on record as opposed to this legislation.

In the face of such declarations from the spokesmen of the two armed services of the Nation, uncontested by anyone except the author of the bill, we need not take seriously the contention that this legislation would promote the national defense. If the spokesmen for the War and Navy Departments made statements and recommendations regarding this legislation which were invalid and could not be sustained, why did not the proponents of this bill demonstrate that fact by competent witnesses in hearings before the Committee on Military Affairs? The fact that they did not do so adds to the force and weight of the War and Navy Department reports.

Indeed, I propose to demonstrate presently that this bill, if enacted into law, would hinder if not jeopardize the national defense in event of war. But before doing that, I would like to dispose of another contention made on behalf of this legislation. That such legislation is necessary in order properly to finance American participation in another general war. It is suggested that our financing of the last war was in danger of breaking down. Such a statement indicated a complete lack of knowledge regarding that subject. The First Liberty Loan was oversubscribed 52 percent and the second 54 percent. The Third Liberty Loan was oversubscribed 39 percent, the fourth, which was double that of any preceding issue, 16½ percent, and the Victory Loan, issued after the war, was oversubscribed 16⅔ percent. At no time during the World War was our Government threatened with a breakdown of its financial operations.

Surely this is a subject in which the Secretary of the Treasury has a direct interest. What does he say about this legislation? Does he think it should be enacted into law? He does not. Writing to the chairman of the Senate Military Affairs, Secretary Morgenthau made this statement—and I quote his words:

"While I am strongly in favor of eliminating all profits from war, I am convinced that this purpose cannot be accomplished through the methods proposed by the bill under consideration and I am therefore opposed to its enactment."

That is the opinion of the Secretary of the Treasury. Thus we have on record the spokesmen for the three Government departments directly concerned with this kind of legislation, each recommending against its enactment. No place in the record on this bill is there a recommendation favorable to this bill from any other Government department.

Let us now turn to the most dangerous aspects of this legislation, namely, the effect its provisions would have on the economic structure of the Nation. No man knows what effect this measure would have if applied at the outbreak of war. It is obvious to anyone with any knowledge of economic laws that it would cause a severe and drastic economic disturbance. We would be confronted with the alternative of a paralyzing deflation or a fiery inflation.

One need not be an economist to realize that ordinary and normal values would be sharply and with breath-taking rapidity depressed if all the persons subject to the provisions of this measure were forced to sell property to be able to meet the sums assessed against them. Let me cite one or two illustrations. A farmer with "net worth" of $10,000, comprising of his farm and livestock, would be required to make available to the Government $450 in exchange for a 50-year callable bond bearing an interest rate of 1 percent.

This farmer, in order to pay cash to the Treasury, could either borrow this sum of money from his bank, paying interest of 4 to 8 percent, or he could sell a part of his livestock. Since many farmers would sell, the market would be glutted with livestock, thus depressing the price. But supose our farmer was appraised as having a "net worth" of $100,000. He would be required to make available to the Treasury $9,450. Thus it might become necessary for him to sell a part of his land, thus forcing down land prices.

The real economic damage, however, would be done through the application of the provisions of this bill to a man of wealth, engaged, for instance, in manufacturing. All of his net worth, of say $1,000,000 would be invested in his factory. Under the bill he would be required to make available to the Treasury $206,950. In a critical time of war, it is certainly doubtful whether he could obtain a loan from his bank for such a sum. Thus he would be compelled to sell one-fifth of his property. Immediately the price would be deflated, especially since every other person of wealth would be subjected to the same pressure from the Government. Such forced selling would set in motion a devastating deflationary circle, crippling the economic structure at the very moment its efficiency would be most essential in producing war materials.

The author of this bill recognizes this danger, for the measure authorizes the President to provide for the acceptance by the Treasury in payment for its bonds, notes, or obligations of the person against whom the assessment rests, with a 6-percent mortgage on his property as security.

A President of the United States who wished to change our economic system could refrain from authorizing the acceptance of such notes and thus compel every person assessed to pay for the war bonds in cash, thus bringing about deflation. Or a President might decide that the prospects of severe deflation would be better than the inflation which would follow should he permit the acceptance of notes in payment of the bonds.

For in this bill the President would be authorized "to issue currency, notes, and other obligations of the United States upon the security of the property, notes, or other obligations accepted."

In other words, if the President permitted our manufacturer with a net worth of $1,000,000 to give his note for the $206,950 which he must make available to the Treasury, then the President could—indeed he would have to in order to get money—issue $200,000 of printing press money, secured only by the manufacturer's factory. Multiply this transaction several thousand times and an inflationary fuel pile would be built up that, when set off, would rock the Nation with skyrocketing prices.

To assert that the currency issued under this process would be secured by property is to be naive and whimsical. In the case of our manufacturer, truly, it would be productive property. But in the case of many men the property securing their notes would be nonproducing property, art collections, country estates, unprofitable businesses, yachts, etc. Going through the processes provided in this bill would not allay one iota the fear of printing press money. It would be better to be honest and just run on the printing presses.

The amazing thing about all of this is that in the hearings held on this bill a little more than a year ago, not a single monetary economist or financial authority was asked to discuss this aspect of the legislation. The only financial authority whose view was solicited in regard to this bill was the Secretary of the Treasury and he, as I previously stated, recommended against its enactment.

To summarize, it is clear that this bill would promote neither peace nor the national defense. On the contrary, it would hamper the efforts of this country to successfully prosecute a war. There is no necessity whatever for such legislation and its enactment would do far more harm than good. It would breed economic chaos and confusion in the critical period at the beginning of American entry into a war.

To those who are concerned about the ability of our country to finance a war, let me say now that they should be disturbed by the present chaotic condition of Federal fiscal affairs. If they are sincere in their efforts, let them turn their attention to curbing the unbridled spending now going on and face this Government toward a balanced Budget. There, is the most effective and soundest step to promote our national defense that we can take today.

In conclusion let me say the whole bill leaves me with the general impression that there is a possibility that those promoting this bill are thinking this country may go in for an aggressive war—"a declared war," to actually use words contained in the first few lines of the bill. That will not happen; therefore, there is not now any necessity for this legislation for I am convinced the United States of America will have no difficulty in financing a defensive war, once an enemy appears at our gates.

B'nai B'rith in the American Way

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

RADIO ADDRESS BY SEYMOUR S. GUTHMAN, APRIL 27, 1939

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address entitled "B'nai B'rith in the American Way," delivered by my secretary, Mr. Seymour S. Guthman, Thursday evening, April 27, 1939:

In ancient Rome, any citizen, irrespective of his economic, social, and political status, or religious beliefs—although he chanced to reside in the most obscure corner of the earth—could, nevertheless, gain the protection of the might and the power and the dignity of that great Roman Empire, by proclaiming "Civis Romanus sum!" (I am a Roman citizen!) Civis Romanus sum! This famous cry we may paraphrase in setting forth the story of the B'nai B'rith organization, that order which was founded almost a century ago in New York, and which has served during all these tumultous years of change and turmoil, as the guardian of Jewish rights everywhere in the world, and as the protector for all who were in danger or in difficulty. Whether he dwelt in benighted Rumania, in darkest Russia, or in Nazi-torn Germany—whether he was wealthy or poor, strong or weak, scion of an ancient family, or a lost immigrant—regardless of status, of position in society, of religious belief or outlook—he had but to exclaim "Ivri Onochi" (I am a Hebrew), and by that proud declaration he had

claim to the protection or the assistance of the oldest and the most representative order in contemporary Jewish life.

Ninety-six years is not a long span in the 3,000-year-old story of our people. But in American history it covers nearly the entire gamut of corporate Jewish life. For, in 1843, when the order was founded in New York City by a dozen forward-looking citizens there were less than 15,000 Jewish men and women in the whole country. The mighty waves of immigration had not yet begun to deposit their millions on American shores. And the new country had attracted only tiny fragments of the great European settlements. The B'nai B'rith, although it began with the trappings of the average fraternal order, soon divested itself of these, and dedicated its energies and its resources of a wide program of social service; to the task of uniting Israel, of building its philanthropies, of protecting its good name, of warding off its enemies, and of developing its rich cultural reservoirs. Through all the bewildering changes of the century, which shifted the center of gravity of Jewish life from the Old World to the New, the B'nai B'rith continued to function on its original program of public service, broad-spirited philanthropy, and cultural development—with the consequent result that today, this order is in the forefront in American Jewish life. Its membership is drawn from every stratum and its roster represents a genuine cross section of American Israel.

Numerically, too, the B'nai B'rith has maintained its representative character. It began with a few lodges in the early 1840's when our people numbered scarcely 15,000. As immigration grew the lodges multiplied, and today there are nearly 500 in this country alone, representing about 80,000 families or nearly 325,000 men of Jewish faith. There is no city of substantial Jewish population without its unit, and scores of tiny communities can boast of their chartered lodge. It can be readily seen from the above that there are few agencies anywhere which have enrolled as large a proportion of its Jewish population as has the B'nai B'rith. Hence, when it acts and speaks it does so as a truly representative Jewish agency.

Moreover, this order is not a mushroom organization, called into being by a sudden crisis or a new emergency. It did not suddenly speak up for Jewish life because of the Nazi terror of this day or the atrocities of the pogroms of yesteryear. It has not seized upon the hysteria of the Jewish masses, in the face of disaster all about them, to win allegiance for particular dogmas or programs. To the contrary, for 96 years it has functioned with dignity and with statesmanship as a Jewish agency. Mellowed through years of experience, it has succeeded in gaining hold of the loyalty of every group in Jewish life and the profound respect of every group in non-Jewish life—and this without the blowing of trumpets, without any pomp or fanfare.

For far more than half a century the preamble of the constitution of this order has read as follows: "The B'nai B'rith has taken upon itself the mission of uniting Israelites in the work of promoting their highest interests and those of humanity; of developing and elevating the mental and moral character of the Jewish people; of inculcating the purest principles of philanthropy, honor, and patriotism; of supporting science and art; alleviating the wants of the poor and needy; visiting and attending the sick; coming to the rescue of victims of persecution; providing for, protecting and assisting the widow and orphan on the broadest principles of humanity."

The B'nai B'rith has not permitted these principles to be merely pious utterances, to be mouthed as pretty, meaningless, platitudes and soon forgotten. To the contrary, these words have been translated into deeds of benefit for all humankind. No wonder, therefore, that wherever B'nai B'rith is, there will be found institutions fostered by it which minister to the frailties of humankind, ranging from the tender care of orphans, to homes caring for the aged and the infirm. Dotted over the land are B'nai B'rith hospitals and sanatoriums for the sick, their doors, for the most part, open to the afflicted regardless of creed, color, or nationality. I like to think of the words inscribed over the gateway to B'nai B'rith's wonderful hospital at Denver for those afflicted with tuberculosis where all, Jew and non-Jew alike, are welcome. The inscription reads as follows: "None may enter who can pay—none may pay who enter." Here, indeed, is epitomized the true spirit of this order.

In every B'nai B'rith lodge room in the United States the flag of our country is found. The attention of the members is directed to our national standard, thus set forth: "The red, white, and blue combined are emblematic of the flag under whose protecting folds we meet; the standard of that land which, sheltering Israel, has been shielded by the God of nations. Mindful of the blessing which we enjoy in common with our fellow citizens, let us, with loyal hearts, be ever devoted to our land of civil and religious liberty."

In doing all the above, the B'nai B'rith is in essence building another bulwark of strength in our land of liberty; another impregnable fortress in the citadel of our democracy. For we interpret democracy as that form of government and that way of life which makes room for differences of opinion and which protects the minority, even though he be a minority of one; we interpret democracy as that form of government which treasures and guards the rights of the poorest, the weakest, and the humblest, even as it does that of the richest, the strongest, and the proudest; and when we rejoice with our fellow Americans in the knowledge that in our country we cherish such precious rights as freedom of speech, freedom of the press, freedom of assemblage, and freedom of religion, we do so with the fervent conviction that progress and civilization demand a society in which men are free to inquire and to differ. We feel that in reality democracy is simply a scrupulous and courageous regard for human personality and for those God-given rights of life, liberty, and the pursuit of happiness. This is our belief today, even as it has been from time immemorial. Listen, for example, to the immortal words of the Hebrew Prophet Joel: "It shall come to pass in the end of days that I will pour out my spirit over all flesh and your sons and your daughters shall prophesy, and your old men shall dream dreams, and your young men shall see visions. Even upon the menservant and maidservant, in these days will I pour out my spirit of love and care." Small wonder, therefore, that the fathers of this country found inspiration for our glorious Republic in the book of Leviticus, whose words of living flame are inscribed on the Liberty Bell in Philadelphia in the following manner: "Proclaim liberty throughout the land and to all the inhabitants thereof." And by no less an historian than the distinguished non-Jew William Edw. Lecky we find written these words: "Hebraic mortar cemented the foundations of American democracy."

All of the foregoing is precisely contemplated in the program of the B'nai B'rith. In other words, our order seeks only to put into effect the true democratic impulses in American life. The B'nai B'rith way—yes, that is the American way.

And so to our Jewish and non-Jewish friends and neighbors, we wish to state that the program of our order is not one simply to combat antisemitism. For that is not the essence of Jewish life. That is not the crown of our achievement or the secret of our survival. Rather do we proclaim and emphasize those noble teachings of our faith which have made fruitful the life of the world. We think of and submit to all humankind the majesty of our moral code, the wide sweep of our prophetic vision of justice, of brotherhood, and of peace. We think of and regard with pride the glory of our literature and the heroic quality of our national survival. We think of the great contributions which the gifted sons of our people have made and are making in every field of human endeavor in a determined effort to make this world a better and happier place for men everywhere to live their short span of years.

One of our great American colleges has as its seal a three-headed figure, one looking backward, another looking frontward, and the third gazing toward the distant horizon. The seal bears the inscription: "Respice, Prospice, Adspice * * *" which means "Backward, frontward, and forward." That motto, it seems to me, sums up very aptly our discussion this evening. If we of the B'nai B'rith are to live joyously and creatively in the present, then we must at all times look to the past, conscious of our great traditions, and at the same time look forward, our eyes and our hearts and our souls fixed on the distant horizon, where man will be friend to man, and everyone, no matter his race, his creed, or his color, will be able to walk the earth proudly and with dignity.

When Napoleon led his weary and bedraggled soldiers to Egypt, he assembled them on the hot desert sands, and there, in the shadow of the mighty pyramids, he spoke to them: "Soldiers of France," he cried, "Soldiers of France, give heed and feel the pride that is justly yours—for 40 centuries of human history look down upon you!" Likewise, do I now say unto you, ladies and gentlemen of the B'nai B'rith: Feel the pride that is justly yours as the present leaders of the children of Israel in this glorious American democracy. The degradation and misery of our unfortunate brethren in other lands emphasize with tragic clarity that it is you and you alone who are the one hope and the one refuge of our people in one of the darkest eras of history. Down the long corridors of time, 90 generations of our ancestors are calling you, men and women of the B'nai B'rith, and their cry is reechoed by our brave and suffering brothers overseas:

"O American Israel:
O Sons of the Covenant:
From dying hands we throw the torch,
Be yours to hold it high!"

Good-Neighbor Policy With Reference to South America—We Hail the Chilean Commission

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

Mr. CELLER. Mr. Speaker, we have lived in amity and accord with our neighbors to the south ever since we have been a nation, and we pray it shall ever be thus. Democracy flourishes in the Western Hemisphere. It would die if there were not that amity and that accord.

President Roosevelt, Secretary of State Hull, and their colleagues are to be congratulated for their fine and sterling attitude toward all the republics to the south.

The American people will soon have an opportunity to welcome to this country a commission composed of eminent Chileans who are scheduled to leave their native land this week to visit the United States. Their arrival is not likely to be heralded throughout the land, which does not at all imply that their mission is not one of significance as regards future economic relations between the United States and the southern Republic. Our southern friends will come here "for other purposes than recreation, or to receive the personal satisfaction of travel."

Our friends south of the Rio Grande have been hearing so much of late about the "good neighbor" policy which our Government has been pursuing that they wish better to become acquainted with us in order to be able to refute the propaganda carried on throughout Latin America in general, and in Chile in particular, about the continued imperialistic designs fostered by the "Colossus of the North."

A commercial treaty is in the process of being negotiated between the United States and the Republic of Chile. It is imperative that this treaty be ratified at the earliest possible moment. We must bear in mind that we cannot be indifferent to what is happening in the neighboring Republic: America's stake in Chile is placed at over $650,000,000, of which close to $300,000,000 is invested in copper mines, about sixty-six and one-half million dollars in public utilities, and an equal amount in nitrate properties. In addition, Americans own close to $200,000,000 par value of bonds of the Chilean Government, political subdivisions, financial institutions, and corporations.

It is, perhaps, worth calling attention to the fact that the United States is in a position to supply Chile with virtually all the products and manufactured goods which Chile ordinarily imports from abroad. These include especially sugar, cotton, woolens and thread, wool fabrics, paper and cardboard, petroleum and allied products, machinery of all kinds, automobiles, and chemicals. Among the products which the United States takes from Chile in rather limited quantities, although there is no reason why a marked increase cannot be effected, one might mention meat products, cereals, vegetables and fruit, sheepskins, cattle hides, wool, and, of course, copper and nitrate.

I deem it incumbent upon us to extend to the Chilean delegates all the courtesies which we owe them as a friendly sister republic with which we have maintained pleasant relations for decades. Especial attention should be directed to the possibilities which the Chilean market affords to American manufacturers and exporters.

As a result of the recent disaster which befell the Republic, the process of rehabilitation is, of necessity, a slow one. The present Chilean administration is composed of men who are genuinely democratic and who have the welfare of their people at heart. If we have been in earnest in our contentions that we have nothing but friendship and the highest regard for our neighbors, now is the time to show these characteristics. It would seem highly desirable, and, in the end, profitable, to all parties concerned, if the trade treaty to be ratified with Chile were to be accompanied or shortly followed by the extension of a credit to the Republic for the purpose of enabling Chile to effect a speedy restoration of the regions devastated by the recent disaster.

It is apparent that the credit, which Chile will employ for strictly constructive and revenue-producing purposes, will result in a healthy expansion in the commercial relations between the two countries. There is no reason why the record volume of trade established between the two nations in 1929, aggregating more than $133,000,000, cannot be reached or even exceeded. Last year's trade amounted to only $52,836,000, a rather appreciable decline from the 1937 results when total trade amounted to $70,665,000.

The impending visit of the Chilean commission should give Americans an opportunity to discuss freely the various problems which vitally affect the two Republics. I need not remind you that lasting friendship between nations as well as individuals is barely possible without a thorough acquaintance with and a full knowledge of each other. We shall, in all probability, succeed in convincing our visitors that the United States is not the imperialistic government which our southern neighbors hold it to be. If we are in earnest, as I am sure we are, about fostering the principles of democracy not alone in our country but in the entire Western Hemisphere, we must appreciate the fact that economic well-being is one of the prerequisites for the accomplishment of this objective. Countries which are in the throes of economic distress often furnish fertile grounds for sinister propaganda and the spreading of insidious dogmas. If we aim at peace and prosperity in our own land, we must see to it that peace and prosperity obtain also in the lands of our neighbors.

"Onward, Christian Soldiers"

EXTENSION OF REMARKS

OF

HON. COLGATE W. DARDEN, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

ADDRESS BY HON. A. WILLIS ROBERTSON, OF VIRGINIA, ON JUNE 2, 1939

Mr. DARDEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following commencement address delivered at Woodstock High School, Woodstock, Va., by my colleague from Virginia [Mr. ROBERTSON] on June 2, 1939:

I never come to Woodstock but that I recall the life and times of the most famous man who ever lived here, Gen. Peter Muhlenberg. Born in 1746 in a small Pennsylvania village near Philadelphia, he showed no great promise as a boy, being fonder of hunting and fishing than of his books, and giving no indication of the religious and patriotic zeal that subsequently characterized his life. When he was only 16 years of age his father placed him for a year in the College of Philadelphia, which later became the University of Pennsylvania, and on April 27, 1763, when Muhlenberg was only 17 years of age, his father sent him to England. From there he went to Germany, where he was apprenticed to a shopkeeper for 6 years, at the conclusion of which he was to receive as his total compensation for 6 years of hard labor, a new suit of clothes, hat, and shoes. After 2 years of the drudgery of an apprenticeship of this kind Muhlenberg enlisted in a British regiment that was being recruited in Germany for service in America and returned with it to America, where his father purchased his release. The father, a devout and able Luthern minister, wanted his oldest son to follow in his footsteps, and although Peter at that time had no great inclination to do so, he did have a great desire to please his father, and hence took up studies leading to the ministry. On one occasion while still a student for the ministry he substituted for his father, and attracted such favorable comment from the congregation that he was made his father's assistant. At the dedication of a new church in Philadelphia he was licensed to preach on June 25, 1769, when he took as his text verses 6 and 7 of the One hundred and twenty-second Psalm: "Pray for the peace of Jerusalem; they shall prosper that love thee." "Peace be within thy walls and prosperity within thy palaces," commenting on wars around Jerusalem and the relation between wars and prosperity.

In May 1771 Peter Muhlenberg received a letter from James Wood, a justice of the peace of Woodstock, which at that time was called Muellerstadt after a prominent German named Mueller. When the county of Dunmore was formed from Frederick in 1772 and named after the royal Governor of Virginia, Lord Dunmore, the Legislature changed the name of the town from Muellerstadt to Woodstock and designated it as the county seat of the county.

The letter from Squire Wood to Muhlenberg was as follows:

"Dear Sir: I have been requested by the vestry of a vacant charge in Virginia to use my endeavors to find a person of an unexceptionable character, either ordained or desirous of obtaining ordination in the clergy of the Church of England, who is capable of preaching both in the English and German languages. The Living, as established by the Laws of the Land, with Perquisites is of the value of Two hundred and Fifty Pounds Pennsylvania currency, with a Parsonage House and a Farm of at least Two hundred Acres of Extremely Good Land with every other

convenient Out House belonging to the same, which will render it very convenient for a Gentleman's Seat. And having just now received a Character and Information of you from Mr. John Vanorden of Brunswick, I am very inclinable to believe You would fully answer the expectations of the people of that Parish; the Gentleman of whom I have had information does not know, whether You are ordained by the Bishop of London or not. However, be that as it will, if You can come well recommended to the Vestry, they will recommend You in such a manner as to make Your ordination certain. If You should think those Proposals worth Your acceptance, I shall be glad You would write me an Answer, to be left in Philadelphia at the Sign of the Cross Keys, where I shall stay a few days on my return home, when, if I find You inclined to accept of this Living, You may expect to hear from me, directed to the care of the Gentleman, of whom I have been favored with the information, which I have received.
"I am, tho' unacquainted, Rev. Sir,
"Y. Ob. Serv.,
"JAMES WOOD

"NEW YORK, *4th May, 1771.*
"P. S.—If You should determine to go to London, I make no Doubt of the Vestry advancing sufficient Sum to defray the expenses."

In those days only the salaries of the preachers of the Church of England were paid from public taxation and only marriages performed by such clerics were considered legal. In order for Muhlenberg to meet those requirements he went to London, where on April 23, 1772, he was ordained by the Bishop of London and returning to America he assumed his duties at Woodstock in the fall of that year.

To better understand the background of the young preacher who came to Woodstock in 1772, it is necessary for us to recall that the dominance of the Quakers in Pennsylvania was maintained through the Germans of Pennsylvania. The Quakers did not like war and the Germans did not like taxes so a happy medium was formed on the basis of no war and lower taxes. After Braddock's disastrous defeat in western Pennsylvania during the French and Indian war, the Indians continued to harass the Pennsylvania settlers and Peter Muhlenberg's grandfather helped to organize the local defense against their recurring raids. So he grew up hearing those tales of Indian warfare, which probably influenced him to enlist, as stated above, in the English regiment for military service.

The Boston Tea Party occurred in December 1773, shortly after Muhlenberg had gone to Woodstock. In May 1774 the Virginia House of Burgesses meeting at Williamsburg adopted a resolution calling upon all the people in the colony to observe Sunday, June 1, as a day of prayer and fasting for deliverance against tyranny. Lord Dunmore answered that petition by dissolving the house of burgesses. And so we find the free and unterrified citizens of Dunmore County meeting on June 16, 1774, with Peter Muhlenberg as their chairman, or moderator, and this, in part, is the resolution adopted by that mass meeting:

"That we will pay due submission to such acts of government as His Majesty has a right by law to exercise over his subjects, and to such only.

"That it is the inherent right of British subjects to be governed and taxed by representatives chosen by themselves only, and that every act of the British Parliament respecting the internal policy of America is a dangerous and unconstitutional invasion of our rights and privileges.

"That the enforcing the execution of the said act of Parliament by a military power will have a necessary tendency to cause a civil war, thereby dissolving that union which has so long happily subsisted between the mother country and her colonies; and that we will most heartily and unanimously concur with our suffering brethren of Boston and every other part of North America that may be the immediate victim of tyranny, in promoting all proper measures to avert such dreadful calamities, to procure a redress of our grievances and to secure our common liberties."

Pursuant to a resolution adopted by the Virginia Burgesses in their Raleigh Tavern meeting, two delegates were elected to represent Dunmore County in the convention called to meet in Williamsburg on August 1 1774. These delegates were Jonathan Clarke, Esq., and Peter Muhlenberg. At that convention Muhlenberg supported Patrick Henry in his demands for vigorous action and he there made the acquaintance of Col. George Washington, who was representing Fairfax County, and who made a speech offering to raise and subsist a thousand men and march with them to the aid of Boston.

At the convention which met in Richmond on March 20, 1775, with Peyton Randolph presiding, Clarke and Muhlenberg again represented Dunmore County and were present in St. John's Church when Patrick Henry delivered his impassioned and memorable words: "As for me, give me liberty or give me death." Muhlenberg and Clarke continued to represent their county in the further session in Richmond on December 1, 1775, and in Williamsburg on December 4. Lord Dunmore declared martial law in Virginia and issued a call to arms. His proclamation was referred to a committee of 10, of which Muhlenberg was one, and that committee reported on December 13, declaring Dunmore's proclamation violated the constitution and laws, assuming powers which even the king could not exercise. Therefore, the reply continued, the people were "compelled by a disagreeable and absolute necessity of repelling force to maintain our just rights and privileges, and we appeal to God, who is the sovereign disposer of all events, for the justice of our cause, trusting to His unerring wisdom to direct our councils and give success to our arms."

The sessions of the convention continued until January 1776. On January 12 the appointment of officers for the new battalions was announced (equal to the command of a colonel). The eighth battalion was the German command, and the colonel chosen for that battalion was none other than Peter Muhlenberg, of Woodstock, who was then only 29 years of age. Although he had had less previous military experience than any other colonel then chosen, his selection was urged by both George Washington and Patrick Henry. Legend has it that prior to that time Washington and Muhlenberg had hunted deer together in the Shenandoah Valley.

The exact time when Muhlenberg preached his famous sermon in Woodstock is not known, but the assumption is that it was in January 1776. The assembled throng filled every bit of space in the small church and overflowed upon the surrounding burial ground. Clad, as usual, in the black ministerial robe of his church, Muhlenberg preached a sermon that stirred the hearts of every hearer, although the exact language used by him was never recorded. However, 70 years later, Henry A. Muhlenberg quoted Pastor Muhlenberg as saying, "In the language of Holy Writ there is a time for all things, a time to preach and a time to pray, but those times have passed away. There is a time to fight, and that time has now come." Muhlenberg undoubtedly was making reference to the third chapter of Ecclesiastes, wherein it is written, "To everything there is a season, and a time to every purpose under the heaven."

Thomas Buchanan Reed epitomizes Muhlenberg's appeal in the closing stanza of his stirring poem:

"'Who dares'—this was the patriot's cry,
As striding from the desk he came—
'Come out with me in freedom's name,
For her to live, for her to die?'
A hundred voices answer, 'I!'"

It is that same appeal that I present to you tonight to enlist in the war to solve our current economic problems and by solving them save the representative democracy and American constitutional liberty for which General Muhlenberg fought. As long as I have the honor of representing you in the halls of Congress I will do all in my power to save you from the necessity of carrying a rifle on the field of battle, but I do call on you tonight to enlist as peacetime soldiers in the battle for what is fundamentally right, for what is fundamentally sound, for what is fundamentally necessary to preserve the rich heritage of the past.

Peacetime battles call for trained soldiers. Therefore, continue your education, in college if you can, but not necessarily, because the opportunities for self-education with the radio, good lectures, good books, and to learn at first hand the laws of nature are better now than ever before.

Peacetime battles call for moral courage of the highest type—a type of courage that will face difficulties, a type of courage that will assume responsibility for mistakes and shortcomings, and not attribute defeat to lack of wealth or political pull, a type of courage that places reliance upon one's own efforts and not upon the bounties of a paternalistic Government. They call for soldiers that can combine with that type of courage, modesty, and a pride limited to the ambition to excel in good deeds. I would be less than frank were I to seek to leave you under the impression that there are not dark clouds upon the horizon. The expenditure of a billion dollars a month by the nations of the world for a war not yet fought, to say nothing of the heavy burdens of past wars, handicaps efforts for a higher standard of living. Our land, as well as others, is permeated by group selfishness, group hatreds, and racial prejudices, all enemies of peace and prosperity. An unwillingness on the part of the present generation to make the sacrifices incident to the post-war depression is piling up a crushing debt burden—a hostage, as Lord Bacon might say, to your future prosperity.

Yet there remain more opportunities for your success and advancement in life than there were for the children of those who followed General Muhlenberg to make the fight for civil and religious freedom. And it is no longer necessary for a boy or girl to leave the Old Dominion to find these opportunities. I have traveled from Canada to the Keys of Florida; from the Atlantic to the Pacific; and every day I make contact with the Representatives of other States, and I can truthfully tell you that in my opinion and without idle boasting there is no better State than Virginia in which to live and none that offers more advantages for the future We have a good climate, fertile soil, a nice balance between agriculture and industry, a State comparatively free from debt, and the lowest tax rate of any State in the Union. We have good roads, good schools, and good churches, and above all else a Christian population of native-born Americans with an ambition to be true to the ideals and standards set by a distinguished ancestry.

We believe in State rights, and Chief Justice Hughes told us on the one hundred and fiftieth anniversary of the Congress that had we created a nation without sovereign States it would have been necessary to form them. And we have always believed, with Edmund Burke, that when liberty and justice separate, the fate of neither is safe. That was the undoing of the French Revolution. That might have been the undoing of Virginia during the trying reconstruction period when a carpetbag legislature passed a law amounting to a repudiation of private debts. But the unwillingness of the Virginia people, even in that dark hour, to deny

the just obligation of a contract was expressed by Judge Alexander Rives, of our State supreme court of appeals, when he said, in declaring that act unconstitutional:

"No matter what consequences may follow nor what action may be taken by the military authorities in our present unsettled state, the apprehension of them cannot, and ought not to, deter us from the fearless discharge of our responsible duties. But it should not be forgotten that there are opposite evils of perhaps greater magnitude than those which have been so feelingly depicted and depreciated. It has already been seen how these high constitutional sanctions of private right have no other means of vindication but by the judiciary.

"Is it not, then, worth while to consider on this side of the question what deplorable calamities, moral and political, might attend the surrender of this last bulwark by its sworn defenders through a subserviency to temporary interests or passions; or a timid disposition to sacrifice convictions to motives of expediency? No greater or more enduring misfortune, it seems to me, could befall a people, blessed with a constitutional form of government, than a sacrifice of any of its fundamental guaranties of that department of its service which, by the nature of its organization and functions, has ever been counted on to uphold with a stern inflexibility private rights and public morals. Great as might be the suffering growing out of a judicial sentence against this law, and widespread as might be the ruin of individuals and the sacrifice of property under it, they are not, for one moment, to be compared with the evils likely to attend the demoralizing example of a judiciary seeking, however covertly, popular favor by some skillfully disguised compromise of its highest and most imperious duty—that of disdaining any pretext, however plausible, and withstanding every temptation, however strong, to betray in the slightest particular the requirements of the State and Federal Constitutions. Such a spectacle of weakness and subserviency upon the bench, if it did not shock, would incurably deprave public sentiment, destroy confidence in the administration of the laws, spread corruption through other branches of the public service, and fearfully depress the hopes of the friends of constitutional freedom."

In a word, Virginia has sacrificed to preserve American constitutional liberty by preserving American constitutional justice and will always continue to do so.

With this background you descendants of the great Muhlenberg and of the German and Scotch-Irish settlers of the Shenandoah Valley will, I am sure, successfully meet and solve the economic problems that now confront us. There is no lack of wealth, of labor, of inventive genius in this great Nation of ours, but there is a lack of decisive purpose to go forward, a decisive purpose not to permit man's ingenuity to produce to outstrip his ingenuity to distribute. That is our outstanding peacetime problem to which I summon your best ability. "Onward, Christian soldiers."

Value of N. Y. A. Program

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

LETTERS REGARDING NATIONAL YOUTH ADMINISTRATION

Mr. VOORHIS of California. Mr. Speaker, once again I am glad to introduce into the RECORD evidence of the great value of the work of the National Youth Administration. In this case the letters are from one of the ablest high-school principals I know of, and written on behalf of the High School Principals and Administrators' Association of Los Angeles County and from the California Society of Secondary Education.

The letters follow:

BONITA UNION HIGH SCHOOL,
La Verne, Calif., May 12, 1939.

Hon. H. J. VOORHIS,
House of Representatives, Washington, D. C.

DEAR SIR: At the last regular meeting of the High School Principals and Administrators' Association of Los Angeles County I was directed to write you in behalf of the school-aid program of the National Youth Administration, with a request that you use your good offices to secure the continuance and, if possible, the extension of the program for the ensuing year.

The feeling expressed by the men present was that the program was very beneficial and is greatly needed by many of our students, who because of low prices in our agricultural commodities, particularly citrus, are suffering severe deprivation, and the present program is so inadequately financed that the average student is only receiving approximately two-thirds of the $6 amount allowed under the present program; and in addition there are approximately as many students on the waiting list as are now accommodated even under the reduced schedule.

We would urge, therefore, that the program be continued and, if possible, expanded to make possible the payment of $6 to needy young people and to take care of a larger proportion of needy cases until the present emergency is past.

Thanking you for your consideration in this matter, I am,

Very truly yours,

GEO. H. BELL.

CALIFORNIA SOCIETY OF SECONDARY EDUCATION,
Berkeley, Calif., May 8, 1939.

Hon. H. JERRY VOORHIS,
Representative from California, Washington, D. C.

DEAR SIR: At a recent meeting of the board of trustees of the California Society of Secondary Education, I was instructed to bring to the attention of California's Representatives in Congress the following resolution:

"Because of appreciation of the education implications, as well as the relief aspects, of the National Youth Administration program for youth in our secondary schools, the California Society of Secondary Education goes on record as commending wholeheartedly the student-aid features of the N. Y. A. program. The society feels that if educational equality is to be the right of young men and women in our high schools and colleges, it is mandatory that this type of Federal support be continued and even extended beyond its present scope."

Will you please exert your influence in behalf of future legislation favoring the N. Y. A. student-aid program. As administrators and teachers in California secondary schools, members of our society feel that the teaching personnel in the State is unanimous in backing appropriations for this phase of the National Youth Administration program.

Respectfully yours,

L. P. FARRIS, *President.*

Vandenberg's Advantage in 1940—Canal Victory Shows He Holds Power to Rally Anti-New Dealers

EXTENSION OF REMARKS

OF

HON. CARL E. MAPES

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

ARTICLE BY MARK SULLIVAN

Mr. MAPES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mark Sullivan, which appeared in yesterday's papers:

VANDENBERG'S ADVANTAGE IN 1940—CANAL VICTORY SHOWS HE HOLDS POWER TO RALLY ANTI-NEW DEALERS—MARK SULLIVAN SAYS THIS ABILITY MAKES HIM A FOREMOST REPUBLICAN PRESIDENTIAL PROSPECT, THOUGH HE ALSO COULD SERVE WELL IN THE SENATE

(By Mark Sullivan)

WASHINGTON, June 3.—One day last month in the Senate there came to an end a long series of battles. The outcome, occurring in a roll call May 17, may have a strong bearing on the Republican Presidential election next year.

The fight, going on intermittently through 5 years, was about building a canal, "a sublimated ditch," across north Florida, at a cost of from two hundred to three hundred million dollars. It was a New Deal project. President Roosevelt wanted it. The fight for it in the Senate was led by 100-percent New Deal Senator CLAUDE PEPPER, of Florida. And it was the most direct and plain economy issue that has arisen in Congress. That two hundred or three hundred million dollars could be saved without interfering with any public service.

The fight against the canal was led—with a remarkable combination of vigor, patience, and tenacity—by Republican Senator ARTHUR VANDENBERG, of Michigan. When the show-down came, Senator VANDENBERG won. The canal project was defeated by 45 to 36.

MIXED ALINEMENT

If we analyze the political complexion of the 45 Senators whom Mr. VANDENBERG had behind him, we find a curious condition. Mr. VANDENBERG was supported by 21 Republicans (all but 2 of the

Republicans in the Senate—the 2 were absent). And he was supported by 23 Democrats. (The other vote was contributed by a progressive, Senator LA FOLLETTE, of Wisconsin.)

Here was a Republican Senator leading a victorious army against a New Deal measure in a controversy that was essentially New Deal versus anti New Deal. And Republican Senator VANDENBERG's successful army was made up of more Democrats than Republicans.

In that condition lies light on the Presidential nomination that the Republicans will make next year. I will explain why.

THE THREE LEADERS

In all polls there are three leading figures in the Republican Presidential field for next year—Mr. Dewey, of New York; Senator TAFT, of Ohio; and Senator VANDENBERG, of Michigan. Probably other figures may emerge. Today, in polls, more than 80 percent of the persons asked, express preference for one of these three.

Nomination will be determined by two factors. One factor is popularity with the people, as expressed in party primaries. The other is the judgment of party leaders. The respective weights of these two factors vary, in different Presidential years.

Today, among voters, in a popular sense, Mr. Dewey has more strength than either of the other two. But among party leaders, Senator VANDENBERG and Senator TAFT have more strength. Mr. Dewey's strength with the people rests upon his strong and colorful personality, coupled with his highly important public services. The strength of Senators VANDENBERG and TAFT with the party leaders is based upon conditions which not all of the voters take into account. One of these conditions has much weight.

REAL LEADER NEEDED

If the Republicans win the general election next year, they will be obliged to manage the country. They will wish to have an orderly, smooth-running government—how the country will need it! Looking forward to having a smoothly functioning government after 1940, the Republicans, and everybody else, must consider a factor that is often forgotten.

The Republicans may elect the President next year—many think they will. The Republicans may elect a majority of the lower House of Congress—if they elect a President they will with practical certainty elect a majority of the lower House also. But when we come to the Senate we find a novel condition.

By no possibility can the Republicans have a majority of the Senate in 1941. Senators are elected for 6-year terms; that is, one-third of the entire 96 are elected every 2 years. As a result of the great Democratic landslides of 1932, 1934, and 1936, so many Democrats are now in the Senate that they have an immense majority. The Republicans are a small minority, only 23 out of the entire 96.

REPUBLICAN HANDICAP

This present Republican inferiority in the Senate is such that by no possibility can they increase to a majority in next year's election. In other words, if the Republicans won every one of the senatorial elections next year, they would have only half the Senate. And the Republicans, even if they have a landslide, can hardly win every senatorial election next year, for some of them occur in southern States that never have gone Republican.

This condition, that the Republicans cannot possibly have a majority of the Senate, is one that some Republican leaders take account of when they consider whom to nominate for the Presidency. Whoever the Republican President is, in order to deal smoothly with the Senate he will be obliged to have friendly relations with the anti New Deal Democrats. If the Republican President wishes to get a bill through Congress, he would have to depend, in the Senate, on a combination of Republican Senators and anti New Deal Democratic ones—a Senate coalition.

VANDENBERG'S FORTE

I have recited all this to explain why some Republican leaders give serious thought to nominating Senator VANDENBERG. He has shown, in his fight on the Florida ship canal, and otherwise, that he can bring about, and successfully lead, a coalition of Republicans and anti New Deal Democrats. He has been in the Senate 11 years. He is part of the Senate fraternity—only a Senator who is liked and respected could get large numbers of the opposing party to vote for policies led by him.

The theory of those who advocate Senator VANDENBERG for the Republican Presidential nomination is that he could do in the Presidency what he has done in the Senate. The theory is that Mr. VANDENBERG as President could work harmoniously with a Senate in which, inevitably, there must be a Democratic majority. And this ability to work with such a Senate is very necessary for any Republican President who is elected next year, assuming some Republican is.

A variation of this theory says that Senator VANDENBERG could be just as effective by remaining in the Senate—that in the Senate Mr. VANDENBERG could be the ambassador of the Republican President.

What is said here merely explains why many Republican leaders look favorably upon nominating Senator VANDENBERG. Neither this nor any other condition is conclusive, about this or any other Republican possibility.

The Inconsistencies of the New Deal

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

RADIO ADDRESS BY HON. CHARLES HAWKS, JR., OF WISCONSIN

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me recently over the radio:

Ladies and gentlemen, since 1930 we have been trying to bring our country out of a depression, and since 1932 we have done nothing but play politics with the misery that goes along with a depression. I would like to say for the President that he started out to do a good job, but once he put out to sea he threw away the compass and all the charts, and in 1935 he threw overboard the steering wheel. At the present time the New Deal has absolutely no course to follow, and I can find no better evidence of this than in the legislation the administration has offered and pounded through Congress this year.

For 5 years their only program was one of spending, hoping against hope that huge appropriations of Federal funds would start the wheels of industry and business turning. They know from experience that this won't work, but for lack of a sound program, and because they haven't got what it takes to live within their income, the new dealers in 1939, prodded on by a determined administration, continue to spend, and spend, and spend.

The New Deal dominated Congress has already appropriated money enough that will indicate that the coming year will show a deficit of at least $3,000,000,000, and the program for 1940–41 shows definitely that our outgo will exceed our income by several more billions of dollars.

The inconsistencies of the New Deal are something to marvel at. Since 1932 they have been trying to put back to work 12,000,000 unemployed workers. They have been demanding that business and industry open up and expand their activities to absorb a large part of this unemployed army and at the same time have passed legislation that has driven capital and industry deeper into their holes.

A more recent attempt of the President to be friendly to business is typical of the inconsistency they follow. His appointment of W. P. A. Administrator Hopkins to the post of Secretary of Commerce was a blow below the belt, and recent statements of Mr. Hopkins are proof of that fact. These bureaucrats, these theorists, these professional boondogglers, have no love for private industry, and Harry Hopkins has no intention of offering to business an opportunity to go ahead.

In the Department of Agriculture Mr. Wallace is determined to follow through with his Triple A. He has killed and plowed under and destroyed and subsidized, until our farmers are dizzy. While we were following a policy of curtailment in this country in an effort to control so-called surpluses of agricultural products, the State Department was entering into friendly neighbor agreements, so-called reciprocal-trade agreements, that permitted the dumping into the American market of cheap foreign produce.

We have enacted the Fair Labor Standards Act, and have passed labor relations legislation. We have established maximum hours and minimum wages, created social security and unemployment insurance, and have done everything but give to 12,000,000 men and women a job. Our labor leaders are very jealous and very anxious to guard what they call gains for labor. We have all of these so-called gains, but still we have no jobs.

We have low agricultural prices, and high costs of manufactured goods, and until we obtain a better balance between the income of the farmer, and the income of the worker, until the price for the finished product is within the reach of the greatest purchasing power in this country, namely, the farmer, there is no sense in our talking about prosperity.

During the last 6 years we have built up the greatest Federal bureaucracy known to the world. In the building of this top-heavy structure we have just about destroyed local governments. Local county boards meet to set up the budget for the coming year, and are at once confronted with the necessity of meeting mandatory obligations imposed upon them by the State and National governments. In November 1938, as a member of the county board of my county in Wisconsin, we discovered that of the million-dollar budget we had set up, 63 percent of the moneys appropriated were required of us by reason of State and Federal demands. In other words, the basic unit of government in this

country, the county board, could control only 37 percent of its activities.

I believe it should be Republican policy to return immediately to the States and other local units of government their proper functions and responsibilities.

To quote Chief Justice Hughes:

"If we owe to the wisdom and restraint of the fathers a system of government which has thus far stood the test, we all recognize that it is only by wisdom and restraint in our own day that we can make that system last."

Now, as to the "good neighbor" policy. How long can you be good neighbors with those who come to borrow your butter, your eggs, your sugar, and your coffee, and never return any of them, who not only continually borrow with no return, but who finally take your lawn mower and trade it off, barter it away to somebody else for something?

Of course, we all subscribe to the "good neighbor" policy, but a good-neighbor policy is a two-way proposition. The principle of the good neighbor is the principle of those who repay what they borrow, and try to repay promptly, and fully. We all adhere to the ideals of good will and brotherhood, but that is a two-way proposition, also, and when it ceases to be a two-way proposition, it ceases to be brotherhood, or good will, and becomes imposition.

We all believe in the Golden Rule as an ideal, and as a practical philosophy of life, and of government; but certainly the Golden Rule does not mean to give to everyone who asks of you, all he asks, until you have pauperized yourself. There is nothing in the philosophy of the Golden Rule that requires us to make paupers of ourselves in order to enrich our neighbors. There is nothing in the philosophy of the good neighbor that requires us to continue to give and to give, and to lend and to lend, while our neighbor expropriates the land and personal property of some of us, in order to barter away the proceeds in some other direction.

There is a very serious question involved as to how far we should be expected to pursue a "good neighbor" policy, with the peoples of other countries, while we neglect to be good neighbors to those in our own country who need help. It is a serious question, as to how far we should borrow money, which the taxpayers must repay, to lend to foreign nations, while not as much as one-third of our own citizens who are unemployed have ever had the benefit of any Federal relief.

Those of the generation which preceded us will not have to do the repaying; they are not the ones who will have to liquidate the enormous debts being piled up under the "good neighbor" policy as conducted under the reciprocal-trade agreements and the other ways in which our debt is being increased day by day and hour by hour. It is the young people of today, and their children, who are going to reap the bitter fruits of these mistakes, unless the young people take matters into their own hands and stop these trends and remedy this situation.

We hear a good deal of talk, particularly among the older groups, about the enormous power that has been vested in the executive head of our Government, the tremendous bureaucracy which has been built up, the ruthlessness of political manipulation of public funds, and the great force of the patronage at the disposal of the bureaucrats. This tends to bring an attitude of "defeatism." Don't take those things too seriously. If we in Wisconsin had stopped to fear the powers of patronage and the grip of the bureaucrats, and the enormous influence of relief and farm subsidies which can be dispensed by the administration, we would not have attempted what we did attempt.

The best evidence in this country that these powers now possessed by the administration are not convincing is to be found in the election returns last November in the State of Wisconsin. To be perfectly frank with you, I suspect we young fellows up there just didn't have sense enough to know that we couldn't win; therefore we barged in where older angels feared to tread, and in some way we won. Don't think it was an accident, or a political fluke, because we expect to repeat, and on a greater scale, in 1940.

We expect to do that, because we have discovered in Wisconsin the truth of what Abraham Lincoln said: "That you can fool all of the people some of the time, and some of the people all of the time, but you can't fool all of the people all of the time."

The New Deal has done just exactly that. The lofty platitudes and the melodious tones and the simulated sincerity finding expression over the radio, throbbing in the columns of the press, fooled all of the people for a while. Part of the people are still fooled, but the majority of them, as shown by the election returns last November, and as being shown week after week in the Gallup polls—the majority of them, I say, have ceased to be fooled, and the handwriting is on the wall.

Someone has said that if you make a better mouse trap the world will beat a path to your door. We have also discovered that if you will open your treasure house for all to come and take, the world will beat a path to your door. The trouble today, the trouble ever since the war has been that they beat a path to come and get, but they don't retread the path to come and pay.

So far as the question of our foreign relations is concerned, it seems to me it can be disposed of completely in one sentence: If we go in with our dough, we will go in with our doughboys later.

From the time we went into the World War with our men and our money up to the hour when the depression struck, we had exported from this country in governmental and private loans to other countries, a total of something like $29,000,000,000. Do you wonder, you young people, why you are today facing the conditions you do? Is there anything to wonder about, when you stop to consider that no economic structure in the world, not even in rich America, possibly could withstand without a terrible shock and maladjustment the withdrawal of $29,000,000,000 of purchasing power, and its export to other peoples in other countries? And remember the greater portion of that has never been repaid.

I now want to put my finger on one of the principal fallacies of the New Deal, of the whole New Deal philosophy. It is argued that these loans, or credits, were spent in this country, and therefore we got the money back. We produced and paid for the raw materials. We manufactured and fabricated, and then we sent the results of our resources and our labor in goods and services abroad, and did not get the money in return. Of course, it impoverished this country. Of course, it took dollars out of the pockets of every one of us, of every citizen of this country. So don't be fooled by this fallacy that because we extend credits to be spent in this country that we do not lose the money, because we do, for we lose the goods.

Some of you listening are in business, and all of you understand business. What would you say of a storekeeper who would say to his customers: "Come to the office and get the money, and then step down to the counter and buy my goods." How long do you think he would stay in business? What would you think of him, if not once, but again and again he would extend the invitation and, in addition, turn out the Army and the Navy, with all the pomp and panoply, and flags and glittering bands, to greet those who came to his office to get the money to buy his goods, when they had failed to repay their former debts?

That is the situation that this Government is in today. That is precisely what we are heading into again. Certainly, it ought not be so difficult to find in other countries of the world those who want to borrow, that we have to put on a huge military show, in order to persuade them into the state of mind where they are willing to accept loans from us.

And, finally, let's get back to the thing that touches our lives intimately; that is, the "good neighbor" policy can be a policy only when the neighbor brings the cut of butter and the pound of sugar and the can of milk and the dozen eggs and the coffee and the lawnmower back.

A very distinguished gentleman from New York, who made the brown derby a household word in America, once said, "You can't beat Santa Claus."

In Wisconsin we didn't try to beat Santa Claus, but we certainly did beat his spendthrift nephew and all of his first and second cousins. The childhood tradition of Santa Claus is a beautiful thing, and one of life's saddest memories for each one of us was when we discovered there isn't any Santa Claus. The American people, certainly the people of Wisconsin, know there isn't any Santa Claus.

They know that the bags full of checks and coupons, and food and clothing, and houses and farms, and projects of one kind and another, do not come out of the mysterious realm of Santa Claus at the North Pole; but that they come out of the hard-earned dollars of the men who plow the fields, and work at the lathes, and toil at their various occupations, staggering under a load of taxation, facing a load of debt that makes the future look dark, and that for the youth of America holds little but hardship and sacrifice, if it goes on.

The New Deal has proven to be a very, very bad deal. The American people demand that the political cards be laid on the table and that they be dealt from the top of the deck. Let's have an "honest deal" for a change.

Who's the Boondoggler?

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

ARTICLE FROM THE VENTURA COUNTY (CALIF.) STAR-FREE PRESS

Mr. VOORHIS of California. Mr. Speaker, in view of the severe attack which has been made on the Works Progress Administration, I feel that all such charges, as a matter of right, should be carefully analyzed. To this end, therefore, I have asked to include with my remarks the following editorial from a California newspaper:

[From the Ventura County (Calif.) Star-Free Press]

WHO'S THE BOONDOGGLER?

A great deal has been said here and elsewhere about the W. P. A. as a leaf-raking, boondoggling organization. And much of it is lamentably true.

It has been true, in quite a degree, about Ventura County's W. P. A. projects. True, certainly, about some of them.

However, it probably is a fact that the blame for the boondoggling lies rather with our own local officials than it does with W. P. A. itself. For, after all, the job which is completed by a crew of W. P. A. workers can be no better than the plan which was outlined in the beginning for that work. If it was planned to have a crew of men manicure the highway shoulders, shoulder manicuring will be the finished product. If the plan calls for a fire station, a storm-water drainage system, a schoolhouse, a water-main extension, or the creation of a new park, then the community obtains for its and the National Government's expenditures something lasting and worth while.

And in every case it is the local governmental unit which makes the plan.

The Star-Free Press was pleased to record Saturday the statements made by two southern California executives of the W. P. A. urging our local officials to come forward with more constructive projects. The budget-making period for county, cities, school districts, and other governmental subdivisions is near. The supervisors, councilmen, trustees, and other officers in laying their plans for the next fiscal year should devote thought to the community needs, and, where possible, plan to utilize this valuable W. P. A. agency (valuable, that is, if properly employed) to obtain public structures and improvements which we really need and can effectively use. Many other California communities have been wiser in this regard. Glendale and Inglewood, for example, have done an outstanding job of formulating W. P. A. projects which have brought to those cities permanent improvements of sterling worth instead of wasting their shares of these funds for transitory and unnecessary purposes. Ventura County should begin getting its money's worth, too.

Senator Robert F. Wagner

EXTENSION OF REMARKS

OF

HON. MARTIN J. KENNEDY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

RESOLUTION OF THE JOHN P. MORRISSEY-THANNAWAGA CLUB

Mr. MARTIN J. KENNEDY. Mr. Speaker, ladies and gentlemen of the House, it gives me pleasure to insert in the RECORD a resolution adopted by the John P. Morrissey-Thannawaga Club, the Democratic organization of the sixteenth assembly district of New York, and in which I concur. It praises the unselfishness of Senator ROBERT F. WAGNER. In these days of arduous duties in the Nation's Capital, and when the press and others are critical of public characters, it is heartening to know that the noted senior Senator from New York is not forgetful of his friends; that strenuous work in the office here in Washington and on the floor of the Senate does not prevent him from displaying his devotion to the assembly district from which he first embarked on his political career.

To attend a testimonial dinner to Leader John P. Morrissey, which inspired this resolution, Senator WAGNER encountered serious danger. His airplane was forced by fog to turn back from the Newark Airport. He landed at Camden, and with the aid of a motorcycle escort he drove furiously on to New York so as not to disappoint his friend John P. Morrissey and thus mar the happy occasion.

The resolution follows:

Whereas the Honorable ROBERT F. WAGNER, senior United States Senator for the State of New York, did attend at the testimonial dinner tendered to John P. Morrissey by his friends and neighbors of the sixteenth assembly district on April 27, 1939; and

Whereas, notwithstanding the innumerable duties attending upon the Senator as the leader of the United States Senate in the furtherance and completion of the recovery program of the President of the United States; and

Whereas the Honorable ROBERT F. WAGNER, despite great personal inconvenience, did nevertheless put such duties aside to do honor to our leader: Be it hereby

Resolved, That the John P. Morrissey Association-Thannawaga Club, Inc., inscribe upon the minutes of the organization a vote of thanks and appreciation for the unswerving interest and loyalty ever shown by the Senator in the affairs and well-being of the sixteenth assembly district, county of New York, and his friends therein residing; be it further

Resolved, That a copy of this resolution be presented to the Honorable ROBERT F. WAGNER, United States Senator, representing the State of New York.

The above resolution was unanimously adopted at a regular meeting of the John P. Morrissey-Thannawaga Democratic Club, Inc., on the 5th day of May 1939.

Recovery and the Tariff

EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

RADIO ADDRESS BY HON. FOREST A. HARNESS, OF INDIANA, JUNE 2, 1939

Mr. JOHNSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address made by Hon. FOREST A. HARNESS over the red network of the National Broadcasting Co. on June 2, 1939:

All of you have attended circus performances, where the artists dazzled you in three separate rings at the same time, while acrobats flew through the air and clowns disported themselves—all in a glorious confusion of sight and sound. You know exactly how I feel, then, when I confess that the great New Deal circus of the past few days has proved a little too much for my simple ability to comprehend. There have been entirely too much aerial acrobatics and too much buffoonery going on for us to grasp it all.

Speaking of circuses, we will probably never see anything under the big top any funnier than a new dealer trying to act like a conservative. There probably will never be a finer piece of trapeze work than that which the President performed when he flew from avowed liberalism to his newly announced position as a conservative. But while you and I were showing the proper amazement at that exhibition of agility, we could not miss the significant fact that the New Deal's domestic program remains exactly what it has always been—spending and more spending; taxing and more taxing; regulation and more regulation; abuse and more abuse of American business. If any of us held the hope that the New Deal had honestly meant what it said about business appeasement, the President definitely put an end to that hope in his speech before the Forum of National Retailers May 22.

If a hundred commentators had not already riddled that speech and exposed the President's inability or unwillingness to grasp the most apparent economic truths, I should like to remind him that he still has the cart before the horse. I should like to tell him that his much-preached-about purchasing power is not a mystic quality which you create by waving a Federal wand; but that it is the result which naturally follows when farmers and laboring men and busy capital produce. Purchasing power is simply wealth in action. And when we relearn the simple lesson that we must produce before we can spend, we will have learned how to provide the purchasing power which is such a fetish with the President.

With the proof before us that the New Deal domestic policies are to remain unchanged, it is pertinent that we should examine these policies again in relation to the administration's program for foreign trade. The subject is particularly pertinent, in view of the fact that we have just finished a week devoted to promotion of world trade, during which time we have heard significant speeches by three Cabinet members, Secretaries Hull, Wallace, and Hopkins, in addition to an official communication from the President, himself, on the subject.

You recall the President's reminder, "We must take as well as give; import as well as export." You also recall Secretary of Commerce Hopkins' speech before a world trade dinner in New York on May 25, in which he stressed the importance of increasing our imports. Finally, you recall that Secretary of State Hull, speaking at Chicago May 28, emphasized the necessity of promoting international trade. These gentlemen were speaking directly on the promotion of world trade.

But it was Secretary Wallace, speaking at Little Rock, Ark., on May 26, who really displayed the New Deal's domestic program and foreign trade policy in their true perspective. Mr. Wallace did not have foreign trade or tariffs particularly in mind when he spoke at Little Rock, but the highlights of that speech bitterly illustrate the fact that our domestic program and our tariff policy are working in exactly opposite directions.

That speech was an utter maze of economic contradictions, and admissions of New Deal error. It was the speech of a man whose

conscience led him to admit the economic absurdities his administration has committed; but, none the less, the speech of a man who insists that these absurdities must be continued because the administration knows no way out of the dilemma it has created.

Wallace frankly admits that artificially pegged domestic prices for cotton have hampered the natural movement of our cotton in international markets. And there, ladies and gentlemen, is the key to this utter absurdity. For what is true of cotton is true of the entire New Deal farm program. And what is true of the farm program is equally true of the entire New Deal philosophy.

For 6 frantic years the New Deal has moved heaven and earth to jack up domestic wages and prices. It is beside the point to say that the New Deal has been entirely wrong from the beginning in the childish assumption that high prices cause prosperity. This, of course, is still the business of getting the cart before the horse. But right or wrong, that is the basis upon which our course has been charted for 6 years.

With that thought in mind, look now at our foreign trade policy. While the administration has been trying frantically to jack up domestic price levels by every conceivable artificial means, Mr. Hull has been working with might and main to knock down prices, wages, and the American standard of living. The entire official family this past week has preached the doctrine of international trade. But there has not been a day since 1933 when the administration has not denied these preachings with its domestic program.

Now, while the New Deal continues to assert that it is physically possible to go in opposite directions at the same time, let us look at the simple truths about international trade. Let us skip statistics, and stick to logic and simple arithmetic.

The President himself gave us a good starting point when he said: "We must take, as well as give; we must import, as well as export." In other words, when we sell a dollar's worth of American goods abroad, we must sooner or later take back a dollar's worth of foreign goods in exchange. Nothing can be truer than this simple fact. It varies only in times of unusual emergency; and then only long enough for natural forces to strike a balance. When we seek trade in foreign markets, we must expect to open our own markets to producers abroad who care to sell within our borders.

The internationalists would have us believe that that free interchange is exactly what the doctor ordered for world prosperity and international security. But before we agree let's compare world markets with our own.

Where can we hope to find trade opportunities to compare with those right at home? The answer is automatic; there simply are no markets abroad as we know them here. Ours is a fertile trade area which is so far ahead of anything else in the world that there is simply no basis of comparison. With only 6 percent of the world's population, we own half of the world's gold supply and three-fourths of the banking resources. We own 70 percent of the world's automobiles, 50 percent of the telephones, and 40 percent of the radios. We are far and away the largest consumers of practically every important product or commodity.

We have the highest wage scales and the greatest purchasing power on earth. In fact, our purchasing power is greater than that of 500,000,000 people in Europe.

Yet the internationalists would have us open this incomparable market for the doubtful advantage of competing for a handful of trade abroad. They do not tell us that our export trade has never amounted to as much as 10 percent of our total volume of business, except briefly during the World War, when we fed the allied armies on credit.

Incidentally, I hardly need to remind you that those 20-year-old bills are still unpaid and that a high percentage of our exports in the decade following the war were financed with your money and mine. Also, that our loans abroad proved so bad that our debtors no longer even apologize when they pass their interest-paying period.

Neither do the internationalists tell us that we are now pursuing a childishly idealistic course in a world of brutally realistic bargain drivers. They don't explain that since the World War there has been such a complete resurgence of nationalism that we are hopelessly alone and out-numbered in any gesture we make toward free trade.

Finally, they do not tell us the actual consequences which follow within our own borders when we destroy the protections behind which the United States has developed an unparalleled standard of living. But—and this is so important that I want to emphasize it particularly—the simplest sort of arithmetic tells us that when an American laboring man, earning from 2 to 10 times as much as the foreign workman, is thrown into competition with that foreign workman, the American loses his job. Whenever we permit the importation of a product or commodity which can be reasonably produced in America, we have simply laid off our own people and sent their jobs abroad.

What has tariff to do with recovery? Simply this: With proper safeguards against low wage, low standard foreign competition, American agriculture and industry may have some chance—despite the burdens and restrictions imposed by the New Deal—to pick up the slack and put our unemployed people back to work.

New Dealers will tell you that our present policy is working; and that our 21 trade agreements are aiding recovery. Actual statistics, as well as the entire history of American tariffs, however, both disagree with them. If you are a businessman, or a laborer, you know of case after case in your own experience where reciprocal-trade agreements have worked hardships right in your own community. If you are a farmer, you can't help feeling rather bitter at the fact that America, the greatest agricultural nation in the world, has lately become an important importer of farm products.

Free-trade exponents may argue until doomsday about the beautiful theories of internationalism, and American responsibility in the world today. It means little to us that foreign nations will be affronted if we deny them free access to American markets. Of course, they want to sell in America—why shouldn't they want to sell where the selling is easiest and most profitable? We intend to be, and will be good neighbors. But being a good neighbor doesn't necessarily mean opening your garden to your neighbor's chickens—nor does it mean that we owe him an apology if he is offended when we close our garden gate.

The international aspect is entirely secondary and relatively unimportant. The main point is that we are confronted today with the grave problem of maintaining and improving the American standard of living. We have an administration which professes to make every effort to maintain that standard.

Why, then, should we tolerate a trade policy which we know is directly opposed to everything the administration professes to work for? With American industry and agriculture in a New Deal strait jacket which restricts production and boosts production costs, why hold to the futile hope that we can compete in markets where we have never enjoyed a notable success? Why, with our own producers burdened and restricted, should we expose their natural markets to foreign producers?

If we are to have prosperity again, it is time we applied a common-sense program of tariff protection which will save American markets for American producers. When we adopt such a policy we will have taken an important step toward sound recovery in this country.

Address of the Postmaster General

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

ADDRESS BY HON. JAMES A. FARLEY, MAY 15, 1939

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable James A. Farley, Postmaster General of the United States, at the annual State convention of the Kansas Chapter of the National Association of Postmasters, held at Salina, Kans., Monday, May 15, 1939, at noon:

I am happy to be here today in Salina with the postmasters of Kansas. Every year about this time the postmasters hold their State conventions. I am glad to attend them and to take advantage of the opportunity they afford me to meet you personally and to talk shop. Last week I attended similar meetings in Missouri, Illinois, and Iowa, and like this meeting here those conventions were well attended, which indicates that the postmasters are enthusiastic about their work and are sufficiently interested to travel great distances when necessary to attend these sectional meetings, which serve a twofold purpose. First, they enable all of us to increase our knowledge of the postal system, and second, they enable you as a group of postal officials to consider and discuss the things relating to your own welfare. I thank you for coming.

During the fiscal year ended June 30, 1938, we handled more than 26,000,000,000 pieces of mail matter. Of this number more than 14,000,000,000 pieces were first-class, in excess of 5,000,000,000 pieces third-class, more than 600,000,000 parcels, and more than 200,000,000 pieces of air mail. The remainder was made up of newspapers, magazines, and penalty matter. The handling of that volume of business of course requires a huge organization, totaling nearly 400,000 people at this time.

With the exception of the Motor Vehicle Service in the cities, the Department itself does not own any of the transportation facilities used, but depends upon the air lines, the railroads, steamships, and other forms of service under contract to provide the actual vehicles for carrying this tremendous load across the country and around the world. We buy supplies in the open

market, therefore our operations either directly or indirectly affect a major portion of the industries of the country. For example:

During the fiscal year 1938 we paid out in salaries approximately $585,000,000, paid taxes more than $99,000,000 to the railroads, in excess of $14,000,000 to the air lines, about $11,000,000 for ocean-mail transportation, and approximately the same amount to contractors for star route and other vehicle service. We also spent more than $7,000,000 for mail messenger service. We bought more than $10,000,000 worth of miscellaneous supplies used in service operations, and $1,600,000 worth of supplies used in the maintenance of public buildings. We paid approximately $15,000,000 for rent for post-office quarters, and the heat and light bill for our public buildings amounted to approximately $3,000,000.

I am proud to be at the head of this business organization of the Government, which collects in the aggregate a staggering sum of money from the public each year but, considering the character of service rendered, gives back in that service alone adequate return to those who patronize it. You will also observe from the facts I have just related that in salaries and money spent for work performed we immediately turn back into the channels of commerce—not at any one central point but through all the cities, towns, and hamlets in every State in the Union—all of the money we collect. We maintain this business on a sound financial basis, for, as you know, in 4 of the 5 full years under this administration we have had a balanced budget; as a matter of fact, a surplus from that part of our service which we render to the public for hire.

I know that you, as postmasters, and all postal employees, are proud of your connection with the postal establishment and that you do and should take full credit to yourselves for the contribution you make to the Department's success. I have heard it said that all great and big things are merely an accumulation of properly coordinated little things. The fine hotels and office buildings in this and in all other cities in America are big in themselves, but in reality they represent a number of very small units properly assembled and properly coordinated. Some pieces of stone and some pieces of steel are larger and some are smaller, but in the general plan and in the final result each piece is of great importance. The same is true of the Postal Service. The basis of our success and our ability to serve the people so well is due to the fact that our agencies are universal.

We are confident in the knowledge that we can deliver a letter or a parcel, if properly addressed, to an individual anywhere in the world if he lives within reach of the long arms of transportation, or if he comes at regular intervals to points that are so reached. Obviously there is no other agency in existence, except the post-office establishments throughout the world, who can make such claims or offer any facilities that compare with those available by the use of the post.

Of all the postal establishments the United States Postal Service is the largest, larger by far than the three most important European countries. In fact, we have several States in this country which exceed in the volume of postal business handled the entire volume of many individual nations. The postal service, as you know, has been in existence in some form or another almost since the beginning of civilization, and the United States Postal Service has been in existence throughout the life of the Nation. It has been developed and made better, not by one man or any group of men. Its present efficiency is due to the ingenuity, the courage, and faithfulness of hundreds and thousands of men and women, some in the present administration and some in each administration that has preceded us. It would be foolish for any man, in a high or low position, to make extravagant claims concerning the part he has played in the development of this fine communication service, because in some way or another everyone connected with it contributes something to its success and improvement.

I do wish to say, however, that I came into the Government service during the present administration after having had a long career in business and public life. As a citizen I had great respect for this organization, and, as many of you know, I had personally made quite generous use of the postal facilities, and still do as a cash customer. My intimate connection with the management of the Department's affairs has caused me to increase my respect and admiration for the men who have spent their lives in its operation. I also have a high regard for the postmasters and officials who have come into the Department with me or since that time. But to get back to the idea of the management of the Postal Service: When I assumed charge of the Department in 1933 I had a definite purpose to give to the American people a sensible business administration of the affairs of this Department. I am happy to say that for myself and for all those associated with me in an executive or administrative capacity we have lived up to that purpose, and with your cooperation and the cooperation of every man and woman in the Postal Service we have brought about improvements far beyond our expectations.

We have insisted upon regularity of service. With the cooperation of the Treasury Department we have provided many fine, new, and well-equipped post-office buildings. We have improved the City Delivery Service and the Rural Delivery Service. We have taken advantage of every opportunity to perfect the air-mail system and to expedite the handling of mail by railroad. We have carried on campaigns and have secured much good will by courtesy on the part of our officials and employees.

We reduced the local rate of postage in cities and towns from 3 to 2 cents, and we are giving to the public a service on letters going out of town that is most assuredly worth the 3 cents paid for it. Last but not least, we have not forgotten the welfare of our employees. We have provided for them better working conditions in better buildings, and we have shortened their workweek without reducing their pay, so that now they have time for recreation and pleasure.

The benefits I have just enumerated have not been confined to any one section, one State, or group of States. These benefits will be found in every State, in every congressional district, and in every county throughout the United States.

I hope that each and every man and woman in the Postal Service will feel the same sense of pride and enthusiasm that I have, not in any sense a partisan pride, because what I am saying has no political meaning whatever. I am talking to you as my associates in a fine public enterprise, and telling you that with a full knowledge of the facts you have ample justification for being enthusiastic and proud over the fine job you are doing.

National Railroad Problems

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

RESOLUTION OF THE LEGISLATURE OF THE STATE OF OREGON

Mr. ANGELL. Mr. Speaker, the Oregon Legislature at its recent session adopted House Joint Memorial No. 8, memorializing the Congress of the United States to give early consideration to legislation to ameliorate the existing crisis in the railroad industry and to contribute to the solution of the national railroad problems. As part of my remarks I desire to extend in the CONGRESSIONAL RECORD the memorial referred to. It is as follows:

HOUSE JOINT MEMORIAL 8

Whereas there is at this time pending before the Congress of the United States a program of legislative relief introduced at the suggestion of the President of the United States and devised with the full cooperation and approval of the national leaders of the railroad labor organizations and of the railroad management; and

Whereas the State of Oregon is peculiarly dependent upon efficient and economic railroad service for the marketing of its products in highly competitive and far-distant eastern and middle-western markets; and

Whereas operation of the class I railroads in the United States during 1938 were conducted at an estimated deficit of $125,000,000, it being a matter of record that the deficits of western railroads during the said year generally were larger than those of eastern railroads; and

Whereas it is certain that the unreassuring financial outlook for the five major steam railroads serving the State of Oregon affects adversely the economic prospects of agriculture, industry, employment, and pay rolls and tends to decrease annual purchases by railroads of materials and supplies within the State of Oregon amounting normally to a sum in excess of $11,000,000; and

Whereas the President of the United States in his message to Congress on January 4, 1939, emphasized the critical nature of the railroad problem, saying in part "With this exception of legislation to provide greater Government efficiency, and with the exception of legislation to ameliorate our railroad and other transportation problems, the past three Congresses have met in part or in whole the pressing needs of the new order of things"; and

Whereas the interest of the State of Oregon in a sound and prompt solution of the national problem is undeniably most substantial: Now, therefore, be it

Resolved by the Senate and the House of Representatives of the State of Oregon jointly, That the Congress of the United States be memorialized to act quickly in the consideration and enactment of proper legislation which will tend to ameliorate the existing crisis in the railroad industry and contribute to the solution of the national railroad problem; and be it further

Resolved, That the Governor of the State of Oregon is hereby requested to transmit a copy of this resolution to each Senator and Representative from Oregon in the Congress of the United States and that the Senators and Representatives from Oregon are hereby respectfully requested to diligently urge such action.

Honorary Degree of Doctor of Laws Awarded to the Honorable Edward T. Taylor by the University of Colorado

EXTENSION OF REMARKS

OF

HON. LAWRENCE LEWIS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

CITATION BY ROBERT L. STEARNS, ESQ., DEAN OF THE SCHOOL OF LAW OF THE UNIVERSITY OF COLORADO, AT BOULDER, IN RECOMMENDING, ON BEHALF OF THE FACULTY, THE HONORABLE EDWARD T. TAYLOR FOR THE DEGREE OF DOCTOR OF LAWS, HONORIS CAUSA

Mr. LEWIS of Colorado. Mr. Speaker, for more than 54 years the Honorable EDWARD T. TAYLOR has faithfully and ably served the people of Colorado in State and Federal offices. As evidence of the affectionate regard and confidence in which he is now and has always been held by citizens of our State, it should be recalled that he has never been defeated when his name has been presented to the people as a candidate for an elective office. He is now serving his sixteenth consecutive term in the House of Representatives of the Congress of the United States as one of the Representatives from Colorado. He is now the dean of the House in age and, except for the Honorable ADOLPH J. SABATH, of Illinois, has had longer continuous service than any other present Member.

This service of 31 years in the Congress is, however, merely the climax of a useful public career in our State, which had made his name a household word in Colorado long before he came to Washington as a Member of the House of Representatives.

In 1884, Mr. TAYLOR received the degree of bachelor of laws from the University of Michigan on completing his study of law at Ann Arbor. Years afterward, on August 20, 1936, he was awarded the honorary degree of doctor of laws by the Western State College of Colorado, at Gunnison, Colo. It is a source of pride and satisfaction to his tens of thousands of friends and admirers that on August 27, 1938, the University of Colorado at Boulder, Colo., also conferred upon him the honorary degree of doctor of laws. The citation delivered by Robert L. Stearns, Esq., dean of the Law School of the University of Colorado, in recommending, on behalf of the faculty, the Honorable EDWARD T. TAYLOR for the degree of doctor of laws, honoris causa, is as follows:

Mr. President, we have been told that a prophet is not without honor save in his own country. This morning marks an occasion which is an outstanding exception to that trite but frequently true observation. The Honorable EDWARD THOMAS TAYLOR has served the people of this State for over 54 years. It is now the privilege of the people of this State through their university to make public acknowledgment of their gratitude and grant fitting recognition of the qualities and ability of an outstanding statesman and public servant.

Mr. TAYLOR was born in Illinois 80 years ago last June. He came to Colorado in 1881 and settled in Leadville, where he immediately became the first principal of the Leadville High School. After a year in this capacity he entered the law department of the University of Michigan and received the degree LL. B. from that institution in 1884. He returned to Leadville and shortly thereafter became the superintendent of schools in Lake County and the deputy district attorney for that judicial district. In 1887 he moved to Glenwood Springs, where he has made his home ever since. He was elected district attorney of northwestern Colorado in the fall of 1887.

Forty-two years ago he was elected to the Colorado State Senate and served in that capacity for 12 years. In 1908 he was elected to the United States Congress as the Representative at Large from the State of Colorado, and was reelected twice as Congressman at Large from the entire State.

To many men three such elections would be a fitting climax to a distinguished public career. To Mr. TAYLOR it marked merely the beginning of a life of usefulness in the wide sphere of public service. The State was redistricted and he has been elected 12 consecutive times to the Congress from the Fourth Congressional District, which is practically the western half of the State. At the present time he is the senior member and chairman of the House Appropriations Committee, one of the most important legislative posts in the Nation.

To enumerate the major legislative acts with which his name and his efforts have been connected would be too long a task for this occasion. But no recital, however brief, should omit reference to the Taylor Grazing Act, whereby the public domain is preserved for the legitimate use of the many instead of being exploited for the benefit of the few. This act is typical of Mr. TAYLOR'S career as a legislator. He is motivated by a desire to represent not only his district and his State, but to act with an honest conviction for the welfare of the Nation as a whole.

To have served his State and his Nation in the National Congress for nearly 30 years, and under six different Presidents, is a most unusual accomplishment. To have done so and earned and kept the regard of the people of his own State is a distinct achievement.

Upon the recommendation of the faculty of the University of Colorado I have, sir, the honor to present EDWARD THOMAS TAYLOR for the degree of doctor of laws, honoris causa.

America First

EXTENSION OF REMARKS

OF

HON. ANDREW C. SCHIFFLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

ADDRESS BY HON. ANDREW C. SCHIFFLER, OF WEST VIRGINIA, AT DEDICATION OF VETERANS' MEMORIAL AT CAMERON, W. VA., MAY 30, 1939

Mr. SCHIFFLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered on Memorial Day:

Mr. Commander, ladies, and gentlemen, this Memorial Day we assemble to pay tribute to those who have gone before. We also come to dedicate to the memory of the living and the dead this memorial in this liberty-loving, loyal, and patriotic city of Cameron. Today, when again wars rage abroad and more rumors of wars are heard from many quarters of the world, those of us who by experience know of the wars of the past turn our faces heavenward, in humble supplication to God, praying that there shall not be a repetition of those things which we have seen. Horrible experiences are within the memory of many of those here present. Words cannot describe, for no man is gifted sufficiently to portray the horrifying scenes of the last terrible and devastating world conflict among men. That we should again dangerously approach such horror and that man should seek to destroy his fellow man is to the advanced and civilized people inconceivable. Yet, with all this terrifying panorama, as only the most imaginative minds can conjure, approaching as a reality, we turn in amazement and ask ourselves with all our pretended civilization, how can it be? Our minds turn to the fields of battle in America with those countless thousands of dead having paid for our liberty, our unity, our progress, and our preservation. Well recognizing as we do the tremendous price that we have paid for our continued preservation as a liberty-loving union of one people, indivisible, we ask what must be the cost in the future of this priceless heritage.

Let us turn to calm reasoning and with steadfast purpose determine to follow a course of common sense and adopt as our national guide, "Not one drop of American blood shed elsewhere than in defense of America on American soil, and the last drop of blood of every American for the preservation of American ideals, institutions, and country.

I recognize that that slogan is far reaching; that it is significant in its actual steadfast application, and is the one true requisite of every loyal American. In that we shall give it significance, it is necessary that we protect ourselves in two concrete ways. This protection necessarily involves the alert, firm, and consistent conduct of every citizen of our Republic. The first and vitally important course of conduct and one that should be at this time highly vitalized by vigilant action is the prompt, speedy, and thorough Americanization of America. Those who do not in thought or action give of themselves without reservation to this program are no longer entitled to the benefits and privileges of our Nation, and should be promptly excluded from such blessings.

I speak now particularly with regard to those within our borders, who by subversive activities would destroy our Republican form of government and substitute other forms of government whose object and purposes would destroy the Constitution and the institutions fostered by such. The right of free speech, the right of assembly, the right of freedom in religious worship, and the freedom of the press and radio. These fundamental guaranties and the cornerstone upon which American institutions are

created and these privileges must be zealously guarded in that they shall not be lost either by direct seizure or by subtle and subversive encroachments.

Freedom of speech does not necessarily mean the right of expression without regard to the rights and privileges of others, and in pursuit of the destruction of American government and institutions. Men have a right to express themselves freely regarding matters of government. Such, however, does not constitute a license to destroy government or the Constitution by which our government is regulated. The right to the use of freedom of speech, as well as of assembly, and of press and radio, is controlled by the rule of decency and respect for others. Too many people have misinterpreted the constitutional guaranty and use such misinterpreted view as the basis for vicious and traitorous condemnation. It is time that true American citizens recognize the well-defined line of demarcation that exists between freedom of speech, press, and radio and of unwarranted slander.

To you, veterans of all wars, is entrusted the sacred duty of curtailing such licentiousness, and of safeguarding the real and true liberties and privileges of our beloved country. Before I leave this phase, I again repeat that America shall be made a nation for real Americans and those who shall destroy such have no place within our borders, and to that we renew our pledge upon our sacred honor.

As we are told of the approaching danger of war it is tragic to look to the millions of bayonets held by men and pointed at each other today throughout the world. For what purpose? Can it be that they do not love each other? Can it be that they have general cause for hatred? Can it be that irreparable and genuine injury has been done one to another? In the judgment of every sensible man such is not true. The various nationals do not dislike each other except where such hatred is promoted by selfish and ungodly motives. It has no real basis. All of the controversies existing are capable of sound, satisfactory, and bloodless settlements. When leaders violate their paramount duty to their people by provoking wars over things that could otherwise be settled it is entirely unjustifiable, and such leaders should be promptly and summarily disposed of. Let us hope on this anniversary that we will recognize the futility of much war, and may we insist that our diplomats and leaders shall do nothing that will again involve us in a war on foreign soil. Let us remember the counsel and advice of the Father of his Country counseling against the meddling in the affairs of the European nations and of the entering into entangling alliances and agreements, and, further, let us observe, as the immortal Lincoln has said, that we are a government of the people, by the people, and for the people and that as such the will of the people is and must be supreme.

I might be reminded tonight of the famous masterpiece of Abraham Lincoln. I might be reminded of his words as he went to Gettysburg to dedicate that famous scene of battle, and as I come to Cameron tonight I might add only what he said, that to those, both living and dead, who by their sacrifice have in fact made this dedication, and to them we pay our humble tribute.

Convention of Postal Supervisors of Kansas

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

ADDRESS BY HON. JAMES A. FARLEY, MAY 15, 1939

Mr. HOUSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the Honorable James A. Farley, Postmaster General of the United States, at the Convention of the Postal Supervisors of Kansas, Topeka, Kans., Monday evening, May 15, 1939:

For the past several days I have been visiting with the postmasters at several of their State conventions, and I am delighted in having this opportunity to join with the supervisors of Kansas, and am pleased to note that you have your wives with you this evening. The presence of the ladies lends a touch of charm and beauty which is most refreshing.

You as supervisors in the post offices, regardless of the particular positions you occupy, must realize that you are the key men in the local post-office organization. The Department looks to the postmaster first as its local manager, and holds him to account personally for the successful management of the business under his charge. However, we recognize, and all postmasters are fully aware of the fact, that without an efficient supervisory staff neither the Department nor the postmasters can be successful.

You are what we term the career men in the Postal Service—the fellows who have come up from the ranks and who have demonstrated their ability to get things done. Your field of opportunity is as broad as the service itself, and I am pleased that during my administration as Postmaster General I have had occasion to recognize in a substantial way the career men of outstanding ability.

There are two important elements to be considered in the organization, management, and operation of a big business like the Postal Service. First, it is necessary to provide an executive staff of men who have had wide experience in public life and in public contact, and who have a sincere desire to safeguard the interest of the people. Second, it is necessary to coordinate with that executive group a staff of administrative officials, men of sufficiently broad vision to recognize that the public has the first and most important stake, and who have at the same time the training, experience, and capacity to administer the details of the operations. In my selection of a departmental staff I was most fortunate in finding this happy combination.

I am quite sure that you good people will agree that my four assistants who form the executive board of the Department have demonstrated to postal people a capacity for handling the affairs of their several bureaus that has not been excelled by those holding similar positions in any previous administration. I am confident also that you recognize in the group of men that have been brought in from the field service and placed in high administrative posts in the Department a group of career men of unquestioned ability and integrity. In setting up this kind of an organization in the Department I feel I have established a precedent which will be followed by succeeding administrations. In the organization of our post-office forces this same practice is followed. As you know, under this administration legislation has been enacted which places the position of postmaster in the category of a career job.

We need business methods and a businesslike management of the postal establishment, for there is no organization that nearly approaches it in size or importance. I dare say that few of you realize that the report of the Comptroller General of the United States shows that during the last fiscal year the Postal Service was an $8,000,000,000 business. By that I mean that the total cash turn-over handled in receipts and payments in the post offices amounted to more than that sum, and there is every indication that our business all along the line will show further increases this year, and as the business multiplies the responsibility of the supervisory staff becomes greater.

Your most important problem is the handling of personnel, for it is you who come into direct contact with the rank and file of the workers. Under the general direction of the postmaster it is you who are called upon to carry out the Department's instructions, to instruct employees in the proper performance of their duties, and to expedite the handling of the mails and the conduct of our vast financial enterprises.

I am convinced that you men in supervisory places do take your positions quite seriously and are earnestly endeavoring to do a good job. I do not think it would be amiss, however, to point out to you somewhat briefly the things that from my point of view appear to be essential. First, you should have the proper attitude toward your work and a definite purpose to cooperate with those in authority over you and those subordinate to you. In other words, do not try to be different, but be a part of the team. This teamwork is fundamental to the success of any post-office organization. Second, it is necessary that you be a gentleman in everything that the term implies, which means that you must be temperate in your habits, quiet and courteous, and firm when the occasion demands it, but never harsh or unkind; and third, that you be thoroughly grounded in the post-office work; that is, you must have a complete knowledge of the details of the job that you are supervising, and by all means practice the Golden Rule, treat others as you would like to be treated.

I fully appreciate that in the handling of both large and small groups of men aggravating situations will arise, but it is the duty of the supervisor to control his temper and guard his tongue until he secures all of the facts and weighs them carefully before determining the course of action. This takes practice, and an amazing amount of self-control under some conditions, but it always pays a rich dividend and enables you to retain the admiration of your subordinates and enables them to retain their self-respect.

One of our greatest opportunities, and in fact our first duty, is to develop the capacity of postal employees by continuous and systematic instruction. No one in the Postal Service knows all about it; therefore, it is encumbent upon those who are in managerial and supervisory positions to constantly study the phase of the service under their particular charge. Conditions change rapidly. Methods and practices that were good and most acceptable yesterday are being discarded today, due to a change in the volume of work to be handled, a necessary change in schedules, or a change in many other conditions that do not remain fixed for any length of time. When these conditions arise supervisors should consult freely and fully with the people who are actually performing the task. There is nothing undignified about that, and I am quite sure that you will learn things that may surprise you and increase your knowledge if you will patiently listen to the ideas and suggestions of your subordinates. You will not accept them all because many of the suggestions received will not be sound, but by following that procedure you will unquestionably get ideas that, coupled with your own practical experience and knowledge, will enable you to do things in the right way.

Never change a system or way of doing something simply because you temporarily have the authority to make that change, and as you progress from one supervisory job to another do not

get the idea that you should undo all of the things your predecessors have done. Progressiveness demands that you be willing and eager to accept new ideas and to install new methods, but be absolutely sure that some good will come from the change. Do not assume authority that you do not rightfully possess. Be careful not to transgress the rights of others. Without being offensive, and in the right way, you should learn something about the fellow's job who is just ahead of you, and teach the chap just below you everything you know about your job. If you do this, when changes occur or when the organization is disrupted by absence on account of illness or by other causes, the important key positions will be protected. This is most important if the post office is to function smoothly, and I urge all postmasters and all supervisors in the higher positions to see to it that every man and woman in the organization has an understudy, fully prepared and well equipped, to take up where he or she leaves off, either permanently or for a temporary period.

Finally, may I suggest that you be a leader and not a boss? There is quite a difference. The leader gets things done because he has the good will of his associates and is able to command their respect and confidence. The boss gets things done solely by the exercise of authority and force.

You are connected with a fine organization that exemplifies to a greater extent than any other governmental function the progress and development of America. It must be most encouraging to you to know that you are having an important part in the communication system which in the past 10 years has made such marked contribution to the improvement of transportation facilities. Without attempting to minimize the aggressiveness and spirit of the private enterprises which actually operate our transportation systems, I do claim that the Post Office Department pioneered in the field of regularly scheduled air transportation. The Department, with the cooperation of the United States Army, established the first air lines between New York and Washington. Later it operated in its own right with its own employees and under its own supervision the first transcontinental air service. This was done so successfully that private capital was attracted, and when the private interests were ready to take over, the Government withdrew from the actual operation of the lines. At this time the Post Office Department does not own any of the planes, but the money it pays to the air-line operators is still a substantial part of their revenues. I am pleased to note that these lines are regularly increasing the number of passengers carried, and I predict that they will soon have sufficient patronage to enable them to expand both in mileage and in frequency of schedules. Air transportation has proven its dependability, the operators have gained the confidence of the people, and its future is assured.

Railroad transportation, too, has made rapid strides in recent years. The facilities offered today for passenger travel, and the speed attained by the through trains on the principal railroad lines, establishes a new day in travel, efficiency, and comfort. We are pretty good customers of the railroads. Last year we paid them almost $100,000,000 for carrying the mails. I think everyone will agree that such a sum is a substantial contribution to the railroad industry.

I think these developments offer ample evidence of the prosperity of our country. They show a national spirit that is bound to succeed. We are living in an age of abundant opportunity, and we should all be proud and happy that we are Americans.

In conclusion, I again thank you for inviting me here this evening, and wish for each of you a full measure of success and happiness.

Townsend Old-Age Pension Plan

EXTENSION OF REMARKS

OF

HON. HAMPTON P. FULMER

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

EDITORIAL FROM THE STATE, COLUMBIA, S. C.

Mr. FULMER. Mr. Speaker, under leave to extend my remarks, I am inserting an editorial from The State, Columbia, S. C., in reference to the Townsend old-age pension plan.

For years we had what was known as the Pope old-age pension program, and thousands of innocent people were sending in their dimes and contributions believing in the merits of floods of propaganda which was put out at that time solely for the purpose of inducing innocent people to send in their contributions.

I am glad that the people in my district have not fallen for the Townsend plan, which has for its purpose the paying to every citizen in this country who has reached the age of 60 years, rich and poor, white and black, $200 per month.

There is no Member of Congress or citizen in my district who is more favorable toward a fair and reasonable pension bill for the aged people of this country than I am; but when it comes to a program of the type of that proposed by Dr. Townsend, which is unfair and impossible, and apparently advocated only for the purpose of robbing the innocent old people of this country, there is nothing left for me to do except vote against such a program.

It appears at this time that there are numerous organizations that are being formed for the purpose of sending out propaganda in the name of this or that group, all of which is purely in the interest of those who are organizing these groups, and at the actual expense of those who fall for this type of propaganda.

I am glad that these organizations have not been able to secure any great amount of response on the part of the people of the South.

I am hoping that the press of our great section of these United States, as well as the Members of the Congress will keep our people fully informed about the proposals of these selfish organizations, whereby we may be able to save for our people the money that is being extracted from the innocent public, as well as a continuation of clean politics in the South.

The editorial is as follows:

[From The State, Columbia, S. C., of June 3, 1939]

PROMISES TO OLD FOLKS

By a vote of 302 to 97 the Townsend plan has been thrown out the window by the National House of Representatives. The result is about as expected. Surprise, if any, probably will be found mainly among senior citizens who last summer and last autumn took too seriously the promises made to them by many candidates for office. The Townsend plan, unamended, has never had a chance, and never will have a chance unless conditions become chaotic and legislators wilder than they now are. But that plan has been useful to office seekers who knew how to use it. Some found in it, or in the general idea of pensions for old folks, plenty of material for political sob stuff.

In the course of several past campaigns old folks have been led, in imagination, to a high place from which they could see what they mistook for the promised land. It was, in fact, a mirage; only a promised, promised land.

Old folks, especially old folks in need, sometimes are pathetic. They have not the strength to fight longer for livelihoods. They cannot compete successfully. But they wish to live. Of course they do. Tenacity of life appears in instances to become more acute as age advances. Need for money does become more acute. Such facts and factors make millions of old folks quick partisans of office seekers who are willing to promise anything.

There seems to be no doubt of the sincerity of old Dr. Townsend himself, and quite likely other advocates of his plan also are sincere. Yet there remains a large number of office seekers who have used that plan, as future office seekers will use it, to promote their own interests by offering the old folks an apple which they know is rotten on the inside.

The Neutrality Issue

EXTENSION OF REMARKS

OF

HON. ALBERT G. RUTHERFORD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

ARTICLE BY JOHN C. LE CLAIR

Mr. RUTHERFORD. Mr. Speaker, the question of neutrality is bothering a lot of people throughout the country at the present time. The following article written by John C. Le Clair, a member of the history department of the College of the City of New York, a specialist in foreign affairs, is well worth the study of every Member of this body:

Once again we have Congress attempting to devise a neutrality formula that will satisfy all factions and provide in advance for the solution of any problem which might arise. This, incidentally,

is the fourth attempt. On August 31, 1935, as an outgrowth of possibilities inherent in the general international situation, the United States adopted its first neutrality law which, subsequently amended in 1936 and again in the early months of 1937, achieved its present form on May 1 of that year.

However, as it now apparently pleases no one, some five proposals are being considered which range all the way from a suggestion to repeal all neutrality laws passed from 1935 to 1938, and place the making of future neutrality regulations completely in the hands of the President on a day-to-day basis to the Thomas amendment, which provides for the determining and designating of the aggressor as against the victim of his attack—barring the former from American munition markets while giving American economic support to the latter.

The joker in this, as in previous neutrality legislation, is that it is not neutrality, and the groups who sponsor it now, as in the past, have no intention that it be so. The original neutrality law developed out of the Italo-Ethiopian affair conflicts, but, due to our lack of interest and the comparative shortness of this affair, there was no opportunity to test its effectiveness. However, in the case of the Spanish war there was ample time to judge the effects of our policy, and they were not particularly encouraging in that the very groups who at the outset of the conflict could not make the neutrality law sufficiently binding or mandatory as to preventing the purchase of supplies in this country by the Spanish Nationalists immediately turned about when things became difficult for the Loyalist regime and demanded that we lift the embargo on arms to the latter.

Similar inconsistencies developed in the case of the application of the neutrality law to far eastern policy. When the conflict between China and Japan broke out in July 1937, we refrained from enforcing the provisions of the Neutrality Act on the ground that, although there was little question as to its existence, yet technically neither nation had declared war. Probably back of our stand was a general sympathy for China as the weaker of the contestants, in conjunction possibly with the influence of certain groups interested, among other things, in the prospects of the continued sale of war materials to both. Yet despite this the State Department subsequently brought pressure upon American manufacturers to prevent the further exportation of bombing planes and equipment to Japan on the ground that they were to be used in activities which we regard as contrary to correct practice in warfare—rather a paradoxical situation at best.

This is undoubtedly of a piece with much of the recent activities of our State Department, which have become anything but consistent and sensible. Despite sympathy for civilian populations subjected to the hardships and brutalities of war, the fact remains that Japan is at the present time, to all intents and purposes, a friendly nation entitled to be dealt with as such. If consistent in our neutrality policy, then from the outbreak of the conflict in the Far East, despite the lack of an official declaration of war, its stipulations should have been applied, as in the case of Spain. We did not, as indicated, choose to do this. Yet we did impose a moral embargo on equipment to be exported to Japan—undertaking to judge in advance as to the use to which it is to be put, and its moral justification, from which it would appear that we now intend to enforce a strict and complete application of our neutrality policy. Yet it might be argued also that, if the morality of the use to which our war equipment is to be put is to govern its sale, why sell it at all or, better, why not demand a guaranty that it will not be put to any use forbidden by our idealistic standards—or would such stipulation affect Great Britain or France with whom we have political understandings?

Furthermore, if agitation to lift the embargo toward Loyalist Spain had been successful, would this have been neutrality? Hardly. Then the logical conclusion is that either it is our intention to constitute ourselves the moral arbiter of various disputes which may arise, and throw our support in accord with this judgment, although still retaining our neutrality legislation, or use it to cloak our real intentions. To regard all this as merely a policy of general inconsistency is too charitable a characterization. As a matter of fact, within recent months our foreign policy has become so much the shuttlecock of various interests as not only to confirm the charge of its nonexistence, per se, but more—to raise the question as to whether we are actually formulating it and, if so, in whose interests?

Herein lies our major difficulty, if not danger. Those who would commit the United States to a policy of absolute neutrality in the quarrels of the various nations of the world find themselves opposed by the partisans of various groups, idealogies, and "isms" who seek, in terms of their own individual interests, to aline the country on one side or the other. Unfortunately, both groups, although probably sincere in their efforts, appear to ignore the fact that, over and above the possible sympathy that we, as individuals, might have for the victims of war conditions throughout the world, there is the more important factor of the safety and welfare of this country and its people. More conducive to furthering these objectives would be a policy of considering events in terms of fundamental national objectives and not attempting to prevent this by committing ourselves in advance to one of neutrality, the effectiveness of which cannot be gaged except in terms of its applicability to situations which, however, are still in the making.

It should be obvious that there is little likelihood of our being able to disassociate ourselves from the rest of the world. Consequently, our determination not to sell arms and war materials to belligerents, while to be commended, is not practical. We appear to overlook the fact that our policy means a surrender of tradition of over a hundred years in the matter of the freedom of the seas and the promise to forego a considerable amount of commerce in the event of another war. In which case why not, if the sole purpose of the act is to prevent this, carry it to its logical conclusion and limit the manufacture, through Government supervision, of all arms to our national needs. It would be a more effective device and less fraught with possibilities for conflict.

As the neutrality law now appears on our books, it is neither effective nor practical—a hybrid of doubtful parentage, conceived in political expediency and weaned on platitudinous eyewash. Therefore, it should be repealed and Congress left with full power to legislate as to what our policy shall be when and if the need arises. As to the claim often made that Congress might not be in session at the time—the logical reply is that in any issue so vitally affecting the country as this matter of our foreign policy Congress should be consulted even if it is necessary to call an emergency session, which would certainly be justified under the circumstances.

Bituminous Coal Act

EXTENSION OF REMARKS

OF

HON. ROBERT G. ALLEN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

Mr. ALLEN of Pennsylvania. Mr. Speaker, on March 20 I introduced H. R. 5119 to amend the Bituminous Coal Act of 1937 by striking out the price-fixing provisions and repealing the 30-day contract limitation clause on the sale of coal and the 1-cent Federal tax on each ton of coal mined, as well as strengthening the marketing-agency provisions of existing law. This measure was referred to the Committee on Ways and Means. Under the authority conferred upon him in the Reorganization Act of 1939, the President on May 9 abolished the National Bituminous Coal Commission and the office of Consumers' Counsel, and placed the duty of administering the Coal Act in the hands of the Secretary of the Interior, who will assume this responsibility on July 1. In order to bring my proposal in line with the President's most commendable action in abolishing the Commission, on May 15 I introduced H. R. 6325 embodying the same principles as my previous bill, except that the Secretary of the Interior was substituted for the Coal Commission, and this bill is likewise pending before the Ways and Means Committee.

Mr. Speaker, it is my contention, and I am from a district where the production of bituminous coal is all-important, that the Coal Commission, the Secretary of the Interior, or no one else, will be able to administer the Coal Act as it is now written. I make this statement with all due respect to the present Secretary of the Interior. I therefore firmly believe that Congress should, during the present session, consider H. R. 6325, and I strongly urge that the Committee on Ways and Means schedule early hearings on this measure which means so much not only to the soft-coal industry but to its employees and to the consuming public as well.

The bituminous mining industry has had nearly 6 years' experience with ill-advised experiments in Federal regulation. These experiments began with the adoption of the Bituminous Coal Code under the National Industrial Recovery Act. This act was passed in June 1933 and was invalidated by the decision of the Supreme Court in May 1935. As a price-fixing device the scheme never worked. Long before the Supreme Court invalidated this legislation, code prices had lost all their significance. The only permanent effects upon the industry were advanced rates of wages for mine workers and the establishment of the 7-hour day. The increase in the price of coal made necessary by these sudden substantial increases in cost of production had their natural result in further demoralization of the bituminous-coal market and a more rapid replacement of coal by competitive sources of energy, such as fuel oil and natural gas.

The second attempt at Federal regulation of the bituminous mining industry was embodied in the Bituminous Coal Conservation Act of 1935. In spite of its misleading reference to conservation in its title, the act was almost exclusively a price-fixing device. It provided for the appointment of a Commission of five members, with elaborate and expensive machinery for the administration of the act. To avoid the invalidation of the act by the Supreme Court as involving undue delegation of power by Congress to an administrative agency, it prescribed in great detail the procedure to be followed by the Commission in arriving at its price determinations. As usually happens when a legislative body attempts to dictate the details of procedure to an administrative body, this procedure proved to be extremely protracted and costly. As these methods of price-fixing were practically the same as those embodied in the present act, further reference to them at this point is not necessary. The act prescribed such sweeping provisions regarding collective bargaining and the application and enforcement of resulting agreements that the Supreme Court invalidated those provisions as involving unconstitutional restraint upon the freedom of the individual, and further held that, as the price-fixing provisions of the act were inextricably entwined with the labor provisions, the whole act must be thrown out. This decision was handed down in May 1936.

Against the protest of a large number of operators, the Congress reenacted the price-fixing provisions of the previous act in the Bituminous Coal Act of 1937. The detailed provisions for the regulation and enforcement of collective bargaining which had caused the act of 1935 to be invalidated were omitted from the new act. On the other hand, the minute provisions regarding the method to be followed by the Commission in the determination of prices were continued and even expanded. The cost of administering the act was increased, not only through the appointment of two additional Commissioners but also through provision for even more elaborate and expensive machinery than had been required under the 1935 act. This new act was passed in April 1937. It has now been in effect 2 years, and the time of the actual effective determination of prices is still many months in the future.

A schedule of prices was put into effect by the Commission in December 1937, 7 months after the enactment of the act. These were reached speedily, however, only because the Commission adopted arbitrary methods of procedure. Some of the prices thus established were set aside by the courts on the ground that persons affected were not given adequate opportunity to examine the evidence or to be heard in protest, and the Commission was practically compelled to revoke the remainder.

As a result of these court rulings the Commission was obliged to make a new start on the long and complicated procedure prescribed by the act as prerequisite to the actual announcement of prices. It is now over a year since that new start was made, and not only have prices not been fixed but they are still so far off that no one will venture to predict when they will appear. The Commission has already received data regarding 500,000 different price schedules in the Appalachian area alone. Obviously it will be utterly impossible to administer such a broad and complex schedule as this. If minimum prices are eventually established under existing law, constant litigation will result with concommitant chaos and confusion.

Meantime the industry operates under special handicaps imposed upon it by the act. The most obvious handicap is the expense involved. As is the case with no other Federal regulatory body, the cost of administration of the Bituminous Coal Act is assessed against the industry itself. There is the Federal tax of 1 cent a ton, amounting to several million dollars a year. There are the district assessments made compulsory under the act for the support of the district boards, which amount in the aggregate to more than the Federal tax. And the individual mining companies must bear the cost of preparing elaborate statistical reports and of attending countless committee meetings, hearings, and conferences.

One special provision of the act is particularly onerous. That is the provision limiting the term of contracts for the sale of coal to 30 days. This limitation is to continue until prices are determined. The result has been to put contract coal on a spot-price basis. The whole bituminous-coal industry has been placed on the auction block. The effect has been disastrous. The industry is one of unavoidable seasonal variation in demand and on that account contracts running through a whole year are of great value as a stabilizing factor. It should be remembered that consumers may write contracts for competing fuels such as oil and gas for 1 year or 20 years if they wish. The result of this restrictive clause has been to drive more consumers into the arms of the oil and gas producers.

As a result of the confusion occasioned by the successive attempts at Federal regulation of a private industry and of the burdensome provisions of the act now in force, it may be said without fear of contradiction that the bituminous mining industry is today in the most demoralized condition in its entire history. And that condition must continue for months until the Commission, and after July 1, the Secretary of the Interior, complete the elaborate procedure imposed upon them by the act and announces its schedule of prices. Then there is no assurance whatever that any price schedule promulgated will meet the tests necessary to put the prices into operation. As a matter of fact, thousands of coal men and economists are quite sure no direct price-fixing scheme by the Government can possibly succeed.

While the Commission was guilty of some errors in procedure in arriving at its initial price schedule, the collapse of the price structure was not due primarily to that cause but to the intricate nature of the problems involved and the elaborate procedure laid down in the act. This procedure was prescribed for the purpose of attaining an impossible ideal, namely, an equitable price for the many grades and sizes of coal intended for many uses in many competing markets. The fact is that such an equitable price schedule cannot be attained under any system of artificial control because of the varied and complex conditions under which the industry is carried on.

Not only do different consumers call for a great variety of grades and sizes of coal to meet their individual needs, but even the demands of the same consumers do not remain constant. Changes in the methods and devices used in the consumption of coal are going on all the time and any consumer who adopts any such new device is likely to want a different kind of coal from that previously used by him. Under the rigid requirements of the Coal Act, weeks or even months might elapse before the established price could be altered to suit the altered conditions.

There are the further complications arising from the competition of coal in the same market from different fields subject to unequal charges for transportation. The control of railroad rates on bituminous coal, like the control of rates on all other commodities, rests in the discretion of the Interstate Commerce Commission, and any adjustment of prices in a common market is liable to be upset at any moment by a change in the freight rate from one or the other of the competing producing districts.

Bituminous coal is in intense competition with other sources of energy, both in the industrial field and in the domestic field. Its chief competitors are fuel oil, natural gas, and hydrogenerated electricity. To meet the competition of these rival sources of energy, bituminous coal producers must be able to adapt their prices quickly to changed labor conditions brought about by such competition. The industry has already lost a market for hundreds of millions of tons of coal to these rival sources of energy. The establishment of a rigid schedule of prices for bituminous coal would increase the advantages which fuel oil and natural gas now possess by enabling them to adjust their flexible prices to meet the fixed price schedule of bituminous coal.

Another factor affecting the regularity of demand for bituminous coal and involving the necessity of frequent price adjustments is to be found in variations in the rate of industrial activity. In seasons of active demand, the price of bituminous coal may remain relatively constant but when industrial activity declines and demand for coal falls off, a reduction in price is the only method by which the market for bituminous coal can be supported. Similarly seasonal fluctuations in demand are, under conditions of voluntary price determination, partially offset by variations in price. Under the rigid system of price determination provided for in the Bituminous Coal Act no such adjustment of prices to demand would be possible.

All these complex and varying factors affecting the bituminous mining industry have been cited as evidence of the fact that the industry needs the utmost freedom in the instantaneous adjustment of prices to meet these varying conditions. To attempt to operate the industry under any such rigid system of price control as that contemplated by the act of 1937 would fall of its own weight.

There is nothing in the nature of the bituminous mining industry which distinguishes it from thousands of other industries privately operated. The establishment of a rigid system of governmental control in this industry constitutes a radical departure from the traditional American system of free enterprise. Under the system of private control the bituminous mining industry of the United States has come to be one of the most efficiently operated industries in the world. To substitute Federal control for individual enterprise is to destroy the incentive to improvement in mining and marketing methods, which has given the American bituminous mining industry its great superiority. Bureaucratic control of industry or regimentation thereof will never work in an economic system dedicated to free enterprise. We must either fish or cut bait. We are either a free nation or we are not. So closely bound and interdependent is industry in America that the Government cannot possibly regulate one branch without applying equal regulation to all other branches.

It is true we complain about the unfair competition of oil and natural gas, but that is because our Government is attempting to put coal in a strait jacket. It allows the industry to be destroyed while its competitors run wild. A complete illustration that one step leads to another and that the oil and gas industries must be controlled if coal is to be subjected to the control now provided in the Coal Act of 1937. It violates all freedom of action on which industry and our country have been built.

There is no disputing the fact that those coal producers who supported this and similar legislation are those properties that need artificial stimulation and cannot stand on their own feet as business concerns. Since when has any nation prospered when its government attempts to strengthen the weak by weakening the strong? To continue this law as now written simply means that if it should operate under price-fixing for even a short time a new lease will be given those who are in no position to stand the normal competition of the industry. Higher prices will be charged the American people for coal estimated at $100,000,000 annually under this law, so that some mining companies who have no right to exist from an economic standpoint may longer stay in business. No one will dispute the fact that coal prices will be greatly increased under this law. Why should the American consuming public be penalized to pay for something that a great many coal producing companies contend is not necessary?

Those who support this law as now on the books must be prepared to defend themselves before the great mass of American citizens who will be called on to pay more for their coal. It is no answer to say the law will help labor. Mine labor works under a union contract and is amply able to protect and defend itself, as the coal industry and the American people well know.

Labor is worthy of its hire, and mine labor deserves a high standard of wages. It is getting those wages now. It will continue to get them for the coal that is produced. The trouble is this law will so increase prices that millions more tons will be lost to competitive fuels, and labor will be deprived of its opportunity to work. This applies not only in the mines, but on the railroads and other related industries. There is no desire on the part of the coal producers in this country to reduce the wages of mine labor. What the coal operators want is the opportunity to run their mines as free American citizens, to pay their workers fair and decent wages, and to sell their product in a free and open market. That is what the amendments that are suggested in H. R. 6325 will permit to a large degree. This bill deserves, Mr. Speaker, the very careful consideration of all who are in any way interested in the welfare of labor and the maintenance of American institutions, and I hope it can be favorably considered before we adjourn the present session.

Let Us Be a Good Neighbor to Our Own Sugar Farmer

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

EDITORIAL FROM THE DENVER POST

Mr. CRAWFORD. Mr. Speaker, we have heard much lately about a good-neighbor policy and I think that neighborliness begins at home and I would like for some of my city colleagues to give some thought to a good-neighbor policy to the American farmer in his effort to supply the American tables with their sugar needs. I refer particularly to the sugar situation and the virtual "preliminary veto" given the sugar bill recently passed by the other house. Let us be a good neighbor to our own sugar farmer.

Under leave to extend my remarks I submit herewith an editorial appearing in the Denver (Colo.) Post under date of May 28, 1939:

[From the Denver (Colo.) Post of May 28, 1939]

Congressman O'CONNOR (Democrat), of Montana, is right in taking the position that the threat of a Presidential veto should not be permitted to bar consideration by the House of the bill passed by the Senate to increase American sugar-beet acreage. If the President wants to veto this measure, after Congress has passed it, that is his privilege. But Congress also has a right to pass it over his veto. And that is what it should do.

While the United States is producing only about 30 percent of the sugar it uses, any policy of restricting American sugar production is idiotic. For a few years after the quota system was first established American beet-sugar producers failed to produce their full quota. Those who would destroy the American sugar industry pointed to this as evidence that the quota system wasn't hurting any American farmer. But they can't do that any longer. Last year the production of American beet sugar exceeded the quota. It may do that again this year if growing conditions continue favorable. And if it does the quota for 1940 either will have to be increased or the acreage will be further reduced.

It has been suggested that the question of increasing the sugar-beet acreage should be left to the next Congress. That would be a serious mistake. If Congress waits until 1940 to determine the sugar-beet acreage and production quota for 1940, that will be too late. The question probably won't be decided before it is time for the farmers to plant their beets.

Limiting the amount of sugar beets and sugarcane American farmers can raise is supposed to be in line with our good-neighbor policy toward Cuba. But, as Congressman O'CONNOR declares, "We must first be concerned with good neighbors within our own country." He says he does "not believe that in order to carry out a good-neighbor policy we must give our neighbors our clothes so that we have only a shirt in our economic wardrobe" and that he does "not believe we must place people on relief to carry out our program of peace in the Western Hemisphere." Providing an American market for one American farmer is infinitely more important to us than furnishing a market for a hundred Cuban cane growers.

Memorial Anniversary of the Disastrous Johnstown Flood of 1889

EXTENSION OF REMARKS

OF

HON. J. BUELL SNYDER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 2, 1939

ADDRESS BY HON. J. BUELL SNYDER, OF PENNSYLVANIA, MAY 31, 1939

Mr. SNYDER. Mr. Speaker, under permission to extend my remarks in the RECORD, I am inserting herein the address I delivered May 31, 1939, in the Masonic Temple in the city of Johnstown, commemorating the fiftieth anniversary of the disastrous Johnstown flood of 1889, as follows:

Mr. Chairman, distinguished guests, ladies and gentlemen:

"If you and I should wake from sleep,
A century from now,
Back to our graves we'd wish to creep,
A century from now.
We'd witness such a startling change,
Find everything so wondrously strange,
That we'd run right back across the range,
A century from now.

* * * * *

"The people all will fly on wings,
A century from now,
Not heavenly, but patented things,
A century from now."

It has been just 89 years since the poet penned these lines. Eleven years to go before the century, yet we have witnessed many startling changes, and millions of people are riding in patented flying machines.

Fifty years ago tomorrow morning a small country boy, seated on next to the front row in the little Mount Union United Brethren Church, Upperturkeyfoot Township, Somerset County, Pa., listened to a God-fearing preacher, Rev. John Felix, as he told of the disaster of the Johnstown flood which had occurred the day before. His remarks still ring in my ears. I was too small to remember ordinary sermons or ordinary events, but his remarks still ring in my ears, as he told us of how, in the city of Johnstown, there were thousands that had burned and drowned.

The poet said that in 100 years "we'd witness such a startling change." Those of you who are as old as I, or older, and especially those who were eye witnesses to the Johnstown flood of 1889, have indeed witnessed startling changes not only in and around the city of Johnstown but in the State, the Nation, and the world as a whole.

If we but draw back memory's curtain and look at Johnstown on June 1, 1889, and again draw the curtain and look at the city of Johnstown 50 years later on June 1, 1939, we truly will witness marvelous changes. Yes; we will see a bigger and a greater city in '39 than we saw in '89. A city with better streets, better lights, better health facilities, better water facilities, better stores, better schools, better churches—a question mark must be placed after better churches if we think of the spiritual side of life. But up until a year ago Johnstown did not have any better flood protection. Johnstown, like many other centers in the United States, put off from year to year the important task of providing flood protection, and in 1936 the mighty waters from a thousand hills again deluged the city and caused millions of dollars of damage, to say nothing of loss of life.

I assume that if I were an orator as gifted as Mark Anthony or Chauncy Depew or William Jennings Bryan, I would not be a guest of honor tonight at this fitting and timely gathering if that were the only quality I possessed.

I am here as your guest:

First, because the fine network of our free, liberty-loving, and efficient Government of the United States—the most democratic and humane government on the face of the earth—finds me a Member of the Congress of the United States.

Second, because the great right arm of your Government and my Government observed that 50 years passed since the horrible flood of '89, and that the city of Johnstown could not financially give protection to its people against the ravages of floods—and in turn the Government reached out, as it were, and said, "I will have the Army engineers, headed by the capable and efficient Col. William E. R. Covell, survey your city and vicinity."

After the survey your Government said, "You need reservoirs and river improvements to prevent floods. I will give you financial aid."

The third reason, and the real reason you so graciously invited me—one of the 435 Members of the Congress of the United States—as an honor guest, is because I, as chairman of the House Appropriations Subcommittee on National Defense and River, Harbor, and Flood Control Appropriations, after 6 years of effort to get flood protection for the city of Johnstown, finally had the pleasure and privilege of putting the sum of $2,936,000 for flood protection for Johnstown in the bill for 1939, and a few weeks ago of placing the sum of $3,534,600 in the bill for the fiscal year of 1940. I feel sure that these words contain more music and sweeter music to the ears of the citizens of Johnstown than any eulogy that might be delivered.

My conscience tells me that your generation and my generation and the generations preceding us, fell below par in efforts to protect and preserve our natural resources and human resources. The greed for possession of material things has caused us in a big way to contribute toward the destruction of our natural resources, and thus leave to our children and our children's children, a soil that is less rich—forests that are less productive—mineral wealth that is less valuable than was left to us by our forefathers.

Yes, our generation and the generations that preceded us reaped multiplied billions and billions of dollars from these sources—but it will take multiplied billions and billions to replace and restore and rehabilitate where we have robbed Nature and Nature's agencies.

Too many of us look upon the riches of the Commonwealth as the "be all and end all," only to find that man cannot cheat and rob Nature. Nature will take its toll in time if you cheat her. We fail to fully realize that—

"The riches of a Commonwealth
Are free, strong minds and hearts of health.
They are more to her than gold or grain,
The cunning hand and cultured brain."

Yes, my friends, we have in a measure failed to train the cunning hand of youth and to give opportunity for youth to develop the cultured brain.

The youth of today are either going to preserve or let decay our democracy of tomorrow. Last year we graduated from our high schools, private schools, and colleges, 1,100,000 young people. This May and June we will graduate 1,200,000 more young men and women. Other millions have graduated in previous years.

A democracy cannot long be perpetuated in a country where the young people are not employed in gainful occupations. In 1931, 1932, and 1933 we dumped millions of these young people on the unemployed scrap heap. Shall we dump this year's millions on the same scrap heap? If we do, the future generations will pay many times more for rehabilitation than it would have cost the towns, cities, and Nation to put them to work.

Your city set a similar example of doing nothing for 47 years after the first flood, and then witnessed a similar flood that cost the citizens and taxpayers of Johnstown many more dollars than it would have cost them to have built flood-control dams after the flood of 1889. The moral is, "Never put off for tomorrow what you can do today."

So, in conclusion, my friends, I think it would be most appropriate for us to prepare well for the future by following the laws of Nature in dealing with our fields, our streams, our minerals, and our forests.

Yesterday the Nation paid tribute to her honored dead. Today you, the citizens of Johnstown and vicinity, pay special tribute to those who passed on due to the flood of 1889. All civilized and cultured nations revere the memories of their loved ones who have gone to rest in the great beyond.

Let's push forward in the preservation of our homes, our schools, and our churches by following at all times Nature's law and the will of the divine Master, and then:

"Long, long will our hearts with these memories be filled,
Like a vase in which roses have once been distilled.
You may break, you may shatter the vase if you will,
But the scent of the roses will cling 'round it still."

Pensions for the Aged

EXTENSION OF REMARKS

OF

HON. CHESTER C. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

Mr. BOLTON. Mr. Speaker, I have studied this bill as carefully as anyone could in the short time it has been before the House. While I am aware that it is intended honestly by its sponsors as a move in the right direction, I am forced to the conclusion that, without adequate study, it cannot really accomplish the objectives toward which it aims.

It is a peculiar situation which faces us today, and one which bears review. Apparently it is the result of an ad-

ministration parliamentary maneuver to embarrass those who believe the social-security law is not operating satisfactorily.

We are forced, under the severest of "gag" rules, to discuss this measure for 4 hours and then cast our vote for or against, without the privilege of submitting any amendments or of clarifying the wordage which is admittedly ambiguous.

Until a few days ago there was an insistent demand from members of the Townsend organization that Congress enact H. R. 2 without changing a word. Now, almost overnight, a new bill appears sponsored by this same group but embodying an entirely different plan. It contains some commendable features. The measure provides a pay-as-you-go basis and does away with the debt-creating reserve fund, and would prohibit the use of old-age pension funds for current Government expenses, as is the practice today. These features are improvements.

The elimination of the pay-roll tax and the substitution of a broader tax base is also a step in the right direction, but unfortunately no one knows what the new plan might bring in the way of practical administration or tax returns. No study has been given the proposal by the Ways and Means Committee. On the contrary, the bill was reported out immediately following its introduction without any sort of recommendation and without any consideration whatever before that committee.

The question of constitutionality is raised and the right of Congress to enact a general tax measure for a special purpose is challenged. This aspect of the question was not considered by the committee. Proponents admit that they have deserted the original plan embodied in H. R. 2, and they confirm the fact that the new measure (H. R. 6466) is hastily drawn and loosely worded with much ambiguous phraseology. They have had no time to prepare facts and figures on which to base real estimates as to what final results might be expected in the operation of the plan. In other words, while it is assumed that the proposal might bring revenues sufficient to offer slightly higher payments to the aged, there is really no data to support that assumption.

We have heard read here today very strong statements in opposition from such organizations as the American Federation of Labor, the National Grange, the American Farm Bureau Federation, the Railway Labor Executives Association, and the American Association for Social Security, and others.

On so many occasions I have voted against measures of questionable constitutionality and I have consistently opposed gag-rule procedure on hastily drawn legislation which the New Deal has railroaded through Congress. I would not be consistent if I were to accept a similar situation in this instance.

I do believe the Social Security Act can be much improved upon, but I want the Ways and Means Committee to give conscientious and thorough study to the problem, so that we will have factual data prepared by qualified experts and will know just what we are voting for.

I am opposed to playing politics with this issue, and I insist that measures which I support be well considered both in committee and on the floor of the House.

It is not necessary for me to repeat that I believe the care of the aged is a problem of government. My position is unchanged. I believe old-age security in its present form is entirely unsuited to our needs, and the great demand for old-age pensions as a means of security for both human and property rights must be recognized. I still honestly believe in sufficient old-age pensions and will continue to work for impartial study. This subject is too important to be treated hastily. Some of our major problems today are the result of loosely drawn laws rammed through Congress under similar gag rules.

Certainly I do not want the old-age pensioners to be added to the list of New Deal victims.

The problem will not be solved by such tactics as are employed here today. Every large group of people has the right to expect a fair and impartial hearing. The majority members of the Ways and Means Committee, who have been guiding this legislation, should assume their responsibilities and by proper study formulate workable and more liberal legislation to correct the deficiencies of the present situation.

Beware the Dogs of War!

EXTENSION OF REMARKS
OF
HON. HAMILTON FISH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 25, 1939

AN ARTICLE BY GEN. JOHNSON HAGOOD IN LIBERTY MAGAZINE, JUNE 3, 1939

Mr. FISH. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following article from Liberty magazine, June 3, 1939, by Gen. Johnson Hagood, on "Beware the Dogs of War!":

[From Liberty of June 3, 1939]

BEWARE THE DOGS OF WAR

(By Gen. Johnson Hagood)

DANGER IN WASHINGTON! AN ARMY MAN'S FRIGHTENING VIEW OF WHAT CONFRONTS US

The greatest war danger to America today lies, not in Berlin, not in Rome, not in Tokyo, but in the District of Columbia. It comes from the fact that over a long period of time the legislative branch of our Government has allowed the war-making power to drift into the hands of the Executive.

Hitler, Mussolini, or Stalin may throw his country into war, but they would at least know what they were doing. They would have at their disposal ready-made fighting machines; and from long experience they would know what to expect from their enemies.

The Prime Ministers of Great Britain and France may make some great decisions on peace or war. But in every case they must go at once before their Parliaments and get a vote of confidence, or out they go, and their decisions will be reversed by their people.

But the President of the United States is neither a soldier nor a prime minister. The President's Cabinet contains none who know anything about the conduct or the consequences of war. And yet the President, or any of his subordinates, may take it into their heads to throw the United States into war; and if so, they have the power to do it without consulting the Congress or the people.

Backseat drivers of the State Department drove us over the precipice and into the bottomless pit of the World War. The situation is more fraught with danger now than it was then, and it is time for us to stop, look, and listen before it is too late.

The American colonists fought a great war for independence and set up a Constitution which guaranteed a republican form of government for each of the several States, but nothing for the rest of the world. George Washington said: "We will stand on this. We will look after our own affairs and let other people look after theirs."

But 122 years later we detoured away from the great American highway and became lost in the wilderness of foreign entanglements. It was on April 19, 1898, that Congress met at Washington, D. C., and declared that "the people of Cuba are, and by right ought to be, free." So we entered upon a second war of independence, and set up a second republic, not for ourselves but for a people of a foreign tongue. This was followed almost immediately by a third, this time for a miscellaneous collection of Malay tribes scattered over a thousand islands off the coast of Asia.

A few years elapsed, and then we turned to our neighbor on the south. The President of Mexico did not come up to the standard specifications for a democrat, so we put him down for a purge, and in April 1914 launched a fourth war of independence and democracy, this time for the people of Mexico. Finally we extended our horizon to encompass the entire globe. We entered the World War and fought to "make the world safe for democracy."

The Army and Navy had become an instrument in the hands of the Executive that was never dreamed of at the time when our Constitution was written. And the President found himself in the position that, while he could not make a formal declaration of war, he could nevertheless perform acts of war which forced Congress into the position of backing him up.

It was never expected that our President should be a war lord. His duties are essentially civil. It was not until after the Civil War that Congress, by the act of March 1, 1875, authorized the President "to make and publish regulations for the Army in accordance with existing law."

Even here we see that the President was given no free hand. He could act only within the confines of existing law.

But as time went on and the Government became more complicated, Congress began to enact more and more laws containing the phrase "as the President may direct." And finally, with the passage of the General Staff Act of 1903, Congress became committed to the German system. The State Department took over the job of deciding when, where, and with whom we should go to war. And the War Department took over the job of deciding what preparations should be made for war; and to what extent and how our Government should be reorganized and operated while war was in progress.

Congress was expected to cooperate.

Let's see how this actually worked out in regard to the World War.

The Great War in Europe had been going on about 1 year when our Secretary of State, Mr. Robert Lansing, prepared a number of memoranda which have since been given to the public. From these memoranda and from his memoirs we learn some startling facts.

First. That as early as the spring of 1915 Mr. Lansing and some of his associates had decided that the United States should go into the war on the side of the Allies. But the people did not want to go to war; they believed that the issues of the war were no concern of theirs. According to Mr. Lansing, a slow and irritating period of education would be necessary before the indignation of the people could be aroused to the point that they would force their Members of Congress to vote for war.

Second. He says that it occurred to him that the people might be united against Germany if they were brought to think that the Kaiser was warring against democracy and that it was up to us to join with the Allies in coming to its defense.

Third. Having decided (prior to July 1915) that we should go into the war on the side of the Allies, he had deliberately pulled his punches against Great Britain for violating our neutrality.

Fourth. During this time it appears that the officials of the Army and Navy were not consulted as to what extent, if at all, we were prepared to undertake a war. In fact, it was during this time that the White House was frustrating all attempts on the part of General Leonard Wood and others (including Colonel House) to take some steps in the direction of preparedness. Mr. Lansing tells us, however, that he and his associates believed that if he did not take advantage of the existing situation the Allies would be defeated, and that we would be called upon later to fight against Germany alone. In other words, these gentlemen were attempting to solve the age-old problem of whether it would be better to attack now or wait until later and act on the defensive if we ourselves were assaulted.

Wholly without military knowledge or experience, they committed the United States to one of the greatest military blunders in history.

The process of educating the American people up to war had been going on for about 2 years when President Wilson submitted his message to Congress, April 2, 1917. There was no deliberation. There were outbursts of patriotic enthusiasm. There were accusations and counteraccusations. There was heated debate. But, in the end, Congress was swept off its feet and the war resolution was passed by a majority of 8 to 1 in the House and 14 to 1 in the Senate.

The orderly processes of the Constitution had been avoided. The executive branch had first created a situation in which there was nothing for Congress to do except pass a resolution declaring that a state of war with Germany existed.

The slogan "Make the world safe for democracy" was just another campaign song like "a chicken in every pot." Germany was not fighting against democracy. The Allies had not banded together to save democracy. They were all fighting to save their skins.

And democracy today does not have to be saved from any menace from abroad. Nobody in Europe or Asia cares anything about our form of government. Yet once more we have been educated up to the idea that democracy is in danger and that the United States must do something big to save the world. We are once more a war-frenzied people and have started out on the biggest armament program the world has ever seen. Some of this might be advisable if we could afford it. But no one man should be entrusted with this tremendous agency of destruction.

The great patriotic duty of the present Congress is to take the destiny of this Nation back into its own hands—to say when, where, and against whom the armed forces of this country shall be used, and to see that never again shall the blood of our young men be uselessly bespattered upon the soil of Europe and Asia or upon the shores of the Caribbean Sea. No more visionary schemes to establish peace on earth and good will toward men by means of the bayonet.

There is a plan now on foot, known as the Ludlow amendment, to prevent the President or the Congress from throwing us into a foreign war without the prior consent of the people. It is a good idea, but it will not work. We should not wait until we have been educated up to the point of war before we take a vote upon this question. We should decide right now in cold blood that we shall not become involved in any kind of foreign war, no matter how great the provocation.

It is not necessary to amend the Constitution. We all know what we want. The machinery is all set up and it would be a very simple thing for Congress to enact the necessary laws to carry these purposes into effect.

Congress should create two Committees on National Defense—one in the House and one in the Senate—to consolidate and coordinate the work now being done by 10 different committees, 4 on the Army, 4 on the Navy, and 2 on Foreign Affairs, all of which are working independently and at cross purposes.

Congress should revamp the entire military code and should provide some simple and expeditious plan by which the people of this country could repel invasion without seizing all private property and setting up a totalitarian state under a military dictator. We could take as our model the Militia Act of 1792.

Pending this, however, Congress should provide:

That the land and naval forces of the United States shall not be used for any hostile purpose beyond the limits of the Western Hemisphere.

It is very easy to keep out of war on this continent if we develop a system of national defense based on the traditions of the American people, which is to repel invasion. And we should remember that nothing has happened in the last 50 years that warranted our sending armed forces to Europe or Asia—and nothing is likely to happen in the next 50.

The United States should serve due notice upon the world that it is going to make good on its solemn promise not to resort to war as a means for settling international differences. We should stop all this big talk—a bark without a bite—about how much better we are than other people, and how much we despise the other nations of the world who have their own ways of attending to their own business. We should recognize the inherent right of all people to seize territory by force of arms and to set up new governments by revolution. Our entire responsibility begins and ends when we fix it so that they cannot take anything away from us.

What this country needs is a good dose of spring tonic to clear up our system and get rid of this war fever!

How To Get $80,000,000,000

EXTENSION OF REMARKS

OF

HON. DUDLEY A. WHITE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

ARTICLE BY HON. BRUCE BARTON, OF NEW YORK

Mr. WHITE of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. BRUCE BARTON, of New York:

How To GET $80,000,000,000

[Condensed from Collier's, the National Weekly, in the Reader's Digest]

(By BRUCE BARTON, Congressman, advertising executive, author)

The one big issue in this country today is your income. Two groups of political leaders, equally sincere and patriotic, are engaged in a head-on argument about it. One group, consisting of New Dealers, is led by the President, and the Governor of the Federal Reserve System. On the other side are Senators BYRD and GLASS, most of the conservative Democrats as well as the Republicans, and a majority of businessmen.

The President says that if the United States will just keep on running into debt the national income will automatically increase from sixty billion to eighty billion dollars. We, his political opponents, contend that the President's 1939 financial policies (the exact reverse of his 1933 policies) are not merely a denial of historical experience, but are in complete violation of ordinary horse sense. We believe that he has been persuaded by a group of cocksure young men to conduct a reckless gamble with the fortunes of 130,000,000 people, and that history, while admitting the sincerity of his motives, will say that his second term was a frightfully expensive luxury for the people of the United States.

There you have the real issue between Republicans and new dealers. It cannot be compromised; it grows out of philosophies diametrically opposed. On it the campaign of 1940 will be fought and the next President of the United States elected.

You will be offered:

More spending, more debt, as the path to an $80,000,000,000 national income, versus Government economy, lower taxes, business encouragement, and scientific research as factors which can easily double the Nation's income and yours.

This article argues in terms of everyday experience for the second proposition. Let us start with a true story illustrating the process by which jobs and income are created. Back in November 1919 three young men wanting to start a business of their own found a banker who would take a chance on them to the tune of $10,000. The note they signed bore the company name, their own names, and their wives' names—none of which had any financial value. It was what is known as a character loan.

The little business, starting that week with 14 people, now employs 650. The total pay roll has exceeded $35,000,000. How many homes have been built out of that business? How many automobiles have been purchased? How many refrigerators, radios, vacation trips? How much life insurance? The $10,000 of bank money, plus the energy of three young men, created expanding circles of employment and production which reached out to thousands of homes.

Countless stories of the past 30 years have the same formula: A group of young men, enthusiastic, willing to take a chance, plus a small amount of borrowed money, courage, and hard work. These are the factors that made millions of jobs before the New Deal was ever born. We claim that, given a chance, they can make millions of jobs again.

These three young men opened their office right after the World War in a time of unrest and economic confusion. They believed that the way to recovery was not by legislation or wishful thinking but by hard work and thrift.

The Government of that time felt the same way. A form letter from the Treasury Department urged "increased production, economy, savings, and investment" as the solution for the adverse economic situation. In the year 1919–20, neither these young men nor their Government had ever heard that the way to prosperity was to work less, or that national debt is a national blessing.

In those days men lived largely in the future. Business was full of confidence. The clients whom the young men served were laying out 3-, 5-, or 10-year programs. Advertising budgets were usually approved a year in advance. For the past 6 years there has been very little forward planning by those young men or their clients. Advertising budgets are approved for only 3 months ahead, sometimes less. In industry, machines are not being replaced until they threaten to fall to pieces. A recent survey showed that $17,000,000,000 should be spent immediately for modernized equipment. Executive decisions are postponed to the last possible minute. No one wants to make a commitment for the day after tomorrow because there may be bad news in the papers tomorrow. Men have been living in fear rather than faith.

When the three young men started in business their bookkeeping was done by a man and a couple of girls. Today, at every monthly directors' meeting, lawyers and the chief accountant must spend an hour explaining new taxes. (The company files 97 different tax returns.) Government questionnaires have to be filled out. (Last year the Government mailed 135,000,000 questionnaires to American businessmen.) There is always at least one new law that affects operations in one or all of the six States where branch offices are maintained. The business is on the defensive—struggling to maintain itself in the face of constant annoyance and increased tax burdens.

With this specific example I have tried to make clear what the businessmen mean by "overtaxation," "Government interference," "lack of confidence." To the man in the street these phrases have become monotonous squawks uttered by folks whom he still tends to distrust; but to management, seeking more sales and more employment, they mean sand in the gear box. Not that any intelligent manager wants to "go back" to the laissez faire that ended in debacle. Government supervision is here to stay. But it can be vastly simplified and exercised in a spirit of cooperation.

Business has not a perfect record by any means, but the record of bureaucracy is even less impressive. Our oldest bit of bureaucracy is the Interstate Commerce Commission, which, after a half century of control of the railroads, has let them reach the edge of the scrap heap.

How little spirit of cooperation there is in the New Deal was evidenced by the President's nomination of Mr. Amlie for the Commission. Mr. Amlie is a sincere and honest man. But he has stated publicly that the business system is outworn and must be discarded in favor of some form of socialism. This is the man the President selected to help work out one of the biggest business problems of our day.

Let us turn now to the general points of controversy:

Private debt and public debt: The President and Mr. Eccles, Governor of the Federal Reserve System, maintain that there is, in effect, no difference between public debt and private debt; that as long as the public debt is owed internally and carried at a low rate of interest, it is nothing to worry about. But we have seen how a private debt of $10,000, plus energy and courage, created 650 jobs and $35,000,000 in purchasing power. What is the effect of public debt on that enterprise?

Public debt, resulting in high taxes, compels the management to struggle constantly to decrease expenses. Wages are the biggest cost in any business, and the only way to affect a major saving is to employ fewer people. Thus, while private debt created these jobs, public debt works steadily to limit or destroy them. Second, public debt, incurred professedly to give greater security to the "one-third" at the bottom of the social scale, is wiping out the security of the middle class. Thrifty folk who have accumulated a few thousands in the savings bank thought they could depend upon an income of 4 percent. They are now receiving half that. By depressing the interest rate in order to float its huge bond issues, the administration has greatly increased the worries and lessened the incentive of the middle class.

How to get out of depression: The depression of 1920–21 was sharp and severe; the national income fell from seventy-three to fifty-three billions. Did the Government spend billions in pump priming? On the contrary. It reduced its expenditures from five billions in 1921 to three billions in 1922, with a corresponding decrease in taxation. The national income shot up seven billions in a single year. In 1923 there was another reduction in Federal spending and Federal taxes. The national income rose another nine billions.

In 1933 President Roosevelt came into office with the promise of a 25-percent reduction in governmental expenses. He put that promise into action, with the result that there was a greater increase in national income between March and July 1933 than in any similar period in our history. There has been no such recovery since he abandoned his 1933 promise in favor of deficits and debt.

We discover from history that the national income has been highest when the Government was being operated economically, when taxes were being reduced and payments being made on the national debt. The only time the Nation approached an income of $80,000,000,000 was when these three factors were at work.

Purchasing power: The new dealers assert that depressions occur because the men and women who create the products of industry do not have money enough to buy those products. So they seek to spread purchasing power via "pump priming" and relief. Now, what are the facts? Consumer purchasing power holds up pretty well even at the bottom of a depression.

Department-store sales are down only a small percentage. Food sales hardly at all. The big unemployment is in the capital-goods industries, and this is not cured by artificially creating consumer purchasing power. Buildings, machinery, railroads are financed by long-term investment; and this takes place only when men believe that invested money will be safe and return a future profit. This is what businessmen mean by the much abused word "confidence."

"Purchasing power" is not fixed or static. I have half a dozen different purchasing powers; so do you. I have one purchasing power when I feel well, and quite a different one when I am sick. I have one purchasing power when I am afraid of Government taxes, restrictions, or abuse, and quite a different purchasing power when I feel that the Government is going to help me, provided I am operating with a reasonable degree of social justice. Purchasing power is fully as much psychological as it is economic. The failure to appreciate this truth constitutes one of the biggest mistakes of the New Deal.

The profit system: Not long ago a man who accumulated a fortune promoting varied undertakings, said to me: "I used to raise millions for new businesses. Now I do nothing. If I should promote an enterprise that provided a lot of jobs and resulted in a profit, the Government would let me and my heirs retain about 8 cents out of every dollar. If the thing flopped, I would loss 100 cents. Why should I gamble at 12-to-1 odds?

The New Deal professedly wants to preserve the profit system, but does not recognize that there can be no profit system without profit makers. You can fill the tank with the gasoline of relief, you can give the machine a push with "pump priming," but you never will get the engine running without the spark plug—the profit maker.

More important than any of these economic factors is the spiritual factor—the belief of people in the future of themselves and their country. This hopeful outlook the New Deal has failed to establish. It could be established in 90 days. In 90 days, barring a major war, we could be really on our way to a national income of eighty billions or even one hundred and twenty billions. It is because I believe this that I am working to have a different viewpoint in Washington after 1940.

What would an administration with a different viewpoint do? Would it balance the Budget immediately? Impossible. But it would do the following:

Take immediate steps toward economy. Abolish such useless Government agencies as the National Emergency Council and the Guffey Coal Commission, and radically reduce the expenses of the others.

Stop Government competition with private industry. Let industry work and Government govern.

Make all Government expenditures, insofar as possible, through private agencies. Government must provide relief directly; but jobs should be provided through private industry. The work would be done more efficiently, and the morale of the worker would be improved.

Cut taxes immediately. Instead of decreasing the deficit the first year, this might for the moment increase it. But business would leap ahead; an increase of ten billions in the national income would be an easy achievement. The whole psychology of the American Nation could be quickly changed. During that first year there would be opportunity to revise and simplify our whole tax structure.

Most important of all, the new administration would sweep out of Washington the theorists and defeatists and re-create in the hearts of the American people a faith in their future. How rich are the materials for such a faith. The new science of "chemurgy," the application of chemistry to agriculture, envisions scores of new industries, all of which would consume farm products. In the past few years thousands of new metal alloys and new chemical compounds have been produced. Chemists and engineers have no question that they will open the door to millions of jobs.

To sum it all up, my fellow businessmen believe that the United States still has a great future. We reject absolutely the craven doctrine that there must be a permanent army of unemployed or of Government wards. We believe that prosperity and full employment can be reached by the same paths which have led us toward them in the past—economical government, lowered taxes, a reduced national debt, scientific research, new industries, and an expanding economy. The New Deal economists argue that the deeper in debt you sink the

higher in prosperity you rise. We stand on history and horse sense. We know it ain't so.

There is one thing to be added. We must make sure that this bigger national income is better distributed than in 1929. We cannot afford another bust. I believe that business has learned the lesson of the past 10 years. There is a much keener sense of social responsibility; a realization that success will be measured in the future not by money making alone but by contribution to human life. This more active social consciousness is one result of the New Deal; history may term it the one most important result.

Memorial Day Address at Arlington

EXTENSION OF REMARKS

OF

HON. CHARLES H. ELSTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Memorial Day address by Hon. ROBERT A. TAFT, Senator from Ohio:

I deeply appreciate the honor of being chosen to address this great gathering on Memorial Day, a day which has come to mean so much to Americans, a day which brings sacred memories to the past and an inspiration for the future.

Seventy-one years ago today Gen. John A. Logan, of the Grand Army of the Republic, designated the 30th of May for the purpose of strewing with flowers or otherwise decorating the graves of comrades who died in defense of their country during the Civil War. April 26 had already been designated for the same purpose in the Southern States for the purpose of honoring the Confederate dead. With the passage of years we have gradually come to consider these days as days of tribute to the memory of all those who have given their lives in armed conflict for their country and as a time of solemn reflection on those ideals and principles for which those boys and those men were willing to make the supreme sacrifice.

We come here, therefore, to pay tribute to all of our soldier dead, whether they served in the War between the States, the War with Spain, or the World War. All were fighting for love of this country of ours and for love of those ideals which have made our country the greatest force for good in the world today. We come also to pay tribute to those, both living and dead, who served in these three wars but who were not called upon to sacrifice their lives. Even though death passed them by, they were none the less ready to offer themselves to their country in the cause for which they fought, and many bear wounds or other injuries for which the country owes them a debt of gratitude it can never pay.

We come here to reflect upon the ideals for which these men so willingly offered their lives. All through history men have been willing to fight for their honor, for their glory, and for the protection of their homes and their loved ones. But it seems to me that Americans have fought for something in addition to that—for ideals and a way of life, unique in this country, which every American recognizes as true Americanism. Many other countries now have, and have had in the past, democratic institutions somewhat similar to our own. Many other countries have had, and some still have, individual freedom. But the combination of ideals set forth in the Declaration of Independence, consolidated in the Constitution, and made alive by the growth of a nation across an unconquered continent, are characteristic of this country alone.

The Puritans came to this country seeking individual freedom and the right to work out a better condition of life for themselves and their families without the interference of government. Their ideals were carried on in the Declaration of Independence, which laid down the fundamental doctrine that there were certain inalienable rights in every individual of which no government and no majority, no matter how large, could deprive him. Freedom of worship, freedom of speech, freedom from oppressive searches and seizures and unfair trials, freedom from the tyranny of government, if you please, were written into the Constitution.

But, more than that, America has stood for equality of opportunity. It has been always a land of opportunity. This country is proud of the fact that it has not been divided into the classes which have existed in every European country. With universal free education there has been no boy or girl born in the United States who has not had the opportunity to rise to the top of his or her field of activity if he or she had the necessary ability and industry and courage. In government, in the professions, in the Army and Navy, in big business and little business, we find at the top men who started with nothing except their own character, and this is still true today in spite of all the talk of the privileged and underprivileged.

We have today a much more difficult social problem, but we need not let that problem distract us from the essential fact that American principles have succeeded as no other principles have succeeded in the world. In our desire to meet our economic problems we need not imitate European ideals or substitute for individual freedom any paternal direction from Washington. We must not substitute for industry and thrift and a proper recognition of ability any alien panaceas of a purely socialistic nature. There are all kinds of democracy in this world, but we must be concerned with preserving American democracy. Let us not imitate the European idea of dividing the whole country into classes and trying to divide rights and privileges between those classes. All over the world even the rights of individual freedom are rapidly being encroached upon. In many countries they have disappeared. The very basis on which Americanism has been built is being destroyed in Europe, and the propaganda which is destroying it is spreading into the United States. I do not share the fear often expressed that communism and fascism are threatening to replace the American republican form of government, but the principles of those "isms" are being studiously spread to modify individual freedom and opportunity and Americanism as we have known it.

There is a constant effort to modify our institutions in a way which is inconsistent with their basic principles, and we cannot too often remind ourselves of what Americanism is. It is the American philosophy which has made our institutions live and breathe, and caused the guiding light of the American ideal to shine as brightly today as it did in the first fire of its youth, over 150 years ago. All of us feel that spirit. Sometimes we feel it more intensely than at other times. Because Memorial Day is one of those times, it has become one of our truly great national holidays.

Let us not become inclined to take our heritage for granted, lest it be gradually encroached upon until we awaken suddenly to the peril of losing it, and must fight again to regain what we might otherwise lose. May Memorial Day remind us of the sacrifices which have been made in the past; may it impress us with the possibility of danger in the future; and may it urge us on to fight aggressively for the retention of American ideals and the American way of life.

We come here today to honor the men who gave their lives for the protection of these ideals. First are those who died in the War between the States. The dead of both sides now lie in the same soil. The same flag flies over both. No bitterness remains—only an abiding love and loyalty for that united country which remained united. The Civil War was fought to abolish an institution which could not be reconciled with individual freedom and equal opportunity.

We come to honor also those who offered their lives in the War with Spain, the war which ended the tyranny of Spain in this hemisphere. There are many of us here today who remember that conflict, but the bitterness is gone and almost forgotten. It was fought because we could not see the ideals of freedom and opportunity destroyed at our own front door.

The World War has been over for more than 20 years. Nearly everyone within the sound of my voice can remember that great conflict. Our memories of it have not been mellowed, and we still remember much of the horror and the disillusionment connected with it. In previous wars the tragedy and the suffering were soon forgotten, and only the glory remained in the minds of men. Perhaps only the wives and mothers remembered the real facts. But today all of us remember the World War, and we know that the romance has disappeared from modern warfare. We know that the ultra-modern warfare of today is still worse. In other parts of the world the drumbeats of war are throbbing again. Many of the nations of the world are arming to an extent beyond our wildest imagination of a few years ago. New engines of destruction are being devised, and new uses are being found for old instruments of death. Those who went through the World War do not need to be reminded of its utter horror.

The World War did more than anything else to demonstrate the complete futility of war. Some countries today are fighting or preparing to fight to impose their own particular way of life on others. Some countries are fighting or preparing to fight to preserve their own way of life. It is extremely doubtful if war will accomplish the objectives of either. Regardless who may be the nominal victor in any war, both sides may find that those principles which they seek to impose, or those ideals which they seek to preserve, have been destroyed by war itself more than by their enemies. The war to preserve democracy seems to have resulted in a tremendous increase in dictatorships. It has furthermore produced dislocations of normal economic life, which resulted in depressions and suffering and misery and poverty throughout the world.

The World War and the growth of the war spirit in Europe today have made Americans pause and think. They have come to realize that a war to end war is more likely to produce continued war. The people of the United States yearn to avoid war. In recent weeks the Members of Congress have been deluged with letters and postcards of every description. Some are pages long; others contain only the words, "We do not want war"; but all have the same general theme. Some are from veterans; some from the parents of young men and boys; some from the boys themselves. All would be willing to defend this country from attack. Some, it is true, favor methods short of war, but no nation can take

methods short of war unless it is prepared to carry through the war to which such measures inevitably lead.

It is true that this country has never lost a war, but does any nation ever win one? Many millions of young men are lost, even though their nation is victorious. The buildings which civilization has taken centuries to build are destroyed. Economic peace and comfort are lost for many years, and the very freedom of the people of the victor may disappear forever. The World War has been followed by a race of armaments greater than ever before, and a Europe in which millions of people are living in constant apprehension of another war. The people of Europe are infinitely worse off than they were before the war began, and they are facing the possibility of a war which may destroy their civilization itself.

We cannot hope to cure the situation in Europe, produced by the crowding into a small continent of scores of hostile races. Washington and Jefferson and every other American statesman have warned us that we should avoid entanglement in the affairs of Europe, and I do not agree with those who say that conditions have changed and we must plunge into any world war. Let us bear in mind the words of Mackenzie King, the Prime Minister of Canada, who said recently of Canada: "The idea that every 20 years this country, which has all it can do to run itself, should feel called upon to save periodically a continent which cannot run itself, seems to me a nightmare and sheer madness."

The United States need not remain entirely aloof from other nations. To avoid war it is not necessary to ignore the other nations of the world. We can be friendly to all. We can constantly urge peace upon them and do what we can to assist that peace. But we cannot well impose embargoes to starve them into submission. We cannot interfere in their internal affairs, or tell them what kind of government they can have unless we are prepared to join in a world conflict. I believe we can stay out of war if we are determined to do so. We can prepare ourselves for defense against actual attack, and we have taken the necessary steps. But I cannot see the slightest ground for the fear that any foreign nation is likely to attack us. The very fact that we are prepared to defend ourselves decreases the likelihood of our being attacked.

While we are prepared to defend ourselves, we are not entirely prepared against a propaganda which may drag us into a foreign war, a war to defend some other country or some ideals supposed to be similar to ours. We are still subject to the danger of martial enthusiasm, which, in our sober moments, we would reject. Our high schools and colleges are filled with young men and boys who do not remember the horror of the last war as you do. It is they who may be swayed by martial music. It is they who may be deluded by a propaganda of mob psychology. It is they who will be marching away leaving tearful mothers and wives behind. It is they who may be the honored dead to whom future generations pay tribute on some future Memorial Day.

It is our responsibility to teach them the sound principles of Americanism and lead their footsteps in the paths of peace. Fortunately, many of them already understand, although they do not remember. Perhaps it will help us in our purpose if while we pay tribute to these honored dead we continue to remember that in each grave we decorate there lie the remains of a young man or boy who might have rendered a great, if less spectacular, service to his country in the pursuit of peace; a young man or boy who was silenced in the prime of life, leaving loved ones behind who derived small comfort from the glory of his sacrifice.

It is our job to make our own system work. It is our job to preserve Americanism and make its examples so outstanding that it will command the respect of the people of other nations. We can reaffirm our faith in the American way of life and preserve it in this continent, a standard to which the rest of the world may in time return.

From the sacrifices of those whom we honor today, we have learned the importance of carrying on the American tradition they have so nobly preserved. We can benefit by the example they have set, and we can try to carry on their accomplishments by peacetime efforts which do not even compare with their sacrifice but may be equally effective. Patriotism is not confined solely to those who bear arms for their country. Even in time of peace there are battles to be fought, there are victories to be won, and there are sacrifices to be made. There is much for us to accomplish in the pursuits of peace. It is for us to fight these peacetime battles, win these peacetime victories, and make these peacetime sacrifices. Inspired by the example of those to whom we pay tribute today, let us seek by our efforts to make it unnecessary for future generations of young Americans to sacrifice their lives as they have done.

Today as we pay tribute to these great dead, as we decorate these hallowed graves, let us cherish the hope that at some future date, when we are no longer here, there will be no fresh graves to decorate. Let us hope that there will be no veterans of any future war to honor. Let us hope that our hospitals will not be filled with the maimed and disabled of some future war but may be available for the pressing needs of peace. Finally, let us hope that those who decorate these graves will never have heard the tramp of marching feet or the beating of drums and that their hands will not have handled the implements of war. Let us hope that all Memorial Days hereafter will be filled with memories of the past and free of fears for the future.

The H. O. L. C. in Oklahoma

EXTENSION OF REMARKS
OF
HON. JED JOHNSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 5, 1939

LETTER FROM HON. JOHN H. FAHEY, CHAIRMAN, FEDERAL HOME LOAN BANK BOARD

Mr. JOHNSON of Oklahoma. Mr. Speaker, under leave to extend my remarks, I submit a letter addressed to me by Hon. John H. Fahey, chairman, Federal Home Loan Bank Board, and a summary of the record of the Home Owners' Loan Corporation, as follows:

FEDERAL HOME LOAN BANK BOARD,
Washington, May 25, 1939.

The Honorable JED JOHNSON,
House of Representatives.

MY DEAR MR. JOHNSON: We recently have received inquiries from a number of Members of the Congress regarding the operations of the Home Owners' Loan Corporation, both nationally and in their own States. Believing that you will be interested, I therefore am attaching a brief informal report as of December 31, 1938, which not only gives a picture of our current activities but outlines the permanent contributions the Corporation has made to a broader and more secure home ownership. To supplement this report I am taking the liberty of presenting you with some interesting figures on your own State of Oklahoma.

The H. O. L. C. has refinanced 23,962 Oklahoma home owners to the extent of $55,875,384 since the beginning of its lending period, June 12, 1933. These Oklahoma borrowers, like all H. O. L. C. borrowers, were without private credit at the time; the average was 2 years delinquent in both principal and interest and between 2 and 3 years on taxes. The story of their "come-back" is a tribute to their courage and resourcefulness in the face of heavy odds.

As of February 28, 1939, Oklahoma borrowers had repaid $11,439,067, or 20.5 percent of their total principal indebtedness. Collections in March were 105.9 percent of billings. Thirteen hundred forty-seven Oklahoma borrowers have paid in $2,411,228 to settle their accounts in full; 13,649 others today are current or less than 3 months in arrears, while 1,446 more are in a liquidating class, meaning that they not only are meeting all current bills but, in addition, are making regular monthly payments on their arrearages.

This means that we now have 15,095 accounts in Oklahoma in a satisfactory condition, representing borrowers who clearly are on their way to debt-free home ownership. There are 1,958 other borrowers who are making adjusted payments sufficient to keep their accounts active and who are being given every assistance in their effort to rehabilitate themselves.

The H. O. L. C. now owns 2,839 homes in Oklahoma. It has sold 1,955 others. Of the homes it owns, and which are available to yield income, 90 percent are rented. Rental collections in February were 98.7 percent of billings.

These figures tell a story that we believe is a credit to both home owners and the manner in which they were assisted by the Government. They show that more than 76 percent of these almost hopeless home owners H. O. L. C. refinanced either have saved their homes, are almost certain to save them, or at least have a good chance—and only 8 percent are in the last category.

Included in the original loans made in Oklahoma were $698,000 for reconditioning and repair of homes to make them sound security, and about $4,816,000 for payment of delinquent taxes. Since the close of our lending period the Corporation has advanced an additional $1,478,000 for taxes, maintenance, insurance, and similar purposes to aid and protect borrowers. Further, $2,078,000 more has been spent on properties which the Corporation has acquired. Every dollar spent on reconditioning, of course, stimulated the construction industry and enhanced neighborhood values; the taxes we advanced provided needed revenue to Oklahoma communities and to the State.

The story of how the H. O. L. C. tried to serve the purpose for which it was established by the Congress is told in the attached national statement. Its constructive social purposes have been carried out in the State of Oklahoma to the best of our ability.

Sincerely yours,

JOHN H. FAHEY, *Chairman.*

DECEMBER 31, 1938.

THE RECORD OF THE HOME OWNERS' LOAN CORPORATION

The Home Owners' Loan Corporation, now in its sixth year of operation, is well on its way toward the goal set by Congress—the rehabilitation of hundreds of thousands of home owners who faced

the loss of their properties during the depression. Today more than 701,000 borrowers, all threatened with foreclosure at the time H. O. L. C. stepped into the picture, are in satisfactory standing. Nearly 588,000 are either entirely current or less than 3 months in arrears and 113,500 others not only are meeting all regular monthly bills but, in addition, are making regular monthly payments on their arrearages. About 126,000 other borrowers are making adjusted payments which give hope that they, too, will be enabled to "come through" and nearly 44,000 accounts, amounting to $101,000,000, have been fully liquidated and crossed off the books.

Borrowers have paid back more than $500,000,000 of their entire principal indebtedness; about 90 cents of every dollar due has been paid to date, with collections now aggregating about $1,000,000 in principal and interest every working day.

The accomplishments of the Corporation, however, are not confined to the relief it extended more than a million home owners in the form of loans or in helping halt the demoralization of a real-estate market that already was recording 1,000 foreclosures a day and never could have withstood the shock of a million more. In taking mortgages totaling $932,400,000 from banks and trust companies, $767,900,000 from savings and loan associations, $192,000,000 from finance and mortgage companies, and $164,600,000 from insurance companies, it made those institutions liquid and allowed them to grant leniency to other distressed home owners. The rest of the $3,093,000,000 the Corporation advanced before the close of its lending period, June 12, 1936, went direct to individual mortgage lenders, keeping them, too, from adding to an avalanche of foreclosures which had mounted to 1,000 a day.

The Corporation saved its borrowers $200,000,000 in concessions it was able to obtain for them from mortgage holders at the time of refinancing. It directed the spending of $78,000,000 for repairs which made their homes better investments and sounder security. And it paid $229,000,000 to wipe out delinquent taxes. It is estimated that H. O. L. C. borrowers to date have saved $175,000,000 in interest alone—the difference between the amount they have paid under their 5-percent rate and the higher rate on which they originally obtained their mortgages.

But perhaps the Home Owners' Loan Corporation's chief contribution was toward the reformation of the entire mortgage structure of the Nation. Its 15-year, 5-percent amortized mortgage has revolutionized the home-mortgage field. It swept away the old and burdensome second mortgages of H. O. L. C. borrowers, and the second mortgage is virtually disappearing from the American home-financing picture. The old short-term loan, renewable only at high fees and which the average home owner rarely ever pays off, also rapidly is being discarded. The low-interest, long-term loan now is a recognized part of home financing in this country.

The H. O. L. C. at the present time owns 88,576 homes. It has sold 34,595. These homes—representing only about 12 percent of the number H. O. L. C. refinanced—were acquired only after every effort to save their owners failed. It is estimated that 18 percent of the homes acquired were abandoned or virtually so and that 6 percent came to the Corporation through deaths of borrowers and refusal of heirs to assume their obligations, or through legal complications. The largest single block of foreclosures, almost 40 percent, resulted either through willful default of those able to keep their contracts or utter refusal to cooperate to the best of their ability. Only a minority of foreclosed H. O. L. C. borrowers lost out through sheer inability to pay.

The personal service which the H. O. L. C. instituted was unprecedented. If borrowers were out of jobs, H. O. L. C. field men sought to get them employment; if they were eligible for relief, they were aided in obtaining a shelter allowance which could be applied on payments for their homes; if they were "overhoused"—attempting to carry homes beyond their incomes—they were helped to rental or sale. Every resource was exhausted before foreclosure action was taken—and even then 16,500 withdrawals of foreclosure actions prove that leniency was granted to the last.

It must be realized that the average H. O. L. C. borrower, when refinanced, was 2 years delinquent in both principal and interest and in arrears for 2 to 3 years on taxes. The average foreclosed H. O. L. C. borrower at the time of foreclosure was again delinquent 20 months in both principal and interest to the Corporation, with unpaid taxes mounting. Since the process of foreclosure requires several months in the average State, the average borrower who has lost his home occupied it rent free for at least 4 and probably 5 years. If he was unable to make any progress toward rehabilitation in that period, little hope could be held out for the future.

Net H. O. L. C. foreclosure authorizations dropped in November to about 2,000 from a peak of 8,000 monthly in the late summer and fall of 1936. In several States foreclosures virtually have ceased; in many others withdrawals are about equaling foreclosures. H. O. L. C. has been able to dispose of its acquired properties almost at will, but only offers them for sale in quantities which will not adversely affect the stabilization of the real-estate market. In 1938 the Corporation sold more than four times as many as it had sold in the course of its operations up to December 31, 1937.

As rapidly as the H. O. L. C. has acquired homes, they have been placed in condition to yield income. Its reconditioning forces are spending about $100,000 each working day for that purpose and to recapture values lost through depreciation; in all, $45,000,000 has been expended to improve such homes, making a definite contribution toward safeguarding neighborhood values. Of the homes the H. O. L. C. holds, available to yield income, 88 percent are rented; 98.8 percent of the renters either are current or less than a month in arrears.

Although the H. O. L. C. was created to meet an emergency, its officials have sought to make permanent contributions toward a more secure home ownership in the future. Forced to recondition half the homes it refinanced in order to make them good security, the Corporation exposed the full extent of shoddy construction in the small-home field. As a result, its technical forces conceived the Federal home building service plan, which now has been placed in operation by the Federal Home Loan Bank Board, the parent of the H. O. L. C. It is a program which links home-financing agencies, architects, materials dealers and manufacturers, contractors, and all other elements of the building industry to give better design and supervision of construction to small-home seekers for the first time in the country's history.

These technical forces now are working on a neighborhood rehabilitation program, which seeks to halt the obsolescence of what should be sound residential areas, either through blight within their borders or from the menace of encroaching slums. They believe that a united front of home owners, real-estate interests, and home-financing agencies can halt the staggering loss in property values which all major communities now bear each year.

The H. O. L. C. has a selfish interest in such programs to better home construction and protect home investments, since it owns a vast number of homes and has mortgages on hundreds of thousands more, all of which are affected by any decline in property values. But, in a broader sense, it is seeking to protect not only itself and its borrowers but all home owners of the future from the conditions which contributed to the necessity of establishing the H. O. L. C. during the most desperate period of the depression.

Royal S. Copeland

MEMORIAL ADDRESS
OF
HON. MATTHEW J. MERRITT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROYAL S. COPELAND, late a Senator from the State of New York

Mr. MERRITT. Mr. Speaker, once again the Grim Reaper has reached out and taken from our midst the Honorable ROYAL S. COPELAND, Senator from the State of New York.

In the passing of Senator COPELAND the Congress has lost one of its ablest and most brilliant Members. His life has been one of devotion and service to the people of the State of New York and to the people of this great country of ours.

His scholastic attainments have not only been in the field of politics and government but also in the field of medicine he leaves behind a most honorable reputation.

It was my honor and good fortune to have known him intimately, and at this time I desire to pay tribute to this fine character who guided me with a fatherly hand and gave me the benefit of his experience in my first campaign as an aspirant to the House of Representatives. I have lost a very dear friend. May he have eternal peace.

Robert Low Bacon

MEMORIAL ADDRESS
OF
HON. MARTIN J. KENNEDY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 30, 1939

On the life, character, and public service of Hon. ROBERT LOW BACON, late a Representative from the State of New York

Mr. MARTIN J. KENNEDY. Mr. Speaker, others have used poetry to describe the late ROBERT LOW BACON, one of the most distinguished Republican Members to serve in this House since I became a Member. He was a real man.

He was a patriotic soldier and a splendid legislator. Mr. BACON loved politics, and during his long years of service

here in the House he worked indefatigably on the Committee on Appropriations. He was a fiscal expert.

The way of life leads in many directions. Mr. BACON did not seek a political career because of any anticipated monetary rewards, as he was independently wealthy. I believe he did it for the same reason that he went to the Mexican border with Funston; for the same reason that led him to don the soldier's uniform in 1917. We all know that he was as modest in his conduct here as he was in the way he won and accepted the Distinguished Service Medal.

A charming gentleman, he despised show-offs and the superficial. He was unselfish and he loved life. He loved his colleagues and they loved him.

I know, Mr. Speaker, that he would be disturbed if I used more flowery words to eulogize him, for, as I have said, he was a modest man.

He has "gone west," as soldiers say, and wherever that is, he has again found friends. That would be BOB BACON.

A Gentleman, a Statesman, and a Scholar

MEMORIAL ADDRESS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 30, 1939

On the life, character, and public service of Hon. JAMES HAMILTON LEWIS, late a Senator from the State of Illinois

Mr. MASON. Mr. Speaker, recently, on the floor of that Senate which he served so well, loved so well, graced so well, JAMES HAMILTON LEWIS received the final highest tribute of his Nation. The Senate Chamber was hushed; the scent of spring flowers filled the still, quiet room. Capitol guards stood at each end of the silver casket with its single spray of white lilacs. Before it stood the great men of the Nation. Behind it flowers were banked. The Chaplain intoned:

Let not your heart be troubled; ye believe in God, believe also in Me. In My Father's house are many mansions; if it were not so, I would have told you. I go to prepare a place for you. And if I go and prepare a place for you, I will come again and receive you unto Myself; that where I am, there ye may be also.

Thus, a gentleman, a statesman, and a scholar was laid to rest.

Tariff Protection

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Monday, June 5), 1939

EDITORIAL FROM DES MOINES (IOWA) REGISTER

Mr. HILL. Mr. President, I ask unanimous consent to place in the Appendix of the RECORD the excellent editorial entitled "Whom Protection Doesn't Protect," appearing in the Des Moines Register of May 26, 1939, and written by the distinguished editor, Mr. William Weymack.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Des Moines (Iowa) Register of May 26, 1939]

WHOM PROTECTION DOESN'T PROTECT

The Register has repeatedly pointed out that in all the limitless talk about high tariff "protection" there is virtually complete silence about who pays the bill and what the real effect of the tariff subsidies is on our Nation as a whole.

Plenty is said and endless statistics are quoted to show what horrible effects any lessening of high tariffs would have on certain specific interests—the favored beneficiaries.

It is always the special interest that is put forward, never the general interest. This is true whether it is a purely industrial group that is getting the "pap", as for the most part in the case, or whether it is a certain segment of labor that happens to be employed in a "protected" industry, or whether it is a particular part of agriculture that looks strictly to its own short-term interest and not to the long-term interest of agriculture as a whole.

The powerful disinclination of any of the tariff subsidy-getters to permit discussion even to turn seriously toward the consumer side of the picture has been illustrated again and again.

A year or two ago the Register commented on the fact that when the issue of processing taxes in connection with a farm program was up, and when a clique in Congress was making a drive for "exposing" the hidden costs of such taxes to consumers, all that was necessary in order to stop the drive in its tracks was to couple with it a proposal to "expose" through a similar study the "hidden costs" of high tariffs.

The entrenched tariff beneficiaries wanted none of that!

The Canadian Government a few years ago, through an official commission, made a most interesting study of "price spreads" in that dominion, and what the study showed as to the penalizing of consumers t) rough the years by protective tariffs was enough to make eyebrows lift until they merged with the hair on the back of one's neck.

We desperately need a study like that in these United States.

Just to give a hint of what the total picture would be, let us note here a few facts that have come to our attention about sugar. We are not "picking on" sugar. It just happens to be an immediately available illustration. It also happens to be a timely one because of the new drive in Congress for still more protection in the form of quotas for our domestic sugar interests.

We consumed in the United States in 1938 twelve and a half billion pounds of sugar, or 96.11 pounds for every man, woman, and child. Concealed in our national sugar bill is more than $325,000,000, which as consumers we had to pay, above the world sugar price, as a subsidy to our domestic sugar producers.

Philadelphia is one of our great sugar-refining centers. At the very time, recently, when a Philadelphia refiner was quoting sugar at a net price of $4.214 per 100-pound bag for domestic use, the refiner was quoting, for sugar identically packaged but made from unsubsidized raw sugar, the net price of $1.60 for export. The difference between the domestic and export prices represents the total of the various protections given domestic sugar producers. Subtracting the world price at which sugar is sold for export (in the quoted case, $1.60) from the "loaded" price that we pay as American consumers (in the same case, $4.414), we arrive at the hidden cost of "protection" to consumers (in this case, $2.614 per 100-pound bag).

"Protection," very obviously, is anything but protection for the American family that buys sugar.

Figuring our per capita sugar consumption at the 1938 rate of 96.11 pounds, which happens to be below the figure for normal years, not above it, and figuring our population at 130,000,000, the cost of sugar "protection" to all of us as consumers reaches $326,000,000 on last year's consumption of refined sugar. Actually, this should be translated into "raw value equivalent," which raises the figure to $346,000,000 or over $11 per family. Even after deducting from the above total the tariff revenue of about $40,000,000, which goes to the Federal Treasury, there is left plenty that comes out of consumer pockets as a tax, not for government but for our protected sugar interests.

The purpose, of course, is to permit a small percentage of our mainland producers to produce sugar beets and cane in competition with the natural cane sugar production of the Tropics. Last year this mainland production was the equivalent of 41,296,000 100-pound bags of refined sugar with a gross value of approximately $175,000,000. In spite of all the protection and hothousing that has made even this production possible, it amounted to less than 30 percent of America's sugar consumption needs.

In other words, to protect a crop with a gross value of $175,000,000, the American people are required to pay in excess of world sugar prices, nearly $2 in cost to themselves for every $1 of subsidy to a small American segment.

This is merely an exhibit A of what "protective" subsidies of this sort long have meant to American consumers.

Since the great bulk of effective "protection" has been on things that farmers buy and not on things they sell, the American farmer has been the chief "goat" of the whole long process.

It is the inevitable discrimination of this tariff-subsidy grabbing, more than any other single factor, that has forced American agriculture into complicated and difficult "defense programs"—programs that, ironically enough, the great majority of tariff pap-suckers get red in the neck about.

COST OF SUGAR "PROTECTION" BY STATES

The table below is a break-down by States of the hidden costs of one part of our high protective-tariff policies. It amplifies the discussion in the editorial on the same subject that appears today at the left of this page.

It should be noted that totals in this table may vary somewhat from those used in the editorial, for the reason that the table is based on the 1930 census (the latest for which official population

figures for the various States are available) and on the 1938–39 sugar-crop reports. The population of the country in 1930 was only 122,775,046, whereas now it is 130,000,000.

It should also be noted that only the hidden or excess protective cost is given. The actual cost of the sugar consumed by the several States is, of course, very much higher.

State	What the farmers of the State got for the sugar they produced	What the people paid in hidden costs for the sugar they ate	Net gain or loss to the people through these hidden costs
Alabama		$6,642,082.48	−$6,642,082.48
Arizona		1,093,288.23	−1,093,288.23

Address to Graduating Class of United States Naval Academy

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Monday, June 5), 1939

ADDRESS BY ADMIRAL WILLIAM D. LEAHY, UNITED STATES NAVY, CHIEF OF NAVAL OPERATIONS, JUNE 1, 1939

Mr. WALSH. Mr. President, I ask unanimous consent to have printed in the CONGRESSIONAL RECORD the well-received address of Admiral William D. Leahy, United States Navy, Chief of Naval Operations, to the graduating class of 1939 of the United States Naval Academy at Annapolis, Md., Thursday, June 1, 1939.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Gentlemen of the class of 1939, someday after a long absence from Annapolis in strange parts of the world, when the now familiar, and shall we say occasionally annoying, details of academic life shall have been softened by the perspective of time, you are going to be very much surprised at the surge of pleasing memories that comes with even such a visit as this one of mine; with its task of trying to think of something interesting and instructive to tell to a group of young gentlemen about to embark on a career in the Nation's sea defense.

It was hoped that your Commander in Chief, our sailor President of the United States, could have honored us today by officiating at this ceremonial dedication of yourselves to your country's service, but through pressure of work he is unable to do so, and the privilege has devolved upon me.

I am told that in your curriculum at the Naval Academy there has been established in recent years a course of instruction in English and public speaking that is expected to give to all of you a proficiency in the art of getting yourselves out of the kind of a predicament in which I find myself today.

It is unnecessary to tell you, because you will soon know, that in the ancient days when I was a midshipman the final result of our misnamed English course approximated to what we then called an absolute zero.

We indulge in a hope that your accomplishment in the use of the spoken and written word is better, because I can assure you that while proficiency in public speaking in the Navy rarely pays useful dividends, except in personal satisfaction, skill in the use of English is one of the most valuable of all the accomplishments that can be possessed by an officer of the Navy.

The class of 1939 is today starting on a career of highly honorable service in the cause of Americanism, with a diploma from this academy that is a certificate of your moral, mental, and physical fitness to command men in the service of your country. This is a certification of moral and mental attainments of the highest order. It assumes that you will hold the welfare of your men above everything but the welfare of the State and that you will hold your own personal comfort and safety as negligible.

Today also in the ceremonial acceptance of your commissions you will each one solemnly dedicate yourselves to that service and you will depart from these familiar scenes to a strange and different environment on distant seas.

You are entering the most competitive of all professions of the Government—that of a commissioned officer of the United States Navy. Your commissioned record begins on your first ship and the last report to complete that record will be submitted when you leave the active service. You will be scrupulously observed by your superiors, and considering the fallibility of human opinion, their reports over a reasonable period of time will give as exact a measure of your character, achievements, and professional qualifications as can be obtained in any conceivable way.

A distinguished officer of the Navy expressed this a quarter of a century ago by saying:

"In the Navy, after you have been in it a certain number of years, everyone knows you, has you labeled, sized up, and cataloged."

You will today accept an obligation to the Nation to keep that record clear.

In addition to the diploma you will each take with you from the academy something else that is intangible and spiritual that may not be acquired at other institutions of learning.

This intangible spiritual possession seems to be a combination of loyalty to ideals, tradition, courage, devotion, clean living, and clear thinking that has been passed down to you by generations of sea officers who in the service of America built the traditions of the Navy. It is more than "esprit de corps," because it reaches far beyond the corps and comradeship.

Perhaps the words "military character" approximate to a definition of this quality that you all to a greater or lesser degree take with you from the academy.

It will be cultivated and made to grow stronger by most of you through devotion to the synonymous ideals of Christianity and of Americanism, and it may be damaged or lost to some few of you through self-indulgence or intemperance in thought or in living.

The measure of success that waits for you in the high calling to which you are dedicated today depends almost entirely upon the preservation and development of this intangible virtue which has been given in such full measure to all of us; and it therefore appears proper to commend to you the closest possible adherence to the Navy's standards of clean living, courage, devotion to duty, and unselfishness; with an assurance, acquired by observation through nearly a half century of service in the sea defenses, that the rewards for superior military character are tangible, and in peace and in war are the highest attainments that may be aspired to by those of us who are set aside for the cause of national defense.

You will hear many times in your naval career the expression "best interests of the naval service." I commend to you its use in making decisions on the many professional questions that will arise. A well-considered decision or recommendation based on the "best interests of the service" can rarely be criticized. In our profession the service must be put first, and self and individuals must come last.

Your education in its broader aspects is just commencing. There will be much to read and study along strictly professional lines. But so many problems confront our country today that it is necessary for us to keep well informed on current events; and to visualize the future one must know considerable of the past. Naval, military, and political history will assist you in understanding the position our country occupies in the affairs of the world. From the history of the United States and that of our profession you will learn with what unselfish devotion your predecessors gave their best energies to the task of achieving our independence, and in establishing and preserving a free government. Such study is recommended for its inspirational value to the officer and it truly

gives an understanding conception of that general term which we call "Americanism."

To understand naval policy you must be conversant with the national policy which necessitates continued study of a comprehensive and ever changing picture at home and abroad that is in the present time causing a considerable increase in our preparations for national defense.

The character of the naval service will be reflected often by an individual officer. Because of your opportunity to travel and visit remote parts of the world there will be times when your conduct, bearing, and conversation will give to foreigners their only impression of an American in official life. To be a representative American requires a personification of the finest qualities of our race. The expression "officer and gentleman" must, in your understanding, define everything that is superior in the character of an officer and a citizen.

There is a demand for leaders in all professions and businesses; the Navy is no exception. You will read many excellent essays and studies on leadership, but you will develop your natural gift for leading by the emulation of others and by a critical study of yourself, and the success of your service career will be determined mainly by your reputation and potentiality as a leader of men. The study and practice of all phases of the absorbing art of leadership will continue throughout your professional life. To inspire confidence, respect, and loyalty, epitomizes the outstanding qualities of successful leaders. Confidence in oneself is gained by a mastery of profession; respect is inspired by your exercise of authority, your bearing, and your personality; while the loyalty accorded to you is proportionate to your sense of justice, your industry, and your ability to inspire others. The Naval Academy has done its best to give you a ground work in the absorbing subject of leadership, and now you will be faced with its practical application in the fleet. Perseverance and introspection will achieve results.

A well-known contemporary writer has made the following pertinent observation:

"Doctors and Army and Navy officers have in them something of the same holy zeal of a monk. Their professions call for a renunciation of worldly wealth and place; they work for the joy of the job and get little thanks and much criticism for it, and are never really appreciated until a grave emergency arises."

This observation contains a lesson of value to all of us. A "grave emergency" comes in every generation. It will come in yours; but if you aspire to worldly goods, or ease, or the usual comforts of life ashore, the Navy will be a misadventure, and you should in your own interest begin another line of effort without delay.

If on the contrary we are pleased to accept the sacrifices involved, life at sea through the ages has for youth provided romance, adventure, and opportunity for service.

It has trained men in vigilance, self-reliance, initiative, and endurance; and it has eliminated quickly those lacking in courage.

It has rewarded survivors with the satisfaction of successful contest with the elements, with days of soft sunshine in tropic seas, with pleasing friendships, sparkling enmities, and a continuing promise of adventure beyond every horizon.

Forty-two years ago it was my happy privilege to stand where you are today at the beginning of a career in the service of our country.

In a few days that career will be terminated by retirement at a statutory age that for you is still in the far distant future beyond years that will probably provide for you even greater opportunities for service than those that were available to my generation.

We are envious of your prospects.

With a counsel to remain always steadfast in your devotion to the ideals of America inherited from our fathers, to be considerate of the ideals of other peoples, to strive for peaceful solutions of differences, and to hold your personal honor of higher value than all else; I have the privilege today of extending to you from the Navy a welcome to full membership in the brotherhood of sea officers of America, and to deliver your earned and justly prized diplomas.

Memorial Day Address

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Monday, June 5), 1939

ADDRESS BY HON. JAMES J. DAVIS, OF PENNSYLVANIA

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Memorial Day address which I delivered at Shippensburg, Pa.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Memorial Day increases in significance as we reflect on the spread of intolerance and war in so many foreign lands. This has been a restless, militant, war-like, intolerant, depressing, tragic decade. On this Memorial Day the American people are entering into a grave understanding of these sources of conflict and the inevitable influences they cast over the lives of all of us. We remember the fratricidal strife of our own Civil War days. Only 62,108 veterans remain of the Grand Army of the Republic. We pray that never again will the horrors of war ravage the youth of our land and bring the economic and social disasters that have followed upon civil war.

Dorothy Thompson has recently told a story of a visit to Arlington and the house of Lee with the poet, Ernst Toller. He looked out over the cemetery and said: "It is very peaceful here, peaceful and democratic." That is the way we hope it will remain with all America. Peaceful and democratic. We do well to recount the tragedy that marked the lives of so many of the Blue and the Gray. War takes our best and uses it for the worst.

Too often the struggle to abolish war is thought of as a struggle to escape the dangers and hardships that war brings. This is to miss the main point. The struggle for peace is a search for the full opportunities of development that humanity requires to develop its best side, to make human progress possible. More sacrifices and greater hardships are endured by many who strive to keep the peace than by those who thoughtlessly go to war. In every country in the world today are men and women who are resisting the lower-level currents of life that make for war and destruction. The assumption of the State of the authority over human personality, to cause a man to destroy his fellow men, is an outrage upon God and man. I cannot conceive of conditions that would cause me to vote to conscript the youth of the United States to go abroad to fight on foreign soil.

Our thought goes out in sadness today as we reflect on the Unknown Soldier. Of the countless millions of boys and men who have laid down their lives in war, so many are unknown, and tragically, so many are forgotten. We do well to recount the tragic events of the lives of these unknown and forgotten men, directing the attention of the Nation and of the world to the futility of war.

In recent years we have heard more and more concerning un-American activities. Let us not fall into the error of approaching this problem too largely in a negative way. We have a responsibility to encourage the American spirit as well as discovering those who seek to undermine it. We may be sure that if our own altars and firesides are kept sufficiently clean and sacred no foe from without can destroy us, and no foe from within, except that within our own hearts, can overcome us. While we should not neglect to give due consideration to the threats of foreign dangers and the perils of unfriendly activities of the alien mind in our own midst, our chief responsibility is to give substance and health to our American institutions of government and our own individual obligations as citizens of this great Republic.

We are spending more now for national defense in peacetime than ever before—forced to a military, aerial, and naval program by the vast armament preparations of other powers. It would be much better for the world if America were now leading in the cause of limitation of arms, as we did in the Washington Conference under President Harding. Unfortunately, the splendid efforts we made for arms limitations at that time were almost totally disregarded by foreign powers and our unselfish attitude played into the hands of imperial greed. We are now forced to take a firm stand for America.

If we are to protect America we should thoroughly understand the form of government under which we live. Before we can be true Americans, we must know what America stands for. Ours is a representative government of the people; technically not a democracy, but a republic. A pure democracy is seldom found. The city states of Greece constitute an ancient example, where freemen were equals and had an equal participation in government, and yet those freemen enjoyed their freedom at the expense of a large population of slaves. The Cantons of Switzerland represent a more modern development. But the United States of America was not constituted as a democracy where each citizen should have equal responsibility in government with all other citizens, but rather as a representative government, a republic, in which those chosen by the people were to exercise the powers of government delegated to them.

If by precept and example we train the rising generation to build a worthy leadership we shall have discharged our first responsibility for the safety of our Republic. The education for citizenship should be sufficiently widespread that educational opportunities provided for all should give a substantial basis for the individual development of anyone who at some future time may be called upon to serve the people as a leader. No one can say who that leader will be. The most democratic thing in the world is an idea. A dominant idea will choose a humble birthplace for itself, often in the mind of some obscure man or some neglected child, and from that idea will grow the force of a mighty movement which will shake the world and rock the thrones of earthly rulers. Before the power of a great idea, the forces of present-day dictators must tremble. They will give way before the shining light of truth as the blackness of midnight yields to the approach of the rising sun.

In looking into the faces of children, gathered in groups throughout this land, I have said time without number, perhaps in this group may be found a boy who some day may be the President of the United States, a Governor of his State, or a Senator of the United States. If that boy should rise to high office the education provided for him in his early days should be worthy of his future needs. And in our Republic the best for all is none too good for one.

A representative American should be a man of free and independent spirit. He should belong first of all to himself and to his Creator. He should recognize the instruction of the voice within himself, knowing that self-respect, self-discipline and self-control lead on to well-rounded cooperation with his fellow citizens. No one ever gave acceptable cooperation to others who had not first heeded the call of duty within himself. The representative American should have this spirit of liberty which calls him to be true to his own highest self. He should have courage cradled in self-respect, nourished in human sympathy, and built to the stature of full manhood through practical experience in the service of our Republic. If the representative American is to be free and unafraid all of our people must share in this same spirit. The chain of national integrity will be no stronger than its weakest link. The national security will never be more enduring than the lot of our citizens who have the least of comfort, the poorest food, clothing, and shelter, and the worst deprivations of education and culture. The chain is never stronger than its weakest link.

The representative American citizen should not only voice his own conscience but he should express the law within himself. The most important of all laws are not those written on the statute books at Washington but those that are engraved on the tablets of a man's own nature by the Almighty. No centralization of government, no despotic power of dictatorship, no restraint of police power can ever be an acceptable substitute for the law of righteousness within the individual American.

Memorial Day Address

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Monday, June 5), 1939

ADDRESS BY JOSEPH H. HIMES

Mr. BYRD. Mr. President, on Memorial Day at New Oxford, Pa., Mr. Joseph H. Himes, of Washington, D. C., delivered a most eloquent address. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Once again it is our privilege to turn from daily tasks and meet upon this consecrated ground, openly to honor our loved ones who have gone before. And once again we find words are but futile things to reveal the emotions welling, in such an hour, from our hearts.

We feel but cannot voice their fullness. We are stirred by sweetly poignant memories much as the dark waters of the deep are stirred by strong currents far below the surface. How well we remember many of those to whom we here and now pay tribute! But a few months or fleeting years gone by, and they were here as we are here now. Their feet were on the familiar ways which we now tread; their laughter rang, their tears were shed, as freely as our own. And then in succeeding days they drew aside to sleep in this serene and peaceful spot while we, the living, carry on.

They lived and loved and gladdened us. And when they went into the shadows they left for us rich heritage of memory. No one of us would barter that priceless heritage for all else in the world. Our loved ones resting here have hallowed our homes in memory. Of this community they have made a magnet whose invisible power plays ever on the heartstrings of its sons and daughters, near and afar. And of this spot where we now stand they have made a shrine.

To the men and women of this place whose paths have led elsewhere, as well as to those now living here, New Oxford will always be home. Here cluster our fondest memories. Here some of us spent the days of our youth, some of us our prime, and some life's evening. Here we grew to manhood and to womanhood. Here lived our loved ones. And here, in sadly lengthening lists, they now repose at journey's end. Those lasting ties bind our hearts to this spot above all others in our beloved land. This, indeed, is home.

Today is Memorial Day. It is a day given to sweet memories. Yet for all its peaceful calm, it was spawned in the blood and agony of the Civil War.

Strangely perhaps to northern minds, it originated in the South. The first Memorial Day exercises were held on April 26, 1866, at Linwood Cemetery in Columbus, Ga. By a common sympathetic understanding the graves of Confederate veterans there were decorated with flowers on that day.

The custom quickly spread. In 1868 Gen. John A. Logan, commander in chief of the Grand Army of the Republic, adopted it. He called for a day to be set aside, to be known as Memorial Day, in memory of Union soldiers and sailors who had perished in the Civil War. Their graves were to be decorated with flowers. General Logan designated May 30, because on that day the last Union volunteers had been mustered out of the Army after the close of the war.

And so within 3 years after the last of the battle flags was furled, the healing process had begun in the common devotion, North and South, to fallen heroes on Memorial Day.

To this community Memorial Day comes home with peculiar force and emphasis. For in this setting, so familiar to us, all the course of history was determined.

A few years before the first Memorial Day the peaceful hills and valleys of this neighborhood resounded with the roll of drums, the blare of bugles, the tramp of marching armies, and the thunder of the guns that rose to its death-dealing crescendo on the field of Gettysburg.

Thus, we of Pennsylvania, feel we have a charter interest in Memorial Day. Here the great God of Hosts rolled back the rising tide of gray that we, for a time, called enemy. Here He stamped His mighty seal on the cause for which Pennsylvania shed its blood. And, as we then stammered in hot haste our gratitude to Him, so we reverently thank Him again today while we honor the immortal dead of Pennsylvania—flesh of our flesh, bone and sinew of our own—who gave their lives in the titanic struggle.

Yes, we have a founder's interest in Memorial Day. But the flowers we strew on these flag-decked mounds around us are expression only of a feeling we cherish for them on all other days as well. Down through the dimming years we have met here to give token of our devotion; and up through the coming centuries our children and our children's children will continue to pay reverence to their dust.

The guns have long been stilled and the once crimson earth has now been green for more than two generations. The fierce passions of the Civil War have been quelled like roaring flames that dull to embers and to ashes. The legions of that distant day are now but a corporal's guard. And that small remnant of venerated veterans nears the Valley of the Shadow. All peace and honor to them. They have settled the issue forever. Today there is no North, no South; only a Union, one and indivisible.

Our eyes have seen the healing of those ancient wounds and scars. Slowly but surely the broken ties have knit. The culmination came a year ago when the aged survivors of the Blue and the Gray mingled as friends on the field of Gettysburg in the grand reunion marking the seventy-fifth anniversary of that crucial battle of the Civil War. And few are the echoes of our internecine hatred that come to us across the long span of three-quarters of a century.

Since that far day other issues have arisen and have been met. Other wars have called America's sons to the colors. Men of the North and men of the South have fought side by side, shoulder to shoulder, under the Stars and Stripes. They have breathed their last beneath the torrid sun of Cuba, in the jungles of the Philippines, along that far-flung way from the North Sea to the Alps and beyond.

Down through the years the spirit and sentiment of Memorial Day have broadened. At the turn of the century, fresh graves held valiant dust that had worn the uniform in the War with Spain. And we honored it as we honored the dust of our Civil War heroes. Less than 20 years thereafter the World War reaped its grim harvest of the flower of our land. They, too, came within our Memorial Day devotions when the President of the United States stood with head uncovered at the Tomb of the Unknown Soldier at Arlington.

Memorial Day was then no longer token to the immortal dead of the Civil War alone—it had become a day set apart to honor the dead of all our wars. The change was spontaneous. It was not written in an act of Congress decreeing a national holiday. There is no such act. It is not needed. The law under which we meet today is not written in a Federal lawbook. It is written on grateful hearts of the millions that make up America.

More recently we have come to regard Memorial Day as a fitting occasion to honor not only the dead of our armed forces but all our loved ones who have passed on.

More and more in late years has this feeling spread throughout the land. All honor to the men who served the stars and stripes. Peace to their ashes. Honor, too, to loved ones who served us, not to the music of fife and drum and to the plaudits of the world but those who served us in the lowly, humdrum ways of peace. For they too served well. They too have engraved their names upon our hearts. They too were of noble mien. Peace eternal to their dust.

In such mood have we assembled here today. The luster lying on the thousands dead from the ways of war in no wise is dimmed by our loving memories of the many millions who went to their reward in the piping days of peace. Not all our heroes, and but few of our heroines, have worn the uniform or marched when the bugles blew. Many stayed behind. The wives and mothers, for instance, of those who fell in battle—were they too not of heroic mold?

Theirs was the battle without the glory, the grim grind for peacetime existence without the pomp and pageantry of war. Their ears caught not the notes of martial music, but the cries of hungry children made fatherless in battle. On their bosoms they bore no medals of a grateful nation. Their badges were but furrowed seams of care upon their faces, and callous knots of toil upon their hands.

And when they came to their hard journey's end, no flag-draped caisson bore their dust to its last resting place. No bugle sounded taps above them, no last salute volleyed over them from upraised rifles. For them there was no Arlington. They lay down unsung in myriad peaceful spots like this. And only the purling waters of placid streams, the birds of the air, and the winds of heaven chant their praise.

Here today we see their resting places all around us. Brave men and women of peace, heroines and heroes unproclaimed, we salute and honor you as well. Without our heartfelt tribute to your dear dust Memorial Day devotions would be incomplete, indeed.

We stand here now in memory's quiet hour with eyes fixed on the glorious past. And even as we stand and look our hopes and fears turn to the uncertain future and vainly grope to glimpse it. Another, and related, thought tempers the calm of our devotions.

What of the future's troubled tomorrow, now hid from us? In coming years will there be still other graves at this fair spot to make the grisly toll of battles yet unfought? Will wars to come bring more flags here atop fresh mounds of honored clay? More sobs of orphaned children? More unsung heroines who stooped beneath the burdens of fallen sons and fathers?

God forbid! The words fall in all reverence from my lips.

But is it enough simply to say "God forbid"? From across the seas the rumble of approaching strife comes to us. We pray the storm may pass. And as we pray, deep in our hearts we hold the firm conviction that this mighty, peaceful Nation should never again engage in foreign war. The Stars and Stripes already have been bathed in blood enough to last for all eternity!

We of America want no more of war, least of all foreign war. Let us make that so plain that he who runs may read. Our souls thirst for peace; these honored graves cry out for peace. Nor is the cry a craven call. Let those in high place hear it. For it is the sobered thought of this strong and virile Nation as it works out its destiny with good will to all other peoples and with malice toward none.

We of America would travel our time-honored way. We would walk alone, conscious of our dignity and might, along that road which leads to peace. We seek to tread beside no nation on the way that leads to war. With the bristling camps on the oceans' farther shores we have no quarrel. They are not our camps. We seek no conquests. We desire no entangling alliance that may set our feet on the ruinous road to Armageddon.

Let us make crystal clear our steadfast purpose to have naught to do with foreign wars. In a world unbalanced and torn by reckless passions let us attune our ears to the call of our own people. It is a call for peace. Let us keep our heads and hold our tongues from part in the raucous quarreling elsewhere. It is not our quarrel. On no pretext or excuse whatever should it be made our war, should war come.

Our country is at peace today. Let us so watch our step that it will remain at peace. Let us not provoke hostility.

God grant that war will never come again to America. But should it come, despite our will for peace, then let it not be war of our provocation. Let us ever be ready to repel the invader. Let us ever be ready to rise in our might and overwhelm those who may threaten our liberty. Let us be prepared to meet with unyielding force if necessary any menace to American safety and security in whatever quarter the menace may arise.

Beyond that, let us stay our steps. By that course of conduct we may walk with our children in the ways of peace for the years to come.

The flag-marked dead around us here fought in battle that we might live. Let us live so that our youth may not have to fight in war of our own provocation.

Idle Money and Men

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Monday, June 5), 1939

EDITORIAL FROM THE NEW YORK TIMES

Mr. TOBEY. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the New York Times of last Friday, entitled "Idle Money and Men."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times]

IDLE MONEY AND MEN

The President has recommended that the Temporary National Economic Committee investigate the reasons for the idleness of money with a consequent idleness of men. If the committee undertakes this task seriously, it will have to look into some of the policies of the administration. For while recovery has doubtless been delayed by European political unsettlement, and while certain obstacles to recovery are to be found within the business structure itself, governmental economic policies have also played an important part.

The briefest consideration of some of these policies and, above all, of their cumulative effect, is enough to indicate why American capital is timid. The effect of the undistributed-profits tax has been sufficiently dilated upon. The excessive and one-sided capital-gains tax must alone have an effect of the first importance. When men who are asked to put their money into new business ventures stand to lose the entire amount if they fail, but to retain only a minor fraction of their gains if they succeed, the timidity of "risk capital" cannot be regarded as mysterious.

The stock exchanges of the country recently called the attention of the Securities and Exchange Commission to some of the regulations governing securities which still place excessive obstacles in the way of market stability and new capital issues. The "emergency" money powers granted to the President, and the unbalanced Budget, add to the elements of uncertainty. The workings of the Wagner Labor Act and heavy pay-roll taxes add to the difficulties of employers and place serious obstacles in the way of full employment.

The President, as his letter to Senator O'MAHONEY illustrates, has ignored or underrated these psychological factors. He tends to view "the financial machine" as if the difficulties were purely in "the mechanism." But American capital is idle largely because of understandable timidity, and idle money is certainly one of the major causes for idle men. There is enough ability and independence on the part of some outstanding members of the T. N. E. C. to lead to the hope that a realistic reply to the President's questions may be forthcoming.

Freight Rates

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 6 (legislative day of Monday, June 5), 1939

STATEMENT OF FORMER GOV. BIBB GRAVES

Mr. HILL. Mr. President, a few days ago the Senate passed S. 2009, the general railroad bill, containing the provisions of Senate Joint Resolution 99, which prohibits unjust, unreasonable, and unlawful freight rates as between regions, sections, and territories, and directs the Interstate Commerce Commission immediately to make investigations and to issue such orders as may be necessary to remove any such unjust, unreasonable, or unlawful rates. On last Thursday arguments were made before the Interstate Commerce Commission in the so-called Southeastern Governors case. The chairman of the Southeastern Governors Conference, when the case was filed, was the then Gov. Bibb Graves, of Alabama, and it was largely because of former Governor Graves' initiative, insistence, and leadership that the case was brought. I ask unanimous consent to place in the Appendix of the RECORD the very strong and able statement that former Governor Graves made to the Commission on last Thursday.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

If the Commission please:

Let me first try to clear some of the misunderstanding that has been gathered around and gotten into this case.

The record shows that the distinguished Governor of Rhode Island on the witness stand, when asked by Mr. Norman, "I will ask you, then, if you do not understand that what we are asking for is only a parity?" replied "No; I do not understand that. I understand that you are asking for an advantage." (Record, 1826.)

Surely the clearing up of such misunderstanding is necessary, not just for the success of this proceeding but primarily for the

welfare of this country. Instead of seeking to obtain or make secure any advantage for any part of our country over any other part, we are, on the contrary, seeking to establish facts and principles that will remove any such advantages as may now exist and make impossible their future existence. Or, to put it the other way, we are trying to remove every man-made trade barrier that in any way, anywhere, interferes with the equality of opportunity for any part of our country to do business with every other part.

The ends we seek are not sectional—they are national.

We are trying to give to every consumer, to every buyer within our Nation, a Nation-wide market in which to buy. The majority of our people live in official territory. Many of their needs must come from without that territory. Yet, under the system which we attack, in order to secure these needs they must pay a penalty in excess freight rates, measured quite often by what somebody thinks "the traffic will bear."

Such a system is untenable in statecraft and in ethics and is at variance with the law of the land as set out in the 1933 amendment of paragraph 2, section 205, of Emergency Railway Transportation Act requiring that, among other factors, due consideration be given to the need in the public interest of adequate and efficient railway transportation service at the lowest cost consistent with the furnishing of such service.

As we see it, the fundamental rights and vital interests of these absent consumers are wrapped up in this cause, and if your honorable body will see eye to eye with us and give to them in fact a Nation-wide market in which to buy, it will follow that producers or sellers will have a Nation-wide market in which to sell and we will be in economic life one nation and no longer in business ways separated into contending freight territories. A nation that is economically part empire and part province cannot be the unity that we must be in order to hold our place in today's nationalistic world.

Let's look back a century and a half; invidious and partial restraints prevented free commercial intercourse between the independent colonies and brought on trade wars between them. The elimination of these trade wars was doubtless the most potent influence in bringing our Nation into being. Yet our present rate walls between great sections are far more destructive than were those petty quarrels that united us.

The testimony in the record sets out the history of this proceeding from its inception some 5 years ago to the filing of the petition herein about 2 years ago.

It will be seen that at the first there were pending bills in the Congress seeking to remedy the territorial freight-rate discriminations by the legislative route. Successful opposition to any such political methods determined the leadership in this proceeding. That leadership made this a lawsuit rather than a political ball game, and has sought to accomplish those things which we believe best for our Nation as a whole, by this orderly presentation to this honorable Commission.

We have throughout avoided all political and sectional matters and adhered to the legal and national aspects of the case.

Our complaint stresses that the freight rates of which we complain violate "the declared policy of Congress that rates shall be so made as to permit the free movement of traffic and the proper development of the country as a whole"; that such discrimination "retards the national development and thus lessens the opportunity of our country to meet the competition of world markets, in violation of paragraph 2, section 205, of the Emergency Railway Transportation Act of 1933." In that complaint we say (p. 14): "It is in the interest of the public, and especially to the interest of the manufacturers and producers in southern territory of the commodities shown in exhibit B, and to jobbers, retailers, and consumers in all of the territories, that commodities so named shall freely move among all the territories."

The same is true of the evidence we have introduced in our efforts to sustain that complaint. The first witness swore (pp. 31–32): "In this case we present to the Commission the question of the right of all the peoples of these States to have a full and fair opportunity to participate in the commerce of the entire Nation; the question of the right of all the people in official territory to purchase the products of other sections of the United States in a Nation-wide market on a basis of free and fair competition to all concerned and the question whether the people of these Southeastern States, who have been many times called upon, along with other sections of the country, to contribute their share toward the maintenance of a national system of railroad transportation, shall be given fair and impartial treatment by this system of rail transportation which the Supreme Court and the Commission itself often said now constitutes a national system.

What complainants are here asking for is something that should be conceded not only to them but to all other sections of the country where the conditions are similar to those between the South and official territory.

We are most anxious to remove such misunderstanding as has been referred to. We respectfully submit that if eyes willing to see will but look they will see that the grounds upon which this cause has been put, and upon which we have sought to have it maintained, are not political, but are legal; that those grounds are not sectional, but are national.

We believe that the complainants in this cause are the champions of every consumer of our country. The fact that these 100,000,000 consumers are inarticulate does not lessen the sacredness of the fundamental right and direct interest of each.

Surely no other cause that has come before your honorable body can have concerned more of our citizens and individuals or can have meant more to the economic solidarity of our Nation than this.

Our economic sufferings in the last decade have been in vain, if we have not learned that there can be no partial prosperity in our country. With us, prosperity must be for all or for none; or, as was said by Franklin at the signing of the Declaration: "We must hang together or separately."

The other economic lesson of this depression is that there is a limit beyond which it is not safe to exploit the consuming mass. Freight-rate differentials, arbitrarily made, based upon arbitrary territorial divisions are, we believe, in this case, unjust, and though made under the law, deny the equal protection of the law to their unfortunate victims; that they are not constructive, but are destructive of values. We believe conditions today demand that Americans stop exploiting one another and present a united front to the world.

This record shows natural resources in the Southeastern States that under present conditions are unusable, which, if used, would add infinite wealth to all of our country. Complainants in this proceeding are endeavoring to open to all this closed store of natural resources.

The railroads of the Southeast, through their accredited representatives, have come into the hearings in this cause and asked your honorable body to grant the relief for which complainants now contend, namely, the recommendations of the distinguished commissioner who conducted these hearings and of the examiner, who joined with him in those recommendations. This fact is a most potent argument in this case.

We are trying to be constructive. We are earnestly trying to help railroads. As to each and every item for which we prayed lower rates, we have reason to believe, and we do believe, that the granting of any or all of those prayers will economically benefit the railroads. We have not listed anywhere anything for a lower rate that we do not believe with reason will benefit the roads if the lower rates are granted. We believe that the great increase in the volume of business which will inure to the benefit of the whole Nation as well as to the railroads will far more than compensate for any loss in rates.

Be it remembered, our prayer is for parity of rates, not equality of rates. We know that generally we are further from the markets, and we expect to pay more to reach those markets. We are not asking for an absorption of geographical handicaps. We expect to pay for this greater distance. We believe that is sound in ethics, in economics, and in law, but we do insist that in addition to our geographic handicap we be not further penalized by an additional take-out because we chance to be in a part of the Nation which our opponents would treat as a satrapy of their empire.

We have undertaken to show that the cost of transporting freight is not greater in the South than in the North, and we believe we have succeeded. We believe that the conclusions set out in the proposed report now before you have been overwhelmingly established by the uncontradicted evidence in the case. True, there is a labyrinth of figures by expert statisticians, such as would bog up, as in a mire, any ordinary mind; but in all of this bog there are spots of solid ground on which we can stand securely. It seems uncontroverted that the density of traffic in official territory is some 114 percent greater than in southern territory, and by these same figures, that its rate valuation per mile of road is some 136 percent greater, showing that this big business has eaten up capital faster by some 22 percent than it has increased business.

We can take as established by these figures that the rate-making value per mile of road in the north is around $148,000 as compared with a like value in the South of around $63,000; the value of the transportation facilities being two and one-third times as much in the North as in the South, of course makes their cost of transportation service greater.

This array of technical figures cannot take away the common knowledge that we possess along with the average man in the street. That man in the street and you and I know that almost any passenger station of any great southern railroad could be hidden and lost in the basement of the station of the Pennsylvania or of the New York Central in the great city. What is true of passenger stations is also true of freight terminals. That man in the street and you and I know that it must cost hundreds of millions to build these great stations and terminals and subways and tubes and tunnels under skyscrapers and rivers; that to build these costs more than to build thousands of miles of cross-country railroads. We know that these great capital outlays were not made on a cash pay-as-you-go plan or a balancing of budgets of income and outgo but were made on a deferred-payment plan for the payment of which the revenues of the present and the indefinite future have been pledged.

Those fortunate sections that have had the enriching benefit of those hundreds of millions of capital outlays cannot both eat their apple and have it, too. Pay day has come and they must pay for the transportation services which they receive—not only for the present actual cost of that service but enough in addition to take care of these capital outlays, because that additional payment was pledged to amortize these bonded debts. These honest debts should be paid by those for whose benefit they were made. Neither roads nor shippers in official territory have any right in ethics, in economics, or in law to have a surcharge put on freight from a southern origin in excess of the charge for a like service on freight from elsewhere, as, from New England. Arguing volume of business as a basis for penalizing the South for furnishing that volume is so absurd as needs no answer.

It will be noted that those who differ most with us in our lower-cost contention (the southern railroads) join in our prayer. This

certainly shows that from the standpoint of the southern roads the cost element is not enough to effect results in this cause.

It will also be noted that of those who oppose our prayer, the northern roads are ominously silent upon this cost of service. If there is enough difference in these costs of service to rightly have any effect whatsoever upon results in this cause, 23 know that these northern roads, with their first-hand knowledge and ample resources, would not be ominously silent upon this point.

I submit that the railroads, both north and south, have taken away every basis of every cost-of-service argument of all of our opponents.

We believe that the testimony of witness Saunders establishes as a fact that the cost of transportation is lower in the South than in the North.

This expert technical proof is substantiated by such things within our common knowledge as those to which some reference has been made; also, by public documents, such as the T. V. A. studies, and especially document No. 271 of the House of Representatives, this Congress.

We ask that your honorable body give to our American southeast and southwest and northwest territories an opportunity to get into our great American market official territory on a basis at least equal to that granted to the industrial districts of the Dominion of Canada.

We ask that you stop these interterritorial and international discriminations, and that you stop them now—that you give us nationalism in our Nation, unity in our Union.

Freedom of Speech and Assembly

EXTENSION OF REMARKS

OF

HON. ROBERT W. KEAN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1939

CONCURRING OPINION OF MR. JUSTICE STONE IN THE SO-CALLED HAGUE CASE

Mr. KEAN. Mr. Speaker, June 5, 1939, will stand out as a "red letter day" in the age-old fight to protect the civil liberties which America has stood for since the days of the Revolution; for on that day the Supreme Court, in the so-called *Hague case*, reiterated its firm stand against any attempt to curtail our rights in this respect.

The concurring opinion of Mr. Justice Stone impresses me, as a layman, as an outstanding statement of American principles, and in leave to extend my remarks, I insert his opinion in full:

Mr. Justice Stone:

I do not doubt that the decree below, modified as has been proposed, is rightly affirmed, but I am unable to follow the path by which some of my brethern have attained that end, and I think the matter is of sufficient importance to merit discussion in some detail.

It has been explicitly and repeatedly affirmed by this court, without a dissenting voice, that freedom of speech and of assembly for any lawful purpose are rights of personal liberty secured to all persons, without regard to citizenship, by the due-process clause of the fourteenth amendment. *Gitlow* v. *New York*, 268 U. S. 652; *Whitney* v. *California*, 274 U. S. 357; *Fiske* v. *Kansas*, 274 U. S. 380; *Stromberg* v. *California*, 283 U. S. 359; *Near* v. *Minnesota*, 283 U. S. 697; *Grosjean* v. *American Press Co.*, 297 U. S. 233; *De Jonge* v. *Oregon*, 299 U. S. 353; *Herndon* v. *Lowry*, 301 U. S. 242; *Lovell* v. *Griffin*, 303 U. S. 444.

It has never been held that either is a privilege or immunity peculiar to citizenship of the United States, to which alone the privileges and immunities clause refers, Slaughterhouse cases, 16 Wall. 36; *Duncan* v. *Missouri*, 152 U. S. 377, 382; *Twining* v. *New Jersey*, 211 U. S. 78, 97; *Maxwell* v. *Bugbee*, 250 U. S. 525, 538; *Hamilton* v. *Regents*, 293 U. S. 245, 261, and neither can be brought within the protection of that clause without enlarging the category of privileges and immunities of United States citizenship as it has hitherto been defined.

RIGHTS GIVEN TO ALL PERSONS

As will presently appear, the right to maintain a suit in equity to restrain State officers, acting under a State law, from infringing the rights of freedom of speech and of assembly guaranteed by the due-process clause, is given by act of Congress to every person within the jurisdiction of the United States whether a citizen or not, and such a suit may be maintained in the district court without allegation or proof that the jurisdictional amount required by section 24 (1) of the Judicial Code is involved.

Hence there is no occasion for jurisdictional purposes or any other, to consider whether freedom of speech and of assembly are immunities secured by the privileges and immunities clause of the fourteenth amendment to citizens of the United States, or to revive the contention, rejected by this court in the Slaughterhouse cases, supra, that the privileges and immunities of United States citizenship, protected by that clause, extend beyond those which arise or grow out of the relationship of United States citizens to the National Government. [1.]

That such is the limited application of the privileges and immunities clause seems now to be conceded by my brethren. But it is said that the freedom of respondents with which the petitioners have interfered is the "freedom to disseminate information concerning the provisions of the National Labor Relations Act, to assemble peaceably for discussion of the act, and of the opportunities and advantages offered by it," and that these are privileges and immunities of citizens of the United States secured against State abridgement by the privileges and immunities clause of the fourteenth amendment.

CALLED AN AFTERTHOUGHT

It has been said that the right of citizens to assembly for the purpose of petitioning Congress for the redress of grievances is a privilege of United States citizenship protected by the privileges and immunities clause (*United States* v. *Cruikshank*, 92 U. S. 542, 552, 553). We may assume for present purposes although the step is a long and by no means certain one (see *Maxwell* v. *Dow*, 176 U. S. 581; *Twining* v. *New Jersey*, supra) that the right to assemble to discuss the advantages of the National Labor Relations Act is likewise a privilege secured by the privileges and immunities clause to citizens of the United States, but not to others, while freedom to assemble for the purpose of discussing a similar State statute would not be within the privileges and immunities clause. But the difficulty with this assumption, is, as the record and briefs show, that it is an afterthought first emerging in this case after it was submitted to us for decision, and like most afterthoughts in litigated matters it is without adequate support in the record.

The respondents in their bill of complaint specifically named and quoted article IV, section 2, now conceded to be inapplicable, and the due-process, and equal-protection clauses of the fourteenth amendment as the provisions of the Constitution which secure to them the rights of free speech and assembly. They omitted the privileges and immunities clause of the fourteenth amendment from their quotation. They made no specific allegation that any of those whose freedom had been interfered with by petitioners was a citizen of the United States.

CITIZENSHIP ISSUE DISCUSSED

The general allegation that the acts of petitioners complained of violate the rights of citizens of the United States, including the individual plaintiffs here, and other allegations of like tenor, were denied by petitioner's answer. There is no finding by either court below that any of respondents or any of those whose freedom of speech and assembly has been infringed are citizens of the United States, and we are referred to no part of the evidence in which their citizenship is mentioned or from which it can be inferred.

Both courts below found, and the evidence supports the findings, that the purpose of respondents, other than the Civil Liberties Union, in holding meetings in Jersey City, was to organize labor unions in various industries in order to secure to workers the benefits of collective bargaining with respect to betterment of wages, hours of work, and other terms and conditions of employment. Whether the proposed unions were to be organized in industries which might be subject to the National Labor Relations Act or to the jurisdiction of the National Labor Relations Board does not appear. Neither court below has made any finding that the meetings were called to discuss, or that they ever did in fact discuss, the National Labor Relations Act.

ON ABRIDGEMENT OF RIGHTS

The findings do not support the conclusion that the proposed meetings involved any such relationship between the National Government and respondents or any of them, assuming they are citizens of the United States, as to show that the asserted right or privilege was that of a citizen of the United States, and I cannot say that an adequate basis has been laid for supporting a theory—which respondents themselves evidently did not entertain—that any of their privileges as citizens of the United States, guaranteed by the fourteenth amendment, were abridged, as distinguished from the privileges guaranteed to all persons by the due-process clause.

True, the findings refer to the suppression by petitioners of exhibits, one of which turns out to be a handbill advising workers they have the legal right under the Wagner Act to choose their own labor union to represent them in collective bargaining. But the injunction, which the court now rightly sustains, is not restricted to the protection of the right, said to pertain to United States citizens, to disseminate information about the Wagner Act. On the contrary, it extends and applies in the broadest terms to interferences with the respondents in holding any lawful meeting and disseminating any lawful information by circular, leaflet, handbill, and placard.

If, as my brethren think, respondents are entitled to maintain in this suit only the rights secured to them by the privileges and immunities clause of the fourteenth amendment—here the right to disseminate information about the National Labor Relations Act—it is plain that the decree is too broad.

HELD TOO FAR-REACHING

Instead of enjoining, as it does, interference with all meetings for all purposes and the lawful dissemination of all information, it

should have confined its restraint to interferences with the disseminating of information about the National Labor Relations Act, through meetings or otherwise. The court below rightly omitted any such limitation from the decree, evidently because, as it declared, petitioner's acts infringed the due-process clause, which guarantees to all persons freedom of speech and of assembly for any lawful purpose.

No more grave and important issue can be brought to this court than that of freedom of speech and assembly, which the due-process clause guarantees to all persons, regardless of their citizenship, but which privileges our immunities clause secure only to citizens, and then only to the limited extent that their relationship to the National Government is affected. I am unable to rest decision here on the assertion, which I think the record fails to support, that respondents must depend upon their limited privileges as citizens of the United States in order to sustain their cause or upon so palpable an avoidance of the real issue in the case, which respondents have raised by their pleadings and sustained by their proof.

NOT MATTER OF CITIZENSHIP

That issue is whether the present proceeding can be maintained under section 24 (14) of the Judicial Code as a suit for the protection of rights and privileges guaranteed by the due-process clause. I think respondents' right to maintain it does not depend on their citizenship and cannot rightly be made to turn on the existence or nonexistence of a purpose to disseminate information about the National Labor Relations Act. It is enough that petitioners have prevented respondents from holding meetings and disseminating information whether for the organization of labor unions or for any other lawful purpose.

If it be the part of wisdom to avoid unnecessary decision of constitutional questions, it would seem to be equally so to avoid the unnecessary creation of novel constitutional doctrine, inadequately supported by the record, in order to attain an end easily and certainly reached by following the beaten paths of constitutional decision.

The right to maintain the present suit is conferred upon the individual respondents by the due-process clause and acts of Congress, regardless of their citizenship and of the amount in controversy. Section 1 of the Civil Rights Act of April 20, 1871 (17 Stat. 13), provided that "any person who, under color of any law, statute, ordinance * * * of any State, shall subject, or cause to be subjected, any person within the jurisdiction of the United States to the deprivation of any rights, privileges, or immunities secured by the Constitution of the United States shall * * * be liable to the party injured to any action at law, suit in equity, or other proper proceeding for redress."

RIGHT OF ACTION GIVEN

And it directed that such proceedings should be prosecuted in the several district or circuit courts of the United States. The right of action given by this section was later specifically limited to "any citizen of the United States or other person within the jurisdiction thereof," and was extended to include rights, privileges, and immunities secured by the laws of the United States as well as by the Constitution.

As thus modified, the provision was continued as section 1979 of the Revised Statutes and now constitutes section 43 of title 8 of the United States Code. It will be observed that the cause of action, given by the section in its original as well as its final form, extends broadly to deprivation by State action of the rights, privileges, and immunities secured to persons by the Constitution. It thus includes the fourteenth amendment and such privileges and immunities as are secured by the due-process and equal-protection clauses, as well as by the privileges and immunities clause of that amendment. It will also be observed that they are those rights secured to persons, whether citizens of the United States or not, to whom the amendment in terms extends the benefit of the due-process and equal-protection clauses.

Following the decision of the Slaughterhouse cases and before the later expansion by judicial decision of the content of the due-process and equal-protection clauses, there was little scope for the operation of this statute under the fourteenth amendment. The observation of the court in *United States* v. *Cruikshank* (92 U. S. 542, 551), that the right of assembly was not secured against State action by the Constitution, must be attributed to the decision in the Slaughterhouse cases that only privileges and immunities peculiar to United States citizenship were secured by the privileges and immunities clause, and to the further fact that at that time it had not been decided that the right was one protected by the due-process clause.

The argument that the phrase in the statute "secured by the Constitution" refers to rights "created," rather than "protected" by it, is not persuasive. The preamble of the Constitution, proclaiming the establishment of the Constitution in order to "secure the blessings of liberty," uses the word "secure" in the sense of "protect" or "make certain."

That the phrase was used in this sense in the statute now under consideration was recognized in *Carter* v. *Greenhow* (114 U. S. 317, 322), where it was held as a matter of pleading that the particular cause of action set up in the plaintiff's pleading was in contract and was not to redress deprivation of the "right secured to him by that clause of the Constitution" (the contract clause), to which he had "chosen not to resort." See, as to other rights protected by the Constitution and hence secured by it, brought within the provisions of Revised Statutes, section 5508, *Logan* v. *United States* (144 U. S. 265) in re Quarles and Butler (158 U. S. 532); *United States* v. *Mosley* (238 U. S. 383).

Since freedom of speech and freedom of assembly are rights secured to persons by the due-process clause, all of the individual respondents are plainly authorized by section 1 of the Civil Rights Act of 1871 to maintain the present suit in equity to restrain infringement of their rights. As to the American Civil Liberties Union, which is a corporation, it cannot be said to be deprived of the civil rights of freedom of speech and of assembly, for the liberty guaranteed by the due-process clause is the liberty of natural, not artificial, persons. *Northwestern Life Insurance Company* v. *Riggs* (203 U. S. 243, 255); *Western Turf Association* v. *Greenberg* (204 U. S. 359, 363).

NO VALUATION ON FREEDOM

The question remains whether there was jurisdiction in the district court to entertain the suit, although the matter in controversy cannot be shown to exceed $3,000 in value because the asserted rights, freedom of speech, and freedom of assembly, are of such a nature as not to be susceptible of valuation in money. The question is the same whether the right or privilege asserted is secured by the privileges and immunities clause or any other. When the Civil Rights Act of 1871 directed that suits for violation of section 1 of that act should be prosecuted in the district and circuit courts, the only requirement of a jurisdictional amount in suits brought in the Federal courts was that imposed by section 11 of the Judiciary Act of 1789, which conferred jurisdiction on the circuit courts of suits where "the matter in dispute" exceeded $500 and the United States was a plaintiff, or an alien was a party, or the suit was between citizens of different States; and it was then plain that the requirement of a jurisdictional amount did not extend to the causes of action authorized by the Civil Rights Act of 1871.

By the act of March 3, 1875 (c. 137, 18 Stat. 470), the jurisdiction of the circuit courts was extended to suits at common law or in equity "arising under the Constitution or laws of the United States" in which the matter in dispute exceeded $500. By the act of March 3, 1911 (c. 231, 36 Stat. 1887), the circuit courts were abolished and their jurisdiction was transferred to the district courts and by successive enactments the jurisdictional amount applicable to certain classes of suits was raised to $3,000. The provisions applicable to such suits, thus modified, appear as section 24 (1) of the Judicial Code (28 U. S. C., sec. 41 (1)).

TWO PARALLEL PROVISIONS

Meanwhile, the provisions conferring jurisdiction on district and circuit courts over suits brought under section 1 of the Civil Rights Act of 1871 were continued as Revised Statutes, sections 563 and 629, and now appear as section 24 (14) of the Judicial Code (28 U. S. C., sec. 41 (14)). The act of March 3, 1911 (36 Stat. 1087, 1–91), amended section 24 (1) of the Judicial Code so as to direct that "The foregoing provision as to the sum or value of the matter in controversy shall not be construed to apply to any of the cases mentioned in the succeeding paragraphs of this section." (2) Thus, since 1875, the jurisdictional acts have contained two provisions, one conferring jurisdiction on the Federal courts, district or circuit, to entertain suits "arising under the Constitution or laws of the United States" in which the amount in controversy exceeds a specified value; the other, now section 24 (14) of the Judicial Code, conferring jurisdiction on those courts of suits authorized by the Civil Rights Act of 1871, regardless of the amount in controversy.

Since all of the suits thus authorized are suits arising under a statute of the United States to redress deprivation of rights, privileges, and immunities secured by the Constitution, all are literally suits "arising under the Constitution or laws of the United States." But it does not follow that in every such suit the plaintiff is required by section 24 (1) of the Judicial Code to allege and prove that the constitutional immunity which he seeks to vindicate has a value of excess of $3,000.

MATTER OF JURISDICTION

There are many rights and immunities secured by the Constitution, of which freedom of speech and assembly are conspicuous examples, which are not capable of money valuation, and in many instances, like the present, no suit in equity could be maintained for their protection if the jurisdictional amount were prerequisite. We can hardly suppose that Congress, having in the broad terms of the Civil Rights Act of 1871 vested in all persons within the jurisdiction of the United States a right of action in equity for the deprivation of constitutional immunities, cognizable only in the Federal courts, intended by the act of 1875 to destroy those rights of action by withholding from the courts of the United States jurisdiction to entertain them.

That such was not the purpose of the act of 1875 in extending the jurisdiction of Federal courts to causes of action arising under the Constitution or laws of the United States involving a specified jurisdictional amount is evident from the continuance upon the statute books of section 24 (14) side by side with section 24 (1) of the Judicial Code, as amended by the act of 1875. Since the two provisions stand and must be read together, it is obvious that neither is to be interpreted as abolishing the other, especially when it is remembered that the 1911 amendment of section 24 (1) provided that the requirement of a jurisdictional amount should not be construed to apply to cases mentioned in section 24 (14).

AUTHORIZATION FOR SUITS

This must be taken as legislative recognition that there are suits authorized by section 1 of the act of 1871 which could be brought

under section 24 (14) after, as well as before, the amendment of 1875 without compliance with any requirement of jurisdictional amount, and that these at least must be deemed to include suits in which the subject matter is one incapable of valuation. Otherwise we should be forced to reach the absurd conclusion that section 24 (14) is meaningless and that a large proportion of the suits authorized by the Civil Rights Act cannot be maintained in any court, although jurisdiction of them, with no jurisdictional amount, was carefully preserved by section 24 (14) of the Judicial Code and by the 1911 amendment of section 24 (1).

By treating section 24 (14) as conferring Federal jurisdiction of suits brought under the act of 1871 in which the right asserted is inherently incapable of pecuniary valuations, we harmonize the two parallel provisions of the Judicial Code, construe neither as superfluous, and give to each a scope in conformity with its history and manifest purpose.

The practical construction which has been given by this Court to the two jurisdictional provisions establishes that the jurisdiction conferred by section 24 (14) has been preserved to the extent indicated.

CASE IN POINT CITED

In *Holt* v. *Indiana Manufacturing Co.* (176 U. S. 68) suit was brought to restrain alleged unconstitutional taxation of patent rights. The Court held that the suit was one arising under the Constitution or laws of the United States within the meaning of section 24 (1) of the Judicial Code and that the United States circuit court in which the suit had been begun was without jurisdiction because the challenged tax was less than the jurisdictional amount. The Court remarked that the present section 24 (14) applied only to suits alleging deprivation of "civil rights." On the other hand, in *Truax* v. *Raich* (239 U. S. 33, Affirming 219 Fed. 273) this Court sustained the jurisdiction of a district court to entertain the suit of an alien to restrain enforcement of a State statute alleged to be an infringement of the equal-protection clause of the fourteenth amendment because it discriminated against aliens in their right to seek and retain employment.

The jurisdiction of a district court was similarly sustained in *Crane* v. *Johnson* (242 U. S. 339) on the authority of *Truax* v. *Raich*, supra. The suit was brought in a district court to restrain enforcement of a State statute alleged to deny equal protection in suppressing the freedom to pursue a particular trade or calling.

For the purposes of the present case it is important to note that the constitutional right or immunity alleged in these two cases was one of personal freedom, invoked in the Raich case by one not a citizen of the United States. In both cases the right asserted arose under the equal-protection, not the privileges and immunities clause; in both the gist of the cause of action was not damage or injury to property but unconstitutional infringement of a right of personal liberty not susceptible of valuation in money. The jurisdiction was sustained despite the omission of any allegation or proof of jurisdictional amount, pointedly brought to the attention of this Court.

"EXPERIMENTATION" IS SEEN

The conclusion seems inescapable that the right conferred by the act of 1871 to maintain a suit in equity in the Federal courts to protect the suitor against a deprivation of rights or immunities secured by the Constitution has been preserved, and that whenever the right or immunity is one of personal liberty, not dependent for its existence upon the infringement of property rights, there is jurisdiction in the district court under section 24 (14) of the Judicial Code to entertain it without proof that the amount in controversy exceeds $3,000. As the right is secured to "any person" by the due-process clause, and as the statute permits the suit to be brought by "any person" as well as by a citizen, it is certain that resort to the privileges and immunities clause would not support the decree which we now sustain and would involve constitutional experimentation as gratuitous as it is unwarranted. We cannot be sure that its consequences would not be unfortunate.

Mr. Justice Reed concurs in this opinion.

Thank You, America

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1939

ARTICLE BY MARGARET E. BROWN, OF ALHAMBRA, CALIF.

Mr. VOORHIS of California. Mr. Speaker, in the midst of all the tumult and the shouting of today the following expression of one young American woman regarding her country is, I think, a good antidote. I am proud that it was written by one of my constituents.

THANK YOU, AMERICA

(By Margaret E. Brown, Alhambra, Calif.)

For more than 28 years America has been giving me: Parents, food, clothing, shelter, education, and inspiration. Thank you, America, for life itself. Thank you, America, for millions of homes with fine idealistic parents; thanks for sanitation; for public highways; street lights; police and fire protection; thanks for the kind of free education nowhere else available in the world—the kind of education offered in Los Angeles, Pasadena, and all of southern California. We American young people just go ahead and accept for granted homes, newspapers, and magazines, enjoying the freedom of the press—so precious to us—radios, schools which offer the opportunity to train for any kind of occupation one chooses, and frequently we forget to say "Thank you."

Thank you, America, for the great American church and its Big Minister, always near at hand; for the freedom to worship God; and for the problem-solving contact with one's minister.

Thank you, America, for the ballot, for the privilege of participating in the campaign that precedes the balloting. I am grateful for the privilege of choosing a big cause, like "peace" or "temperance," or "democracy," to work for while others have the privilege of choosing the other side of these causes. There is always an honest other side, and both can go merrily on working and living while first one side triumphs, then the other side, but eventually the right side wins—but the person on the other side lives on. I am grateful for the privilege of helping a great candidate gain a political office.

For the blessing of living here when the greatest sin of mankind, war, is being squarely faced by the Nation and its youth—the age that is going to do—is doing the work of changing the world from living in war to living in peace—thanks!

For the Presidency, with its guiding hand and heart always trying to help every American; for Congress and the Senate of the United States, with their tremendous task of governing the American people the way the American people want to be governed, I thank you, America.

May America be first to establish the highest kind of a standard of living for all those residing between the Atlantic and the Pacific. May America be first to gain employment for all her working people in work that is valuable to the entire Nation. May America be first to establish the right kind of free trade with all nations. May America be first in spreading the ideals of democracy to the whole world.

Thank you, America, for the vision your teachers and your preachers have given to American young people!

Military Training

EXTENSION OF REMARKS

OF

HON. E. E. COX

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 31, 1939

ADDRESS BY HON. CHARLES A. PLUMLEY, OF VERMONT

Mr. COX. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of the gentleman from Vermont [Mr. PLUMLEY], delivered at the Georgia Military Academy, College Park, Ga., on May 29, 1939:

I am honored by being asked to address you upon this occasion. My association with your honored president covers a period of 20 years of exceptionally pleasant relations, during which I have come to know about and to appreciate the very great contribution he has made toward the establishment in perpetuity of this distinguished institution.

I am not a militarist and, as an American citizen, I am opposed to war. If that makes me a pacifist, then that is what I am; nevertheless, I have little patience with the attitude of those people who, for selfish, pecuniary, or political purposes, or for any other reason, are ready to strip this country of, or to curtail or limit, our reasonable, necessary, and adequate defense; nor do I agree with those who would throw into the junk heap our plans so carefully worked out in order to insure us a safe, reasonable, and justifiable amount of military preparedness. Anyone conversant with the facts, and anyone may be—and no one who is not has any business to mislead the people of this country—anyone, I say, who knows what he is talking about knows that we are grossly and inadequately prepared to defend ourselves today or to protect ourselves from an attack by foreign foe.

An examination of the roll of graduates of the institutions of our country in which military training is established and wherein the R. O. T. C. units properly function completely refutes the argument that such training produces in them a warlike spirit or makes them militarists. The graduates of these institutions do

not in any considerable number choose the profession of arms. The contrary is true. These young men realize what war means, what it costs, and, above all others, are most anxious that peace shall prevail.

I say to you that every dollar spent in order to diffuse military knowledge among them and to educate them for the discharge of each and all their duties as a citizen in peace and in war is expended in the advancement of the cause of universal peace. I cannot understand the attitude or state of mind of those misled theorists and well-intentioned but misguided and misinformed people who so severely denounce that method and form of education and training which more than all others will accomplish the very end they seek to attain, the outlawry of war. The making of peacetime citizens fitted to serve their country in the event of a time of war is the purpose, the business, and the successful attainment of such institutions.

To be an American citizen in this, so wonderful an age, is the greatest blessing any man or woman may enjoy. To have and play a part in shaping and changing the course of history is the greatest opportunity with which any man or woman of any day or generation can be confronted. The best educated citizen is he who respects the rights of others, recognizes that properly constituted authorities are entitled to be obeyed, and realizes the responsibilities attaching to the rights and duties of his citizenship. A man educated to understand, to accomplish, and to command is the type of citizen such training develops.

Military training of the youth of the land tends to cultivate an honest manly character, hatred of shams and humbugs, an earnest purpose to make the most of one's self, to serve one's time as a man, and one's country as a good citizen and patriot.

I have observed at close hand the exemplification and accomplishment for which this training is responsible. I know whereof I speak when I say that the lessons it teaches are invaluable. It impresses upon the student mind the axiom that no man is fitted to command who has not first learned to obey.

At every formation from the first to the last in his course, everywhere and all the time, it hammers into the head and habit of the cadet the absolute necessity for attention to the business in hand. It shows him, in due course, that real merit is properly recognized; it teaches him to appreciate that with such merited recognition comes the assumption of added responsibility. He learns to meet emergencies, to be prepared for the unexpected, and to assume responsibility as the opportunity and occasion therefor are presented. He is also taught to realize the importance of punctuality, how absolutely indispensable is accuracy, how essential is efficiency, the value of time, and the benefits of brevity. In touching elbows with his equals, saluting his superiors, commanding his inferiors, he is taught the rights and prerogatives of each—what goes with authority and how he may use but never abuse it. He learns to look ahead, to be prepared at any time to have his mettle tried and temper tested, to form his advance guard, but to keep his main strength in reserve. He acquires the knowledge, theoretically and practically, of proper preparation, the worth of his word, and what constitutes honor. He is able fairly, impartially, and impersonally to estimate his own strength and limitations and knows he should not undertake that which he cannot fairly expect decently to accomplish, but should accomplish what he undertakes and that he must find a way or make one.

These are the ideas and ideals set before him in theory and practice constantly as a part of his military training and discipline until they become part and parcel of him—and I doubt if any course of study or plan of training can show better ideas, ideals, or educational theories or, in practical results, better fit those who are taught—citizen, soldier, or sailor, for either private or public careers.

In the older days before the machine became an Iron Man Friday, people obeyed the law: "Work or starve." Today the slogan is: "Think or perish."

I might as well admit, first as last, that I have no patience with those who are living in the past, and to and of themselves and their generation. What old fossils they are to permit themselves to think that the best has been, when everybody knows that the best is yet to be. They live in a past gone glimmering through the dreams of things that were, not realizing that the tender grace of a day that is gone will never come back to them, or that the past is dead, and has no resurrection. They forget that the earth with its scarred face is a symbol of the past.

I say to them and in their interest, that beyond the east is the sunrise, and beyond the west is the sea. There is a realm where the rainbow never fades, where the stars are spread before us like islands that slumber in an ocean, while things and beings that pass before us like shadows, will stay in our presence forever.

Youth is the stream of the new, washing against the rocks of the habitual and the old. It floods in a continual current of enthusiams, of joy in existence, of hope, of fine expectations, of sharp awareness of evil and injustice, of headlong ambition to reap harvests that seem possible. Youth is the idealist. It sees what may be builded out of what is. It is the impetuous engineer knocking at the gates of thought, clamoring to be let in. It is progress, change, alteration, eternal striving ahead, and if it is inclined to trail off the discussion sometimes into poppycock, it has, still, the seeds of vitality. It is that part of life which is irrepressible growth.

Age is the halfway house, where experience fructifies into caution. The aloe has bloomed, but the fruit may be mellowing. Age has met disillusion and knows the garb of that foeman. It has pushed possibilities to the limit and feels ready to cry, "Halt," that it may consolidate its winnings. Crabbed only when defeat has embittered it, or when fear has driven out generosity and implanted greed, it represents the realities which to youth are still touched with haze.

Age is no practical realist when it deadens its ears to the news which the new generation has to tell it. To set oneself against the idealist merely because of a constitutional hatred for change is to prophesy one's own defeat. Hatred for change is not a qualification of the practical realist.

Change is everywhere. It is born into the world with our progeny. Every baby in the cradle is a potential revolution—the end of one epoch and the beginning of another. "Let us keep the keys from the children," cries a woman novelist. Folly! The children are born with the keys in their possession—brains. And if they move to the next village and build up a lure there to draw half of our local populace, are we the gainers?

Change will not be denied any more than youth, its eternal symbol.

The older generations are the steadiers, the stabilizers, and the anchors of this day and generation. So I say to you today, may the joy you get out of bearing your burdens be found in and measured by the accomplishment of all that you would achieve.

When the future looks dark and unpromising, when you cannot reconcile the present with the past, do not be discouraged; learn to say with Martha Haskell Clark:

"Youth will be served; the gods we reared
In faith upon our altar-stone
Now keep their vigil unrevered
In dusty corners, all unknown.
New idols rise at new demands
Above our crumbling overthrow,
They pick and choose with ruthless hands—
As we did in the long ago.

"Youth will be served; we live to see
Our dearest deeds another's boast,
A butt for laughtered ribaldry
The dreams for which we suffered most.
They see no print of bleeding feet,
The heights we won on footsteps slow,
They mount, unwitting of defeat—
As we did in the long ago.

"Youth must be served; one harvest's gain
The seed from which new harvest springs
The fuller yield of golden grain
From our forgotten harrowings.
Their hands shall turn fresh furrow soil,
The bread we eat, they too shall know—
May they find gods to sweeten toil—
As we did in the long ago."

It is mind after all which does the work of the world, so that the more there is of mind the more work will be accomplished. A man in proportion as he is intelligent makes a given force accomplish a greater task; makes skill take the place of muscles, and with less labor gives a better product. It is an insult to our intelligence to suggest a contrary doctrine. Man is bigger and greater than any machine he will ever invent. It is a new era in which we are living. Man will have to adapt himself to the speed of the age and the progress in things mechanical, for which he can hold himself responsible. Because a policy or a principle or a theory is old does not of itself establish the fact that there is not something better to be found. On the other hand, because a policy or a principle or theory is old is not to be taken as a reason or justification for our departure from it.

The astronomer discovers that geometry, a pure abstraction of the human mind, is the measure of planetary motion. The chemist finds proportions and intelligible method throughout matter; and science is nothing but the finding of analogy, identity, in the most remote parts. The ambitious soul sets down his own conclusions before each refractory fact; one after another reduces all strange constituents, each new power to its class and its law, and goes on forever to animate the last fiber of organization, the outskirts of nature by insight.

There are certain laws which in the last analysis are as inexorable and unchanging as those which govern the rising and the setting of the sun, though the time limit within which operations under the law may be completed may change and vary. Man always has turned, and always will, eventually, turn these laws to his advantage and to his own account.

The Old Oracle said: "All things have two handles; beware of the wrong one." And Ralph Waldo Emerson said: "In life too often the scholar errs with mankind and forfeits his privilege." Then he goes on to say: "Every day the sun; and, after sunset, night and her stars; ever the winds blow; ever the grass grows; every day man and woman conversing, beholding and beholden. The scholar is he of all men whom this spectacle most engages."

To the student and scholar, to the individual, there comes a sense of, an appreciation of—what shall I say?—of a something,

a longing which others do not know and cannot comprehend, perhaps as well stated in these words of Moody as anywhere:

"Careless where our face is set,
Let us take the open way.
What we are no tongue has told us:
Errand-goes who forget?
Soldiers heedless of their harry?
Pilgrim people gone astray?
We have heard a voice cry, 'Wander!'
That was all we heard it say.

* * * * * * *

God, who gives the bird its anguish, maketh nothing manifest
But upon our lifted foreheads pours the boon of endless quest."

We go along unblazed trails. We cannot penetrate the final mystery of things, because behind every mystery is another mystery. So it will always be.

Forever apace, never arriving, has been the timeless past and shall be the endless future. "Ah, but a man's reach should exceed his grasp. Or, what is heaven for?" says the poet.

Yes! This is the trail along which travel all human ideals. An everlasting trek from the near to the far horizon sown thick with human bones.

There is no ending and no beginning. There is no limit to space or time, though we make our heads ache trying to think how such can be the case.

This is the journey you are about to take.

You will save yourselves a great deal of needless worry on your journey if you early establish for yourself a philosophy of life, so in conclusion I commend to your careful consideration a brief codification of the philosophy of that stoic philosopher, Epictetus of Rome, who said:

"Is a little oil spilt,
A little wine stolen,
Say to yourself—
This is the purchase
Paid for peace, for
Tranquillity, and nothing
Is to be had for nothing.
Be content to be
Thought foolish and stupid.
Do not wish to be thought
To know—and though
You appear to others
To be somebody—distrust
Yourself!
Remember that
You are an actor
In a drama of
Such a kind as the
Author pleases to make it.
If short, of a short one;
If long, of a long one.
It is your business
To act well the character
Assigned you; to choose it
Is another's."

Social Security Looks to the Future

EXTENSION OF REMARKS

OF

HON. FRANK H. BUCK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 6, 1939

RADIO ADDRESS BY HON. JOHN W. McCORMACK, OF MASSACHUSETTS, JUNE 5, 1939

Mr. BUCK. Mr. Speaker, under leave to extend my remarks, I insert the very able address of Hon. JOHN W. McCORMACK, of Massachusetts, made during the National Radio Forum, arranged by the Washington Star and broadcast over a National Broadcasting Co. network, Monday night, June 5, 1939.

The address is as follows:

LOOKS TO THE FUTURE

Ladies and gentlemen of the radio audience, I want to express my appreciation to the Washington Evening Star for its invitation which enables me to talk over the National Radio Forum in relation to the amendments proposed, which are now pending in the House of Representatives, to the existing social-security law.
